The Willamette National Forest invites written comments and suggestions on the scope of the analysis in addition to those comments already received as a result of local public participation activities. The agency will also give notice of the full environmental analysis and decision-making process so that interested and affected people are made aware as to how they may participate and contribute to the final decision.

DATES: Comments concerning the scope and implementation of the analysis should be received in writing by February 28, 1998.

ADDRESSES: Send written comments and suggestions concerning the management of this area to Rick Scott, District Ranger, Rigdon Ranger District, Willamette National Forest, P.O. Box 1410, Oakridge, Oregon 97463.

FOR FURTHER INFORMATION CONTACT: Direct questions about the proposed action and the scope of analysis to Kristy Miller, Planning Resource Management Assistant or Tim Bailey, Project Coordinator, Oakridge Ranger District, phone 541–782–2283.

SUPPLEMENTARY INFORMATION: The Christy Basin Planning area is entirely within the North Fork of the Middle Fork of the Willamette River watershed, which is designed as a Tier 2 Key watershed by the Northwest Forest Plan (ROD, C–7). Tier 2 Key watersheds contain important sources of high quality water. A Watershed Analysis was completed for the North Fork of the Middle Fork of the Willamette River in September, 1995.

The purpose of this project is to harvest timber in a manner that implements the management objectives, and to implement various resource restoration activities to meet Key Watershed objectives.

The proposal includes harvesting timber by thinning in nine separate timber sales over the next five years, and regeneration harvest methods in four separate timber sales over the next four years. Both thinning and regeneration timber sale proposals would involve road construction, reconstruction, and decommissioning. This analysis will evaluate a range of alternatives addressing the Forest Service proposals to harvest approximately 70.0 million board feet; approximately 43.4 million board feet would be generated from thinning some 3900 acres of young stands created by past clearout harvest, and approximately 26.4 million board feet would be generated by regeneration harvest on approximately 550 acres. All the above proposed harvest would require a total of 8 miles of temporary road construction and 21 miles of road reconstruction.

The Christy Basin planning area comprises about 34,000 acres, all of which is federal land. Of the 34,000 acres about 18,500 acres (54%) have been previously harvested and regenerated. Of the remaining acres, approximately 5300 (15%) acres is in a mature stand condition, ranging in ages from 90 to 170 years, and 10,000 acres is in an old-growth stand condition, stand ages exceeding 200 years. The planning area contains about 600 acres (1.7%) of non-forested vegetation types and rock outcrops. Management areas that provide for programmed timber harvest are Scenic (11c) and General Forest (14a). Other land allocations in this planning area are Late-Successional Reserves, Riparian Reserves, Wild and Scenic River Corridor, and Dispersed Recreation—Semi-primitive Nonmotorized Use.

The project area includes a small portion (about 700 acres) of the Chucksney Mountain inventoried roadless area, which was considered but not selected for wilderness designation. Most of this inventoried roadless area is included within the above Dispersed Recreation—Semi-Primitive Nonmotorized Recreation Management Area.

Issues identified for this analysis are water and stream quality, habitat fragmentation, economic benefit, old-growth habitat reduction, big game habitat quality, biodiversity effects, road management, and soil compaction.

Initial scoping for this analysis began in 1990 but the project was put on hold due to a Federal Court injunction. Scoping was initiated again in March of 1996. Alternatives were developed and preliminary analysis was completed during the summer and fall of 1997. The developed alternative consisted of: (A) low management intensity; retention of more than the prescribed amount of standing green trees and down logs (20–30% retention), (B) conventional management intensity; retention of prescribed amounts of standing green trees and down logs (15% retention), (C) No old-growth harvest, and (D) No Action. All action alternatives were developed to avoid forest fragmentation and system road construction. Results of the above analysis indicated a potential for significant effects to the human environment, hence the need for documentation with the Environmental Impact Statement.

The Forest Service will be seeking additional information, comment and assistance from Federal, State, local agencies, tribes, and other individuals or organizations who may be interested or affected by the proposed project. Additional input will be used to help verify the existing analysis and determine if additional issues and alternatives should be developed. This input will be used in preparation of the draft EIS.

The scoping process will include the following:

- Identification of potential additional issues;
- Identification of issues to be analyzed in depth;
- Elimination of insignificant issues or those which have been covered by a relevant previous environmental process;
- Exploration of potential additional alternatives based on the issues identified during the scoping process; and
- Verification of and potential addition to environmental effects of the proposed action and alternatives (i.e. direct, indirect, and cumulative effects and connected actions).

The draft EIS is expected to be filed with the Environmental Protection Agency (EPA) and to be available for public review by February 28, 1998. The comment period on the draft EIS will be 45 days from the date the EPA publishes the notice of availability in the **Federal Register**.

The Forest Service believes it is important to give reviewers notice at this early stage of several court rulings related to public participation in the environmental review process. First, a reviewer of a draft EIS must structure their participation in the environmental review of the proposal so that it is meaningful and alerts an agency to the reviewer's position and contentions. *Vermont Yankee Nuclear Power Corp.* v. *NRDC, 435 U.S. 519, 553 (1978).* Also, environmental objections that could be raised at the draft EIS stage but that are not raised until after completion of the final EIS may be waived or dismissed by the courts. *City of Angoon* v. *Hodel*, 803 f. 2d 1016, 1022 (9th Cir., 1986) and *Wisconsin Heritages, Inc.* v. *Harris*, 490 F. Supp. 1334, 1338 (E.D. Wis. 1980). Because of these court rulings, it is very important that those interested in this proposed action participate by the close of the 45-day comment period so that substantive comments and objections are made available to the Forest Service at a time when it can meaningfully consider them and respond to them in the final EIS.

To assist the Forest Service in identifying and considering issues and concerns on the proposed action, comments on the draft EIS should be as specific as possible. It is also helpful if comments refer to specific pages or chapters of the draft statement. Comments may also address the adequacy of the draft EIS or the merits of the alternatives formulated and discussed in the statement. (Reviewers may wish to refer to the Council on Environmental Quality Regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3 in addressing these points.)

The final EIS is scheduled to be completed in June, 1998. In the final EIS, the Forest Service is required to respond to comments and responses received during the comment period that pertain to the environmental consequences discussed in the draft EIS and applicable laws, regulations, and policies considered in making the decision regarding this proposal. Rick Scott, District Ranger, is the responsible official and as responsible official, he will document the Christy Basin Timber Sales and restoration project decision and rationale in a Record of Decision. That decision will be subject to Forest Service Appeal Regulations (36 CFR Part 215).

Dated: January 5, 1998.

Rick Scott,

District Ranger.

BILLING CODE 3410–11–M

DEPARTMENT OF COMMERCE

Submission for OMB Review; Comment Request

The Department of Commerce (DOC) has submitted to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: National Oceanic and Atmospheric Administration (NOAA).

Title: Capital Construction Fund Agreement and Certificate.

Agency Form Number: NOAA 88–14.

OMB Approval Number: 0648–0090.

Type of Request: Extension of a currently approved collection.

Burden: 2,250 hours.

Number of Respondents: 1,000.

Avg. Hours Per Response: 2.25 hours.

Needs and Uses: The Merchant Marine Act provides for the administration of the Capital Construction Fund (CCF) by NOAA. This program enables fishermen to construct, reconstruct, or (under limited circumstances) acquire fishing vessels with before-tax, rather than after-tax, dollars. NOAA collects information from fishermen to determine their eligibility to participate in the program and to certify completion of the agreement objectives.

Affected Public: Businesses or other for-profit organizations.

Frequency: On occasion.

Respondent's Obligation: Required to obtain or retain benefits.

OMB Desk Officer: David Rostker, (202) 395–3897.

Copies of the above information collection proposal can be obtained by calling or writing Linda Engelmeier, DOC Forms Clearance Officer, (202) 482–3272, Department of Commerce, Room 5327, 14th and Constitution Avenue, N.W., Washington, D.C. 20230.

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to David Rostker, OMB Desk Officer, Room 10202, New Executive Office Building, 725 17th Street, N.W., Washington, D.C. 20503.

Dated: January 2, 1998.

Linda Engelmeier,

Departmental Forms Clearance Officer, Office of Management and Organization.

[FR Doc. 98–1264 Filed 1–16–98; 8:45 am]

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

Bureau of the Census

Census 2000 Special Place Facility Questionnaire

ACTION: Proposed collection; comment request.

SUMMARY: The Department of Commerce, as part of its continuing

VOL 63 ISS 12 JA 20 1998 UMI

effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506 (c)(2)(A)).

DATES: Written comments must be submitted on or before March 23, 1998.

ADDRESSES: Direct all written comments to Linda Engelmeier, Departmental Forms Clearance Officer, Department of Commerce, Room 5327, 14th and Constitution Avenue, NW, Washington, DC 20230.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to Charles Moore, Bureau of the Census, SFC2, MS–5700, Room 1304, 4301 Suitland Road, Suitland, Maryland 20746, phone number (301) 457–2050.

SUPPLEMENTARY INFORMATION:

I. Abstract

The Census Bureau must provide everyone in the United States and Outlying Areas the opportunity to be counted in the Census 2000, including persons living in group quarters (GQs), (ex. student dormitories and shelters) and housing units (HUs) at and/or associated with SPs.

To that end, the Census Bureau is currently developing final plans for implementing the Census 2000 Special Place Facility Questionnaire Operation. This operation replaces the Special Place Prelist field operation conducted in previous censuses. During that operation, census enumerators visited each special place (SP) and conducted personal interviews to identify and classify the types of GQs and HUs for each SP. One of the major requirements for enumeration of persons at SP facilities is to identify the GQs and any associated HUs at each SP.

We obtain an updated SP/GQ master file from the Census 2000 Dress Rehearsal which contains the names, addresses and phone numbers of each special place. Phone numbers for these SPs were obtained through the use of telephone books, directory assistance and contractors.

We will then mail advance letters to each SP informing them about the upcoming Census 2000 and letting them know that a Census Bureau representative will be phoning in the next few weeks to update the list of places where people stay and to collect other administrative information.

By phoning each SP and conducting interviews, we will identify and collect updated information about the GQs and HUs at each SP using Form D–351, Special Place Facility Questionnaire. The types of information collected during the interviews consists of collecting administrative information, updating existing information, identifying GQs/HUs at each SP, determining facility type and expected population count.

Throughout the Facility Questionnaire Operation, the SP/GQ master file is continually updated. Once the Facility Questionnaire Operation is completed, files will be created based on the requirements for each of the upcoming SP operations, i.e., Local Knowledge Update, Transient Night, Group Quarters Enumeration and Service-Based Enumeration.

II. Method of Collection

Computer Assisted Telephone Interviewing (CATI) will be used for the majority of cases using a computerized questionnaire. Nonrespondents (including SPs that request personal visit follow-up) and adds from other field operations will require a personal visit or telephone interview (non-CATI) by regional office or local census office staff using a paper D–351 questionnaire.

To collect the GQ information for military installations, a census representative will visit each of the military installations to interview military personnel on Form D–351(MIL), Military Installation Group Quarters Address List. Information to be collected consists of the installation name, state, county, military contact, group quarters location, type of GQ and expected population count.

Once completed, the D–351s and the D–351(MIL)s will be sent to the Data Capture Center (DCC) in Jeffersonville, Indiana for processing.

III. Data

OMB Number: Not available.
Form Number: D–351, D–351(MIL).
Type of review: Regular Submission.
Affected Public: Individuals, businesses or other for-profit organizations, non-profit institutions and small businesses or organizations.
Estimated number of Respondents: 450,000 Special Places in Census 2000.
Estimated Time Per Response: Each interview should take about 15 minutes (0.25 hours).
Estimated Total Annual Burden Hours: 112,500 hours.
Estimated Total Annual Cost: There is no cost to respondents for providing information on this operation, except for a few minutes of their time.
Respondent's Obligation: Mandatory.
Legal Authority: Title 13, United States Code, Sections 141 and 193.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c), ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: January 13, 1998.

Linda Engelmeier,

Departmental Forms Clearance Officer, Office of Management and Organization.

[FR Doc. 98–1209 Filed 1–16–98 8:45 am]

Bureau of the Census

Master Address File (MAF) and Topologically Integrated Geographic Encoding and Referencing (TIGER) Update Activities

ACTION: Proposed collection; comment request.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)).

DATES: Written comments must be submitted on or before March 23, 1998.

ADDRESSES: Direct all written comments to Linda Engelmeier, Departmental Forms Clearance Officer, Department of Commerce, Room 5327, 14th and Constitution Avenue, NW, Washington, DC 20230.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instruments and instructions should be directed to Lynn Minneman, Bureau of the Census, SFC–2, Room 1308–A, Washington, DC 20233. Phone number 301–457–2036.

SUPPLEMENTARY INFORMATION:

I. Abstract

Note: The present clearance expires June 30, 1998. This request covers field activities to be conducted from July 1, 1998 through September 30, 2000. Operations occurring during the period from October 1, 1997 through June 30, 1998 are listed here only to explain the total respondent burden for FY98 shown in part III.

The Census Bureau presently operates a generic clearance covering activities involving respondent burden associated with updating our Master Address File (MAF) and Topologically Integrated Geographic Encoding and Referencing (TIGER). We now propose to extend that generic clearance to cover update activities we will undertake during the next three fiscal years.

Under the terms of the generic clearance, we plan to submit a request for OMB clearance that will describe all planned activities for the entire period; we will not submit a separate clearance package for each updating activity. We will send a letter to OMB at least five days before the planned start of each activity that gives more exact details, examples of forms, and final estimates of respondent burden. We also will file a year-end summary with OMB after the close of each fiscal year giving results of each activity conducted. This generic clearance enables OMB to review our overall strategy for MAF and TIGER updating in advance, instead of reviewing each activity in isolation shortly before the planned start.

The MAF is a national address list that is being created and continually updated with information from the U.S. Postal Service Delivery Sequence File. The Census Bureau plans to use the MAF for mailing or delivering questionnaires to households for Census 2000 and as a sampling frame for our demographic current surveys. In the past, the Census Bureau has built a new address list for each decennial census. The MAF we are building during Census 2000 is meant to be kept current thereafter, eliminating the need to build a completely new address list for future censuses and surveys. The TIGER is a geographic system that maps the entire country in Census blocks with applicable address range or living quarter location information. Linking MAF and TIGER allows us to assign each address to the appropriate Census Block, produce maps as needed and publish results at the appropriate level of geographic detail. The following are descriptions of each activity we plan to conduct under the clearance for the next three fiscal years.

1. Address Listing (AL)

Census 2000 Address Listing will be conducted in 2.93 million blocks that have a preponderance of noncity-style addresses; for example, "RR 1, Box 89," "PO Box 678," or "General Delivery." AL also will be conducted in all of Puerto Rico. Temporary Census Bureau employees called "listers" will canvass (walk or drive) each of these blocks, identifying each structure where people live or could live, including housing units and group quarters. They will record the block number and each physical location address or description on Form D–101B, Address Listing Page. For each living quarters, the lister will attempt to conduct an interview to collect the mailing address, an E–911 address for living quarters with no posted city-style mailing address, occupant name or group quarters contact person name, and telephone number. If no one is at home, the lister will attempt to interview a neighbor to obtain this information. If unable to obtain the information, the lister will attempt up to two telephone callbacks to obtain the information. There will be no personal callbacks to conduct an interview during Address Listing. The lister will also spot the location of the living quarters on a Block Map and update the Block Maps by adding missing roads, road names, or other map features as necessary, and deleting roads that no longer exist.

The information collected will be used to create our Master Address File (MAF) for Census 2000 and survey use. The map additions and deletions will be used to update our TIGER maps. The processed address information and map spots will be directly used to deliver a Census 2000 Questionnaire to each housing unit in these blocks.

The operation will be conducted from August through December, 1998. There will be approximately 22.4 million respondents with an estimated response time of 1.5 minutes per living quarters. Approximately 4.7 million respondents will be interviewed in FY98 with a respondent burden of 117,500 hours. Approximately 17.7 million respondents will be interviewed in FY99 with a respondent burden of 442,500 hours.

In addition to the blocks mentioned above, AL will be conducted in the rural portion of 39 counties that are in the 1999 American Community Survey. Since a MAF is needed earlier in these counties than in the rest of the country, the Address Listing will be conducted between February and May, 1998, using slightly different forms and callback rules. Housing units will be listed on Form DX–101B, Housing Unit Address Listing Page. Special places will be listed on Form DX–101C, Special Place Listing Page. The information collected will be almost identical to that listed above, however, more callbacks are authorized to obtain the mailing address. The lister will make up to three personal and two telephone callbacks to obtain the information for households where no one is home on the initial visit. There will be approximately 320,000 respondents with an estimated response time of two minutes per household. The total respondent burden is estimated at 10,666 hours.

2. Block Canvass (BC)

The Census 2000 Block Canvass is scheduled to take place from January 18, 1999 through June 4, 1999 in all areas where there is predominately city-style addressing and mail delivery and where the Census Bureau will conduct a mailout/mailback census. BC is a dependent field canvassing activity where listers will canvass assigned blocks looking for every place where people live or could live using Form D–451A, Address Listing Page, which lists every living quarters currently in the MAF for these blocks. Listers will attempt to interview at predesignated living quarters (every third housing unit and all multi-unit structures) to verify that living quarters' address and unit designation, as necessary, and the addresses of the living quarters on either side. They will also obtain mailing addresses when these are different from the house number and street name address. They will visit the next housing unit to obtain the information if no one is home at the predesignated unit. Listers also will contact the resident manager, superintendent, or other knowledgeable person at all multi-unit structures to verify addresses and unit designations for each unit. For special places, the lister will visually check those on the list and add any that are missing. Listers will visit living quarters not on their list to obtain the house number and street name address and a mailing address (if different) for each living quarters. This information will be listed on Form D–451B, Block Canvass Add Page, or Form D–451B, Block Canvass Special Place Add Page. For special places, the lister will also obtain a contact person name and telephone number.

BC will improve coverage by verifying addresses on our MAF, making

VOL 63 ISS 12 JA 20 1998 UMI

corrections to those addresses as necessary, deleting nonexistent, uninhabitable, or nonresidential living quarters, capturing non-city style mailing addresses when the posted city-style address is not used for mail, and adding addresses for living quarters missing from the MAF. The processed MAF after BC will be used to label and deliver Census 2000 Questionnaires and for other Census Bureau surveys.

The estimated number of respondents for BC is 27,500,000. The estimated time per response is 2 minutes. The total estimated respondent burden is 916,667 hours.

3. Field Verification for Local Update of Census Addresses (LUCA FV)

This operation will verify the existence of predominately noncity-style addresses that the local government officials add during their review of the MAF. This operation will take place around May of 1999. LUCA FV will increase the integrity of the MAF by validating addresses that are added by local government officials prior to these updates being included in the Census Mailout/Delivery.

Listers will receive Form D–137, LUCA Field Verification Address Listing Page, that will include all addresses within a block that contains at least one add from a LUCA participant. Addresses that need to be verified will be identified on the listing pages by a blank action code field. Listers will conduct a brief interview to verify the existence and address of the specified unit and enter an action code on the listing page indicating that the unit exists or does not exist.

We will verify approximately 5 million addresses across the United States. The estimated time per response is 1.5 minutes. The total estimated respondent burden is 125,000 hours.

In addition to the above, LUCA FV will be conducted in the Census 2000 Dress Rehearsal sites of Columbia, SC, Sacramento, CA, and Menominee, WI. This operation will verify the existence of 100% of the addresses, both city-style and noncity-style, that the local governments have added to the address list during LUCA. The operation will be the same as described above for Census 2000, using Form DX–137, LUCA Field Verification Address Listing Page. The operation will take place in December, 1997.

We will verify approximately 22,423 addresses in the Dress Rehearsal sites. The estimated time per response is 1.5 minutes. The total estimated respondent burden is 561 hours.

4. Update Leave (U/L)

Update/leave will occur in the same counties as specified above for operation 1, Address Listing, and throughout Puerto Rico. Each U/L enumerator will receive an Address Register, which includes a listing and Block Maps, and a pre-addressed Census 2000 Questionnaire for each address included in the listing. The Form D–105A, Address Listing Page, will include a record for each living quarters processed during Address Listing. The Block Maps will show a map spot for each listed structure that contained living quarters. The enumerator will completely canvass each assigned block in March of 2000. U/L will update the inventory of housing units by adding any new residential construction to the Form D–105B, U/L Add Page, and the Block Maps, and will deliver a Census 2000 Questionnaire to each housing unit.

The enumerator will attempt to complete a short interview at each address to verify the address information collected during Address Listing or to obtain the address information for new units. They will also give the respondent the Questionnaire to complete and mail back. (The Questionnaire is covered by a different OMB clearance and is not described in this notice.) When no one is home, the enumerator will place the Questionnaire in a bag and hang it on the doorknob. There will be no callbacks for U/L.

The estimated number of households for U/L is 22.4 million, however, we estimate that the total number of respondents will be 7.5 million. The estimated time per response is 1.5 minutes. The total estimated respondent burden is 187,500 hours.

In addition to the above, U/L will be conducted in the rural portions of the Columbia, SC and Menominee, WI Census 2000 Dress Rehearsal sites. This operation will occur in March and April of 1998. It will update the address lists and Block Maps and deliver the Dress Rehearsal Questionnaire in these counties using Form DX–105A, Address Listing Page, and DX–105B, U/L Add Page. The procedures will be the same as described above for Census 2000. The estimated number of households is 75,000, however, we estimate that the total number of respondents will be 25,000. The estimated time per response is 2 minutes. The total estimated respondent burden is 834 hours.

5. Urban Update Leave (UU/L)

The Urban Update/Leave operation for Census 2000 will be conducted in March 2000, in areas where there is predominately city-style addressing but in which the U.S. Postal Service does not deliver mail to housing units at their posted city-style address. UU/L may also be done in areas where the U.S. Postal Service delivers mail to a central drop point with no identifiable mail receptacles for each individual housing unit. The procedures for this operation are the same as described for operation 4, Update/Leave. The enumerators will use Form D–XXXX, Address Listing Page, and Form D–XXXY, UU/L Add Page, for this operation. The total estimated number of households is 1 million, however, we estimate that the total number of respondents is 334,000. The estimated time per response is 2 minutes. The total estimated respondent burden is 11,134 hours.

6. List/Enumerate (L/E)

List/Enumerate is a method of taking Census 2000 in some very rural parts of the country where we will not have a MAF with mailing addresses prior to the Census. During the period from March 31 through May 1, 2000, enumerators will canvass each assigned block to list each living quarters and spot its location on a Block Map. The enumerator will ask a short series of questions using Form D–104A to determine the household name, mailing address and/or physical location/description of the housing unit. The enumerator will then pick up the completed Census 2000 Questionnaire or enumerate the household using the Questionnaire. (The Questionnaire is covered by a different OMB clearance and is not included in this notice.)

The estimated number of respondents for the listing portion of L/E is 420,000. The estimated time per response is 1.5 minutes. The estimated total respondent burden for the listing portion is 10,500 hours.

7. Master Address File Quality Improvement Program (MAF QIP)

The MAF is a national address list that is being created and continually updated with information from the U.S. Postal Service Delivery Sequence File. The Census Bureau plans to use this file for mailing questionnaires to households for Census 2000 and as a sampling frame for our demographic current surveys. The goal of the MAF QIP is to assess the completeness and accuracy of the housing units on the MAF by providing coverage and geocoding error estimates. The operation consists of creating an independent listing of housing units which will be computer matched to the MAF with a field reconciliation follow up of nonmatched units.

Field Representatives will contact each housing unit in the MAF QIP sample areas to obtain and list address information on Form S–676, Master Address File Quality Improvement Program 1998 Independent Listing Book. Listers will also inquire at each special place and commercial structure to identify housing units. Addresses and geocoding information obtained during the independent listing will be computer matched to the MAF. During the reconciliation phase, field staff will resolve nonmatched housing units by verifying address information using Form S–XXX, Housing Unit Followup Form. The independent listing phase will be conducted in March through July of 1998. The reconciliation phase will be conducted in May through September of 1998.

The total estimated number of respondents for the listing phase is 250,000. The total estimated number of respondents for the reconciliation phase is 20,700. The estimated time per response is 3 minutes for the listing phase and 1 minute for the reconciliation phase. The total estimated respondent burden is 10,000 hours for the listing phase and 345 hours for the reconciliation phase.

A 1999 MAF QIP will also be conducted. The procedures will be similar to the 1998 MAF QIP, however, form numbers, exact workloads, and exact timing have not yet been determined. We estimate the maximum possible number of respondents for the listing phase at 500,000 with approximately 250,000 interviews done in late FY99 and 250,000 interviews done in early FY2000. The reconciliation phase will be conducted in FY2000 with approximately 41,400 respondents. The estimated time per response is 3 minutes for the listing phase and 1 minute for the reconciliation phase. The total estimated respondent burden is 10,000 hours in FY99 and 10,000 hours in FY2000 for the listing phase and 690 hours in FY2000 for the reconciliation phase. (The total number of respondents for the 1999 MAF QIP could be as small as 200,000 which would decrease respondent burden proportionately.)

In addition to the above, an FY97 pilot study to test MAF QIP methodology was conducted in six counties. The procedures for this study were the same as outlined above for the 1998 MAF QIP. The reconciliation phase was still in progress at the end of FY97 and was halted due to the continuing resolution on budget. Field Representatives will resolve the remaining 3,770 nonmatched housing units in November and December of 1997 using Form S–663, Housing Unit Followup Form. The estimated number of respondents is 3,770. The estimated time per response is 1 minute. The estimated total respondent burden is 313 hours.

8. Master Address File Update for Otero County, New Mexico

We will update the current MAF for Otero County, NM by identifying new housing units in the area outside Alamogordo City and field list these housing units to obtain a complete mailing and physical location address. This listing will occur sometime between February and June of 1998. The new units are defined as those coming into existence after September, 1996. The new units will be identified using local administrative records (probably building permits); we do not plan to conduct any large scale block recanvass operation. The new units will be address listed using the forms and procedures described above for American Community Survey counties in operation 1, Address Listing. The estimated number of respondents is 200. The estimated time per response is 2 minutes. The estimated total respondent burden is 7 hours.

II. Method of Collection

The primary method of data collection for all operations will be personal interview by Census Listers or Enumerators using the operation's listing form. In some cases, the interview could be by telephone callback if no one was home on the initial visit. See part I for details for each operation.

III. Data

OMB Number: 0607–0809.

Form Number: The form numbers for some activities have not yet been assigned. See the descriptions of the activities in part I for form numbers where applicable.

Type of Review: Regular submission.

Affected Public: Individuals or households.

Estimated Number of Respondents: Varies by operation, see chart below.

Estimated Time Per Response: Varies by operation, see chart below.

Estimated Total Annual Burden Hours: FY98 140,226; FY99 1,494,167; FY2000 219,824.

Estimated Total Annual Cost: The only cost to respondents is that of their time to respond.

Respondent's Obligation: Mandatory.

Legal Authority: Title 13, United States Code, Sections 141 and 193.

Activity	FY 1998 respondent ($)	FY 1999 respondent ($)	FY 2000 respondent ($)	Average hours per response	Responses per respondent	FY 1998 burden hours	FY 1999 burden hours	FY 2000 burden hours

Certain Cut-to-Length Carbon Steel Plate From Finland; Final Results of Antidumping Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

ACTION: Notice of final results of Antidumping Duty Administrative Review.

SUMMARY: On July 15, 1997, the Department of Commerce (the Department) published the preliminary results of its administrative review of the antidumping duty order on certain cut-to-length carbon steel plate from Finland (62 F.R. 37866). The review covers one manufacturer/exporter, Rautaruukki Oy (Rautaruukki), for the period August 1, 1995 through July 31, 1996.

EFFECTIVE DATE: January 20, 1998.

FOR FURTHER INFORMATION CONTACT: Heather Osborne or Linda Ludwig, Enforcement Group III, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW, Washington, D.C. 20230; telephone (202) 482–3019 or (202) 482–3833, respectively.

SUPPLEMENTARY INFORMATION:

Background

On July 15, 1997, the Department of Commerce (the Department) published in the **Federal Register** (62 FR 37866) the preliminary results of its administrative review of the antidumping duty order on certain cut-to-length carbon steel plate from Finland (58 FR 44165, August 19, 1993). The Department has now completed this administrative review in accordance with section 751 of the Tariff Act of 1930, as amended (the Act).

Under section 751(a)(3)(A) of the Act, the Department may extend the deadline for completion of an administrative review if it determines that it is not practical to complete the review within the statutory time limit of 365 days. On November 3, 1997, the Department extended the time limits for the final results in this case. See Extension of Time Limit for Antidumping Duty Administrative Review, 62 FR 60683 (November 12, 1997).

Applicable Statute and Regulations

Unless otherwise stated, all citations to the Tariff Act of 1930, as amended (the Tariff Act) are references to the provisions effective January 1, 1995, the effective date of the amendments made to the Tariff Act by the Uruguay Round Agreements Act (URAA). In addition, unless otherwise indicated, all references to the Department's regulation are to 19 CFR part 353 (April 7, 1997).

Scope of the Review

The products covered by this administrative review constitute one "class or kind" of merchandise: certain cut-to-length carbon steel plate. These products include hot-rolled carbon steel universal mill plates (*i.e.*, flat-rolled products rolled on four faces or in a closed box pass, of a width exceeding 150 millimeters but not exceeding 1,250 millimeters and of a thickness of not less than 4 millimeters, not in coils and without patterns in relief), of rectangular shape, neither clad, plated nor coated with metal, whether or not painted, varnished, or coated with plastics or other nonmetallic substances; and certain hot-rolled carbon steel flat-rolled products in straight lengths, of rectangular shape, hot rolled, neither clad, plated, nor coated with metal, whether or not painted, varnished, or coated with plastics or other nonmetallic substances, 4.75 millimeters or more in thickness and of a width which exceeds 150 millimeters and measures at least twice the thickness, as currently classifiable in the Harmonized Tariff Schedule (HTS) under item numbers 7208.40.3030, 7208.40.3060, 7208.51.0030, 7208.51.0045, 7208.51.0060, 7208.52.0000, 7208.53.0000, 7208.90.0000, 7210.70.3000, 7210.90.9000, 7211.13.0000, 7211.14.0030, 7211.14.0045, 7211.90.0000, 7212.40.1000, 7212.40.5000, and 7212.50.0000. Included are flat-rolled products of nonrectangular cross-section where such cross-section is achieved subsequent to the rolling process (*i.e.*, products which have been "worked after rolling") for example, products which have been beveled or rounded at the edges. Excluded is grade X–70 plate. These HTS item numbers are provided for convenience and Customs purposes. The written description remains dispostive.

Analysis of Comments Received

We gave interested parties an opportunity to comment on the preliminary results. We received briefs and rebuttal comments from Bethlehem Steel Corporation, U.S. Steel Group, a Unit of USX Corporation, Inland Steel Industries, Inc., LTV Steel Company, Inc., National Steel Corporation, AK Steel Corporation, Gulf States Steel Inc. of Alabama, Sharon Steel Corporation, and WCI Steel Inc., petitioners, and from Rautaruukki Oy (Rautaruukki), a producer/exporter of the subject merchandise. At the request of petitioners and respondent, we held a hearing on October 31, 1997.

Comment 1: Petitioners argue that Rautaruukki's interest revenues should be accounted for and that the Department should adjust Rautaruukki's home market sales prices to account for unreported late payment charges. Petitioners contend that Rautaruukki's stated policy of charging interest to all of its customers for late payments conflicts with Rautaruukki's assertion that in practice, its customers rarely pay interest. Petitioners note that Rautaruukki enters all interest revenues into one general account and argue that charges for late payments constitute interests revenue.

Petitioners assert that the Department confirmed at verification that Rautaruukki's financial records account for total interest revenue received in 1996, but that no information was provided for 1995. Petitioners argue that neither of the transactions cited by respondent support Rautaruukki's claim that it did not accrue and receive interest revenue. Petitioners state that the Department should employ facts available in calculating Rautaruukki's interest revenue due to respondent's failure to provide information on interest revenue earned in 1995 and its failure to identify the sales for which late payment charges were assessed. Petitioners state that, as facts available, the Department should calculate an interest revenue adjustment for all sales for which, pursuant to their terms of payment, payment was recorded as late.

Respondent claims that it has reported interest revenue, and no further adjustment is required. Respondent states the Department verified that interest revenue was properly reported. Respondent contends that it has provided information on the total interest revenue which it received during calender year 1995 and 1996.

Department Position: We partially agree with both petitioners and respondent. At verification, the Department specifically identified one sale solely for verification of interest revenue. As noted in the verification report, the Department verified that for this sale, no interest revenue was received. See Sales Verification Report at 24. We also examined other sales for which the customer had initially been billed for late charges (interest revenue) that were ultimately not paid by the customer. These sales were also properly reported. Rautaruukki reported a negative amount for interest revenue in 1995, and a positive amount for 1996. See Respondent's Rebuttal Brief of September 15, 1997, at 11. Rautaruukki did not, however, allocate interest revenue to 1996 sales in its sales database.

Section 776(a)(2) of the Act provides that if an interested party or any other persons—(A) withholds information that has been requested by the administering authority; (B) fails to provide such information by the deadlines for the submission of the information or in the form and manner requested, subject to subsections (c)(1) and (e) of section 782; (C) significantly impedes a proceeding under this title; or (D) provides such information but the information cannot be verified as provided in section 782(i), the administering authority shall, subject to section 782(d), use the facts otherwise available in reaching the applicable determination under this title.

Because Rautaruukki did not report any interest revenue in its sales database, although the interest revenue was received, the Department must, pursuant to section 776, use facts otherwise available in these final results. We are allocating as facts available the amount of interest revenue reported for 1996 to all 1996 sales on a per-ton basis.

Comment 2: Petitioners argue that Rautaruukki's submitted gross unit prices should be adjusted, because the Department found a very large discrepancy with respect to the reported gross unit price of a pre-selected home market sale. Petitioners claim Rautaruukki deducted the full amount of the credit from the selected sale rather than applying this credit to all sales listed on the invoice. Petitioners contend that since the error was uncovered pursuant to a small sampling, this suggests that similar errors may well exist elsewhere in the dataset. Petitioners argue that based upon variation in prices within a given product control number, the understatement discovered by the Department at verification could also exist in other product control numbers and, in fact, pervade the dataset. Petitioners contend that the Department should make an adjustment to the entire dataset to account for the errors uncovered with the sample sales. Specifically, petitioners suggest that gross unit prices be increased by the percentage that the samples sales were under-reported.

Respondent argues that it has submitted correct home market gross unit price data and that no adjustment is warranted. Respondent claims that the discrepancy in question was the result of offsetting a credit to a customer against a single line item or transaction which was one of several transactions on a single invoice. Respondent argues that this allocation error works both ways. Although the gross unit price of the sale in question was artificially depressed, the gross unit prices of the remaining transactions on the invoice were artificially increased. Overall, according to Rautaruukki, the errors offset each other. Respondent also contends that, as noted during the sales verification, this was a special project credit involving an end-user (shipyard) in Finland, and that such special or one-time projects are rare. Moreover, respondent notes that the Department's verification of other home market sales did not disclose a similar problem.

Department Position: We agree with respondent. At verification, we found that, for one sale a credit to a customer was offset against a single line item, rather than crediting this amount to all the items to which it applied. We agree with respondent that the consequences of this allocation error serve to artificially depress the gross unit price of the sale in question, while artificially increasing the gross unit prices of the remaining transactions on the invoice. We noted that the one sale in question was found to be below cost, and is therefore already being excluded from our calculation of normal value. We found no evidence at verification of any other discrepancies in the reporting of gross unit prices. No further adjustment of reported gross unit prices is warranted for these final results.

Comment 3: Petitioners state that Rautaruukki should be denied any home market credit expense adjustment because the Department determined at verification that the Finnish short-term interest rate that Rautaruukki used to calculate the reported home market credit expense could not be verified. Petitioners argue that the Department must use facts available in establishing the interest rate applicable to the calculation of the home market credit expense, and deny Rautaruukki any home market credit expense adjustment for the final results.

Respondent argues that it submitted information on its home market interest rate and the Department verified Rautaruukki's total interest expenses. Respondent claims that due to time constraints during the sales verification, the Department chose to postpone the verification of Rautaruukki's home market interest rate until the cost verification. Rautaruukki states that during the cost verification the Department reviewed Rautaruukki's interest expense worksheet and verified Rautaruukki's total interest cost. Additionally, Rautaruukki claims that it provided the Department with detailed information regarding borrowings during the POR. Hence, in respondent's view, Rautaruukki's home market interest rate was reported to the Department and is readily verifiable.

Department Position: We agree with petitioners that we were unable to verify Rautaruukki's home market interest rate. The verification report states that, [w]e were unable to verify Rautaruukki's U.S. or HM interest rates during sales verification. See Sales Verification Report at 23. Respondent's claim that the Department chose to postpone the verification of Rautaruukki's home market interest rate until the cost verification is false. We were prepared to conduct this portion of the verification during the sales verification; however, as noted in the verification report, respondent simply referred us to prior submissions listing short-term borrowings. No original loan agreements or proof of payment relative to these loans were provided to the sales verification team. While the cost verification team examined information relating to respondent's overall interest expense, it was unable to verify the interest rate claimed by Rautaruukki in its home market credit calculation. As a result of the failure on the part of respondent to support a claimed adjustment, and thus our inability to verify that claim, we must use partial facts available pursuant to Section 776(a) of the Act. Thus, as facts available we are denying an adjustment for home market credit expenses for these final results.

VOL 63 ISS 12 JA 20 1998 UMI

Comment 4: Petitioners claim that the Department should use facts available to calculate Rautaruukki's U.S. credit expense because Rautaruukki used Finnish interest rates rather than interest rates related to U.S. borrowing in its calculation of credit, and that the Finnish rate submitted by Rautaruukki could not be verified. Petitioners contend that the Department should use an interest rate of nine percent, the short-term interest rate in effect during the POR which the U.S. Customs Service charged on underpayment of antidumping duties.

Respondent claims that it had no U.S. borrowings during the POR. Rautaruukki states that in view of the Department's verification of Rautaruukki's total interest expense and in light of the fact that Rautaruukki had no U.S. borrowings, the Department should use the Finnish short-term borrowing rate submitted by Rautaruukki for the calculation of its U.S. credit expenses.

Department Position: We partially agree with petitioners. It is Department practice to use a U.S. interest rate in the calculation of U.S. credit expenses. If a respondent does not have such borrowing, the questionnaire instructs the party to use a U.S. published commercial bank prime short-term lending rate. Rautaruukki did not do so. Moreover, as noted in Comment 3 above, the Department was unable to verify respondent's home market interest rate. Therefore, pursuant to Section 776 of the Act, the Department must use facts available to calculate Rautaruukki's U.S. credit expense.

In Certain Cut-to-Length Carbon Steel Plate from Sweden; Final Results of Antidumping Duty Administrative Review, 61 FR 15772, 15780 (April 9, 1996) and Certain Corrosion-Resistant Carbon Steel Flat Products from Australia; Final Results of Antidumping Duty Administrative Reviews, 61 FR 14049, 14054 (March 29, 1996) the Department selected the average short-term lending rates calculated by the Federal Reserve as surrogate U.S. interest rates. These rates represent a reasonable surrogate for respondents' U.S. dollar borrowing rates because they are calculated based on a variety of actual dollar loans to actual U.S. customers. We have employed this methodology as facts available in calculating Rautaruukki's U.S. credit expense using the average short-term dollar lending rate effective during the POR. See Analysis Memorandum, dated December 15, 1997.

Comment 5: Petitioners argue that the Department should adjust Rautaruukki's movement expenses related to international freight charges. Petitioners note that Rautaruukki's movement expenses are based on affiliated party transactions with JIT-Trans. In this situation, petitioners note that the Department tests whether movement expenses based on affiliated party transactions reflect arm's-length transactions by comparing those expenses to movement expenses pertaining to non-affiliated party transactions. Petitioners reject Rautaruukki's claim that JIT-Trans's transfer prices reflect an arm's-length price merely because JIT-Trans is profitable overall. In petitioners' view, this claim is contradicted by a direct comparison of JIT-Trans' charge to Rautaruukki with its charge to an unaffiliated party. Petitioners claim that for the final results, the Department should revise this expense upwards by the percentage that the price to the unaffiliated party exceeded that charged to respondent.

Respondent alleges no additional adjustment is required by the Department to its reported movement expenses other than the adjustment already made for affiliated party mark-up charges. Respondent claims that at verification, Rautaruukki provided the Department with documentation to compare movement expenses from arm's length transactions between Rautaruukki and JIT-Trans and movement expenses from transactions between JIT-Trans and non-affiliated party Outokumpu Oy, a Finnish producer of stainless steel products. Rautaruukki cites the explanation for the higher prices charged Outokumpu in the sales verification report: "[t]he rate charged the unaffiliated party is somewhat higher * * * because in the winter it is more expensive to go farther north (due to the ice) and also because it is more expensive to make an additional stop." Respondent contends that the Department concluded that transactions between Rautaruukki and JIT-Trans are at arm's length and argues that no additional adjustment by the Department is required for movement expenses.

Department Position: We partially agree with petitioners. Respondent did not demonstrate that transactions between Rautaruukki and JIT-Trans are at arm's length. In fact the prices charged to an unaffiliated party are greater than those charged to respondent.

Respondent asserted at verification that "[t]he rate charged the unaffiliated party is somewhat higher * * * because in the winter it is more expensive to go farther north (due to the ice) and also because it is more expensive to make an additional stop." Given the geographic location of Rautaruukki and Outokumpu Oy, we find respondent's explanation that some price differential is attributable to the additional expense of going farther north in the winter to be reasonable. However the charges to the affiliated party are higher in summer as well as in winter. (See Sales Verification Exhibit 26). For these final results, therefore, we are increasing Rautaruukki's reported U.S. movement expenses for all shipments by the absolute value of the amount of the difference in price charged the unaffiliated party and Rautaruukki for the summer. See Analysis Memorandum dated December 15, 1997.

Comment 6: Respondent claims that the Department erred in its selection of a weight conversion factor. Respondent states that the Department chose to apply as facts available the lowest conversion factor submitted by Rautaruukki, or 0.9059, because the Department was unable to verify respondent's reported weight conversion factors. Rautaruukki alleges that this conversion factor is aberrational and the Department's use of this factor distorts the verified information submitted by Rautaruukki. Rautaruuki claims that only one product control number in its database had a conversion factor of 0.9059, and that this product control number contains only one observation, a sale of painted plate. Respondent argues that this sale is not an identical or similar match to its U.S. sales under the Department's mode match criteria. Respondent notes that under the Department's model match hierarchy, painted versus not painted is the first factor to be considered. The respondent explained that none of its U.S. sales are of painted plate and argues that in selecting a conversion factor of 0.9059, based solely on painted plate, the Department selected an aberrant non-representative factor. Respondent argues that its submitted data are the most accurate weight conversion factors. Respondent contends that its calculation of theoretical weight was explained in its submissions and at verification. In the event the Department continues to apply a facts available conversion factor, Rautaruukki urges the Department to apply an average of its reported factors, or 0.9870. Respondent argues that unlike the factor used in the preliminary results, at least this factor would be representative of Rautaruukki's submitted data.

Petitioners claim that the facts available weight conversion factor selected by the Department is appropriate. Petitioners disagree that the conversion factor used by the Department is aberrational. Further, petitioners argue that because Rautaruukki failed to provide sufficient support for any of its conversion factors at verification, the Department may make an adverse inference to ensure that the respondent does not benefit from its failure to provide the necessary information. See Certain Internal Combustion Industrial Forklift Trucks from Japan, 62 FR 5592, 5594–95 (Feb. 6, 1997). Petitioners note that the Department may use as facts available data that are reported by the respondent or any other data it deems appropriate. See Uruguay Round Agreements Act, Statement of Administrative Action, A.R. Doc. No. 103–316, 103d cong., 2d sess. at 869–870. Petitioners claim there is no requirement that the facts available selected by the Department reflect the actual data or be the most recent information. See *e.g., Rhone Poulenc, Inc.*, v. *United States*, 899 F.2d 1185, 1190 (Fed. Cir. 1990); *Mitsubishi Belting Limited and MBL (USA) Corp.* v. *United States*, Slip Op. No. 97–28, (CIT March 12, 1997) at 5. As the Department could not verify the conversion factors used by Rautaruukki, in petitioners' view, there is no reason to believe that an average of these unverified factors would be more accurate than the factor used by the Department. Petitioners add that using an average factor would essentially reward Rautaruukki for its failure to provide verifiable conversion factors. Petitioners conclude that the use of an average factor would not satisfy the Department's need to make an adverse inference in this instance and urge the Department to continue to use the factor employed in the preliminary results for the final results.

Department's Position: We agree with petitioners. By not providing verifiable weight conversion factors, when respondent could have done so, we have determined that respondent failed to cooperate by not acting to the best of its ability to comply with a request for information. See Certain Cut-to-Length Carbon Steel Plate From South Africa, 62 FR 61731 (November 19, 1997). The Department first learned that Rautaruukki had not reported sale-specific weight conversion factors at sales verification. Rather, we were told, weight conversion factors were calculated for each product control number. The verification outline clearly states: Provide worksheets showing any conversions from actual to theoretical weight. Rautaruukki did not prepare any such worksheets in advance of verification. When asked at verification to support the weight conversion calculation for a specific product control number, Rautaruukki was unable to do so in the time available at the verification. Consequently, pursuant to section 776(b) of the Act, an adverse inference is warranted in selecting facts available. Thus as facts available, we are continuing to use the weight conversion factor employed in the preliminary results of review. See Certain Cut-to-Length Carbon Steel Plate from Finland, 62 FR at 37,876.

Comment 7: Respondent alleges that the Department erred by failing to consider subject merchandise which is manufactured to shipbuilding specification "A" as identical merchandise. Respondent claims that its customers sometimes demand that identical merchandise, such as shipbuilding plate grade "A," be certified by the national classification society of the country in which the product will be used. Respondent states that the Department has treated all of the grade "A" shipbuilding plate, other than the grade used in the United States, as most similar to this grade, and that the Department assigned a unique weight to the U.S. specification and a different but uniform weight to all other grade "A" shipbuilding plate. Respondent claims that the Department is treating identical merchandise differently based on the identity of the classification society. Respondent contends that it demonstrated repeatedly during this administrative review that all grade "A" shipbuilding plate subject merchandise manufactured to the "A" specification of shipbuilding plate is the same product, regardless of the classification society which provides the certification. Respondent claims that irrespective of national classification society, all grade "A" shipbuilding steel has identical chemistry, delivery condition, elongation, yield strength and tensile strength. Respondent claims that it provided mill certificates, which show not only that the chemical and physical properties are the same for all shipbuilding grade "A" steel, but also demonstrate that steel from the same cast or heat was used to meet orders for grade "A" shipbuilding plate sold to different classification society certifications. Respondent states that it described the procedures that it underwent in order to qualify as a supplier of shipbuilding steels, and notes that in order to be qualified, the various national certification societies used common test pieces and test results. Respondent argues that this interchangeability of test pieces supports its claim that this material is identical and that the various societies apply the same standard for this material.

Petitioners did not comment on this issue.

Department Position: We disagree with respondent. Respondent's argument is based on an examination of the plate that was produced. As we have explained to respondent in this proceeding, the plate specification variable refers to the physical characteristics of the specification. See Analysis Memorandum for the preliminary results of the third administrative review of Certain Cut-to-Length Carbon Steel Plate From Finland (July 7, 1997). Thus, while it is possible to produce plate so that the same plate meets multiple national standards, this in no way demonstrates that the standards themselves are identical. As noted in the final results of the second review, prices can vary based on the specifications to which the product is sold, even though the product is physically identical. See Certain Cut-to-Length Carbon Steel Plate from Finland; Final Results of Antidumping Duty Administrative Review. 62 FR 18468 (April 15, 1997). See also analysis memo. We continue to find that there are certain differences between the various national specifications for grade A shipbuilding plate and are not changing the weights assigned to these products for these final results. We do note, however, that as there was no plate sold in the home market that was made to the same specification as the shipbuilding steel sold in the United States, maintaining the weights assigned to various products will not affect the home market models that are matched to U.S. sales.

Comment 8: Respondent argues that the Department erred by comparing normal cut-to-length carbon steel plate sold to the U.S. market with beveled plate sold in the home market. Respondent claims that beveled plate is a structural steel product which requires separate and additional manufacturing and handling on a different product line. Respondent notes that it has created a special field to identify beveled plate as well as other prefabricated plate products, which may have the same physical characteristics as basic cut-to-length plate, but are manufactured by different processes and have different end uses. Respondent also notes that it has provided information about the different and additional costs associated with the production of beveled plate. Respondent contends that the Department has verified that beveled plate requires additional processing and the different nature of the product is reflected in

VOL 63 ISS 12 JA 20 1998 UMI

Rautaruukki's price list which established an (extra) for beveled plate.

Petitioners allege respondent has failed to demonstrate that beveled plate is not comparable to the plate sold in the U.S. market. Petitioners contend that the Department expressly rejected the arguments raised by respondent in both the first and second administrative reviews. See Certain Cut-to-Length Carbon Steel Plate from Finland, 61 FR 2792, 2795 (January 29, 1996) and Certain Cut-to-Length Carbon Steel Plate from Finland 62 FR 18468, 18471 (April 15, 1997). Petitioners argue that the Department correctly determined in those prior reviews that Rautaruukki failed to establish beveling as a product-matching criterion, and that the Department found that beveled plate does not possess physical characteristics which make it unique from non-beveled plate with regard to applications and uses. Petitioners claim that the Department noted that Rautaruukki had the opportunity to suggest beveling as a characteristic for use in product matching, but failed to do so. See Certain Cut-to-Length Carbon Steel Plate from Finland, 61 FR at 2795. Petitioners argue that nothing has changed with respect to this issue in this review. In petitioners' view, respondent has not established on the record that beveling is a product matching criterion considered by the Department. Petitioners claim that respondent is simply seeking to create its own matching hierarchy. Petitioners state that the support cited by Rautaruukki is the same information that Rautaruukki submitted in the second administrative review information which failed to convince the Department that beveled plate should not be compared to the products sold in the U.S. market.

Petitioners claim that the Department has correctly determined, and as Rautaruukki has conceded, beveled plate products do not possess any physical characteristics that set them apart from non-beveled plate products. Accordingly, petitioners argue that Rautaruukki's contentions regarding the treatment of beveled plate are without merit and should be rejected by the Department.

Department Position: We agree with the petitioners. The Department correctly determined in those prior reviews that Rautaruukki failed to establish beveling as a product-matching criterion, and that the Department found that beveled plate does not possess physical characteristics which make it unique from non-beveled plate with regard to applications and uses. See Certain Cut-to-Length Carbon Steel Plate from Finland, 61 FR 2792, 2795 and Certain Cut-to-Length Carbon Steel Plate from Finland, 62 FR 18468, 18471. The documentation submitted by Rautaruukki in the course of this review does not establish the relevance of beveling as a product matching criterion. We have not changed our treatment of beveled products for these final results.

Comment 9: Respondent contends that the Department failed to convert harbor expenses from Finnish markka to U.S. dollars in its calculation of margin expenses. The respondent suggests that we make an adjustment similar to the adjustment made for international freight charges for affiliated party charges.

Additionally, respondent claims that the Department did not convert direct selling expenses and credit expenses for U.S. sales from Finnish markka to U.S. dollars in the margin calculation program. Rautaruukki reported direct selling and credit expenses in Finnish markka, but the margin calculation program applies these figures in U.S. dollars, resulting in a skewed total for direct expenses for U.S. sales.

Petitioners did not comment on this issue.

Department's Position: We have converted harbor expenses, U.S. direct selling expenses, and U.S. credit expenses from Finnish markka to U.S. dollars. We note that the affiliated party charges were in U.S. dollars so no currency conversion was required for these expenses.

Comment 10: Rautaruukki claims that the Department erred in applying the theoretical weight conversion factor to its verified COP and CV amounts. Rautaruukki argues that the Department should have applied the weight conversion factor only to the sales quantities to insure that all sales were reported on the same (*i.e.*, theoretical weight) basis and not to reported costs which reflect actual costs incurred for delivered or shipped quantities of subject merchandise. Rautaruukki notes that its U.S. sales were all reported on a theoretical weight basis, while some of its home market sales were reported on a theoretical weight basis and some were reported on an actual weight basis. Consequently, for the sales made on a theoretical weight basis, Rautaruukki contends that the costs associated with these sales were reported on a theoretical weight basis, not on an actual weight basis. Therefore, Rautaruukki argues that if the Department decides to apply the conversion factor to costs, it should be applied only to those products sold on an actual weight basis. Rautarrukki suggests that the Department would need to recalculate costs for only two of the three products which were matched in the model match program because one product's costs was reported only on a theoretical weight basis. To recalculate the costs for the other two matched products, Rautaruukki recommends that the Department calculate the relative distribution or allocation of costs associated with each weight basis using the percentage of sales made on each basis. Then, the Department could adjust the costs associated with sales made on an actual weight basis by applying the conversion factor and add this figure to the costs reported on a theoretical weight to arrive at a figure for the cost for all sales on a theoretical weight basis.

Petitioners state that Rautaruukki's claim that cost data are calculated on both theoretical and actual weight basis constitutes new information that the Department has not verified. Petitioners cite the Department's cost verification report which states that to calculate the weighted-average cost for all extras, Rautaruukki used shipped quantities to determine the per ton cost amounts. Because Rautaruukki's case brief dated September 8, 1997, indicates that Rautaruukki calculated the average cost per ton using a combination of costs based on both theoretical weights and actual weights, petitioners argue that Rautaruukki's cost reporting methodology is flawed and the reported amounts are inaccurate and unreliable. Therefore, petitioners cite Final Results of Antidumping Duty Administrative Review: Certain Cut-to-Length Carbon Steel Plate from Sweden, 62 FR 18396, 18398–99 (April 15, 1997), and recommend that the Department reject Rautaruukki's reported per ton costs and apply total facts available.

Department Position: We agree with petitioners that Rautaruukki's cost calculation methodology is flawed in that it relied on production quantities based on both theoretical and actual weights. We disagree with petitioners, however, that Rautaruukki's cost reporting methodology warrants use of total facts available. Under its submission methodology, Rautaruukki first computed a weighted-average cost of manufacturing for the subject merchandise based on two broad product categories, plate and cut-to-length coil. At verification, we confirmed that each of these weighted-average cost categories was calculated by dividing actual costs by total production quantity on an actual weight basis (See Production Reports per February 27, 1997, Submission at Exhibit 3, calculation 3). Rautaruukki then computed an average cost for

extras by multiplying product-specific extra amounts by product-specific sales quantities (some of which were on an actual weight basis, others on a theoretical weight basis) and dividing by the same sales quantities. Because, in the normal course of business, Rautaruukki maintains product-specific sales reports but not product-specific production reports, it used shipped quantities of each product to compute the average cost for extras. Rautaruukki deducted this average cost for extras from the weighted-average cost of manufacturing for each broad product category in order to compute the average base cost for the category. To compute product-specific manufacturing costs, Rautaruukki added to the average base cost the same product-specific extra amounts used to derive the base cost.

By using actual production weights to compute the average costs for each of the broad product categories, and by relying on a mix of theoretical and actual production weights in determining the average cost of extras, Rautaruukki's submitted costs represent a mix of weight bases that do not accurately reflect the per-unit costs incurred to produce the subject merchandise. To correct this flaw, we increased Rautaruukki's reported COP and CV amounts by the theoretical-to-actual weight conversion factor. See Comment 6.

Comment 11: Petitioners argue that the Department should reject Rautaruukki's COP and CV data and use facts available because they contend that Rautaruukki's product-specific cost data are not based on actual costs incurred during the POR, are not supported by source documentation, cannot be reconciled to Rautaruukki's audited financial statements, and are not supported by tests performed by the Department. Petitioners cite Final Results of Antidumping Duty Administrative Review: Certain Cut-to-Length Carbon Steel Plate from Finland, 62 FR 18468, 18472–18473 (April 15, 1997), in which the Department rejected Rautaruukki's cost data in the second administrative review, to support its argument. Petitioners state that the problems identified in the second administrative review persist and that there is insufficient record evidence for the third administrative review to support the Department's reversal of its previous decision.

Petitioners argue that the submitted costs be rejected because the Department verified that product-specific costs are not based on the POR. Petitioners note that all documentation provided by Rautaruukki to substantiate its reported product-specific costs was from outside the POR. Therefore, petitioners maintain that the Department has no reliable basis or record evidence to determine whether the submitted data reflect actual costs for the POR. Petitioners further contend that the Department cannot rely on documentation provided during this review which relates to previous review periods to support Rautaruukki's historical production costs since the Department previously rejected this information.

Rautaruukki argues that the Department's decision regarding costs submitted in this third administrative review must be based on the facts of the current proceeding and not on alleged deficiencies or factual errors in previous administrative proceedings. Rautaruukki asserts that record evidence in the current review clearly states that the Department verified Rautaruukki's submitted product-specific information, reviewed its internal system which tracks quality and dimensional costs by product grade, and reconciled these costs with Rautaruukki's profit-and-loss accounts. Rautaruukki contends that the costs recorded in the quality cost tables dated July 31, 1995, were the costs in effect throughout the POR, and therefore, are a proper basis for calculating product-specific costs. Rautaruukki also states that the Department verified its dimensional extras costs and reconciled these figures with Rautaruukki's financial reports. Lastly, Rautaruukki argues that the Department tested and verified costs for specific products and reconciled these costs with Rautaruukki's financial statements. Therefore, Rautaruukki maintains that its product-specific cost data was verified by the Department to be accurate and reliable.

Department Position: We disagree with petitioners' contention that we must reject totally Rautaruukki's submitted COP and CV data for this review. First, as discussed in Comment 10 above, Rautaruukki relied on actual costs incurred and actual tonnages produced during the POR to calculate weighted-average costs for its broad categories of plates and cut-to-length products. In order to derive the total base cost for each category, Rautaruukki deducted from the weighted-average cost, an amount for the average cost of extras. The company then added back costs for product-specific extras. Contrary to petitioners' assertions, there is nothing inherently unreliable or theoretically unsound about Rautaruukki's underlying cost allocation methodology. Rather, much like other manufacturers that rely on standard costs as a means to distribute actual costs among specific products, Rautaruukki relies on a system of base and standard extra costs to allocate its actual production costs among the company's plate and cut-to-length products. We found this methodology reasonable.

Second, Rautaruukki's product-specific costs are supported by source documentation. In its February 27, 1997, Section D supplemental response, Rautaruukki provided documentation of the detailed calculations used to derive its quality and dimensional extras costs. Rautaruukki notes that these calculations are based on engineering standards and the company's production experience. Petitioners chose not to challenge the validity or accuracy of Rautaruukki's calculations. Instead, the petitioners argue that because Rautaruukki did not update these standards during the POR, the cost of extras as reported by the company are unreliable. For this review, however, we have no reason to believe that Rautaruukki's extra cost calculations, which were based on data used by the company during the POR, do not reasonably represent the cost differences incurred to produce individual products. It is unnecessary for Rautaruukki to update its standard extra costs every year so long as these amounts continue to accurately reflect costs incurred by the company during the year.

Third, the reported costs can be reconciled to Rautaruukki's audited financial statements. During the cost verification, we reconciled Rautaruukki's reported product-specific costs to its audited financial statements noting only a slight difference. See Comment 14 below for further discussion.

Fourth, Rautaruukki's product-specific costs are supported by tests performed by the Department during verification. We tested Rautaruukki's calculations of weighted-average costs, base costs, and extra costs (see cost verification report at pages 7 through 14). During our verification, we determined that the standard costs for extras used by Rautaruukki in the normal course of business during the POR were based on actual production and cost data, engineering standards, and company experience. As discussed above in this comment, we do not believe that it is necessary for Rautaruukki to update every year the tables containing these standard extra costs, where such standard costs continue to reflect the company's production cost experience with reasonable accuracy. In addition, in contrast to petitioners' argument, we

UMI
VOL
63
ISS
12
JA
20
1998

found it reasonable that Rautaruukki reported identical cost of manufacturing amounts for a small number of CONNUMs even though these products had slightly different physical characteristics. We verified the fact that these products had the same cost for various reasons. For example, in some instances, differences in the costs of specific extras offset one another, making the costs of the two products the same in total. In other instances, products with differing plate specifications underwent the same processing and, as a result, incurred the same costs under Rautaruukki's accounting system. Thus, it was not unreasonable for certain of Rautaruukki's products to have identical costs.

Last, to support their argument that the cost data submitted in this review should be rejected, the petitioners cite Final Results of Antidumping Duty Administrative Review: Certain Cut-to-Length Carbon Steel Plate from Finland, 62 FR 18468, 18472–18473 (April 15, 1997), in which the Department rejected Rautaruukki's cost data in the second administrative review. We note that any decision in a specific review must be made on the facts of the record for that review. In this review, as explained above, we were able to verify Rautaruukki's cost extras and found their reporting methodology to be reasonable. As the Department has stated, we review each period independently and may determine that a change in analysis is appropriate. * * * Thus, the Department is not bound in a current administrative review to strictly adhere to the methodology or practice used in a previous review. See Certain Dried Heavy Salted Codfish from Canada, 54 FR 13211, 13213 (March 31, 1989).

Comment 12: Petitioners state that Rautaruukki's variable cost of manufacturing data reported for its home market and U.S. sales differs substantially from the amounts derived from the COP and CV datasets. Petitioners argue that the Department's calculation of variable costs as used for the preliminary determination, which were computed by subtracting the fixed overhead amount reported in the COP dataset from the total cost of manufacturing amount reported in the COP dataset, fails to accurately calculate product-specific costs. Petitioners reason that this methdology is unacceptable because Rautaruukki reported the same fixed overhead amount for every product produced, thereby disregarding fixed-cost differences between products.

As the Department cannot derive accurate product-specific variable costs from Rautaruukki's COP dataset, petitioners recommend that the Department use an adverse facts available percentage of 24.95 percent, the margin from the last administrative review, for calculating the difference in merchandise (difmer) adjustment. As alternative adverse facts available, petitioners suggest that the Department use Rautaruukki's lowest reported home market variable cost and its highest reported U.S. variable cost to calculate the difmer adjustment for all non-identical comparisons. Petitioners assert that use of adverse facts available is appropriate since Rautaruukki failed to submit revised data in response to several requests made by the Department that Rautaruukki ensure that its home market and U.S. sales files reflect the same variable cost of manufacturing amounts as reported in its COP and CV datasets. petitioners cite Final Results of Antidumping Duty Administrative Review: Porcelain-on-Steel Cookware from Mexico, 61 FR 54616, 54618 (October 21, 1996); Preliminary Determination of Sales at Less than Fair Value: Class 150 Stainless Steel Threaded Pipe Fittings from Taiwan, 59 FR 10784, 10785 (March 8, 1994); and Final Determination of Sales at Less than Fair Value: Class 150 Stainless Steel Threaded Pipe Fittings from Taiwan, 59 FR 28432 (July 28, 1994) to support the use of adverse facts available.

Petitioners further contend that if the Department does not use adverse facts available, the Department should at least apply neutral facts available for the difmer adjustment. As neutral facts available, petitioners suggest that the Department apply an amount equal to the twenty percent cap as the difmer adjustment. Petitioners cite Notice of Final Results and Partial Termination of Antidumping Duty Administrative Reviews: Tapered Rolled Bearings, Four Inches or Less in Diameter, and Components Thereof, from Japan, 59 FR 56035, 56048, which was upheld in *NTN Bearing Corp. of America* v. *United States*, 924 F. Supp. 200 (Ct. Int'l Trade 1996), to show that the Department's practice has been to apply an amount equal to the twenty percent cap in those instances where a respondent fails to provide variable cost data in the requisite form for the difmer test.

Rautaruukki disagrees with the petitioners' claim that the Department erred in calculating Rautaruukki's variable costs by subtracting fixed overhead costs from the total cost of manufacture reported in the COP and CV datasets. Rautaruukki maintains that the Department's calculation is acceptable because the Department verified that the cost data are in accordance with its practice and generally accepted accounting principles.

Department Position: We agree with petitioners that Rautaruukki incorrectly reported its fixed manufacturing costs by reporting only amounts related to producing base products (*i.e.*, all products were assigned the same amount of fixed manufacturing costs). As a result, the methodology used by the Department for the preliminary determination (determining product-specific variable cost of manufacturing by subtracting the reported product-specific fixed cost of manufacturing from the product-specific total cost of manufacturing) failed to account for fixed-cost differences arising from processing route differences. This flaw in methodology, however, has no impact on the similar product matches for Rautaruukki in this review. The only difference between home market sales and the U.S. sales to which they are matched is the specification of the steel. All other model match criteria, including width and thickness, and identical. With respect to specification, all U.S. sales and the home market sales that are matched to those U.S. sales are shipbuilding grade A material. As respondent has argued throughout this proceeding (See Comment 7), all shipbuilding grade A material is manufactured the same regardless of the national classification standard to which it is ultimately certified. Petitioners have not disputed these claims. Thus, with respect to these sales, there are essentially no differences in the total cost of manufacturing for the matched products, and no differences in the processing routes or machines used in production. Accordingly, we consider the methodology used by the Department for the preliminary results reasonable and non-distortive for purposes of this review. We are continuing to use this methodology for these final results.

Comment 13: Petitioners claim that Rautaruukki improperly reduced its costs associated with the production of subject merchandise by including revenue from sales of slab in the amount it reported for scrap and sales of by-products. Petitioners note that slabs are semi-finished, non-subject merchandise and that the income from sales of slab should not be deducted from costs. Petitioners recommend that the Department exclude Rautaruukki's reported scrap amount from the calculation of total costs because the Department has no way of knowing what percentage of Rautaruukki's scrap amount is from sales of slab.

Rautaruukki responds that it did not report slab as a by-product and offset its COP and CV data by revenues from the sale of slabs. Rautaruukki notes that the Department verified that by-products reported include burnt lime, coke, coal tar, sulfur, benzene, nut coke, and utilities. Rautaruukki maintains that slab is not included as a by-product offset in its submitted costs.

Department Position: We agree with Rautaruukki. Although Rautaruukki officials stated that in their management accounting monthly reports, they included sales of slabs with by-product turnovers (See Sales Verification Report at 5), we found no evidence to show that Rautaruukki had improperly offset reported production costs with revenue from the sale of slab. As discussed in our cost verification report at page 7, by-product revenues offset to the cost of subject merchandise included burnt lime, coke, coal tar, sulfur, benzene, nut coke, and utilities. Because we have no evidence that Rautaruukki included sales of slab in the by-product offset, we made no adjustment.

Comment 14: Petitioners argue that if the Department accepts Rautaruukki's product-specific cost data, the Department should make an adjustment to account for the difference between Rautaruukki's May 5, 1997 COP dataset, which was submitted after verification, and its audited financial statements. Petitioners note that the reconciliation reviewed by the Department was based on data submitted prior to verification and that the May 5, 1997 dataset no longer reconciles to Rautaruukki's financial statements. As Rautaruukki did not explain whether the discrepancy between its revised COP dataset and its financial statements relates to subject or non-subject merchandise, petitioners recommend that the Department adjust the submitted data by the amount of the discrepancy.

Rautaruukki replies that the slight discrepancy between its costs submitted on May 5, 1997, and its audited financial statements represents omitted costs of products sold to third countries that were outside the scope of this administrative review. Rautaruukki further contends that the Department verified the accuracy and validity of its cost reconciliation and its production costs for plate. Therefore, Rautaruukki concludes that an adjustment to its reported costs is unwarranted.

Department Position: We agree with practitioners. The reconciliation reviewed by the Department did not include the correction of errors identified at the beginning of verification (See Cost Verification Report at 3, 6, and 7). Based on our revised reconciliation, it appears that the COP and CV data submitted by Rautaruukki in its May 5, 1997, response did not capture all costs as recorded under the company's financial accounting system. As we have no evidence to support Rautaruukki's contention that the difference relates to third country sales that were outside the scope of this administrative review, we adjusted Rautaruukki's submitted costs for this small difference. See Analysis Memorandum dated December 15, 1997.

Final Results of Review

As a result of our review, we have determined that no margin exists for Rautaruukki Oy for the period of August 1, 1995 through July 31, 1996. The Department will issue appraisement instructions directly to the Customs Service.

Furthermore, the following deposit requirements will be effective upon publication of this notice of final results of review for all shipments of plate from Finland entered, or withdrawn from warehouse, for consumption on or after the publication date, as provided for by section 751(a)(1) of the Act: (1) The cash deposit rates for the reviewed company will be zero; (2) for previously reviewed or investigated companies not listed above, the cash deposit rate will continue to be the company-specific rate published for the most recent period; (3) if the exporter is not a firm covered in this review, or the original less than fair value (LTFV) investigation, but the manufacturer is, the cash deposit rate will be the rate established for the most recent period for the manufacturer of the merchandise, and (4) if neither the exporter nor the manufacturer is a firm covered in this review, the cash deposit rate will be 40.36 percent. This is the all others rate from the amended final determination in the LTFV investigation. See Amended Final Determination Pursuant To CIT Decision: Certain Cut-To-Length Carbon Steel Plate from Finland, 62 FR 55782 (October 28, 1997). These deposit requirements when imposed, shall remain in effect until publication of the final results of the next administrative review.

This notice serves as a final reminder to importers of their responsibility under Section 351.402(f) of the Department's regulations to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Secretary's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

This notice also serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with Sections 351.305 of the Department's regulations. Timely notification of return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

This administrative review and this notice are in accordance with section 751 (a)(1) of the Act (19 U.S.C. 1675(a)(1)) and Sec. 351.213 and 351.221 of the Department's regulations.

Dated: January 12, 1998.

Robert S. LaRussa,

Assistant Secretary for Import Administration.

[FR Doc. 98–1277 Filed 1–16–98; 8:45 am]

[A–423–805]

Certain Cut-to-Length Carbon Steel Plate From Belgium; Final Results of Antidumping Duty Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

ACTION: Notice of Final Results of Antidumping Duty Administrative Review.

SUMMARY: On September 15, 1997, the Department of Commerce (the Department) published the preliminary results of its 1995–96 administrative review of the antidumping duty order on cut-to-length carbon steel plate from Belgium (62 FR 48213). This review covers one manufacturer/exporter of the subject merchandise, Fabrique de Fer de Charleroi, S.A. (FAFER), and its subsidiary, Charleroi (USA) for the period August 1, 1995 through July 31, 1996.

EFFECTIVE DATE: January 20, 1998.

FOR FURTHER INFORMATION CONTACT: Maureen McPhillips or Linda Ludwig, Office of AD/CVD Enforcement, Group III, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington,

VOL 63 ISS 12 JA 20 1998 UMI

DC 20230; telephone (202) 482–0193 or 482–3833, respectively.

SUPPLEMENTARY INFORMATION:

Background

On September 15, 1997, the Department published in the **Federal Register** (62 FR 48213), the preliminary results of the 1995–96 review of the antidumping duty order on certain cut-to-length carbon steel plate from Belgium (58 FR 44164). At the request of petitioners, we held a public hearing, which included a closed session for the discussion of proprietary information, on November 18, 1997. The Department has now completed this administrative review in accordance with section 751 of the Tariff Act of 1930, as amended (the Act).

Applicable Statute and Regulations

Unless otherwise indicated, all citations to the statute are references to the provisions effective January 1, 1995, the effective date of the amendments made to the Tariff Act of 1930 by the Uruguay Round Agreements Act (URAA). In addition, unless otherwise indicated, all references to the Department's regulations are to 19 CFR part 353 (April 1, 1997).

Scope of the Order

The products covered by this administrative review constitute one "class or kind" of merchandise: certain cut-to-length carbon steel plate. These products include hot-rolled carbon steel universal mill plates (i.e., flat-rolled products rolled on four faces or in a closed box pass, of a width exceeding 150 millimeters but not exceeding 1,250 millimeters and of a thickness of not less than 4 millimeters, not in coils and without patterns in relief), of rectangular shape, neither clad, plated nor coated with metal, whether or not painted, varnished, or coated with plastics or other nonmetallic substances; and certain hot-rolled carbon steel flat-rolled products in straight lengths, of rectangular shape, hot rolled, neither clad, plated, nor coated with metal, whether or not painted, varnished, or coated with plastics or other nonmetallic substances, 4.75 millimeters or more in thickness and of a width which exceeds 150 millimeters and measures at least twice the thickness, as currently classifiable in the Harmonized Tariff Schedule (HTS) under item numbers 7208.40.3030, 7208.40.3060, 7208.51.0030, 7208.51.0045, 7208.51.0060, 7208.52.0000, 7208.53.0000, 7208.90.0000, 7210.70.3000, 7210.90.9000, 7211.13.0000, 7211.14.0030, 7211.14.0045, 7211.90.0000, 7212.40.1000, 7212.40.5000, and 7212.50.0000. Included are flat-rolled products of nonrectangular cross-section where such cross-section is achieved subsequent to the rolling process (i.e., products which have been "worked after rolling")—for example, products which have been beveled or rounded at the edges. Excluded is grade X–70 plate. The HTS item numbers are provided for convenience and Customs purposes. The written description remains dispositive.

Analysis of Comments Received

We gave interested parties an opportunity to comment on the preliminary results of review. The Department received briefs and rebuttal briefs from the petitioners, Bethlehem Steel Corporation, U.S. Steel Company, Inc., (a Unit of USX Corporation), Inland Steel Industries, Inc., Geneva Steel, Gulf States Steel Inc. of Alabama, Sharon Steel Corporation, and Lukens Steel Company, and the sole respondent in this case, Fabrique de Fer de Charleroi. Based on our analysis of the issues discussed in these briefs, we have changed these final results of review from those published in our preliminary results.

General Comments

Comment 1: The petitioners argue that the Department must deduct actual antidumping and countervailing duties paid by respondents' affiliated importers from the price used to establish export price (EP) or constructed export price (CEP).

Department's Position: We disagree with petitioners. We continue to adhere to the statutory interpretation articulated in the final results of Certain Cold Rolled and Corrosion-Resistant Carbon Steel Flat Products from Korea: Final Results of Antidumping Duty Administrative Reviews (62 FR 18404), under which we do not make the deduction. The Department's decision in that case not to make the deduction was recently affirmed by the Court of International Trade (CIT), *See Ak Steel Corp. et al.* v. *United States*, Slip Op. 97–160 (CIT, December 1, 1997).

Comment 2: The petitioners contend that the Department's duty absorption determination in the preliminary results is generally flawed for two major reasons.

First, petitioners assert that by inviting the parties to submit new factual information after verification in order to rebut its presumption that "duties will be absorbed for those sales which were dumped," the Department undermines the statutory and regulatory requirement that it rely only on verified information in the *Final Results*. In petitioners' view, allowing respondents to place information on the record which cannot be verified places petitioners at a distinct disadvantage, and is inconsistent with a recent ruling by the Court of Appeals for the Federal Circuit. *See Creswell Trading Co.* v. *United States*, 15 F.3d 10543, 1060 (Fed. Cir. 1994). They urge the Department to abandon this poorly conceived method and to collect all relevant duty absorption evidence at the same time as it collects information necessary to complete its dumping analysis.

Second, petitioners believe the Department's methodology has the potential to understate the extent to which antidumping duties were absorbed. The Department's methodology, they affirm, can give the casual reader the mistaken impression that the total amount of duties absorbed was limited to the dumped sales included in the final antidumping duty calculated. As the overall dumping margin is weight averaged, petitioners contend, the true level of dumping, and thus of duty absorption, is significantly greater than the overall margin. To resolve this problem, petitioners argue that the Department should state its duty absorption finding as the percentage of sales dumped along with the average level of dumping *for those sales* (emphasis in the original). For example, if five percent of a respondent's sales were dumped, and the overall weighted-average dumping margin were forty percent, the Department should state that the respondent absorbed duties on five percent of sales at a margin of forty percent.

Department's Position: After careful consideration of petitioners' views, we have left our duty absorption methodology unchanged from the preliminary results.

Contrary to petitioners' contention that we violated the statute by inviting submission of new factual information after verification, our regulations allow us to invite submission of factual information from parties at any time during a proceeding. If a party submits information as a result of such an invitation, we afford all other interested parties an opportunity to comment in writing on such information (see, § 353.31(a)). *See* Comment 6 for the Department's position on the duty absorption issue as it relates specifically to FAFER. Moreover, the statute and regulations do not require that all information submitted to the Department be examined at verification.

See, Monsanto v. *United States*, 698 F. Supp. 275,281 (CIT 1988).

We believe the approach suggested by petitioners is inappropriate and unreasonable for the following reasons: (1) A transaction-specific determination on duty absorption is impractical because dumping margins on individual transactions are "business proprietary;" (2) Petitioners' approach would result in an artificially inflated duty absorption percentage which would cause unnecessary confusion. In a hypothetical case where, if only one sale were dumped out of one hundred U.S. sale transactions, but at a margin of twenty percent, petitioners apparently would have the Department determine that duty absorption had occurred at a rate of twenty percent on one percent of the sales. We find this approach inappropriate and not mandated by either statute or regulation. Our analysis focuses on the entire POR. We find that our methodology better represents absorption during the POR.

Accordingly, for purposes of these final results, we have left our duty absorption methodology unchanged.

Company-Specific Comments

Comment 1: The petitioners claim that total facts available is warranted in this case because the ultimate ownership of FAFER and the full extent of the company's affiliations remain largely unknown despite the Department's repeated requests for such information. The petitioners contend that party affiliation can affect every aspect of the Department's analysis, including the arm's-length test, model matching, and the sales-below-cost test. Therefore, the petitioners request that the Department employ total facts available for the final results.

The petitioners note that in the preliminary results the Department found that FAFER is affiliated to a steel service center to which it sold subject merchandise during the POR. According to petitioners, FAFER's refusal to report downstream sales of this reseller violated the Department's explicit instructions in its questionnaire *not* to report sales to affiliated resellers in the home market, but instead to report "downstream sales," *i.e.*, "the resales by the affiliates to unaffiliated customers." In addition, the petitioners claim that FAFER failed to contact the Department immediately, as instructed, if it would be unable to report downstream sales as requested.

The petitioners point out that in its response to the Department's supplemental questionnaire, FAFER once again failed to report the requested downstream sales data, but claimed that the service center "must * * * be considered as an unaffiliated customer" because FAFER is only a minor shareholder of (the service center) and as a result has no control on it." *See* FAFER's January 13, 1997 Letter to the Department of Commerce at 12–13. The petitioners argue that FAFER's persistent attempts to obscure the true nature of its corporate structure compelled the Department to make an adverse inference with regard to the level of the Boël family's equity holdings in FAFER and consequently, FAFER's sales to this customer were subjected to and failed the arm's-length test. Furthermore, the petitioners claim that the egregious nature of FAFER's refusal to provide the requested information is compounded by the fact that some of the information in question ultimately has proven to be publicly available from other sources.

The petitioners state that the Department has, in the past, determined that the application of facts available is warranted in certain instances in which a respondent fails to report downstream sales. For example, in Certain Cold-Rolled Carbon Steel Flat Products from Argentina, 59 FR 37062, 37077 (July 9, 1993), the petitioners state that "when the respondents could not, or would not, report downstream sales, we applied margins based on BIA to any U.S. sale matched only to a sale to a related reseller in the home market that failed the arm's-length test." The petitioners believe that such an approach should be used in this case.

The petitioners acknowledge that the Department may exempt respondents from reporting downstream sales if they are "unable" to obtain this information, but contend that FAFER has not met this burden. In fact, according to the petitioners, FAFER should have been able to provide the requested data because FAFER and the service center are affiliated not only through equity holdings, but also through extensive overlapping membership of their boards of directors and through family groupings.

Consequently, the petitioners recommend that the Department make an adverse inference and employ total facts available, using a dumping margin of 42.64 percent, the highest margin alleged in the original petition; or, in the alternative, the margin of 13.31 percent from the less-than-fair-value (LTFV) investigation.

The respondent counters that there is no statutory provision requiring the Department to use the downstream sales of an affiliated reseller, and petitioner fails to cite any legal support for any requirement on the Department to do so, particularly where the finding of affiliation is one based on facts available in the first instance. Moreover, the respondent contends that the Department has already resorted to facts available in determining that the steel service center is an affiliated reseller in the home market, and has therefore already acted in a manner adverse to respondent's interests (since this allowed the Department to conduct the arm's-length test, which led to the elimination of all identical matching home market sales to that service center). In FAFER's opinion, the Department should dismiss the petitioners' request that we resort to total facts available because FAFER did, in fact, cooperate with the Department to the fullest extent possible, reporting downstream sales to at least one affiliated reseller. Finally, FAFER maintains that it did not have the authority to obtain downstream sales data from the service center in question.

Department's Position: We have determined that FAFER and the steel service center to which FAFER sold subject merchandise during the POR are affiliated by means of Boël family control, pursuant to section 771(33) (*see*, Certain Cut-to-Length Carbon Steel Plate from Belgium; Preliminary Results of Antidumping Duty Administrative Review (62 FR 48213)).

Section 776(b) of the Act requires that if an interested party fails to cooperate by not acting to the best of its ability to comply with the Department's request for information, the Department may use an adverse inference in selecting from the facts otherwise available. Thus, we may resort to adverse facts available in response to FAFER's failure to report downstream sales unless FAFER establishes that it could not compel its affiliate to report those downstream sales (*cf.*, Notice of Final Results and Partial Recission of Antidumping Duty Administrative Review; Roller Chain, Other Than Bicycle, From Japan (62 FR 60472, 60476) (November 10, 1997)). Although FAFER claims that it could not compel its affiliated customer to provide downstream sales information, we cannot accept this claim based solely on the information FAFER has provided. Respondent has the burden of proof to show that it cannot compel the reporting of downstream sales. However, recognizing that the Department did not inform FAFER of certain deficiencies in its attempt to establish such a claim, we have elected not to use adverse facts available.

As the result of our conclusion that FAFER and the steel service center were indeed affiliated, we applied our arm's-length test and found that sales to the

VOL 63 ISS 12 JA 20 1998 UMI

affiliated customer, the steel service center, were not made at arm's-length prices, *i.e.*, at prices comparable to prices at which the respondent sold identical merchandise to unaffiliated customers. In addition, based on the Department's previous determination to disregard sales made at below the cost of production (COP) in the original LTFV investigation, we had reasonable grounds to believe or suspect that sales of the foreign like product under consideration for the determination of NV in this review may have been made at prices below the COP, as provided by section 773(b)(2)(A)(i) of the Act. Therefore, pursuant to section 773(b)(1) of the Act, we initiated a COP investigation of sales by FAFER in the home market. The results of the sales-below-cost test revealed that the remaining home market sales to unaffiliated parties which provided contemporaneous matches with the U.S. sales, failed the sales-below-cost test and could not be used for the calculation of normal value (*see*, Certain Cut-to-Length Carbon Steel Plate from Belgium: Preliminary Results of Antidumping Duty Administrative Review (62 FR 48213)). Therefore, in accordance with section 773(a)(4) of the Act, we have continued to disregard all home market sales and have used constructed value as the basis for normal value for these final results.

Comment 2: Although the petitioners do not dispute that the commission that FAFER paid to its agent in connection with U.S. sales represents a reasonable proxy for FAFER's unreported U.S. indirect selling expenses, they do object to the commission amount applied by the Department in its margin calculation.

The petitioners state that since FAFER did not provide any documents regarding its commission payments to Charleroi USA, the Department attempted to calculate the commission. However, the petitioners maintain that the commission amount calculated by the Department is plainly inconsistent with information on the record in this review.

In addition, the petitioners assert that the disparity between the U.S. commission amount and the home market commission amount underscores their assertion that the figure used by the Department is not an accurate measure of FAFER's U.S. commission expense.

The petitioners contend that the record provides sufficient information to calculate properly the commission amount to deduct from CEP. They note that in its response to the Department's questionnaire, FAFER states that it pays its affiliate, Charleroi USA, a commission calculated as a specific rate of "the minimum prices mentioned in FAFER's (sic) price guide." (*see*, Section A Response). They suggest that this evidence on the record provides sufficient information for the Department to calculate properly the commission amount to deduct from constructed export price. The petitioners urge the Department to use this commission rate applied to the price in the price guide as facts available for FAFER's U.S. commission expense.

In its brief, FAFER rejects the petitioners' claim that the Department used the incorrect amount when deducting from CEP the commission paid to its affiliate, Charleroi U.S.A. Moreover, FAFER maintains the petitioners' contention that the Department should use the rate mentioned in its Section A response reveals a misinterpretation of FAFER's commission policy on the part of petitioners. FAFER contends that its Section A statement was a general policy statement and, as indicated by the context of item 3.1 of the Section A response, is subject to the circumstances under which sales are actually negotiated, as well as to the resulting price. For the particular sale at issue, FAFER states that the general policy on commissions was superseded by the facts and circumstances of the sale, and the Department, based upon the records of the sale reviewed at verification, determined the commission actually paid per metric ton. In FAFER's opinion, in light of the availability of specific sales data, there is no need for application of a general policy which did not take effect in the case of the sale in question.

Furthermore, in its rebuttal brief, FAFER states that upon further investigation of the U.S. sales documentation, it has determined that it did not pay any commissions to its U.S. affiliate during the POR and no basis exists for imputing an amount to its one U.S. sale. FAFER cites to U.S. Sales Verification Report, Exhibit 10 as proof that no U.S. commission was paid. FAFER asserts that this evidence backs up its submissions to the Department in which it unambiguously stated that its affiliate, Charleroi U.S.A., received no commission on the subject sale.

FAFER also asserts that the amount the Department used as the U.S. commission expense in its preliminary results was probably, to the best recollection of FAFER's counsel who was present at verification, a service charge by transmitting banks. FAFER urges the Department not to increase the U.S. commission amount, as petitioners request, but reduce FAFER's commission amount to zero.

In rebuttal, the petitioners assert that FAFER is attempting to downplay its stated policy regarding its commission payments to affiliates and seeking to recast its commission policy to accommodate the amount used in the preliminary results. The petitioners maintain that, contrary to FAFER's contention, its section A response states that commissions may be paid either by permitting the affiliated agent to withhold a portion of the sales proceeds, or by issuance of a credit note after the transaction is completed (*see* Letter from Barnes Richardson & Colburn to the U.S. Department of Commerce, at 4 (October 21, 1996)). The petitioners maintain that this statement is evidence that although the method of payment may vary from sale to sale, there is no indication that the commission amount itself may vary. Therefore, the petitioners reiterate their contention that the Department should deduct the appropriate commission amount from CEP and not the inaccurate amount used in the preliminary results.

Moreover, the petitioners note that FAFER's failure to report indirect selling expenses incurred in the U.S. resulted in the Department's use of the commission amount that FAFER paid its agent as the facts otherwise available to fill this void in FAFER's data. While the petitioners fully support the Department's determination to make this adjustment to CEP as facts available for unreported U.S. indirect selling expenses, they assert that the Department should use the commissions that FAFER paid in connection with U.S. sales only if those commissions represent a reasonable proxy for FAFER's unreported U.S. indirect selling expenses. The petitioners point out that in order to give effect to the purpose of the facts available provision of the statute, the information selected as facts available must have probative value, and must be sufficient to induce respondents to respond fully to the Department's information requests in the future (*see, Rhone Poulenc, Inc.* v. *United States*, 899 F.2d 1185, 1190–91 (Fed. Cir. 1990)). Should the Department erroneously determine that the understated commission amount used in the preliminary results is accurate, the petitioners suggest a more accurate amount for indirect selling expenses derived from Charleroi USA's financial statements.

Department's Response: We agree with the respondent's contention that further examination of the U.S. sales documentation obtained at verification reveals that FAFER did not pay any commission on the U.S. sale in question. We also agree with petitioners that the U.S. commission amount calculated by the Department and used in the preliminary results as a proxy for FAFER's U.S. indirect selling expenses is inappropriate and does not reflect an adverse inference. Such an inference is justified by FAFER's refusal to comply with the Department's requests for information on its U.S. indirect selling expenses.

The commission amount used by the Department in the preliminary results was an unrealistically low commission rate and inconsistent with the commission rate reported by FAFER in its Section A response at 4 (*see* the Department's October 8, 1997, Internal Memorandum from Helen Kramer to the File). Moreover, FAFER acknowledges that the U.S. commission amount used in the preliminary results probably represented a service fee charged by transmitting banks (*see*, Respondent's Rebuttal Brief, October 22, 1997 at 4, Footnote 8), not a commission amount. Therefore, for these final results, while we have continued to use FAFER's U.S. commission expense as facts available for FAFER's failure to report U.S. indirect selling expenses (*see*, Analysis Memorandum from Analyst to the File, January 12, 1998), we are using a different estimate of this expense. We find that the commission rate FAFER typically pays its U.S. affiliate is the most reasonable estimate of U.S. indirect selling expenses (*see*, FAFER's Section A Response at 4).

Comment 3: The petitioners note that in its preliminary results, the Department subtracted home market commissions from CV as a circumstance-of-sale adjustment, but did *not* include the value of home market commissions in the calculation of the CV itself. The petitioners state that pursuant to statutory mandate, the Department's margin calculation program should include all direct selling expenses in the calculation of CV, including commissions. *See* 19 U.S.C. § 1677(e)(2)(A).

FAFER maintains that the filed designated general and administrative (G&A) expenses already includes amounts reported in its Section D response as home market commissions. According to the respondent, the Department verified FAFER's reported G&A amounts which included commissions, and to include them again in the calculation of CV would result in double-counting. FAFER cites generally to Cost Verification Report, March 24, 1997, at p. 26 and Cost Verification, Exhibit 7a in support of its position.

Department's Position: We agree with petitioners. In its original Section D submission of November 18, 1996, FARER noted that commissions were included in the variable field G&A. In its submission of January 21, 1997, FAFER, on instructions from the Department, reported home market commissions in a separate field in sections B and C. At the sales verification, we determined that the commission field was zero and the indirect selling expense field included only commissions paid to its affiliate. At the cost verification, the Department reviewed FAFER's G&A calculation and found it contained only general and administrative items. At verification FAFER did not indicate that any of the G&A expense categories included selling expenses. A review of the Cost Verification Report and Exhibit 7a of that report, cited by the respondent, supports the Department's conclusion that home market commission expenses were not included in G&A expenses.

The absence of any verified account which can be tied to home market commissions leaves us no choice but to conclude that home market commissions are not included in FAFER's reported G&A expenses. Therefore, we agree with petitioners that the Department erroneously understated CV in its preliminary results by not including home market commissions, pursuant to 19 U.S.C. § 1677b(e)(2)(a), in its calculation of CV. For these final results, we have added home market commissions in calculating CV (see, Analysis Memorandum from Analyst to the File, January 12, 1998).

Comment 4: The petitioners contend that in its calculation of CV profit in the preliminary results, the Department did not determine the total cost and the profit rate on the same basis. They maintain that home market commissions were included in the denominator of the ratio to determine that profit rate, but they were not included in the total costs multiplied by the profit rate to determine the per unit amount of CV profit. Therefore, they conclude that the Department should revise its margin calculation program to ensure that commissions are treated consistently throughout the Department's CV calculations.

FAFER counters that for the same reason it articulated in regard to commissions (*see* Comment 3), the Department should disregard the petitioner's request to recalculate CV profit.

Department's Position: We agree with petitioners. In order to calculate CV correctly, we must include commissions in the total costs multiplied by the profit rate in our calculation of CV profit. Accordingly, we have changed the computer program for these final results (*see* Comment 4 above).

Comment 5: The petitioners assert that certain of FAFER's claimed home market indirect selling expenses were, in fact, commissions, as indicated in the Department's Sales Verification Report at 11. In the petitioner's opinion, it seems incredible that a company would not incur any home market indirect selling expenses and, therefore, the Department should rely on the facts available and increase FAFER's reported SG&A expense, using the sales and cost of goods sold figures from FARER's unconsolidated statements.

FAFER maintains that no basis exists for increasing its calculated SG&A expense rate by the petitioner's randomly chosen percent because (1) the petitioners provide no mathematical explanation for this figure, and (2) any amounts that the Department would ordinarily deem indirect selling expenses were included in FAFER's SG&A rate, which reconciled with its financial statement at verification.

Department's Position: We agree with petitioners. As we stated in our response to Comment 3 above, home market indirect selling expenses are not included in the G&A filed or the indirect selling expense field. In addition, despite the Department's request in its original questionnaire and in its supplemental questionnaire of December 23, 1996, FARER failed to report any home market indirect selling expenses or the absence of any indirect selling expenses.

Therefore, pursuant to section 776(A)(2)(A) of the Act, we have employed the facts available for FAFER's home market indirect selling expenses. As a proxy for the unreported home market indirect selling expenses, we have added a percentage amount derived by deducting the G&A amounts reported by FAFER from the SG&A value stated on FAFER's unconsolidated financial statement, and then dividing the resulting difference by the cost of goods sold (*see*, Analysis Memorandum, January 12, 1998).

Comment 6: FAFER notes that the Department in its preliminary results found that the antidumping duties have been absorbed by FAFER because the record did not permit a conclusion that the unaffiliated purchaser in the United States will pay the ultimate assessed duty. The Department invited interested parties to submit evidence to the contrary within 15 days of the date of publication. FAFER states that Charleroi U.S.A. received a letter from the unaffiliated purchaser certifying that

VOL 63 ISS 12 JA 20 1998 UMI

company's irrevocable commitment to pay the antidumping duty at issue. This letter was submitted (and served) in a timely manner, and should put the issue to rest in FAFER's view. FAFER also requests that the Department decrease the preliminary margin of 0.22% accordingly.

In rebuttal, the petitioners assert that the Department's invitation to FAFER to submit new factual information after verification is contrary to the Tariff Act of 1930, as amended, and the Department's regulations requiring that the Department rely only on verified information in its final results for this review. *See* 19 U.S.C. § 1677m(i).

The petitioners believe that FAFER's submission purporting to demonstrate that it did not absorb antidumping duties should be rejected for the following reasons: (1) The document from the customer to FAFER was dated September 29, 1997, only one day before it was filed with the Department and, therefore, not part of the original terms of sale; (2) the document is simply a one page letter, not notarized, containing no indication that it is a contractual obligation; and (3) the document cannot be relied upon because it has not been verified by the Department.

In conclusion, the petitioners assert that the Department should reject FAFER's submission for the reasons noted above, and reaffirm its determination that FAFER and its affiliated importer absorbed antidumping duties.

Department's Position: We agree with petitioners as to the results of this duty absorption inquiry, but not as to the rationale. In our preliminary results of review, at the request of petitioners, the Department undertook a duty absorption inquiry. The Act provides for a determination on duty absorption if the subject merchandise is sold in the United States through an affiliated importer. In this case, the reviewed firm sold through an "affiliated" importer within the meaning of section 751(a)(4) of the Act. We preliminarily determined that FAFER had absorbed the antidumping duties on one hundred percent of its U.S. sales because we could not conclude from the record that the unaffiliated purchasers in the United States had agreements to pay the ultimately assessed duty.

We invited interested parties to submit evidence that the unaffiliated purchasers in the United States have agreements to pay any ultimately assessed duties charged to the affiliated importer, Charleroi, USA. In a timely manner, FAFER submitted a statement from the customer that he "[would] irrevocably commit to make payments on any antidumping duty with respect to [the] purchase of the [subject merchandise], if such duty is assessed upon final determination by the U.S. Department of Commerce in this 1995–1996 administrative review." See Attachment, dated September 29, 1997, to the Letter from FAFER to the Secretary of Commerce, September 30, 1997.

Concerning the petitioners' objections to this response, as stated above, we note that the submission from the respondent was timely filed within the fifteen days following the publication of the preliminary. Our regulations at 19 C.F.R. § 351.31(b)(1) permit the Department to ask for (and receive) information pertaining to an administrative review at any time during a proceeding. Indeed, in an effort to obtain more detailed information and a clarification of the respondent's September 30, 1997 submission on duty absorption, we sent a supplemental questionnaire to FAFER on November 26, 1997. The petitioners had the opportunity to comment on the respondent's supplementary response (*see*, Letter from petitioners to the U.S. Department of Commerce, December 15, 1997).

After careful consideration of the evidence on the record, we have determined that the submission from the respondent does not establish that the unaffiliated customer will pay any ultimately assessed duty (*see*, Certain Cut-to-Length Carbon Steel Plate from Belgium: Preliminary Results of Antidumping Duty Administrative Review (62 FR 48213, 48217)) rendering the petitioners concerns about verification of the submission moot. In addition, the petitioners concerns about the timing of the alleged agreement between Charleroi U.S.A. and its customer do not enter into our refusal to rely on the submission. Petitioners have not stated any reasons why the timing of the alleged agreement has a bearing on its enforceability. As for the petitioners' objection to the fact that the "letter" was only one page and not notarized, the Department does not consider length a criterion for substance, and we note that the submission was properly certified pursuant to § 353.31(i) of the Department's regulations.

In the Preamble to 19 CFR part 351 *et al.*, Antidumping Duties; Countervailing Duties; Final Rule, we state that the Department did not adopt in its final rules suggestions that it establish substantive criteria regarding duty absorption because the Department "will need experience with absorption duty inquiries before it is able to promulgate such criteria." *Id.* at p. 27318. In this spirit, we have carefully considered the alleged agreement presented by Charleroi U.S.A.'s customer that purportedly indicates that he will be financially responsible for any duty assessed by the Department in this administrative review. We have concluded, in this case, that the evidence of record does not demonstrate the existence of an enforceable agreement to pay the full amount of the assessed duties. The fact that the customer has agreed "to make payments on" antidumping duties does not provide for an enforceable agreement to pay all antidumping duties. The alleged agreement does not state the exact number or amount of the "payments" the customer will make to the affiliated importer, nor that the amounts paid by the unaffiliated purchaser will be for the entire amount that is assessed by the Department. Finally, the agreement contains no provision as to when the customer will make such payments. Given these uncertainties, we cannot conclude that there is an enforceable agreement for the unaffiliated purchaser to pay the duties. Therefore, for these final results, we have continued to find that antidumping duties have been absorbed by FAFER on one hundred percent of its U.S. sales.

Results of Review

We determine that the following weighted-average margin exists:

Manufacturer/exporter	Period of review	Margin (percent)
Fab. de Fer de Charleroi	08/01/95–07/31/96	13.75

The Department shall determine, and the Customs Service shall assess, antidumping duties on all appropriate entries. Individual differences between export price and normal value may vary from the percentage stated above. The Department will issue appraisement instructions directly to the Customs Service.

Furthermore, the following deposit requirements will be effective upon publication of this notice of final results of review for all shipments of certain cut-to-length carbon steel plate from Belgium within the scope of the order entered, or withdrawn from warehouse, for consumption on or after the publication date, as provided by section 751(a)(1) of the Tariff Act: (1) The cash deposit rate for the reviewed company will be the rate listed above; (2) for previously reviewed or investigated companies not listed above, the rate will continue to be the company-specific rate published for the most recent period; (3) if the exporter is not a firm covered in this review, a prior review, or the original LTFV investigation, but the manufacturer is, the cash deposit rate will be the rate established for the most recent period for the manufacturer of the merchandise; and (4) for all other producers and/or exporters of this merchandise, the cash deposit rate of 13.31 percent, the "all others" rate, established in the LTFV investigation, shall remain in effect until publication of the final results of the next administrative review.

We will calculate importer-specific duty assessment rates on an *ad valorem* basis against the entered value of each entry of subject merchandise during the POR.

Notification of Interested Parties

This notice serves as a final reminder to importers of their responsibility under 19 CFR § 353.26 to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Secretary's presumption that reimbursement of antidumping duties occurred and subsequent assessment of double antidumping duties.

This notice also serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR § 353.34(d). Timely written notification of return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is sanctionable violation. Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested.

This administrative review and notice are in accordance with Section 751(a)(1) of the Tariff Act (19 U.S.C. 1675(a)(1)) and 19 CFR § 353.22.

Dated: January 12, 1998.

Robert S. LaRussa,

Assistant Secretary for Import Administration.

BILLING CODE 3510–DS–M

DEPARTMENT OF COMMERCE

International Trade Administration

[A–588–823]

Professional Electric Cutting Tools From Japan: Extension of Time Limit for Final Results of Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

ACTION: Notice of extension of final results of antidumping duty review.

SUMMARY: The Department of Commerce ("the Department") is extending the final results for the antidumping duty review of professional electric cutting tools from Japan. This review covers the period July 1, 1995 through June 30, 1996.

EFFECTIVE DATE: January 20, 1998.

FOR FURTHER INFORMATION CONTACT: N. Gerard Zapiain or Steve Jacques at 202–482–1395 or 202–482–1391; Office of AD/CVD Enforcement, Group III, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW, Washington, DC 20230.

SUPPLEMENTARY INFORMATION: On December 16, 1997, the Department published in the **Federal Register** its decision that it would extend the deadline for the final results of review by 32 days until January 7, 1998 (see 62 FR 65796). The Department has now determined that it is not practicable to issue its final results within that time limit (See Decision Memorandum from Joseph A. Spetrini, Deputy Assistant Secretary, Enforcement Group III to Robert LaRussa, Assistant Secretary for Import Administration). The Department is extending the time limit for completion of the final results for the full 60 days available until February 4, 1998 in accordance with section 751(a)(3)(A) of the Act.

Dated: January 13, 1998.

Joseph A. Spetrini,

Deputy Assistant Secretary for Enforcement Group III.

International Trade Administration

[Docket No. 980114015–8015–01]

RIN 0625–ZA07

CFDA No.: 11.115; Cooperative Agreement Program for American Business Centers® in Russia

AGENCY: International Trade Administration, Commerce.

ACTION: Notice.

SUMMARY: The International Trade Administration (ITA) is soliciting competitive applications to establish and operate American Business Centers® (ABCs®) in Volgograd and Chelyabinsk, Russia for a two (2) year multi-year award period. ABCs® will encourage the export of U.S. goods and services and stimulate trade and investment in Russia's regions. Funds to support new ABC® Awards are not currently available. All awards resulting from this announcement are contingent upon the availability of appropriated funds.

ABCs® will provide, on a user fee basis, a broad range of business development and facilitation services to United States companies in Russia's regions. Services provided by the ABCs® will be designed to encourage more U.S. firms to explore opportunities for trade and investment in Russia's regions and to help them conduct business there more effectively. The core services to be provided by the ABCs® include: international telephone, fax, and data transmission; temporary office space; space for meetings, small seminars, and small product exhibitions or demonstrations; secretarial support (e.g. word processing, typing, message taking); translator/interpreters; photocopying; market research; counseling on local business conditions; and arranging appointments with Russian business contacts. The Centers also will work closely with Russian businesses to help them become more attractive trading partners; identify and report obstacles to trade and investment; and serve as a link between financial institutions, U.S. companies, and Russian enterprises.

In addition to these core services, ABCs® will support U.S. Government activities under the Regional Investment Initiative (RII). This will include providing, at cost, support for the activities of the RII coordinators. Such support may include office space, computers, telecommunications equipment and secretarial and translation services.

VOL 63 ISS 12 JA 20 1998 UMI

DATES: ITA will accept only those applications which are received at the U.S. Department of Commerce, Room 1235, HCHB, no later than 3:00 pm E.S.T. February 19, 1998. Late applications will not be accepted and will not be considered. On January 20, 1998 competitive application kits are available from the Department of Commerce.

ADDRESSES: To obtain a copy of the application kit, please send a written request with a self-addressed mail label to: Russia-NIS Program Office, U.S. & Foreign Commercial Service, Room 1235, HCHB, U.S. Department of Commerce, Washington, D.C. 20230. Requests for application kits also may be faxed to 202–482–2456. Only one application kit will be provided to each organization requesting it, but the kit may be reproduced by the requester. All forms necessary to submit an application will be included in the application kit.

Completed applications should be returned to the same address. Applicants must submit a signed original and two copies of the application and supporting materials. It is anticipated that it will take ten weeks after the deadline for receipt of applications to process applications and make awards.

FOR FURTHER INFORMATION CONTACT: Applicants wishing further information should contact Ms. E. Vivian Spathopoulos, Deputy Director, Russia-NIS Program Office, U.S. & Foreign Commercial Service, U.S. Department of Commerce, room 1235, HCHB, Washington, D.C. 20230, telephone: (202) 482–2902, or Fax: (202) 482–2456.

SUPPLEMENTARY INFORMATION:

Program Authority

The American Business Center℠ program is authorized by Title III of the "Freedom for Russia and Emerging Eurasian Democracies and Open Markets Support Act of 1992" or the "FREEDOM Support Act", Pub. L. 102–511. Funding for the program is provided by the Agency for International Development under Section 632(a) of the Foreign Assistance Act of 1961, as amended.

Eligible Applicants

United States for-profit firms, non-profit organizations, non-Federal government agencies, industry and trade associations, and educational institutions are eligible to apply. An enterprise which includes or intends to include participation of host country citizens or entities will be considered an eligible applicant only so long as the applicant is and will remain, throughout the award period, controlled and managed by citizens and entities of the United States.

Funding Guidelines

Since it is anticipated that ITA will be involved in the implementation of each project for which an award is made, the funding instrument for the program will be a cooperative agreement. Examples of ITA involvement include but are not limited to the following: supplemental marketing to promote the ABCs℠, guidance on eligibility of ABC® clients, and coordination with other U.S. government assistance programs.

ITA anticipates $400,000 will be available for the first year of funding for up to two (2) multi-year cooperative agreement awards during FY 1998. Applicants will be requested to submit a work-plan and budget which cover a one (1) year period for a total amount of not more than $200,000 in Federal funds. Applicants must supply at least fifty-percent (50%) of total project costs, with the Federal portion of total project costs to be no more than fifty-percent (50%). A minimum of one half (½) of the support supplied by the applicant must be in the form of cash. The remaining portion of the applicant's support may consist of cash or in-kind contributions (goods and services contributed by a third-party). Applicants will be requested to submit a work-plan and budget for a second year of operation based on the level of funding for the first year with the understanding that funding levels may or may not be the same as the first year.

The total dollar amount of the indirect costs proposed in an application under this program must not exceed the indirect cost rate negotiated and approved by a cognizant Federal agency prior to the proposed effective date of the award, or 100 percent of the total proposed direct costs dollar amount in the application, whichever is less.

Applicant receipt of future funding is contingent upon the availability of appropriated funds, and satisfactory performance, and will be at the sole discretion of ITA. Publication of this notice does not constitute an obligation by the Department of Commerce to enter into a cooperative agreement with any responding applicant.

Eligible entities may propose the establishment of one or more ABCs℠. Applicants must submit a separate application for each proposed ABC℠. Each ABC℠ will be funded through a separate cooperative agreement. More than one cooperative agreement may be awarded to a single entity. No more than one ABC® will be funded in any given Russian city.

Evaluation Criteria

Consideration for financial assistance under the program will be based on the following evaluation criteria:

(1) *Quality of Work Plan:* core commercial activities, marketing strategy, management/staffing, cooperation with ITA and outreach programs to Russian firms;

(2) *Qualifications of Applicant:* financial history, personnel's experience in region and in delivering commercial products/services;

(3) *Market Knowledge of Locations:* applicant's demonstrated familiarity with the market conditions in the proposed city and/or region;

(4) *Project Timetable:* ability of applicant to complete major stages in the scope of work quickly, particularly bringing an ABC® into the fully-operational stage;

(5) *U.S. Small Business Utility:* accessibility of services to small firms and reasonableness of fees;

(6) *Cost-Effectiveness:* reasonableness, allowability and allocability of costs.

For purpose of evaluation of the applications, the above criteria will be weighted as follows: criterion (1) will be worth a maximum of 30 (thirty) percent; criterion (2) will be worth a maximum of 30 (thirty) percent; criterion (3) will be worth a maximum of 20 (twenty) percent; criterion (4) will be worth a maximum of 10 (ten) percent; criterions (5) and (6) will be worth a maximum of 5 (five) percent each.

Selection Procedure

Each application will be evaluated by a panel of at least three independent ITA reviewers qualified to evaluate applications submitted under the program. Applications will be evaluated on a competitive basis in accordance with the evaluation criteria set forth above. Awards will be based on highest total accumulated score and geographic location.

Notifications

All applicants are advised of the following:

(1) Unsatisfactory performance under prior Federal awards may result in an application not being considered for funding.

(2) If applicants incur any cost prior to an award being made, they do so solely at their own risk of not being reimbursed by the Federal Government. Notwithstanding any verbal assurance that they may receive, there is no obligation on the part of the Department of Commerce to cover pre-award costs.

(3) If an application is selected for funding, the Department of Commerce has no obligation to provide any additional future funding in connection with the award. Renewal of an award to increase funding or extend the period of performance is at the total discretion of the Department of Commerce.

(4) No award of Federal funds shall be made to an applicant who has an outstanding debt until either:

a. The delinquent account is paid in full;

b. A negotiated repayment schedule is established and at least one payment is received; or

c. Other arrangements satisfactory to the Department of Commerce are made.

(5) All primary applicants must submit a completed Form CD–511, "Certification Regarding Debarment, Suspension and other Responsibility Matters; Drug-Free Workplace Requirements and Lobbying". Prospective participants (as defined at 15 CFR part 26, section 105) are subject to 15 CFR part 26, "Nonprocurement Debarment and Suspension" and the related section of the certification form prescribed above applies. Grantees (as defined at 15 CFR part 26, section 605) are subject to 15 CFR part 26, subpart F "Government wide Requirement for Drug-Free Workplace (Grants)" and the related section of the certification form prescribed above applies. Persons (as defined at 15 CFR part 28, section 105) are subject to the lobbying provisions of 31 U.S.C. 1352, "Limitation on the use of appropriated funds to influence certain Federal contracting and financial transactions;" and the lobbying section of the certification form prescribed above applies to applications/bids for grants, cooperative agreements, and contracts for more than $100,000 and loans and loan guarantees for more than $150,000 or the single family maximum mortgage limit for affected programs, whichever is greater". Any applicant that has paid or will pay for lobbying using any funds must submit an SF–LLL, "Disclosure of Lobbying Activities," as required under 15 CFR part 28, Appendix B.

(6) Recipients shall require applicants/bidders for subgrants, contracts, subcontracts, or other lower tier covered transactions at any tier under the award to submit, if applicable, a completed Form CD–512, "Certifications Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion—Lower Tier Covered Transaction and Lobbying" and disclosure form, SF–LLL, "Disclosure of Lobbying Activities." Form CD–512 is intended for the use of recipients and should not be submitted to the Department. Form LLL submitted by any tier recipient or sub-recipient should be submitted to the Department in accordance with instructions contained in the award document.

(7) A false statement on an application is grounds for denial or termination of funds and grounds for possible punishment by a fine or imprisonment as provided in 18 U.S.C. 1001.

(8) All recipients and sub-recipients are subject to all applicable Federal laws and Federal Department of Commerce policies, regulations, and procedures applicable to Federal assistance awards. For-profit organizations shall be subject to OMB Circular A–110 and 48 CFR part 31.

(9) All non-profit and for-profit applicants are subject to a name check review process. Name checks are intended to reveal if any key individuals associated with the applicant have been convicted of or are presently facing criminal charges such as fraud, theft, perjury, or other matters which significantly reflect on the applicant's management honesty or financial integrity.

(10) Recipients are subject to the Fly America Act (49 U.S.C. sec. 1517 as implemented by 41 CFR sec. 301–3.6).

(11) Executive Order 12372 "Intergovernmental Review of Federal Programs" does not apply to this program.

(12) Paperwork Reduction Act does apply to this program. This document involves collections of information subject to the Paperwork Reduction Act, which have been approved by the Office of Management and Budget under OMB Control Numbers 0348–0043, 0348–0044, 0348–0040, 0348–0046, and 0605–0001. Notwithstanding any other provision of law, no person is required to respond to nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB control number.

Dated: January 14, 1998.

E. Vivian Spathopoulos,

Deputy Director, US&FCS/Russia-NIS Program Office.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Archival Tag Recovery; Proposed Collection; Comment Request

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)).

DATES: Written comments must be submitted on or before March 23, 1998.

ADDRESSES: Direct all written comments to Linda Engelmeier, Departmental Forms Clearance Officer, Department of Commerce, Room 5327, 14th and Constitution Avenue, NW, Washington DC 20230.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument(s) and instructions should be directed to Christopher Rogers, F/SF1, Station 14709, 1315 East-West Highway, Silver Spring, MD 20910–3282 (301–713–2347).

SUPPLEMENTARY INFORMATION:

I. Abstract

To investigate the migratory patterns of Atlantic bluefin tuna, a program has been undertaken to implant archival tags in selected tuna. In the event a fish with an archival tag is captured, applicable regulations could require its immediate release under certain conditions. In order to provide for maximum likelihood of data recovery, a regulation is being issued to exempt the harvest of fish with archival tags from other applicable requirements. Persons that harvest a tuna containing a tag must provide certain information about the tuna (size, weight, location, etc.). This collection was initially approved under emergency clearance procedures; this notice invites comments on plans to submit a regular clearance request to extend that approval for three years.

In addition to those approved requirements, NOAA also proposes a requirement that persons conducting research with archival tags register and report on their activities.

II. Method of Collection

Fishermen catching tagged bluefin tuna call a toll-free telephone number. They are then directed to remove the tag and to mail it to a specified address. A

VOL 63 ISS 12 JA 20 1998 UMI

reward is given for tag recoveries. Archival tag researchers would submit registration and reporting information in accordance with regulatory requirements.

III. Data

OMB Number: 0648–0338.
Form Number: None.
Type of Review: Regular Submission.
Affected Public: Individuals, businesses or other for-profit organizations, not-for-profit institutions.
Estimated Number of Respondents: 23.
Estimated Time Per Response: 30 minutes.
Estimated Total Annual Burden Hours: 13.
Estimated Total Annual Cost to Public: None.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: January 2, 1998.

Linda Engelmeier,

Departmental Forms Clearance Officer, Office of Management and Organization.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[I.D. 011298B]

South Atlantic Fishery Management Council; Public Meetings

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meetings.

SUMMARY: The South Atlantic Fishery Management Council (Council) will convene a meeting of its Snapper Grouper Assessment Group.

DATES: The meeting will convene on February 4, 1998, at 1:30 p.m. and adjourn at 5:30 p.m.; reconvene on February 5, 1998, from 8:30 a.m. to 5:30 p.m. and, on February 6, 1998, reconvene at 8:30 a.m. and adjourn at 12:00 noon.

ADDRESSES: The meeting will be held at the Town and Country Inn, 2001 Savannah Highway, Charleston, SC 29407; telephone: 803-571-1000.

Council address: South Atlantic Fishery Management Council, 1 Southpark Circle, Southpark Building, Suite 306, Charleston, South Carolina 29407–4699.

FOR FURTHER INFORMATION CONTACT: Susan Buchanan, Public Information Officer; telephone: (803) 571-4366; fax: (803) 769-4520.

SUPPLEMENTARY INFORMATION: The meetings will be held to:

1. Review wreckfish landings and make recommendations to the Council for setting the 1998/99 wreckfish framework actions, including total allowable catch;

2. Review Special Management Zone requests received by the Council;

3. Refine appropriate criteria for developing marine fishery reserves based on the Plan Development Team report;

4. Review the revised Oculina research plan;

5. Determine the current status of the snapper grouper species, as well as project the change in this status that will result from regulations in Snapper Grouper Amendment 9; and,

6. Develop recommendations on information prepared by Council staff concerning new definitions for overfishing, optimum yield (OY) and maximum sustainable yield (MSY) levels or spawning potential ratio proxies for MSY and OY.

Although other issues not contained in this agenda may come before this Group for discussion, in accordance with the Magnuson-Stevens Fishery Conservation and Management Act, those issues may not be the subject of formal Council action during this meeting. Group action will be restricted to those issues specifically identified in the agenda listed in this notice.

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to the Council office (see **ADDRESSES**) by January 28, 1998.

Dated: January 13, 1998.

Bruce C. Morehead,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[I.D. 011298A]

Caribbean Fishery Management Council; Public Meetings

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meetings.

SUMMARY: The Caribbean Fishery Management Council (Council) and its Administrative Committee will hold public meetings.

DATES: The meetings will be held on February 9, 1998 through February 12, 1998. The Council will meet on Wednesday, February 11, 1998, from 9:00 a.m. to 5:00 p.m., and reconvene on Thursday, February 12, 1998, at 9:00 a.m., and adjourn at approximately noon. The Administrative Committee will meet on Monday, February 9, 1998, from 2:00 p.m. to 5:00 p.m.

ADDRESSES: The meetings will be held at the Marriott's Frenchman's Reef Beach Resort, St. Thomas, U.S. Virgin Islands; telephone: 809–776–8500.

Council address: Caribbean Fishery Management Council, 268 Munoz Rivera Avenue, Suite 1108, San Juan, Puerto Rico 00918–2577; telephone: (787) 766–5926; fax: (787) 766–6239.

FOR FURTHER INFORMATION CONTACT: Miguel A. Rolon, Council Executive Director, telephone: (787) 766–5926.

SUPPLEMENTARY INFORMATION: The Council will hold its 93rd regular public meeting to discuss the draft Amendment 1 to the Fishery Management Plan for Corals and Reef Associated Plants and Invertebrates of Puerto Rico and the United States Virgin Islands that would establish a Marine Conservation District (MCD). The Council will consider establishment of a proposed "no-take" MCD in the EEZ due south of St. John, U.S. Virgin Islands. The Administrative Committee will discuss the results of the CY 96 audit; the CY 98 budget; Scientific and Statistical Committee/ Advisory Panel membership, and other administrative matters. Following adjournment of the Administrative Committee's public meeting, the Committee will convene a closed session to discuss personnel matters.

Although other issues not contained in this agenda may come before this Council and Administrative Committee for discussion, in accordance with the Magnuson-Stevens Fishery Conservation and Management Act, those issues may not be the subject of formal Council/Committee action during this meeting. Council/Committee action will be restricted to those issues specifically identified in the agenda listed in this notice.

The meetings will be conducted in English. All interested persons are invited to attend and participate with oral and written statements regarding agenda issues.

Special Accommodations

These meetings are physically accessible to people with disabilities. For more information or requests for sign language interpretation and other auxiliary aids, please contact the Council office (see **ADDRESSES**) at least 5 days prior to the meeting dates.

Dated: January 13, 1998.

DEPARTMENT OF DEFENSE

Office of the Secretary of Defense

Meeting of the DOD Advisory Group of Electron Devices

AGENCY: Advisory Group on Electron Devices, Department of Defense.

ACTION: Notice.

SUMMARY: Working Group B (Microelectronics) of the DoD Advisory Group on Electron Devices (AGED) announces a closed session meeting.

DATES: The meeting will be held at 0830, Tuesday and 0800, Wednesday February 3–4, 1998.

ADDRESSES: The meeting will be held at Air Force Phillips Laboratory, Science Center, Building 201 and Sandia National Laboratories, Microelectronics Development Laboratory (MDL), Building 858, Albuquerque, NM.

FOR FURTHER INFORMATION CONTACT: Timothy Doyle, AGED Secretariat, 1745 Jefferson Davis Highway, Crystal Square Four, Suite 500, Arlington, Virginia 22202.

SUPPLEMENTARY INFORMATION: The mission of the Advisory Group is to provide advice to the Under Secretary of Defense for Acquisition and Technology; to the Director; Defense Research and Engineering (DDR&E); and through the DDR&E, to the Director, Defense Advanced Research Projects Agency and the Military Departments in planning and managing an effective research and development program in the field of electron devices.

The Working Group B meeting will be limited to review of research and development programs which the military proposes to initiate with industry, universities or in their laboratories. The microelectronics area includes such programs on semiconductor materials, integrated circuits, charge coupled devices and memories. The review will include classified program details throughout.

In accordance with Section 10(d) of Pub. L. No. 92–463, as amended (5 U.S.C. App. § 10(d)(1994)), it has been determined that this Advisory Group meeting concerns matters listed in 5 U.S.C. 552b(c)(1) (1994), and that accordingly, this meeting will be closed to the public.

Dated: January 13, 1998.

DEPARTMENT OF EDUCATION

Notice of Proposed Information Collection Requests

AGENCY: Department of Education.

ACTION: Proposed collection; comment request.

SUMMARY: The Deputy Chief Information Officer, Office of the Chief Information Officer, invites comments on the proposed information collection requests as required by the Paperwork Reduction Act of 1995.

DATES: Interested persons are invited to submit comments on or before March 23, 1998.

ADDRESSES: Written comments and requests for copies of the proposed information collection requests should be addressed to Patrick J. Sherrill, Department of Education, 600 Independence Avenue, S.W., Room 5624, Regional Office Building 3, Washington, DC 20202–4651.

FOR FURTHER INFORMATION CONTACT: Patrick J. Sherrill (202) 708–8196. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8 a.m. and 8 p.m., Eastern time, Monday through Friday.

SUPPLEMENTARY INFORMATION: Section 3506 of the Paperwork Reduction Act of 1995 (44 U. S. C. Chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations. The Deputy Chief Information Officer, Office of the Chief Information Officer, publishes this notice containing proposed information collection requests prior to submission of these requests to OMB. Each proposed information collection, grouped by office, contains the following: (1) Type of review requested, e.g., new, revision, extension, existing or reinstatement; (2) Title; (3) Summary of the collection; (4) Description of the need for, and proposed use of, the information; (5) Respondents and frequency of collection; and (6) Reporting and/or Recordkeeping burden. OMB invites public comment at the address specified above. Copies of the requests are available from Patrick J. Sherrill at the address specified above.

The Department of Education is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department, (2) will this information be processed and used in a timely manner, (3) is the estimate of burden accurate, (4) how might the Department enhance the quality, utility, and clarity of the information to be collected, and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology.

Fund for the Improvement of Postsecondary Education (FIPSE)—Special Focus Competition: Controlling the Cost of Postsecondary Education; Notice Inviting Applications for New Awards for Fiscal Year (FY) 1998

Purpose of Program: To provide grants or enter into cooperative agreements to improve postsecondary education opportunities by focusing on problem areas or improvement approaches in postsecondary education.

Eligible Applicants: Institutions of higher education, other public and private nonprofit educational institutions and agencies, or combinations of those institutions or agencies.

Deadline for Transmittal of Applications: March 20, 1998.

Deadline for Intergovernmental Review: May 19, 1998.

Applications Available: January 20, 1998.

Available Funds: $1,300,000.

Estimated Range of Awards: $70,000–$200,000.

Estimated Average Size of Awards: $100,000.

Estimated Number of Awards: 5–15.

Note: The Department is not bound by any estimates in this notice.

Project Period: Up to 24 months.

Applicable Regulations: The Education Department General Administrative Regulations (EDGAR) in 34 CFR Parts 74, 75, 77, 79, 80, 82, 85 and 86.

Priority

Invitational Priority

The Secretary is particularly interested in applications that meet the following invitational priority. However, an application that meets this invitational priority does not receive competitive or absolute preference over other applications (34 CFR 75.105(c)(1)).

Invitational Priority

Projects that are designed to deliver postsecondary education at less cost than in previous years, while maintaining high quality.

Methods for Applying Selection Criteria

The Secretary gives equal weight to the listed criteria. Within each of the criterion, the Secretary gives equal weight to each of the factors.

Selection Criteria

In evaluating applications for grants under this program competition, the Secretary uses the following selection criteria chosen from those listed in 34 CFR 75.210:

(a) The significance of the proposed project, as determined by—

(1) The extent to which the proposed project involves the development or demonstration of promising new strategies that build on, or are alternatives to, existing strategies; and

(2) The potential replicability of the proposed project or strategies, including, as appropriate, the potential for implementation in a variety of settings.

(b) The quality of the design of the proposed project, as determined by the extent to which the goals, objectives, and outcomes to be achieved by the proposed project are clearly specified and measurable.

(c) The quality of the evaluation to be conducted of the proposed project, as determined by the extent to which the methods of evaluation are thorough, feasible, and appropriate to the goals, objectives, and outcomes of the proposed project.

(d) The quality of the personnel who will carry out the proposed project, as determined by—

(1) The qualifications, including relevant training and experience, of key project personnel; and

(2) The extent to which the applicant encourages applications for employment from persons who are members of groups that have traditionally been underrepresented based on race, color, national origin, gender, age, or disability.

(e) The adequacy of resources for the proposed project, as determined by—

(1) The extent to which the budget is adequate to support the proposed project;

(2) The extent to which the costs are reasonable in relation to the objectives, design, and potential significance of the proposed project;

(3) The relevance and demonstrated commitment of each partner in the proposed project to the implementation and success of the project;

(4) The adequacy of support, including facilities, equipment, supplies, and other resources from the applicant organization or the lead applicant organization; and

(5) The potential for continued support of the project after Federal funding ends, including, as appropriate, the demonstrated commitment of appropriate entities to such support.

For Applications or Information Contact: Fund for the Improvement of Postsecondary Education (FIPSE), U.S. Department of Education, 600 Independence Avenue, S.W., Room 3100, ROB–3, Washington, D.C. 20202–5175. You may request applications by calling 202–358–3041 (voice mail) or 732–544–2872 (fax-on-demand) or by submitting the name of the competition and your name and postal address to FIPSE@ED.GOV (e-mail). Applications are also listed on the FIPSE Web Site <http://www.ed.gov/offices/OPE/FIPSE>. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8 a.m. and 8 p.m., Eastern time, Monday through Friday. For additional program information call David Johnson at the FIPSE office (202–708–5750) between the hours of 9 a.m. and 5 p.m., Eastern time, Monday through Friday.

Individuals with disabilities may obtain this document in an alternate format (e.g., Braille, large print, audiotape, or computer diskette) on

VOL 63 ISS 12 JA 20 1998 UMI

request to the contact person listed in the preceding paragraph.

Individuals with disabilities may obtain a copy of the application package in an alternate format, also, by contacting that person. However, the Department is not able to reproduce in an alternate format the standard forms included in the application package.

Electronic Access to This Document

Anyone may view this document, as well as all other Department of Education documents published in the **Federal Register**, in text or portable document format (pdf) on the World Wide Web at either of the following sites:

http://ocfo.ed.gov/fedreg.htm
http://www.ed.gov/news.html

To use the pdf you must have the Adobe Acrobat Reader Program with Search, which is available free at either of the previous sites. If you have questions about using the pdf, call the U.S. Government Printing Office toll free at 1–888–293–6498.

Anyone may also view these documents in text copy only on an electronic bulletin board of the Department. Telephone: (202) 219–1511 or, toll free, 1–800–222–4922. The documents are located under Option G—Files/Announcements, Bulletins and Press Releases.

Note: The official version of a document is the document published in the **Federal Register**.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Directory Database Available for License

AGENCY: Office of General Counsel, Department of Energy.

ACTION: Notice.

SUMMARY: The U.S. Department of Energy announces that the following Directory Database is available for license: "Commercial Environmental Cleanup. Products and Services Directory."

FOR FURTHER INFORMATION: Michael P. Hoffman, Office of the Assistant General Counsel for Technology Transfer and Intellectual Property, U.S. Department of Energy, 1000 Independence Avenue, SW., Washington, DC. 20585; Telephone (202) 586–2802.

SUPPLEMENTARY INFORMATION: The above-captioned Directory, which is in the nature of a database of companies working in the area of environmental cleanup, was prepared under Government contract. The Department of Energy (DOE) is currently paying for the continued maintenance and dissemination of the above-captioned Directory database, both to Government agencies and to the general public. DOE is attempting to secure a private entity which, in return for a possible exclusive royalty-free license in the Directory database, will maintain the Directory database as well as print and market it, both to the Government and the general public as a stand-alone entity or incorporated with other services on a for-profit basis, thereby relieving the Government of the labor and expense of doing so.

Issued in Washington, DC., on January 9, 1998.

Paul A. Gottlieb,

Assistant General Counsel for Technology Transfer and Intellectual Property.

Federal Energy Regulatory Commission

[Docket No. CP98–171–000]

Koch Gateway Pipeline Company; Notice of Request Under Blanket Authorization

January 13, 1998.

Take notice that on January 7, 1998, Koch Gateway Pipeline Company (Koch Gateway), P.O. Box 1478, Houston, TX 77251–1478, filed in Docket No. CP98–171–000 a request pursuant to Sections 157.205 and 157.216 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205, 157.216) for authorization to abandon a leased compressor unit, under Koch Gateway's blanket certificate issued in Docket No. CP82–430, pursuant to Section 7 of the Natural Gas Act, all as more fully set forth in the request that is on file with the Commission and open to public inspection.

Koch Gateway proposes to abandon, by returning to the lessor, a 1200 horsepower skid-mounted compressor unit located on its Index 201 low pressure pipeline system at its existing Hecker Compressor Station yard in Calcasieu Parish, Louisiana. Koch Gateway states that it installed this unit as part of its low pressure lateral system for the purpose of lifting additional gas supplies from its low pressure system to its higher pressure system and ultimate delivery to the Lake Charles market area. Koch Gateway states that it will no longer need the compressor unit once its transportation contract with Union Pacific Resource Company (UPRC) expires in May of 1998. Koch Gateway also states that the proposed abandonment will have no impact on any of its existing customers, since this compressor unit was placed in service for UPRC.

Any person or the Commission's staff may, within 45 days after issuance of the instant notice by the Commission, file pursuant to Rule 214 of the Commission's Procedural Rules (18 CFR 385.214) a motion to intervene or notice of intervention and pursuant to Section 157.205 of the Regulations under the Natural Gas Act (18 CFR 157.205) a protest to the request. If no protest is filed within the time allowed therefor, the proposed activity shall be deemed to be authorized effective the day after the time allowed for filing a protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request shall be treated as an application for authorization pursuant to Section 7 of the Natural Gas Act.

David P. Boergers,

Acting Secretary.

[Docket No. ER98–11–000]

Long Island Lighting Company; Notice of Filing

January 13, 1998.

Take notice that on December 22, 1997, Long Island Lighting Company tendered for filing a Settlement Agreement Request for Establishment of Technical Conference.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 18 CFR 385.214). All such motions or protests should be filed on or before January 20, 1998. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

[Docket No. ER98–1119–000]

Southern Company Services, Inc.; Notice of Filing

January 13, 1998.

Take notice that on December 10, 1997, Southern Company Services, Inc., acting on behalf of Alabama Power Company, Georgia Power Company, Gulf Power Company, Mississippi Power Company, and Savannah Electric and Power Company (collectively referred to as Operating Companies), tendered for Commission review information concerning the accrual of post-retirement benefits other than pensions as set forth in Statement of Financial Accounting Standard No. 106, by the Financial Accounting Standards Board in agreements and tariffs of the Operating Companies (jointly and individually).

Any person desiring to be heard or to protest such filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All such motions and protests should be filed on or before January 26, 1998. Protests will be considered by the Commission to determine the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER98–1082–000, et al.]

Louisville Gas and Electric Company, et al.; Electric Rate and Corporate Regulation Filings

January 12, 1998.

Take notice that the following filings have been made with the Commission:

1. Louisville Gas and Electric Company

[Docket No. ER98–1082–000]

Take notice that on December 15, 1997, Louisville Gas and Electric Company (LG&E), tendered for filing an executed Short-Term Firm Point-To-Point Transmission Service Agreement between LG&E and Morgan Stanley Capital Group, Inc., under LG&E's Open Access Transmission Tariff.

Comment date: January 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

2. Louisville Gas and Electric Company

[Docket No. ER98–1083–000]

Take notice that on December 15, 1997, Louisville Gas and Electric Company (LG&E), tendered for filing an executed Short-Term Firm Point-To-Point Transmission Service Agreement between LG&E and Entergy Services, Inc., under LG&E's Open Access Transmission Tariff.

Comment date: January 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

3. Louisville Gas and Electric Company

[Docket No. ER98–1084–000]

Take notice that on December 15, 1997, Louisville Gas and Electric Company (LG&E), tendered for filing an executed Short-Term Firm Point-To-Point Transmission Service Agreement between LG&E and CNG Power Services Corp., under LG&E's Open Access Transmission Tariff.

Comment date: January 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

4. Louisville Gas and Electric Company

[Docket No. ER98–1085–000]

Take notice that on December 15, 1997, Louisville Gas and Electric Company (LG&E), tendered for filing an executed Short-Term Firm Point-To-Point Transmission Service Agreement between LG&E and Citizens Power Sales under LG&E's Open Access Transmission Tariff.

Comment date: January 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

5. Louisville Gas and Electric Company

[Docket No. ER98–1086–000]

Take notice that on December 15, 1997, Louisville Gas and Electric Company, tendered for filing copies of a service agreement between Louisville Gas and Electric Company and Engage Energy under Rate GSS.

Comment date: January 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

6. Arizona Public Service Company

[Docket No. ER98–1087–000]

Take notice that on December 16, 1997, Arizona Public Service Company (APS), tendered for filing Notice of Cancellation of the Service Agreements with Delhi Energy Services, Inc. (Delhi), for umbrella firm and non-firm point-to-point transmission service under the Tariff.

APS requests that this cancellation become effective November 20, 1997.

Comment date: January 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

7. Arizona Public Service Company

[Docket No. ER98–1088–000]

Take notice that on December 16, 1997, Arizona Public Service Company (APS), tendered for filing a Service Agreement under APS' FERC Electric Tariff, Original Volume No. 3, with the Arizona Districts.

A copy of this filing has been served on the Arizona Corporation Commission and the parties to this Service Agreement.

Comment date: January 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

8. New York State Electric & Gas Corporation

[Docket No. ER98–1089–000]

Take notice that on December 16, 1997, New York State Electric & Gas Corporation (NYSEG), filed Service Agreements between NYSEG and AIG Trading Corporation (Customer). These Service Agreements specify that the Customer has agreed to the rates, terms and conditions of the NYSEG open access transmission tariff filed and effective on June 11, 1997, in Docket No. OA97–571–000.

NYSEG requests waiver of the Commission's sixty-day notice requirements and an effective date of November 24, 1997, for the Service Agreements. NYSEG has served copies of the filing on The New York State Public Service Commission and on the Customer.

VOL 63 ISS 12 JA 20 1998 UMI

Comment date: January 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

9. Central Vermont Public Service Corporation

[Docket No. ER98–1092–000]

Take notice that on December 12, 1997, Central Vermont Public Service Corporation (Central Vermont), tendered for filing a Service Agreement with PacifiCorp Power Marketing, Inc., under its FERC Electric Tariff No. 5. The tariff provides for the sale by Central Vermont of power, energy, and/or resold transmission capacity at or below Central Vermont's fully allocated costs.

Central Vermont requests waiver of the Commission's Regulations to permit the service agreement to become effective on December 12, 1997.

Comment date: January 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

10. Central Vermont Public Service Corporation

[Docket No. ER98–1093–000]

Take notice that on December 12, 1997, Central Vermont Public Service Corporation (Central Vermont), tendered for filing a Service Agreement with Engage Energy US, L.P., under its FERC Electric Tariff No. 5. The tariff provides for the sale by Central Vermont of power, energy, and/or resold transmission capacity at or below Central Vermont's fully allocated costs.

Central Vermont requests waiver of the Commission's Regulations to permit the service agreement to become effective on December 12, 1997.

Comment date: January 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

11. Central Hudson Gas & Electric Corporation

[Docket No. ER98–1094–000]

Take notice that on December 12, 1997, Central Hudson Gas & Electric Corporation (CHG&E), tendered for filing pursuant to § 35.12 of the Federal Energy Regulatory Commission's (Commission) Regulations in 18 CFR a Service Agreement between CHG&E and U.S. Generating Power Services, L.P. The terms and conditions of service under this Agreement are made pursuant to CHG&E's FERC Open Access Schedule, Original Volume No. 1 (Transmission Tariff), filed in compliance with the Commission's Order No. 888 in Docket No. RM95–8–000 and RM94–7–001 and amended in compliance with Commission Order dated May 28, 1997. CHG&E also has requested waiver of the 60-day notice provision pursuant to 18 CFR 35.11.

A copy of this filing has been served on the Public Service Commission of the State of New York.

Comment date: January 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

12. Southern California Edison Company

[Docket No. ER98–1095–000]

Take notice that on December 12, 1997, Southern California Edison Company (Edison), tendered for filing Amendment No. 4 (Amendment No. 4), to the Power Contract dated October 11, 1979, with the Department of Water Resources of the State of California (CDWR), FERC Rate Schedule No. 112. Amendment No. 4 deletes Sections 5.10, 5.22, 5.23, 8, and 9 of the Power Contract in their entirety, and replaces Sections 7.2.3 and 13.7.1 in their entirety with new sections. The revisions to these sections reflect the intent of Edison and CDWR to no longer enter into voluntary transactions pursuant to the Power Contract.

The Amendment No. 4, shall become effective on the date when the Commission accepts the amendment for filing.

Copies of this filing were served upon the Public Utilities Commission of the State of California and all interested parties.

Comment date: January 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

13. Kansas City Power & Light Company

[Docket No. ER98–1097–000]

Take notice that on December 12, 1997, Kansas City Power & Light Company (KCPL), tendered for filing a Service Agreement dated December 10, 1997, between KCPL and Williams Energy Services Company. KCPL proposes an effective date of December 10, 1997, and requests waiver of the Commission's notice requirement. This Agreement provides for Non-Firm Power Sales Service.

In its filing, KCPL states that the rates included in the above-mentioned Service Agreement are pursuant to KCPL's compliance filing in Docket No. ER94–1045.

Comment date: Janaury 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

14. PP&L, Inc.

[Docket No. ER98–1098–000]

Take notice that on December 16, 1997, PP&L, Inc. (formerly known as Pennsylvania Power & Light Company) (PP&L), filed a Service Agreement dated December 2, 1997, with West Penn Power Company (WPPC) under PP&L's FERC Electric Tariff, Original Volume No. 5. The Service Agreement adds WPPC as an eligible customer under the Tariff.

PP&L requests an effective date of February 14, 1998, for the Service Agreement.

PP&L states that copies of this filing have been supplied to WPPC and to the Pennsylvania Public Utility Commission.

Comment date: January 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

15. PP&L, Inc.

[Docket No. ER98–1099–000]

Take notice that on December 16, 1997, PP&L, Inc. (formerly known as Pennsylvania Power & Light Company) (PP&L), filed a Service Agreement dated December 2, 1997, with Southern Energy Retail Trading and Marketing, Inc. (SERTM), under PP&L's FERC Electric Tariff, Original Volume No. 5. The Service Agreement adds SERTM as an eligible customer under the Tariff.

PP&L requests an effective date of February 14, 1998, for the Service Agreement.

PP&L states that copies of this filing have been supplied to SERTM and to the Pennsylvania Public Utility Commission.

Comment date: January 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

16. MidAmerican Energy Company

[Docket No. ER98–1100–000]

Take notice that on December 16, 1997, MidAmerican Energy Company (MidAmerican), 666 Grand Avenue, Des Moines, Iowa 50309, filed with the Commission a Non-Firm Transmission Service Agreement with Avista Energy, Inc. (Avista), dated December 9, 1997, entered into pursuant to MidAmerican's Open Access Transmission Tariff.

MidAmerican requests an effective date of December 9, 1997, for the Agreement with Avista and accordingly seeks a waiver of the Commission's notice requirement. MidAmerican has served a copy of the filing on Avista, the Iowa Utilities Board, the Illinois Commerce Commission and the South Dakota Public Utilities Commission.

Comment date: January 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

17. California Independent System Corporation

[Docket No. ER98–1311–000]

Take notice that on December 30, 1997, the California Independent System Corporation (ISO), tendered for filing a Scheduling Coordinator Agreement executed by the ISO and Pacific Gas and Electric Company for approval by the Commission.

The ISO states that this filing has been served on all parties listed on the official service list in the above referenced dockets, including the California Public Service Commission.

Comment date: January 30, 1998, in accordance with Standard Paragraph E at the end of this notice.

18. California Independent System Corporation

[Docket No. ER98–1313–000]

On December 30, 1997, the California Independent System Corporation (ISO), tendered for filing a Scheduling Coordinator Agreement executed by the ISO and NorAm Energy Services, Inc., for approval by the Commission.

The ISO states that this filing has been served on all parties listed on the official service list in the above referenced dockets, including the California Public Service Commission.

Comment date: January 26, 1998, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraph

E. Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 18 CFR 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

David P. Boergers,

Acting Secretary.

BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[FRL–5951–3]

Science Advisory Board; Notification of Public Meeting February 5–6, 1998

Pursuant to the Federal Advisory Committee Act, Public Law 92–463, notification is hereby given that the Science Advisory Board's (SAB) Environmental Engineering Committee, will meet Thursday and Friday, February 5–6, 1998, in Room 2103 of the Mall at the U.S. Environmental Protection Agency, 401 M Street SW, Washington, DC 20460. The meeting will begin at 8:30 am on February 5 and adjourn no later than 3:30 pm on February 6. All times noted are Eastern Time. This meeting is open to the public, however, due to limited space, seating will be on a first-come basis. For further information concerning this meeting, please contact the individuals listed below. Documents that are the subject of SAB reviews are normally available from the originating EPA office and are *not* available from the SAB Office.

At this meeting, the EEC will be briefed on the results of the Science Advisory Board's (SAB) Strategic Retreat, the SAB's Integrated Risk Project, and on relevant Agency activities. The EEC will discuss potential FY98 activities such as a Retrospective Analysis, preparation of discussion papers for Self-Initiated Studies, quality management, and brownfields. After selecting the activities, the EEC will attend to the practicalities of scheduling and completing the work.

Any member of the public wishing further information concerning the meeting or wishing to submit comments should contact Kathleen White Conway, Designated Federal Official for the Environmental Engineering Committee, Science Advisory Board (1400), U.S. Environmental Protection Agency, Washington DC 20460; (202) 260–2558; FAX (202) 260–7118; or INTERNET at conway.kathleen@epamail.epa.gov. Copies of the agenda are available from Mrs. Dorothy Clark who can be reached at (202) 260–6555, FAX (202) 260–7118, or Internet at clark.dorothy@epamail.epa.gov.

Providing Oral or Written Comments at SAB Meetings

The Science Advisory Board expects that public statements presented at its meetings will not be repetitive of previously submitted oral or written statements. In general, each individual or group making an oral presentation will be limited to a total time of ten minutes. For conference call meetings, opportunities for oral comment will be limited to no more than five minutes per speaker and no more than fifteen minutes total. Written comments (at least 35 copies) received in the SAB Staff Office sufficiently prior to a meeting date, may be mailed to the relevant SAB committee or subcommittee prior to its meeting; comments received too close to the meeting date will normally be provided to the committee at its meeting. Written comments may be provided to the relevant committee or subcommittee up until the time of the meeting.

Dated: January 12, 1998.

Donald G. Barnes, PhD,

Staff Director, Science Advisory Board.

FEDERAL COMMUNICATIONS COMMISSION

[DA 98–48; Report No. AUC–97–18–A (Auction No. 18)]

Comment Sought on Reserve Prices or Minimum Opening Bids and Other Auction Procedural Issues for the Phase II 220 MHz Service

AGENCY: Federal Communications Commission.

ACTION: Notice; seeking comment.

SUMMARY: The Commission is seeking comment on a proposed formula for calculating minimum opening bids as well as other procedural issues in the auction of licenses for the Phase II 220 MHz Service, Auction No. 18.

DATES: Comments are due on or before January 29, 1998. Reply comments are due on or before February 5, 1998.

ADDRESSES: To file formally, parties must submit an original and four copies to the Office of the Secretary, Federal Communications Commission, Room 222, 1919 M Street N.W., Washington, D.C. 20554. In addition, parties must submit one copy to Kathleen O'Brien Ham, Chief, Auctions and Industry Analysis Division, Wireless Telecommunications Bureau, Federal Communications Commission, Room 5202, 2025 M Street N.W., Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Lisa Hartigan, Bob Reagle or Frank Stilwell, Auctions and Industry Analysis Division, Wireless Telecommunications Bureau, at (202) 418–0660.

SUPPLEMENTARY INFORMATION: This public notice was released on January 13, 1998 and is available in its entirety, including attachments; for inspection and copying during normal business hours in the FCC Reference Center (Room 239), 1919 M Street, N.W., Washington, D.C., and also may be purchased from the Commission's copy contractor, International Transcription Services, (202) 857–3800, fax (202) 857–3805, 1231 20th Street, N.W., Washington, D.C. 20036.

SYNOPSIS OF THE PUBLIC NOTICE

Background

I. Reserve Price or Minimum Opening Bid

The Balanced Budget Act of 1997 calls upon the Commission to prescribe methods by which a reasonable reserve price will be required or a minimum opening bid established when FCC licenses are subject to auction (*i.e.*, because they are mutually exclusive), unless the Commission determines that a reserve price or minimum bid is not in the public interest. Section 3002(a), Balanced Budget Act of 1997, Public Law 105–33, 111 Stat. 251 (1997) ("Budget Act"); 47 U.S.C. 309(j)(4)(F). The Commission's authority to establish a reserve price or minimum opening bid is set forth in 47 CFR 1.2104(c) and (d). Consistent with this mandate, the Commission has directed the Wireless Telecommunications Bureau ("Bureau") to seek comment on the use of a minimum opening bid and/or reserve price prior to the start of each auction. See In the Matter of Amendment of Part 1 of the Commission's Rules—Competitive Bidding Procedures, Allocation of Spectrum Below 5 GHz Transferred from Federal Government Use, 4660–4685 MHz, WT Docket No. 97–82, ET Docket No. 94–32, FCC 97–413, *Third Report and Order and Second Further Notice of Proposed Rule Making* (rel. December 31, 1997) at ¶ 141 ("Part 1 Third Report and Order"). The Bureau was directed to seek comment on the methodology to be employed in establishing each of these mechanisms. Among other factors the Bureau should consider is the amount of spectrum being auctioned, levels of incumbency, the availability of technology to provide service, the size of the geographic service areas, the extent of interference with other spectrum bands, and any other relevant factors that could reasonably have an impact on valuation of the spectrum being auctioned. The Commission concluded that the Bureau should have the discretion to employ either or both of these mechanisms for future auctions. *Id.*

Normally, a reserve price is an absolute minimum price below which an item will not be sold in a given auction. Reserve prices can be either published or unpublished. A minimum opening bid, on the other hand, is the minimum bid price set at the beginning of the auction below which no bids are accepted. It is generally used to accelerate the competitive bidding process. Also, in a minimum opening bid scenario, the auctioneer generally has the discretion to lower the amount later in the auction.

The Bureau recently announced the auction of 908 licenses for the Phase II 220 MHz Service which is scheduled to begin May 19, 1998. See Public Notice, "FCC Announces Spectrum Auction Schedule for 1998," DA 97–2497 (rel. November 25, 1997), 62 FR 64833, 64833–64834 (December 9, 1997). These licenses encompass the United States, the Northern Mariana Islands, Guam, American Samoa, the United States Virgin Islands and Puerto Rico. Specifically, the licenses include: (1) Five licenses in each of 175 geographic areas known as Economic Areas (EAs); (2) five licenses in each of six Regional Economic Area Groupings (REAGs), which we will refer to as "Economic Area Groupings" (EAGs); and (3) three nationwide licenses which encompass the same territory as all of the EAGs, combined. We note that the geographic area encompassed within a 220 MHz REAG differs from the geographic area encompassed within REAGs in prior auctions. In order to avoid confusion, therefore, we will use EAGs in the 220 MHz auction. See 47 CFR 90.717(a) (nationwide channel assignments); 47 CFR 90.721(b) and 90.761 (Phase II EA and REAG channel assignments).

In anticipation of this auction and in light of the Balanced Budget Act, the Bureau proposes to establish minimum opening bids for the 220 MHz auction, and retain discretion to lower the minimum opening bids.

The Bureau believes a minimum opening bid, which has been utilized in other auctions, is an effective bidding tool, and we propose to use this approach in the 220 MHz Service auction. See In the Matter of Auction of 800 MHz SMR Upper 10 MHz Band, Minimum Opening Bids or Reserve Prices, DA 97–2147, *Order* (rel. October 6, 1997), 62 FR 55251 (October 23, 1997); In the Matter of Revision of Rules and Policies for the Direct Broadcast Satellite Service, IB Docket No. 95–168, PP Docket No. 93–253, *Report and Order*, 11 FCC Rcd 9712, 9787–9788, ¶ 186 (1995), 60 FR 65587, 65591 (December 20, 1995). A minimum opening bid will help to regulate the pace of the auction and provides flexibility.

Specifically, the Commission proposes the following formula for calculating minimum opening bids in Auction No. 18:

1. Nationwide Licenses: $0.02 MHz/POP
2. EAG Licenses: $0.015 MHz/POP
3. EA Licenses: $0.0175 MHz/POP

with a minimum of no less than $2500.00 per license.

Comment is sought on this proposal. We note that we have received a proposal from SEA, Inc. to establish a minimum opening bid for the 220 MHz auction. This document has been made a part of the record in this proceeding. If commenters believe that the formula proposed above for minimum opening bids will result in substantial numbers of unsold licenses, or is not a reasonable amount, or should instead operate as a reserve price, they should explain why this is so, and comment on the desirability of an alternative approach. Commenters are advised to support their claims with valuation analyses and suggested reserve prices or minimum opening bid levels or formulas. In establishing the formula for minimum opening bids, we particularly seek comment on such factors as, among other things, the amount of spectrum being auctioned, levels of incumbency, the availability of technology to provide service, the size of the geographic service areas, issues of interference with other spectrum bands and any other relevant factors that could reasonably have an impact on valuation of the Phase II 220 MHz spectrum. Alternatively, comment is sought on whether, consistent with the Balanced Budget Act, the public interest would be served by having no minimum opening bid or reserve price.

II. Other Auction Procedural Issues

The Balanced Budget Act of 1997 requires the Commission to "ensure that, in the scheduling of any competitive bidding under this subsection, an adequate period is allowed * * * before issuance of bidding rules, to permit notice and comment on proposed auction procedures * * *." Budget Act, § 3002(a)(E)(i). Consistent with the provisions of the Balanced Budget Act and to ensure that potential bidders have adequate time to familiarize themselves with the specific provisions that will govern the day-to-day conduct of an auction, the Commission directed the Bureau, under its existing delegated authority, to seek comment on a variety of auction-specific issues prior to the start of each auction. Part 1 Third Report and Order at ¶ 124. The Commission directed the Bureau to seek comment on specific mechanisms related to day-to-day auction conduct including, for example, the structure of bidding rounds and stages, establishment of minimum opening bids or reserve prices, minimum accepted bids, initial maximum eligibility for each bidder, activity requirements for each stage of the auction, activity rule waivers, criteria for determining reductions in eligibility, information regarding bid withdrawal and bid removal, stopping rules, and information relating to auction delay, suspension or cancellation. *Id.* at 125. We therefore seek comment on the following issues.

a. License Groupings

In the 220 MHz Third Report and Order the Commission concluded that it would auction the 908 Phase II 220 MHz licenses in a single, simultaneous multiple-round auction. However, the Commission reserved the discretion, which it ultimately delegated to the Bureau, to auction each of the license types (*i.e.*, nationwide, EAG, EA) separately or in different combinations (*e.g.*, nationwide and EAG together). See In the Matter of Amendment of Part 90 of the Commission's Rules to Provide for the Use of the 220–222 MHz Band by the Private Land Mobile Radio Service, Implementation of Sections 3(n) and 332 of the Communications Act, Regulatory Treatment of Mobile Services, Implementation of Section 309(j) of the Communications Act—Competitive Bidding, PR Docket No. 89–552, RM 8506, GN Docket No. 93–252, PP Docket No. 93–253, *Third Report and Order and Fifth Notice of Proposed Rulemaking*, 12 FCC Rcd 10943, 11046, ¶ 221 (1997) ("220 MHz Third Report and Order"), 62 FR 15978, 15979 (April 3, 1997). For reasons of administrative efficiency, we propose to award the 908 licenses in the Phase II 220 MHz Service in a single, simultaneous multiple-round auction. We seek comment on this proposal.

b. Structure of Bidding Rounds, Activity Requirements, and Criteria for Determining Reductions in Eligibility

We propose to divide the auction into three stages: Stage One, Stage Two and Stage Three. The auction will start in Stage One. We propose that the auction will advance to the next stage (*i.e.*, from Stage One to Stage Two, and from Stage Two to Stage Three) when in each of three consecutive rounds of bidding, the high bid has increased on 10 percent or less of the licenses being auctioned (as measured in bidding units). However, we further propose that the Bureau retain the discretion to accelerate the auction by announcement. This determination will be based on a variety of measures of bidder activity including, but not limited to, the auction activity level, the percentages of licenses (as measured in bidding units) on which there are new bids, the number of new bids, and the percentage increase in revenue. We seek comment on these proposals.

In order to ensure that the auction closes within a reasonable period of time, an activity rule requires bidders to bid actively on a percentage of their maximum eligibility during each round of the auction rather than waiting until the end to participate. A bidder that does not satisfy the activity rule will either lose bidding eligibility in the next round or use an activity rule waiver.

For the Phase II 220 MHz Service auction, we propose that, in each round of the first stage of the auction, a bidder desiring to maintain its current eligibility is required to be active on licenses encompassing at least 80 percent of its current bidding eligibility. Failure to maintain the requisite activity level will result in a reduction in the bidder's bidding eligibility in the next round of bidding (unless an activity rule waiver is used). During Stage One, reduced eligibility for the next round will be calculated by multiplying the current round activity by five-fourths (5/4). In each round of the second stage of the auction, a bidder desiring to maintain its current eligibility is required to be active on at least 90 percent of its current bidding eligibility. During Stage Two, reduced eligibility for the next round will be calculated by multiplying the current round activity by ten-ninths (10/9). In each round of the third stage, a bidder desiring to maintain its current eligibility is required to be active on 98 percent of its current bidding eligibility. In this final stage, reduced eligibility for the next round will be calculated by multiplying the current round activity by fifty-fortyninths (50/49). We seek comment on these proposals.

c. Minimum Accepted Bids

Once there is a standing high bid on a license, a bid increment will be applied to that license to establish a minimum acceptable bid for the following round. For the Phase II 220 MHz Service auction, we propose, as described immediately below, to use an exponential smoothing methodology to calculate minimum bid increments. The Bureau retains the discretion to change the minimum bid increment if it determines that circumstances so dictate. The exponential smoothing methodology has been used in previous auctions, including the WCS auction and the 800 MHz SMR auction. We seek comment on this proposal.

Exponential Smoothing

The exponential smoothing formula calculates the bid increment based on a weighted average of the activity received on each license in the current and all previous rounds. This methodology will tailor the bid increment for each license based on activity, rather than setting a global increment for all licenses. For every license that receives a bid, the bid increment for the next round for that license will be established as the greater of $0.25 per bidding unit for each license or a percentage increment that is determined using the exponential smoothing formula.

Using exponential smoothing, the calculation of the percentage bid increment for each license will be based

on an activity index, which is calculated as the weighted average of the current activity and the activity index from the previous round. The activity index at the start of the auction (round 0) will be set at 0. The current activity index is equal to a weighting factor times the number of new bids received on the license in the current bidding period plus one minus the weighting factor times the activity index from the previous round. The activity index is then used to calculate a percentage increment by multiplying a minimum percentage increment by one plus the activity index with that result being subject to a maximum percentage increment. The Commission will initially set the weighting factor at 0.5, the minimum percentage increment at 0.05, and the maximum percentage increment at 0.15.

Equations

$A_i = (C * B_i) + ((1–C) * A_{i-1})$
I_i = smaller of ((1 + A_i) * N) and M
Where,
A_i = activity index for the current round (round i)
C = activity weight factor
B_i = number of bids in the current round (round i)
A_{i-1}=activity index from previous round (round i-1), A_0 is 0
I_i=percentage bid increment for the current round (round i)
N=minimum percentage increment
M=maximum percentage increment

Under the exponential smoothing methodology, once a bid has been received on a license, the minimum acceptable bid for that license in the following round will be the new high bid plus the greater of either the dollar amount associated with the percentage increment (variable I_i from above times the high bid) or the absolute increment (a fixed dollar amount per bidding unit for each license, *e.g.*, $0.25 per bidding unit).

Example

License 1 (800,000 bidding units)
C=0.5, N=0.05, M=0.15, Absolute bid increment=$0.25 per bidding unit
Round 1 (2 new bids, high bid=$1,000,000)

1. Calculation of percentage increment using exponential smoothing:
$A_1=(0.5 * 2)+(0.5 * 0)=1$
$I_1=(1+1) * 0.05=0.1$

2. Dollar increment using the percentage increment (I_1 from above)
0.1 * $1,000,000=$100,000

3. Dollar increment using the absolute increment
$0.25 * 800,000 bidding units=$200,000

4. Minimum bid increment: greater of percentage and absolute=$200,000
Round 2 (3 new bids, high bid=2,000,000)

1. Calculation of percentage increment using exponential smoothing:
$A_2=(0.5 * 3)+(0.5 * 1)=2$
$I_2=(1+2) * 0.05=0.15$

2. Dollar increment using the percentage increment (I_2 from above)
0.15 * $2,000,000=$300,000

3. Dollar increment using the absolute increment
$0.25×800,000 bidding units=$200,000

4. Minimum bid increment: greater of percentage and absolute=$300,000
Round 3 (1 new bid, high bid = 2,300,000)

1. Calculation of percentage increment using exponential smoothing:
$A_3 = (0.5 * 1) + (0.5 * 2) = 1.5$
$I_3 = (1 + 1.5) * 0.05 = 0.125$

2. Dollar increment using the percentage increment (I_3 from above)
0.125 * $2,300,000 = $287,500

3. Dollar increment using the absolute increment
$0.25 • 800,000 bidding units = $200,000

4. Minimum bid increment: greater of percentage and absolute = $287,500

d. Initial Maximum Eligibility for Each Bidder

In the *220 MHz Third Report and Order*, the Commission delegated to the Bureau the authority and discretion to determine an appropriate upfront payment for each license being auctioned, taking into account such factors as the population in each geographic license area, and the value of similar spectrum. The Commission noted that the Bureau should establish an upfront payment amount that would roughly equate with a five percent value for the license. *220 MHz Third Report and Order*, 12 FCC Rcd at 11055–11056, ¶255, 62 FR at 15981.

With these guidelines in mind, we propose, for the Phase II 220 MHz Service auction, an upfront payment of one cent per MHz-pop with no amount less than $2,500. Our proposal will utilize the data in Attachment A to this Public Notice. We seek comment on this proposal.

For the Phase II 220 MHz Service auction, we further propose that the amount of the upfront payment submitted by a bidder will determine the initial maximum eligibility (as measured in bidding units) for each bidder. Upfront payments are not attributed to specific licenses, but instead will be translated into bidding units to define a bidder's initial maximum eligibility. The total upfront payment defines the maximum amount of bidding units on which the applicant will initially be permitted to bid. We seek comment on this proposal.

e. Activity Rule Waivers and Reducing Eligibility

Use of an activity rule waiver preserves the bidder's current bidding eligibility despite the bidder's activity in the current round being below the required minimum level. An activity rule waiver applies to an entire round of bidding and not to a particular license. Activity waivers are principally a mechanism for auction participants to avoid the loss of auction eligibility in the event that exigent circumstances prevent them from placing a bid in a particular round.

The FCC auction system assumes that bidders with insufficient activity would prefer to use an activity rule waiver (if available) rather than lose bidding eligibility. Therefore, the system will automatically apply a waiver (known as an "automatic waiver") at the end of any bidding period where a bidder's activity level is below the minimum required unless: (1) There are no activity rule waivers available; or (2) the bidder overrides the automatic application of a waiver by reducing eligibility thereby meeting the minimum requirements.

A bidder with insufficient activity that wants to reduce its bidding eligibility rather than use an activity rule waiver must affirmatively override the automatic waiver mechanism during the bidding period by using the reduce eligibility function in the software. In this case, the bidder's eligibility is permanently reduced to bring the bidder into compliance with the activity rules as described above. Once eligibility has been reduced, a bidder will not be permitted to regain its lost bidding eligibility.

A bidder may proactively use an activity rule waiver as a means to keep the auction open without placing a bid. If a bidder submits a proactive waiver (using the proactive waiver function in the bidding software) during a bidding period in which no bids are submitted, the auction will remain open and the bidder's eligibility will be preserved. An automatic waiver invoked in a round in which there are no new valid bids will not keep the auction open.

We propose that each bidder in the Phase II 220 MHz Service auction will be provided five activity rule waivers that may be used in any round during the course of the auction. We seek comment on this proposal.

f. Information Regarding Bid Withdrawal and Bid Removal

For the Phase II 220 MHz Service auction, we propose the following bid removal and bid withdrawal procedures. Before the close of a bidding period, a bidder has the option of removing any bids placed in that round. By using the remove bid function in the software, a bidder may effectively "unsubmit" any bid placed within that round. A bidder removing a bid placed in the same round is not subject to withdrawal payments.

Once a round closes, a bidder may no longer remove a bid. However, in the next round, a bidder may withdraw standing high bids from previous rounds using the withdraw bid function. A high bidder that withdraws its standing high bid from a previous round is subject to the bid withdrawal payment provisions. See 47 CFR 90.1007; 1.2104(g); 1.2109. We seek comment on these bid removal and bid withdrawal procedures.

In the *220 MHz Third Report and Order*, the Commission adopted the bid withdrawal provisions found in Part 1 of the Commission's Rules for the Phase II 220 MHz auction. *220 MHz Third Report and Order*, 12 FCC Rcd at 11057, ¶263, 62 FR at 15981. In the *Part 1 Third Report and Order*, the Commission recently explained that allowing bid withdrawals facilitates efficient aggregation of licenses and pursuit of efficient backup strategies as information becomes available during the course of an auction. The Commission noted, however, that in some instances bidders may seek to withdraw bids for improper reasons, including to delay the close of the auction for strategic purposes. The Bureau, therefore, has discretion, in managing the auction, to limit the number of withdrawals to prevent strategic delay of the close of the auction or other abuses. The Commission stated that the Bureau should assertively exercise its discretion, consider limiting the number of rounds in which bidders may withdraw bids, and prevent bidders from bidding on a particular market if the Bureau finds that a bidder is abusing the Commission's bid withdrawal procedures. *Part 1 Third Report and Order* at ¶150. We note that the *Part 1 Third Report and Order* for the most part expressly does not apply to the auction of licenses for the 220 MHz Service. *Id.* at ¶7. However, as we previously stated, the *220 MHz Third Report and Order* invokes the Part 1 provisions in establishing its withdrawal rules. We therefore follow the reasoning of the Commission in the *Part 1 Third Report and Order* with respect to withdrawals in our analysis of this issue.

Applying this reasoning, we propose to limit each bidder in the Phase II 220 MHz Service auction to withdrawals in no more than two rounds during the course of the auction. To permit a bidder to withdraw bids in more than two rounds would likely encourage insincere bidding or the use of withdrawals for anti-competitive strategic purposes. The two rounds in which withdrawals are utilized will be at the bidder's discretion; withdrawals otherwise must be in accordance with the Commission's Rules. There is no limit on the number of bids that may be removed in either of the rounds in which withdrawals are utilized. Withdrawals will remain subject to the bid withdrawal payment provisions specified in the Commission's Rules. We seek comment on this proposal.

g. Stopping Rules

In the *220 MHz Third Report and Order*, the Commission adopted a simultaneous stopping rule for the Phase II 220 MHz Service auction. The Commission noted that experience in prior auctions demonstrated that the simultaneous stopping rule balanced the interests of administrative efficiency and maximum bidder participation. The Commission concluded that the substitutability between and among licenses in different geographic areas and the importance of preserving bidders' ability to pursue backup strategies support the use of a simultaneous stopping rule. See *220 MHz Third Report and Order*, 12 FCC Rcd at 11048, ¶228, 62 FR at 15980. The Bureau has discretion to "establish stopping rules before or during an auction in order to terminate the auction within a reasonable time." See 47 CFR 90.1005(d). We therefore have the discretion to adopt an alternative stopping rule to the simultaneous stopping rule if we deem appropriate. Thus, unless circumstances dictate otherwise, bidding would remain open on all licenses until bidding stops on every license. The auction would close for all licenses when one round passes during which no bidder submits a new acceptable bid on any license, applies a proactive waiver, or withdraws a previous high bid.

We propose that the Bureau retain the discretion to keep an auction open even if no new acceptable bids or proactive waivers are submitted and no previous high bids are withdrawn. In this event, the effect will be the same as if a bidder had submitted a proactive waiver. The activity rule, therefore, will apply as usual and a bidder with insufficient activity will either lose bidding eligibility or use a remaining activity rule waiver.

Finally, we propose that the Bureau reserve the right to declare that the auction will end after a specified number of additional rounds ("special stopping rule"). If the Bureau invokes this special stopping rule, it will accept bids in the final round(s) only for licenses on which the high bid increased in at least one of the preceding specified number of rounds. The Bureau proposes to exercise this option only in circumstances such as where the auction is proceeding very slowly, where there is minimal overall bidding activity, or where it appears likely that the auction will not close within a reasonable period of time. Before exercising this option, the Bureau is likely to attempt to increase the pace of the auction by, for example, moving the auction into the next stage (where bidders would be required to maintain a higher level of bidding activity), increasing the number of bidding rounds per day, and/or increasing the amount of the minimum bid increments for the limited number of licenses where there is still a high level of bidding activity. We seek comment on these proposals.

h. Information Relating to Auction Delay, Suspension or Cancellation

For the Phase II 220 MHz Service auction, we propose that, by public notice or by announcement during the auction, the Bureau may delay, suspend or cancel the auction in the event of natural disaster, technical obstacle, evidence of an auction security breach, unlawful bidding activity, administrative or weather necessity, or for any other reason that affects the fair and competitive conduct of competitive bidding. In such cases, the Bureau, in its sole discretion, may elect to: resume the auction starting from the beginning of the current round; resume the auction starting from some previous round; or cancel the auction in its entirety. Network interruption may cause the Bureau to delay or suspend the auction. We emphasize that exercise of this authority is solely within the discretion of the Bureau, and its use is not intended to be a substitute for situations in which bidders may wish to apply their activity rule waivers. We seek comment on this proposal.

III. Conclusion

Comments are due on or before January 29, 1998, and reply comments are due on or before February 5, 1998.

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR Part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The application also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act. Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than February 13, 1998.

A. Federal Reserve Bank of Boston (Richard Walker, Community Affairs Officer) 600 Atlantic Avenue, Boston, Massachusetts 02106-2204:

1. Peoples Heritage Financial Group, Inc., Portland, Maine; to acquire and thereby merge with CFX Corporation, Keene, New Hampshire, and thereby indirectly acquire Safety Fund National Bank, Fitchburg, Massachusetts; Orange Savings Bank, Orange, Massachusetts; and CFX Bank, Keene, New Hampshire.

B. Federal Reserve Bank of Cleveland (Jeffery Hirsch, Banking Supervisor) 1455 East Sixth Street, Cleveland, Ohio 44101-2566:

1. FirstMerit Corporation, Akron, Ohio; to merge with CoBancorp, Inc., Elyria, Ohio, and thereby indirectly acquire PremierBank & Trust, Elyria, Ohio.

In connection with this application, Applicant also has applied to acquire Jefferson Savings Bank, West Jefferson, Ohio, and thereby engage in permissible savings association activities, pursuant to § 225.28(b)(4)(ii) of the Board's Regulation Y.

C. Federal Reserve Bank of Richmond (A. Linwood Gill III, Assistant Vice President) 701 East Byrd Street, Richmond, Virginia 23261-4528:

1. MainStreet BankGroup Incorporated, Martinsville, Virginia; to acquire 100 percent of the voting shares of Regency Financial Shares, Inc., Richmond, Virginia, and thereby indirectly acquire Regency Bank, Richmond, Virginia.

D. Federal Reserve Bank of Atlanta (Lois Berthaume, Vice President) 104 Marietta Street, N.W., Atlanta, Georgia 30303-2713:

1. Lincoln Interim Corporation, Lincolnton, Georgia; to become a bank holding company by acquiring 100 percent of the voting shares of Lincoln Bancshares, Inc., Lincoln, Georgia.

2. The Peoples BancTrust Company, Inc., Selma, Alabama; to merge with Merchants & Planters Bancshares, Inc., Montevallo, Alabama, and thereby indirectly acquire Merchants & Planters Bank, Montevallo, Alabama.

E. Federal Reserve Bank of Chicago (Philip Jackson, Applications Officer) 230 South LaSalle Street, Chicago, Illinois 60690-1413:

1. F&M Bancorporation, Inc., Kaukauna, Wisconsin; to acquire 100 percent of the voting shares of Bancsecurity Corporation, Marshalltown, Iowa, and thereby indirectly acquire Security Bank, Marshalltown, Iowa; Security Bank Jasper-Poweshiek, Kellogg, Iowa; and Story County Bank & Trust, Story City, Iowa.

In connection with this application, Bancsecurity Acquisition Corp., Kaukauna, Wisconsin, has also applied to become a bank holding company.

Board of Governors of the Federal Reserve System, January 13, 1998.

Jennifer J. Johnson,

Deputy Secretary of the Board.

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR Part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The application also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act. Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than February 13, 1998.

A. Federal Reserve Bank of Philadelphia (Michael E. Collins, Senior Vice President) 100 North 6th Street, Philadelphia, Pennsylvania 19105-1521:

1. Community Banks, Inc., Millersburg, Pennsylvania; to acquire 100 percent of the voting shares of The Peoples State Bank, East Berlin, Pennsylvania.

B. Federal Reserve Bank of Cleveland (Jeffery Hirsch, Banking Supervisor) 1455 East Sixth Street, Cleveland, Ohio 44101-2566:

1. National City Corporation, Cleveland, Ohio; to merge with Fort Wayne National Corporation, Fort Wayne, Indiana, and thereby indirectly acquire The Auburn State Bank, Auburn, Indiana; Churubusco State Bank, Churubusco, Indiana; First National Bank of Huntington, Huntington, Indiana; First National Bank of Warsaw, Warsaw, Indiana; Fort Wayne National Bank, Fort Wayne, Indiana; Old First National Bank in Bluffton, Bluffton, Indiana; and Valley American Bank and Trust Company, South Bend, Indiana.

C. Federal Reserve Bank of Richmond (A. Linwood Gill III, Assistant Vice President) 701 East Byrd Street, Richmond, Virginia 23261-4528:

1. Centura Banks, Inc., Rocky Mount, North Carolina; to merge with Pee Dee Bankshares, Inc., Timmonsville, South Carolina, and thereby indirectly acquire Pee Dee State Bank, Timmonsville, South Carolina.

Board of Governors of the Federal Reserve System, January 14, 1998.

Jennifer J. Johnson,

Deputy Secretary of the Board.

FEDERAL RESERVE SYSTEM

Notice of Proposals To Engage in Permissible Nonbanking Activities or To Acquire Companies That Are Engaged in Permissible Nonbanking Activities

The companies listed in this notice have given notice under section 4 of the Bank Holding Company Act (12 U.S.C. 1843) (BHC Act) and Regulation Y, (12 CFR Part 225) to engage *de novo*, or to acquire or control voting securities or assets of a company that engages either directly or through a subsidiary or other company, in a nonbanking activity that is listed in § 225.28 of Regulation Y (12 CFR 225.28) or that the Board has determined by Order to be closely related to banking and permissible for bank holding companies. Unless otherwise noted, these activities will be conducted throughout the United States.

Each notice is available for inspection at the Federal Reserve Bank indicated. The notice also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether the proposal complies with the standards of section 4 of the BHC Act.

Unless otherwise noted, comments regarding the applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than February 13, 1998.

A. Federal Reserve Bank of New York (Betsy Buttrill White, Senior Vice President) 33 Liberty Street, New York, New York 10045-0001:

1. Greater Community Bancorp, Totowa, New Jersey; to acquire 1st Bergen Bancorp, Wood-Ridge, New Jersey, and thereby indirectly acquire South Bergen Savings Bank, Wood-Ridge, New Jersey, and engage in operating a savings bank, pursuant to

VOL 63 ISS 12 JA 20 1998 UMI

§ 225.28(b)(4)(ii) of the Board's Regulation Y.

Board of Governors of the Federal Reserve System, January 13, 1998.

[INFO–98–08]

Proposed Data Collections Submitted for Public Comment and Recommendations

In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 for opportunity for public comment on proposed data collection projects, the Centers for Disease Control and Prevention (CDC) and the Agency for Toxic Substances and Disease Registry (ATSDR) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the data collection plans and instruments, call the CDC/ATSDR Reports Clearance Officer on (404) 639–7090.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques for other forms of information technology. Send comments to Wilma Johnson, CDC/ATSDR Reports Clearance Officer, 1600 Clifton Road, MS–D24, Atlanta, GA 30333. Written comments should be received within 60 days of this notice.

Proposed Projects

1. Model Performance Evaluation Program for Retroviral and AIDS-Related Testing—(0920–0274)—Extension—Public Health Practice Program Office (PHPPO). The CDC Model Performance Evaluation Program (MPEP) currently assesses the performance of laboratories that test for human immunodeficiency virus type 1 (HIV–1) antibody, human T-lymphotropic virus types I and II (HTLV–I/II) antibody, perform CD4 T-cell testing or T-lymphocyte immunophenotyping (TLI) by flow cytometry or alternate methods, perform HIV–1 ribonucleic acid (RNA) determinations (viral load), and test for HIV–1 p24 antigen through the use of mailed sample panels. The CDC MPEP is proposing to use annual data collection documents to gain updated information on the characteristics of testing laboratories and their testing practices. Two data collection instruments, or survey questionnaires, will be used. The first data collection instrument will be concerned with laboratories that perform HIV–1 antibody (Ab) testing, HTLV–I/II Ab testing, HIV–1 viral RNA determinations, and HIV–1 p24 antigen (Ag) testing. Laboratories enrolled in the MPEP will be mailed a survey questionnaire and be asked to complete the sections pertinent to their laboratory's testing. The survey instrument will collect demographic information related to laboratory type, primary purpose for testing, types of specimens tested, minimum education requirements of testing personnel, laboratory director, and laboratory supervisor, and training required of testing personnel. The demographic section will be followed by more specific sections related directly to HIV–1 Ab testing, HTLV–I/II Ab testing, HIV–1 RNA, and HIV–1 p24 Ag testing. Included in the latter sections will be questions related to the types of tests performed, the algorithm of testing, how test results are interpreted, how results are reported, how specimens may be rejected for testing, if some testing is referred to other laboratories, and what quality control and quality assurance procedures are conducted by the laboratory. Similarly, the TLI survey questionnaire will also collect demographic information about each laboratory, as well as, the type(s) of flow cytometer used, educational and training requirements of testing personnel, the types of monoclonal antibodies used in testing, how specimens are received, prepared, and stored, how test results are recorded and reported to the test requestor, and what quality control and quality assurance procedures are practiced. Information collected through the use of these instruments will enable CDC to determine if laboratories are conforming to published recommendations and guidelines, whether education and training requirements of testing personnel are conforming to current legislative requirements, and whether problems in testing can be identified through the collection of information. Information collected through the survey instruments will then be compared statistically with the performance evaluation results reported by the enrolled laboratories to determine if characteristics of laboratories that perform well can be distinguished from laboratories not performing as well. Upon enrolling in the MPEP, participants are assigned an MPEP number used to report testing results and survey questionnaire responses allowing the individual responses of each laboratory participant to be treated in confidence. When participants respond to the surveys by sending CDC completed questionnaires, the collected information is developed into aggregate reports. A copy of the completed report is provided to each participating laboratory. Other than their time, there will be no cost to the respondents.

Respondents	Number of respondents	No. of respondents/response	Average burden/response (in hrs)	Total burden (in hrs)
MPEP Enrollment Form	100	1	0.1	10
Retroviral Survey	1,000	1	0.5	500
TLI Survey	350	1	0.5	175
Total				685

2. Prostate and Colorectal Cancer Screening in the Managed Care Environment—New—National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP). Prostate and colorectal cancer are among the leading causes of cancer deaths in the U.S. Prostate cancer screening has increased rapidly during the past few years; however, little is known about actual rates of screening, or the proportion of men screened who present with symptoms or who are at high risk for prostate cancer. Evidence suggests that colorectal cancer screening can save lives and efforts are under way to increase participation in screening. However, little information is available to monitor screening rates. It is also unknown how well self-reported prostate and colorectal cancer screening rates, which are often used in population surveys, compare to actual screening rates. Therefore, the Centers for Disease Control and Prevention (CDC), National Center for Chronic Disease Prevention and Health Promotion, Division of Cancer Prevention and Control, intends to conduct a survey of prostate and colorectal cancer screening test utilization. As an increasing number of people are served by managed care organizations where they may receive cancer screening tests, the proposed study population are members of managed care organizations.

A sample of members (men aged 40 years and older and women 50 years and older) of 3 managed care organizations will be interviewed over the telephone, and the medical charts of the participants will be abstracted. The information collected will include demographic information, prostate and colorectal cancer screening tests received within the past 5 years, and the reasons and outcomes of the tests. The total cost estimate is: $400,000.

Respondents	No. of respondents	No. of responses/respondent	Average burden of response (in hrs)	Total burden (in hrs)
Members of Prepaid Health Plans	2200	1	0.25	550

3. Substance Specific Applied Research Program (AMHPS) (King/Drew Lead Study in-Person Interview, Lead and Hypertension Screening Questionnaire/Risk Factor Questionnaire]—(0923–0015)—EXTENSION—The Agency for Toxic Substances and Disease Registry (ATSDR) is mandated pursuant to the 1980 Comprehensive Environmental Response Compensation and Liability Act (CERCLA), and its 1986 Amendments, The Superfund Amendments and Reauthorization Act (SARA), to prevent or mitigate adverse human health effects and diminished quality of life resulting from the exposure to hazardous substances into the environment. Disadvantaged minorities in large urban areas have higher than national blood lead levels. Some of these groups also suffer from disproportionately high rates of hypertension. Previous data shows a relationship between higher blood lead levels and higher blood pressure, even at the lowest lead exposure. To facilitate this effort, this study examines the relationship between lead exposure history in inner city minorities and blood pressure, using a group at special risk for elevated blood pressure, pregnant women. Elevated blood lead

VOL 63 ISS 12 JA 20 1998 UMI

and elevated blood pressure are two problems that disproportionately affect minority groups. Establishing a link between blood pressure and lead exposure, especially utilizing two new biomarkers of lead exposure, bone lead and serum lead, can provide a new tool for dealing with elevated blood pressure nationwide.

This request is for a 3-year extension. Two previously approved questionnaires will continue to be used to collect socioeconomic data, and data pertaining to risk factors for elevated blood pressure and lead exposure. A new questionnaire assessing social stress (Scale of Chronic Social Role Stressors) and a 16 item, four response choice scale will be added to better control for social stress factors affecting blood pressure. There is no cost to respondents.

Type of respondent	No. of respondents per year	No. of responses/respondent	Avg. burden per response (in hrs)	Total burden (in hrs)
Screening Questionnaire	880	1	.5	440
Social Role Stressors	880	1	.08	70
Risk Questionnaire	330	2	.75	495
Total				1005

Dated: January 13, 1998.

Wilma G. Johnson,

Acting Associate Director for Policy Planning and Evaluation, Centers for Disease Control and Prevention (CDC).

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Proposed Information Collection Activity; Comment Request

Proposed Projects

Title: Community-Based Family Resource and Support Grants.

OMB No.: 0970–0155.

Description: Application information is required when a State wishes to receive a Community-Based Family Resource and Support (CBFRS) grant award. This Program Instruction contains information collection requirements found in Pub. L. 104–235 at Sections 202(1)(A); 202(b)(1)(B); 205; and 207. The information being collected is required by statute to be submitted pursuant to receiving a grant award. The information submitted will be used by the agency to ensure compliance with the statute, complete the calculation of the grant award entitlement, provide training and technical assistance to the grantee, and evaluate State efforts in the prevention of child abuse and neglect.

Respondents: State, Local or Tribal Government.

ANNUAL BURDEN ESTIMATES

Instrument	Number of respondents	Number of responses per respondent	Average burden hours per response	Total burden hours
Application	57	1	40	2,280
Annual Report	57	1	40	1,368

Estimated Total Annual Burden Hours: 3,648.

In compliance with the requirements of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Administration for Children and Families is soliciting public comment on the specific aspects of the information collection described above. Copies of the proposed collection of information can be obtained and comments may be forwarded by writing to the Administration for Children and Families, Office of Information Services, Division of Information Resource Management Services, 370 L'Enfant Promenade, SW., Washington, DC 20447, Attn: ACF Reports Clearance Officer. All requests should be identified by the title of the information collection.

The Department specifically requests comments on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

Dated: January 13, 1998.

Bob Sargis,

Acting Reports Clearance Officer.

Submission for OMB Review; Comment Request

Title: Emergency TANF Data Report (ACF–198).

OMB No.: 0970–0164.

Description: This information is being collected to meet the statutory requirements of section 411 of the Social Security Act and section 116 of the Personal Responsibility and Work Opportunity Reconciliation Act of 1996. It consists of disaggregated and aggregated demographic and program information that will be used to determine participation rates and other statutorily required indicators for the Temporary Assistance for Needy Families (TANF) program. OMB previously approved this data collection under emergency procedures through January 31, 1998. We are now requesting an extension through September 30, 1998, in order to maintain the continuity of data collection pending OMB approval of the data collection instruments published in the NPRM dated November 20, 1997.

Respondents: States and Territories.

ANNUAL BURDEN ESTIMATES

Instrument	Number of respondents	Number of responses per respondent	Average burden hours per response	Total burden hours
Emergency TANF Data Report	54	4	451	97,416

Estimated Total Annual Burden Hours: 97,416.

Additional Information

Copies of the proposed collection may be obtained by writing to The Administration for Children and Families, Office of Information Services, Division of Information Resource Management Services, 370 L'Enfant Promenade, S.W., Washington, D.C. 20447, Attn: ACF Reports Clearance Officer.

OMB Comment

OMB is required to make a decision concerning the collection of information between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment is best assured of having its full effect if OMB receives it within 30 days of publication. Written comments and recommendations for the proposed information collection should be sent directly to the following: Office of Management and Budget, Paperwork Reduction Project, 725 17th Street, N.W., Washington, D.C. 20503, Attn: Ms. Laura Oliven.

Dated: January 7, 1998.

Bob Sargis,

Acting Reports Clearance Officer.

BILLING CODE 4184–01–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. 97N–0497]

Request for Proposed Standards for Unrelated Allogeneic Peripheral and Placental/Umbilical Cord Blood Hematopoietic Stem/Progenitor Cell Products; Request for Comments

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice; request for comments.

SUMMARY: The Food and Drug Administration (FDA) is requesting submission of comments proposing product standards intended to ensure the safety and effectiveness of minimally manipulated hematopoietic stem/progenitor cells derived from peripheral and cord blood for unrelated allogeneic use.[1] The comments should include supporting clinical and nonclinical laboratory data and other relevant information. This information will aid FDA in developing product standards for hematopoietic stem/progenitor cell products intended for allogeneic use in recipients unrelated to the donor (hereinafter referred to as unrelated allogeneic), including manufacturing controls and product specifications. FDA is also announcing its intention to phase-in implementation of investigational new drug application (IND) and license application requirements for minimally manipulated[2] unrelated allogeneic hematopoietic stem/progenitor cell products 3 years after the date of issuance of this notice to permit the development of licensing standards for those products where possible. This action is taken in response to the agency's "Proposed Approach to Regulation of Cellular and Tissue-based Products," which fullfills the objectives of the administration's "Reinventing the Regulation of Human Tissue" initiated to streamline regulatory requirements to ease the burden on regulated industry, while providing adequate protection to the public health.

[1] The term *unrelated allogeneic use* means the implantation, infusion, or transfer of a human cellular or tissue-based product from one person to another who is not a parent, sibling, or a child of the donor.

[2] The term *minimally manipulated* means processing of cells and nonstructural tissues that does not alter the biological characteristics and thus, potentially, the function or integrity of the cells or tissues.

DATES: Submit requested standards and supporting clinical and nonclinical laboratory data by January 20, 2000.

ADDRESSES: Submit proposed product standards and supporting data to the Dockets Management Branch (HFA–305), Food and Drug Administration, 12420 Parklawn Dr., rm. 1–23, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Paula S. McKeever, Center for Biologics Evaluation and Research (HFM–17), Food and Drug Administration, 1401 Rockville Pike, Rockville, MD 20852–1448, 301–827–6210.

SUPPLEMENTARY INFORMATION:

I. Background

A. Use of Peripheral and Cord Blood Stem/Progenitor Cells for Hematopoietic Reconstitution

The field of hematologic transplantation has changed substantially during the last two decades. Improved understanding of the diverse aspects of human hematologic precursors has facilitated their experimental manipulation. Our knowledge of their localization in humans during both fetal and postnatal development, growth regulation, differentiation, homing, and of phenotypic and functional characteristics has facilitated the development of new methods of transplantation. Traditional bone marrow transplantation, involving the extraction of bone marrow by aspiration from bone cavities with further processing by density centrifugation, is increasingly being supplanted by novel approaches that include use of hematopoietic stem/progenitor cells and biotechnologic procedures to purify and expand hematopoietic stem/progenitor cells. Human cord blood, which is enriched with pluripotent hematopoietic stem/progenitor cells, and peripheral blood, which can be enriched in hematopoietic stem/progenitor cells by a variety of

VOL 63 ISS 12 JA 20 1998 UMI

interventions, have emerged as sources of hematopoietic cells alternative to bone marrow aspirates for bone marrow reconstitution.

B. Stem/Progenitor Cell Workshops

FDA held a public workshop to discuss procedures for preparation and storage of cord blood stem/progenitor cells on December 13, 1995 (60 FR 58088, November 24, 1995). The workshop was jointly sponsored by FDA and the National Heart, Lung, and Blood Institute (NHLBI), National Institutes of Health. The purpose of the workshop was to identify and discuss steps for collection, processing, and storage of cord blood stem/progenitor cells for transplantation and to identify what additional post transplantation scientific data are needed in this area. A draft document, discussing an appropriate regulatory approach for placental/umbilical cord blood stem/progenitor cell products for transplantation, was made available at the workshop, and a notice of availability for comment was published in the **Federal Register** of February 26, 1996 (61 FR 7087). In response to requests to extend the comment period, a notice extending the comment period by 90 days was published in the **Federal Register** of May 28, 1996 (61 FR 26473).

In the **Federal Register** of February 8, 1996 (61 FR 4786), FDA announced a public workshop, jointly sponsored by FDA and NHLBI to be held on February 22 and 23, 1996, to discuss procedures for the preparation, processing, and characterization of human peripheral blood stem/progenitor cells. The purpose of the workshop was to identify and discuss the methods for the collection, processing, and storage of peripheral blood stem/progenitor cells for transplantation and to identify areas in need of further research. A draft document was made available at the workshop describing FDA's proposed regulatory approach for human peripheral blood stem/progenitor cell products for transplantation.

Based, in part, on information presented at these meetings, FDA recognized a need to reconsider whether the concepts and procedures used to regulate traditional biological products were appropriate for regulation of peripheral and cord blood hematopoietic stem/progenitor cells and other cellular and tissue-based products which are a result of new technologies. After consultation with representatives of the involved public, FDA proposed a new regulatory framework for cellular and tissue-based products, including hematopoietic stem/progenitor cells, in February 1997, entitled "Reinventing the Regulation of Human Tissue," and "Proposed Approach to Regulation of Cellular and Tissue-based Products." On March 4, 1997, the agency announced a public meeting, to be held on March 17, 1997, to solicit information and views from the interested public on the agency's proposed regulatory approach for such products, and the agency requested that written comments be submitted to the docket (62 FR 9721).

C. New Regulatory Approach for Human Cellular and Tissue-Based Products

The proposed framework provides a tiered approach to human cellular and tissue-based product[3] regulation. The regulation focuses on three general areas: (1) Preventing use of contaminated tissues with the potential for transmitting infectious diseases; (2) preventing improper handling or processing that might contaminate or damage tissues, or produce cellular or tissue-based products of inadequate quality; and (3) ensuring that clinical safety and effectiveness are demonstrated for most tissues that are highly processed, are used for other than their homologous use,[4] are combined with nontissue components, or have a systemic effect.

Under the tiered approach, FDA intends to impose Federal requirements only to the extent necessary to protect the public health, with minimal regulation for some products and with increasing degrees of oversight as the potential risk increases. For example, tissues transplanted from one person to another for their normal structural or reproductive functions and without undergoing extensive processing will be subject to requirements for infectious disease screening and testing, and to requirements for good processing and handling procedures, but will not need FDA marketing approval before distribution and use. Thus, FDA expects that most processors of reproductive tissue, tissue products currently regulated under 21 CFR part 1270, and other minimally manipulated products will not be required to seek FDA premarket approval of their products nor to submit detailed clinical information about their products to FDA. The agency intends to regulate as biological drugs or devices those tissues that are processed extensively, combined with nontissue components, promoted or labeled for use other than homologous use, or (with limited exceptions) that have systemic effect on the body. Minimally manipulated hematopoietic stem/progenitor cells derived from peripheral and cord blood, for unrelated allogeneic use, would therefore be regulated as biological drugs under the Public Health Service Act and the Federal Food, Drug, and Cosmetic Act. FDA does not intend to request clinical data to demonstrate safety and effectiveness for cellular and tissue-based products with systemic effect that are for autologous use[5] or family-related allogeneic use[6] or for reproductive tissues for reproductive use providing such products are minimally manipulated, for homologous use, and not combined with a nontissue component. FDA intends to require that establishments manufacturing such minimally manipulated hematopoietic stem/progenitor cell products for hematopoietic reconstitution register and list their products with FDA, comply with good tissue practice regulations, and ensure that all labeling and promotional materials are clear, accurate, balanced, and nonmisleading.

D. Application of the Proposed Regulatory Approach to Hematopoietic Stem/Progenitor Cell Products

For unrelated allogeneic hematopoietic stem/progenitor cells intended for hematopoietic reconstitution, provided they are not more than minimally manipulated (i.e., processing does not alter the biological characteristics of the cells), the agency believes that it may be possible to develop product standards and establishment and processing controls based on existing clinical trial data or data developed in the near future demonstrating the safety and efficacy of the cells. If adequate information can be developed, the agency intends to issue guidance for establishment controls, processing controls, and product standards in accordance with the agency's "Good Guidance Practices," issued in the **Federal Register** of February 27, 1997 (62 FR 8961). FDA intends to propose that, in lieu of individual applications containing clinical data, licensure may be granted

[3] The term *human cellular and tissue-based product* means a product containing human cells or tissues or any cell or tissue-based component of such a product.

[4] The term *homologous use* means the use of a cellular or tissue-based product for a normal function that is analogous to that of the cells or tissues being replaced or supplemented.

[5] The term *autologous use* means the implantation, transplantation, infusion, or transfer of a human cellular or tissue-based product back into the individual from whom the cells or tissue comprising such product were removed.

[6] The term *family-related allogeneic use* means the implantation, transplantation, infusion, or transfer of a human cellular or tissue-based product into a first-degree blood relative of the individual from whom cells or tissue comprising such product were removed.

for products certified as meeting issued standards. To allow sufficient time for data and standards to be developed, the agency will phase-in IND and license application requirements for minimally manipulated unrelated allogeneic hematopoietic stem/progenitor cell products for hematopoietic reconstitution 3 years following the date of issuance of this **Federal Register** notice. FDA is inviting product providers, professional groups, and other interested persons to submit to the agency proposed standards and supporting data designed to ensure the safety and effectiveness of minimally manipulated hematopoietic stem/progenitor cell products for hematopoietic reconstitution. Proposed standards should be supported by adequate data and other relevant information. In order to permit development of useful standards within the phase-in period for enforcement of premarket application requirements, FDA suggests that interested parties work together to achieve consensus on uniform standards before submission to FDA. FDA will evaluate the information submitted. If the agency determines that the submissions support the development of standards, FDA intends to issue such standards through the agency's guidance documents procedures. If FDA determines that adequate establishment and processing controls and product standards are not available, the agency intends to enforce IND and license application requirements at the close of the 3 year period. FDA reminds affected parties that cells that have been more than minimally manipulated (e.g., expanded, activated, genetically modified or otherwise have their biological characteristics altered) or combined with nontissue components continue to require IND's and licensing approval, and are not subject to a phase-in period for enforcement of these requirements.

II. Request for Product Standards with Supporting Clinical and Nonclinical Data

A. Purpose

FDA is inviting product providers, professional groups, and other interested persons to submit to the agency proposed product standards with supporting clinical and nonclinical laboratory data, and other relevant information, designed to ensure the safety and effectiveness of minimally manipulated hematopoietic stem/progenitor cells derived from peripheral and placental/umbilical cord blood for unrelated allogeneic hematopoietic reconstitution. Submitted data may be specific for a patient subset, e.g., pediatric patients, and should identify the patient subset, if applicable.

FDA is requesting that proposed establishment controls include standards for personnel, facilities, quality management, standard operating procedures, staff training and competence, and process validation. Establishment controls should also include standards for recordkeeping regarding donors, processing, quarantine, storage, labeling, distribution, tracking, handling of errors and accidents, deviations from standard operating procedures, suspected adverse reactions, and quality control processes.

FDA is requesting that proposed processing controls include standards for donor selection, informed consent, donor testing and screening, histocompatibility testing, collection procedures, product testing, volume reduction methods, cryopreservation, storage conditions in liquid and frozen state, storage monitoring, transportation within and between facilities, temperature limits, packaging, and thawing procedures. The processing controls should include standards for testing for product contamination, product viability, composition, and functionality, and include when and how such testing is to be performed.

FDA is requesting that proposed product standards include the criteria for acceptance of a unit of hematopoietic stem/progenitor cells derived from peripheral or placental/umbilical cord blood. Criteria should include volume of the product, viable cell number (specified as nucleated or mononuclear cells), storage temperature limits, microbial or other contamination limits, and any other appropriate characteristics of the product, e.g., CD34 positive cell enumeration. For peripheral blood hematopoietic stem/progenitor cell products, information regarding the treatment regimens of the donors with mobilizing agents should also be provided including the type of mobilizing agent, duration of mobilization, and the number of apheresis collections.

The agency is suggesting that evidence of hematopoietic stem/progenitor cell engraftment for these products be consistently expressed as the time, expressed as number of days from the day of hematopoietic stem/progenitor cell infusion to the day that a neutrophil count of equal to or greater than 500 cells/μL is obtained, and the time, expressed as number of days from the day of hematopoietic stem/progenitor cell infusion to the first of 3 consecutive days in which the transfusion-independent platelet count of equal to or greater than 20,000 platelets/μL is demonstrated in the recipient. Information relevant to sustained platelet engraftment, such as the number of days from the day of hematopoietic stem/progenitor cell infusion to the day in which a transfusion-independent platelet count of equal to or greater than 50,000 platelets/μL is observed, should also be provided. Data provided should include the extent of HLA (human leukocyte antigen) disparity, the nucleated cell dose/kg body weight of the recipient, the weight, age, and underlying disease of the recipient, the extent and severity of Graft-Versus-Host Disease, the criteria utilized for evidence for allogeneic cell engraftment, and any other important information regarding the safety and efficacy of the infused product, e.g., incidence of infection. In addition, a description of the methods used for data evaluation, including statistical techniques, should be included.

B. Review and Consolidation of Submitted Information by FDA

FDA will review and assess the information submitted, and evaluate it as to its application in issuing hematopoietic stem/progenitor cell product standards. FDA may find it necessary to present any or all of the aspects of the standards and/or data for public discussion. Any public meeting held by FDA will be announced to the public prior to the date of the meeting. Subsequent to receiving sufficient standards with supporting data, FDA intends to adopt appropriate standards as guidance and announce their availability in the **Federal Register**.

III. Submissions

Interested persons may, on or before January 20, 2000 submit to the Dockets Management Branch (address above) written proposed standards and supporting clinical and nonclinical laboratory data. Two copies of standards and data should be submitted, except that individuals may submit one copy. Standards and data should be identified with the docket number found in brackets in the heading of this document. All information submitted will be placed on public display and will be subject to public disclosure. Any information that is not intended to be made public must be deleted before submission to the Dockets Management Branch. Trade secrets and confidential commercial information, as well as information that could be used to identify individual patients or others whose privacy should be maintained, should be deleted before being submitted. All comments proposing

VOL 63 ISS 12 JA 20 1998 UMI

standards with supporting data will be available for public examination in the Dockets Management Branch (address above) between 9 a.m. and 4 p..m., Monday through Friday.

Dated: January 8, 1998.

William K. Hubbard,

Associate Commissioner for Policy Coordination.

Food and Drug Administration

Ophthalmic Devices Panel of the Medical Devices Advisory Committee; Notice of Meeting

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

This notice announces a forthcoming meeting of a public advisory committee of the Food and Drug Administration (FDA). The meeting will be open to the public.

Name of Committee: Ophthalmic Devices Panel of the Medical Devices Advisory Committee.

General Function of the Committee: To provide advice and recommendations to the agency on FDA regulatory issues.

Date and Time: The meeting will be held on February 12 and 13, 1998, 8 a.m. to 5 p.m.

Location: Parklawn Bldg., conference rooms D and E, 5600 Fishers Lane, Rockville, MD.

Contact Person: Sara M. Thornton, Center for Devices and Radiological Health (HFZ–460), Food and Drug Administration, 9200 Corporate Blvd., Rockville, MD 20850, 301–594–2053, or FDA Advisory Committee Information Line, 1–800–741–8138 (301–443–0572 in the Washington, DC area), code 12396, or the world wide web at http://www.fda.gov. Please call the Information Line for up-to-date information on this meeting.

Agenda: On February 12, 1998, the committee will discuss specific questions related to the development of contact lens extended wear clinical testing guidance for 7-day extended wear, prolonged extended wear beyond 7 days, and overnight use of contact lenses for orthokeratology. On February 13, 1998, the committee will discuss, make recommendations, and vote on a premarket approval application (PMA) for a broad beam excimer laser for the correction of myopia with astigmatism using laser in-situ keratomileusis. The committee will also discuss, make recommendations, and vote on a PMA for a scanning excimer laser for the correction of myopia with astigmatism using photorefractive keratectomy.

Procedure: Interested persons may present data, information, or views, orally or in writing, on issues pending before the committee. Written submissions may be made to the contact person by February 6, 1998. Oral presentations from the public will be scheduled between approximately 8:30 a.m. and 9:30 a.m. on February 12 and 13, 1998. Time allotted for each presentation may be limited. Those desiring to make formal oral presentations should notify the contact person before February 2, 1998, and submit a brief statement of the general nature of the evidence or arguments they wish to present, the names and addresses of proposed participants, and an indication of the approximate time requested to make their presentation.

Notice of this meeting is given under the Federal Advisory Committee Act (5 U.S.C. app. 2).

Dated: January 12, 1998.

Michael A. Friedman,

Deputy Commissioner for Operations.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. 93N–0195]

Agency Information Collection Activities; Announcement of OMB Approval

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a collection of information entitled "Procedures for the Safe Processing and Importing of Fish and Fishery Products" has been approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (the PRA).

FOR FURTHER INFORMATION CONTACT: Margaret R. Schlosburg, Office of Information Resources Management (HFA–250), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–827–1223.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of October 31, 1997 (62 FR 58973), the agency announced that the proposed information collection had been submitted to OMB for review and clearance under section 3507 of the PRA (44 U.S.C. 3507). An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. OMB has now approved the information collection and has assigned OMB control number 0910–0354. The approval expires on December 31, 2000.

Dated: January 8, 1998.

William K. Hubbard,

Associate Commissioner for Policy Coordination.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

The Ryan White Comprehensive AIDS Resources Emergency Act of 1990 as Amended by Pub. L. 104–146; Notice of Pre-Application Technical Assistance Workshops

AGENCY: Health Resources and Services Administration, HHS.

ACTION: Notice of Pre-Application Technical Assistance Workshops.

SUMMARY: The Health Resources and Services Administration will hold three pre-application technical assistance workshops for organizations that will compete for funds under Title IV, Grants for Coordinated HIV Services and Access to Research for Children, Youth, Women and Families, of the Ryan White Comprehensive AIDS Resources Emergency Act of 1990, Public Law 101–381, as amended by Public Law 104–146.

Grants may be awarded to public or nonprofit private entities that provide primary health care directly or through contracts. Eligible entities may include, but are not limited to, State or local health departments, university medical centers, public or nonprofit private hospitals, community health centers receiving support under section 330 of the Public Health Service Act, hemophilia treatment centers, drug abuse treatment agencies, tribal health programs, school based clinics and institutions of higher education.

PURPOSE: The purpose of the technical assistance workshops is to provide information about the Ryan White Title IV program and application procedures. Eligible entities will have an opportunity to review the program guidance and to receive technical assistance pertaining to all aspects of writing the grant application.

To receive an application kit prior to the meeting, please contact the HRSA Grants Application Center at 1–888–300–4772.

FOR FURTHER INFORMATION CONTACT: Anyone interested in attending the meetings should contact Mr. Bradley Rymph, Professional and Scientific Associates, Inc., 8180 Greensboro Drive, Suite 1050, McLean, VA 22102. His telephone number is 703–442–9824. Room reservations should be made directly with the hotels. Costs of attending the workshop are the sole responsibility of the attendee. For information about the Ryan White Title IV program, contact LaTasha Covington at 301–443–9051.

DATES, TIMES, LOCATIONS:

Friday, February 6, 1998, 12:30PM to 5:15PM, to Saturday, February 7, 1998, 9AM to 4PM. Las Vegas, Nevada.

Wednesday, February 18, 1998, 12:30PM to 5:15PM, to Thursday, February 19, 1998, 9AM to 4PM. Baton Rouge, Louisiana.

Thursday, February 26, 1998, 12:30PM to 5:15PM, to Friday, February 27, 1998, 9AM to 4PM. Washington, DC.

The OMB Catalog of Federal Domestic Assistance number for this program is 93.153.

Dated: January 14, 1998.

Jane M. Harrison,

Acting Director, Division of Policy Review and Coordination.

BILLING CODE 4160–15–U

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of Inspector General

Program Exclusions: December 1997

AGENCY: Office of Inspector General, HHS.

ACTION: Notice of program exclusions.

During the month of December 1997, the HHS Office of Inspector General imposed exclusions in the cases set forth below. When an exclusion is imposed, no program payment is made to anyone for any items or services (other than an emergency item or service not provided in a hospital emergency room) furnished, ordered or prescribed by an excluded party under the Medicare, Medicaid, Maternal and Child Health Services Block Grant and Block Grants to States for Social Services programs. In addition, no program payment is made to any business or facility, e.g., a hospital, that submits bills for payment for items or services provided by an excluded party. Program beneficiaries remain free to decide for themselves whether they will continue to use the services of an excluded party even though no program payments will be made for items and services provided by that excluded party. The exclusions have national effect and also apply to all Executive Branch procurement and non-procurement programs and activities.

BILLING CODE: 4150–04–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Agency Information Collection Activities: Proposed Collection; Comment Request

In compliance with Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 to provide the opportunity for public comment on proposed information collection activities, the Substance Abuse and Mental Health Services Administration publishes periodic summaries of proposed activities. To request more information on the proposed activities or to obtain a copy of the information collection plans, call the SAMHSA Reports Clearance Officer on (301) 443–0525.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. FY 1999–2001 Substance Abuse Prevention and Treatment Block Grant Application Format—Revision—The Public Health Service Act (42 U.S.C. 300x 21–35 & 51–64) authorizes

VOL 63 ISS 12 JA 20 1998 UMI

block grants to States for the purpose of providing substance abuse prevention and treatment services. Under the provisions of the law, States may receive allotments only after an application is submitted and approved by the Secretary, DHHS. For the FY 1999 Substance Abuse Prevention and Treatment (SAPT) Block Grant cycle, SAMHSA plans to provide States with slightly modified application forms and instructions. These changes affect the portion of the application that asks for information related to section 1926 (sales of tobacco to minors). The application will no longer require a description of sampling methodologies and procedures for identifying and selecting tobacco outlets to be sampled throughout a State, unless a change to such methodologies or procedures has occurred in the previous year. The application will provide for more detailed information on the results and validity of the random unannounced inspections, and it will request greater detail on the number and results of actual enforcement activities that a State has undertaken. At the request of the Department, SAMHSA plans to include an additional tobacco-related question to Attachment 6 of the application. This question will require States to briefly describe collaboration between each State's Tobacco and Health Office (ASTHO representative) and Single State Authority for Substance Abuse (NASADAD representative). Because Federal funds for tobacco prevention and control efforts are, in most cases, awarded to different State-level agencies, it is necessary for the Department and SAMHSA to verify and understand interactions at the State level on youth tobacco prevention and enforcement. SAMHSA also plans to modify Attachment 2 to include an additional question regarding tobacco use among minors. Finally, SAMHSA will modify the race/ethnicity categories in Form 9 to comply with recent revisions to OMB Directive No. 15. These modifications are not expected to increase respondent burden. The annual burden estimate for the SAPT Block Grant Application Format is shown below:

Number of respondents	Responses per respondent	Hours per response	Total hours
1[1]	1	530	530
59	1	563	33,217
Total			33,747

[1] Red Lake Indian Tribe (exempt from Tobacco Regulation requirements).

Send comments to Deborah Trunzo, SAMHSA Reports Clearance Officer, Room 16–105, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857. Written comments should be received within 60 days of this notice.

Dated: January 12, 1998.

Richard Kopanda,

Executive Officer, SAMHSA.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Fiscal Year (FY) 1998 Funding Opportunities

AGENCY: Substance Abuse and Mental Health Services Administration, HHS.

ACTION: Notice of Funding Availability.

SUMMARY: The Substance Abuse and Mental Health Services Administration (SAMHSA) Center for Mental Health Services announces the availability of FY 1998 funds for grants and cooperative agreements for the following activities. These activities are discussed in more detail under Section 4 of this notice. This notice is not a complete description of the activities; potential applicants must obtain a copy of the Guidance for Applicants (GFA) before preparing an application.

Activity	Application deadline	Estimated funds available (millions)	Estimated No. of awards	Project period
Circles of Care	04/03/98	$2.4	6–8	3 yrs.
Consumer-Operated Service Program	04/09/98	5.0	9	4 yrs.

Note: SAMHSA also published a notice of available funding opportunities in FY 1998 in the **Federal Register** (Vol. 63, No. 3) on Tuesday, January 6, 1998.

The actual amount available for awards and their allocation may vary, depending on unanticipated program requirements and the volume and quality of applications. Awards are usually made for grant periods from one to three years in duration. FY 1998 funds for activities discussed in this announcement were appropriated by the Congress under Public Law No. 105–78. SAMHSA's policies and procedures for peer review and Advisory Council review of grant and cooperative agreement applications were published in the **Federal Register** (Vol. 58, No. 126) on July 2, 1993.

The Public Health Service (PHS) is committed to achieving the health promotion and disease prevention objectives of Healthy People 2000, a PHS-led national activity for setting priority areas. The SAMHSA Centers' substance abuse and mental health services activities address issues related to Healthy People 2000 objectives of Mental Health and Mental Disorders; Alcohol and Other Drugs; Clinical Preventive Services; HIV Infection; and Surveillance and Data Systems. Potential applicants may obtain a copy of Healthy People 2000 (Full Report: Stock No. 017–001–00474–0) or Summary Report: Stock No. 017–001–00473–1) through the Superintendent of Documents, Government Printing Office, Washington, DC 20402–9325 (Telephone: 202–512–1800).

General Instructions: Applicants must use application form PHS 5161–1 (Rev. 5/96; OMB No. 0937–0189). The application kit contains the GFA (complete programmatic guidance and instructions for preparing and submitting applications), the PHS 5161–1 which includes Standard Form 424 (Face Page), and other documentation and forms. Application kits may be obtained from the organization specified for each activity covered by this notice (see Section 4).

When requesting an application kit, the applicant must specify the particular activity for which detailed information is desired. This is to ensure receipt of all necessary forms and information, including any specific program review and award criteria.

The PHS 5161–1 application form and the full text of each of the activities (i.e., the GFA) described in Section 4 are available electronically via SAMHSA's World Wide Web Home Page (address: http://www.samhsa.gov).

Application Submission: Unless otherwise stated in the GFA, applications must be submitted to: SAMHSA Programs, Center for Scientific Review, National Institutes of Health, Suite 1040, 6701 Rockledge Drive MSC–7710, Bethesda, Maryland 20892–7710.*

(* Applicants who wish to use express mail or courier service should change the zip code to 20817.)

Application Deadlines: The deadlines for receipt of applications are listed in the table above. Please note that the deadlines may differ for the individual activities.

Competing applications must be received by the indicated receipt dates to be accepted for review. An application received after the deadline may be acceptable if it carries a legible proof-of-mailing date assigned by the carrier and that date is not later than one week prior to the deadline date. Private metered postmarks are not acceptable as proof of timely mailing.

Applications received after the deadline date and those sent to an address other than the address specified above will be returned to the applicant without review.

FOR FURTHER INFORMATION CONTACT: Requests for activity-specific technical information should be directed to the program contact person identified for each activity covered by this notice (see Section 4).

Requests for information concerning business management issues should be directed to the grants management contact person identified for each activity covered by this notice (see Section 4).

SUPPLEMENTARY INFORMATION: To facilitate the use of this Notice of Funding Availability, information has been organized as outlined in the Table of Contents below. For each activity, the following information is provided:

- Application Deadline
- Purpose
- Priorities
- Eligible Applicants
- Grants/Cooperative Agreements/Amounts
- Catalog of Federal Domestic Assistance Number
- Contacts
- Application Kits

7. Executive Order 12372

1. Program Background and Objectives

SAMHSA's mission within the Nation's health system is to improve the quality and availability of prevention, early intervention, treatment, and rehabilitation services for substance abuse and mental illnesses, including co-occurring disorders, in order to improve health and reduce illness, death, disability, and cost to society.

Reinventing government, with its emphases on redefining the role of Federal agencies and on improving customer service, has provided SAMHSA with a welcome opportunity to examine carefully its programs and activities. As a result of that process, SAMHSA moved assertively to create a renewed and strategic emphasis on using its resources to generate knowledge about ways to improve the prevention and treatment of substance abuse and mental illness and to work with State and local governments as well as providers, families, and consumers to effectively use that knowledge in everyday practice.

SAMHSA's FY 1998 Knowledge Development and Application (KD&A) agenda is the outcome of a process whereby providers, services researchers, consumers, National Advisory Council members and other interested persons participated in special meetings or responded to calls for suggestions and reactions. From this input, each SAMHSA Center developed a "menu" of suggested topics. The topics were discussed jointly and an agency agenda of critical topics was agreed to. The selection of topics depended heavily on policy importance and on the existence of adequate research and practitioner experience on which to base studies. While SAMHSA's FY 1998 KD&A programs will sometimes involve the evaluation of some delivery of services, they are services studies and application activities, not merely evaluation, since they are aimed at answering policy-relevant questions and putting that knowledge to use.

SAMHSA differs from other agencies in focusing on needed information at the services delivery level, and in its question-focus. Dissemination and application are integral, major features of the programs. SAMHSA believes that it is important to get the information into the hands of the public, providers, and systems administrators as effectively as possible. Technical assistance, training, preparation of special materials will be used, in addition to normal communications means.

SAMHSA also continues to fund legislatively-mandated services programs for which funds are appropriated.

2. Special Concerns

SAMHSA's legislatively-mandated services programs do provide funds for mental health and/or substance abuse treatment and prevention services. However, SAMHSA's KD&A activities do not provide funds for mental health and/or substance abuse treatment and prevention services except sometimes for costs required by the particular activity's study design. Applicants are required to propose true knowledge application or knowledge development and application projects. Applications seeking funding for services projects under a KD&A activity will be considered nonresponsive.

Applications that are incomplete or nonresponsive to the GFA will be returned to the applicant without further consideration.

3. Criteria for Review and Funding

Consistent with the statutory mandate for SAMHSA to support activities that will improve the provision of treatment, prevention and related services, including the development of national mental health and substance abuse goals and model programs, competing applications requesting funding under the specific project activities in Section 4 will be reviewed for technical merit in accordance with established PHS/SAMHSA peer review procedures.

3.1 General Review Criteria

As published in the **Federal Register** on July 2, 1993 (Vol. 58, No. 126), SAMHSA's "Peer Review and Advisory Council Review of Grant and Cooperative Agreement Applications and Contract Proposals," peer review groups will take into account, among other factors as may be specified in the application guidance materials, the following general criteria:

- Potential significance of the proposed project;
- Appropriateness of the applicant's proposed objectives to the goals of the specific program;

VOL 63 ISS 12 JA 20 1998 UMI

• Adequacy and appropriateness of the proposed approach and activities;
• Adequacy of available resources, such as facilities and equipment;
• Qualifications and experience of the applicant organization, the project director, and other key personnel; and
• Reasonableness of the proposed budget.

3.2 Funding Criteria for Scored Applications

Applications will be considered for funding on the basis of their overall technical merit as determined through the peer review group and the appropriate National Advisory Council (if applicable) review process.

Other funding criteria will include:
• Availability of funds.

Additional funding criteria specific to the programmatic activity may be included in the application guidance materials.

4. Special FY 1998 Mental Health Activities

4.1 Grants

4.1.1 Circles of Care: Planning, Designing, and Assessing Mental Health Service System Models for Native American Indian and Alaska Native Children and Their Families

• Application Deadline: April 3, 1998
• Purpose: Six to eight grants will be awarded to plan, design, and assess the feasibility of implementing a culturally appropriate mental health service model for American Indian/Alaska Native children with serious emotional disturbances and their families. The purpose of this program is to support the development of mental health service delivery models that are designed by American Indian/Alaska Native communities to achieve outcomes for their children that they choose for themselves. Formulation and evaluation of programs based directly on the needs, values, and principles of the grantee organizations will provide an information base for other programs interested in structuring culturally relevant children's mental health service systems.

Grantees will engage in a strategic planning process, design a service model, and conduct a feasibility assessment of the model, including a cost and funding analysis. Actual services will not be funded but the intent of the program is to position tribal and urban Indian organizations advantageously for future service system implementation and development when opportunities for funding services are available.

• Priorities: None
• Eligible Applicants: Applications may be submitted by federally acknowledged tribes and tribal organizations. Urban Indian organizations are eligible to apply if they are a nonprofit corporate body situated in an urban center, governed by a board of directors of whom at least 51% are American Indian/Alaska Natives, and provide for the participation of all interested Indian groups and individuals. The applicant must be capable of legally cooperating with other public and private entities for the purposes of performing the activities of this program.

The primary intent of the "Circles of Care" program is to support the development of mental health service delivery models that are designed by American Indian/Alaska Native communities to achieve outcomes for their children that they chose for themselves. Models designed for American Indian/Alaska Native communities by people other than American Indian/Alaska Natives are already available. This program will enable community members to develop models to juxtapose with those not designed by Indians to find which are best for meeting their service needs. To be effective and have the cooperation and confidence of the community, the applicant must be representative of the community, in addition to demonstrating the ability to fulfill the technical requirements of the GFA.

• Grants/Amounts: It is estimated that approximately $2.4 million will be available to support approximately 6–8 awards in FY 1998. Actual funding levels for subsequent years will depend on availability of appropriated funds.
• Catalog of Federal Domestic Assistance Number: 93.230
• Program Contact: For programmatic or technical assistance contact: Gary De Carolis, M.ED., Center for Mental Health Services, Substance Abuse and Mental Health Services Administration, Parklawn Building, Room 18–49, 5600 Fishers Lane, Rockville, Maryland 20857, (301) 443–1333.
• Grants Management Contact: For business management assistance, contact: Stephen J. Hudak, Grants Management Specialist, Division of Grants Management, OPS, Substance Abuse and Mental Health Services Administration, Parklawn Building, Room 15C–05, 5600 Fishers Lane, Rockville, Maryland 20857, (301) 443–4456.
• Application Kits: Application kits are available from: National Mental Health Services, Knowledge Exchange Network (KEN), P.O. Box 42490, Washington, D.C. 20015, Voice: (800) 789–2647, TTY: (301) 443–9006.
• CMHS intends to sponsor two technical assistance workshops for potential applicants to provide guidance on completing the grant application. One workshop will be held in the eastern part of the country; the other will be held in the western part of the country. Letters from CMHS will be mailed to all 550 federally recognized tribes and urban Indian organizations to inform them of the meeting(s). For more information, potential applicants may contact: Kathy McGregor, Project Coordinator, National Indian Child Welfare Association, 3611 SW Hood Street, Suite 201, Portland, OR 97201, (503–222–4044).

4.2 Cooperative Agreements

A major activity for a SAMHSA cooperative agreement program is discussed below. Substantive Federal programmatic involvement is required in cooperative agreement programs. Federal involvement will include planning, guidance, coordination, and participating in programmatic activities (e.g., participation in publication of findings and on steering committees). Periodic meetings, conferences and/or communications with the award recipients may be held to review mutually agreed-upon goals and objectives and to assess progress. Additional details on the degree of Federal programmatic involvement will be included in the application guidance materials.

4.2.1 Cooperative Agreements to Evaluate Consumer-Operated Human Service Programs for Persons With Serious Mental Illness (Consumer-Operated Service Program)

• Application Deadline: April 9, 1998.
• Purpose: This Guidance for Applicants (GFA) solicits applications for two types of cooperative agreements—Study Sites and a Coordinating Center. The purpose of this Program is to assess the extent to which consumer-operated services are effective in improving rehabilitation and recovery of individuals with serious mental illness. It also seeks to determine to what extent participation in such services affect costs.

Specific questions to be addressed are:

1. To what extent does participation in a consumer-operated service program affect selected consumer outcomes for consumers who use traditional service programs?

The selected outcomes are empowerment, housing, employment (such as transition from unemployment to employment), social inclusion, and satisfaction with services. This core question is to be addressed in both the individual Study Site evaluation and the multi-site evaluation to be coordinated by the Coordinating Center.

2. To what extent does participation in a consumer-operated service program affect costs for the following: inpatient hospitalization, crisis intervention, and emergency room utilization as well as offsetting costs in housing, criminal justice, vocational rehabilitation, physical health care, and income support?

Examination of patterns of service use of retrospective or prospective "claims" data on service utilization will be coordinated by the Coordinating Center.

While individual Study Sites will provide the necessary information for the cost-study, the Coordinating Center will be responsible for developing a design and method for collecting and analyzing all information for the cost-study.

A goal of the Program is to create strong and productive partnerships among consumers, service providers and services researchers that demonstrate to the field that these groups are capable of complementing each other's strengths and that their joint efforts will yield the most effective service delivery models possible.

Another goal is to disseminate the knowledge gained about the effectiveness of these projects and the specific components that contributed to their success.

• Priorities: None.
• Eligible Applicants: Applications to be a Study Site or a Coordinating Center may be submitted by public organizations, such as units of State or local governments and by domestic private nonprofit and for-profit organizations such as community-based organizations, universities, colleges, and hospitals, and family and/or consumer operated organizations. Since CMHS seeks to study established consumer-operated and traditional programs, both program entities must have been operational for a minimum of 2 years at the time of the submission of the study site application. Applicants may apply to be a Study Site or a Coordinating Center, but not both.
• Cooperative Agreements/Amounts: It is estimated that approximately $5 million will be available to support approximately eight (8) Study Site awards and one (1) Coordinating Center under this GFA in FY 1998. The average award to support each Study Site is expected to range from $400,000 to $600,000 in total costs (direct+indirect) per year. The award to support the Coordinating Center is expected to be in the range of $700,000 to $900,000 in total costs (direct+indirect) per year. Actual funding levels will depend upon the availability of appropriated funds.
• Catalog of Federal Domestic Assistance Number: 93.230.
• Program Contact: For programmatic or technical assistance contact: William R. McKinnon, Ph.D., Community Support Programs Branch, Division of Knowledge Development and Systems Change, Center for Mental Health Services, Substance Abuse and Mental Health Services Administration, 5600 Fishers Lane, Room 11C–22, Rockville, MD 20857, (301) 443–3655, or Paolo del Vecchio, Office of External Liaison, Center for Mental Health Services, Substance Abuse and Mental Health Services Administration, 5600 Fishers Lane, Room 13C–103, Rockville, MD 20857, (301) 443–2619.
• Grants Management Contact: For business management assistance, contact: Stephen J. Hudak, Grants Management Specialist, Division of Grants Management, OPS, Substance Abuse and Mental Health Services Administration, 5600 Fishers Lane, Room 15C–05, Rockville, Maryland 20857, (301) 443–4456.
• Application Kits: Application kits are available from: National Mental Health Services, Knowledge Exchange Network (KEN), P.O. Box 42490, Washington, DC 20015, Voice: (800) 789–2647, TTY: (301) 443–9006, FAX: (301) 984–8796.

5. Public Health System Reporting Requirements

The Public Health System Impact Statement (PHSIS) is intended to keep State and local health officials apprised of proposed health services grant and cooperative agreement applications submitted by community-based nongovernmental organizations within their jurisdictions.

Community-based nongovernmental service providers who are not transmitting their applications through the State must submit a PHSIS to the head(s) of the appropriate State and local health agencies in the area(s) to be affected not later than the pertinent receipt date for applications. This PHSIS consists of the following information:

a. A copy of the face page of the application (Standard form 424).

b. A summary of the project (PHSIS), not to exceed one page, which provides:

(1) A description of the population to be served.

(2) A summary of the services to be provided.

(3) A description of the coordination planned with the appropriate State or local health agencies.

State and local governments and Indian Tribal Authority applicants are not subject to the Public Health System Reporting Requirements.

Application guidance materials will specify if a particular FY 1998 activity described above is/is not subject to the Public Health System Reporting Requirements.

6. PHS Non-use of Tobacco Policy Statement

The PHS strongly encourages all grant and contract recipients to provide a smoke-free workplace and promote the non-use of all tobacco products. In addition, Public Law 103–227, the Pro-Children Act of 1994, prohibits smoking in certain facilities (or in some cases, any portion of a facility) in which regular or routine education, library, day care, health care, or early childhood development services are provided to children. This is consistent with the PHS mission to protect and advance the physical and mental health of the American people.

7. Executive Order 12372

Applications submitted in response to all FY 1998 activities listed above are subject to the intergovernmental review requirements of Executive Order 12372, as implemented through DHHS regulations at 45 CFR Part 100. E.O. 12372 sets up a system for State and local government review of applications for Federal financial assistance. Applicants (other than Federally recognized Indian tribal governments) should contact the State's Single Point of Contact (SPOC) as early as possible to alert them to the prospective application(s) and to receive any necessary instructions on the State's review process. For proposed projects serving more than one State, the applicant is advised to contact the SPOC of each affected State. A current listing of SPOCs is included in the application guidance materials. The SPOC should send any State review process recommendations directly to: Office of Extramural Activities Review, Substance Abuse and Mental Health Services Administration, Parklawn Building, Room 17–89, 5600 Fishers Lane, Rockville, Maryland 20857.

The due date for State review process recommendations is no later than 60 days after the specified deadline date for the receipt of applications. SAMHSA does not guarantee to accommodate or explain SPOC comments that are received after the 60-day cut-off.

VOL 63 ISS 12 JA 20 1998 UMI

Dated: January 11, 1998.

Richard Kopanda,

Executive Officer, SAMHSA.

BILLING CODE 4162–20–P

DEPARTMENT OF THE INTERIOR

Notice of Intent to Prepare Comprehensive Conservation Plans

AGENCY: Fish and Wildlife Service.

ACTION: Notice of Intent to Prepare Comprehensive Conservation Plans.

SUMMARY: This notice advises that the U.S. Fish and Wildlife Service (Service) intends to gather information necessary to prepare Comprehensive Conservation Plans (CCP) and associated environmental documents for the Tewaukon National Wildlife Refuge Complex in southeastern North Dakota and the Waubay National Wildlife Refuge Complex in northeastern South Dakota. The Service is furnishing this notice in compliance with Service CCP policy to advise other agencies and the public of its intentions and to obtain suggestions and information on the scope of issues to be considered in the planning process.

DATES: Written comments should be received by February 19, 1998.

ADDRESSES: Comments and requests for more information to Allison Banks, Planning Team Leader, Division of Realty, P.O. Box 25486, Denver, CO 80225.

FOR FURTHER INFORMATION CONTACT: Allison Banks, Planning Team Leader, Division of Realty, P.O. Box 25486, Denver, CO 80225.

SUPPLEMENTARY INFORMATION: The Service has initiated Comprehensive Conservation Planning for the Tewaukon National Wildlife Refuge Complex and the Waubay National Wildlife Refuge Complex.

The Tewaukon Complex includes the Tewaukon National Wildlife Refuge and the Tewaukon Wetland Management District (WMD). The Waubay Complex includes the Waubay National Wildlife Refuge and the Waubay Wetland Management District. Each National Wildlife Refuge has specific purposes for which it was established and for which legislation was enacted. Those purposes are used to develop and prioritize management goals and objectives within the National Wildlife Refuge System mission, and to guide which public uses occur on the refuge. The planning process is a way for the Service and the public to evaluate management goals and objectives for the best possible conservation efforts of this important wildlife habitat, while providing for wildlife-dependent recreation opportunities that are compatible with each national wildlife refuge's establishing purposes and the mission of the National Wildlife Refuge System.

The Tewaukon National Wildlife Refuge (approximately 8,500 acres) was established as "* * * a refuge and breeding ground for migratory birds and other wildlife * * *" and "* * * for use as an inviolate sanctuary or for any other management purpose, for migratory birds" (Migratory Bird Conservation Act), by Executive Order 6910, on November 26, 1934. The Tewaukon WMD consists of fee Waterfowl Production Areas (WPA's) (approximately 14,000 acres), and wetland easements (approximately 33,000 acres). The Complex is located in Richland, Ransom, and Sargent counties of North Dakota. The Tewaukon Complex also administers three easement refuges: Lake Elsie, Storm Lake, and Wild Rice. The WPA's are all open to hunting, fishing, and trapping in accordance with the Code of Federal Regulations.

The Tewaukon National Wildlife Refuge Complex lies within the prairie pothole and tallgrass/mixed grass prairie ecosystem in southeastern North Dakota. High densities of a variety of shallow, productive wetlands surrounded by grasslands produce high quality migration and nesting habitat for migratory birds. Tewaukon is a mixing point for migrating birds of both the Central and Mississippi Flyways. The name "Tewaukon" is derived from an ancient tribal name Te Wauk Kon, roughly translated as Son of Heaven. The main water source for Tewaukon, the Wild Rice River, is a tributary of the Red River which flows through Fargo, North Dakota. A portion of the refuge fee title land, several WPA's, and wetland easements are located within the Sisseton-Wahpeton Indian Reservation boundary.

Waubay National Wildlife Refuge, located northeastern South Dakota, was established as "* * * a refuge and breeding ground for migratory birds and other wildlife: * * *." by Executive Order 7245, dated December 10, 1935. The word "Waubary" is of Sioux Indian original meaning "a nesting place for birds." The refuge covers 4,740 acres of grasslands, wetlands, native forests, and croplands. Present public use includes wildlife viewing, environmental education, deer hunting, ice fishing, hiking, and picnicking.

The Waubay WMD manages 40,000 acres of fee WPA's, 100,000 acres of waterfowl management rights easements and 125,000 waterfowl habitat protection easements in Clark, Codington, Day, Grant, Roberts, and Marshall counties of northeastern South Dakota.

Three distinct physiographic regions dominate the Waubay WMD, each with unique habitat properties. The *Coteau des Prairies,* a series of north to south parallel terminal moraines rising 800 feet or more in elevation above adjacent lowlands, covers nearly 80 percent of the WMD. Numerous glacial lakes and smaller wetland basins dot the Coteau. To the east and west of the Coteau lies the Minnesota River and James River Lowlands, respectively. These lowland areas contain flat, fertile, agricultural land that is more intensively cropped that the hilly Coteau grassland region. All WPA's are open to hunting, fishing, and trapping in accordance with the Code of Federal Regulations.

The Service will conduct a comprehensive conservation planning process that will provide opportunity for Tribal, State and local governments, agencies, organizations, and the public to participate in issue scoping and public comment. The Service is requesting input for issues, concerns, ideas, and suggestions for the future management of the Tewaukon and Waubay Complexes. Anyone interested in providing input is invited to respond to the following three questions.

(1) What makes the Tewaukon/Waubay Complexes (or any specific unit) special or unique for you?

(2) What problems or issues do you want to see addressed in the Comprehensive Conservation Plans?

(3) What improvements would you recommend for the Tewaukon/Waubay Complexes (or any specific unit)?

The Service has provided the above questions for your optional use. There is no requirement to provide information to the Service. The Planning Team developed these questions to facilitate finding out more information about individual issues and ideas concerning the Tewaukon/Waubay Complexes. Comments received by the Planning Team will be used as part of the planning process, individual comments will not be referenced in our reports or directly respond to.

There will also be an opportunity to provide input at open houses to be scheduled for February and/or March 1998 to scope issues and concerns (schedule can be obtained from the Planning Team Leader at the above address). All information provided voluntarily by mail, phone, or at public meetings becomes part of the official public record (e.g., names, addresses,

letters of comment, input recorded during meetings). If requested under the Freedom of Information Act by a private citizen or organization, the Service may provide copies of such information.

The environmental review of this project will be conducted in accordance with the requirements of the National Environmental Policy Act of 1969, as amended (42 U.S.C. 4321 et seq.), NEPA Regulations (40 CFR 1500–1508), other appropriate Federal laws and regulations, Executive Order 12996, the National Wildlife Refuge System Improvement Act of 1997, and Service policies and procedures for compliance with those regulations.

We estimate that the draft environmental documents will be available for review in March 1999.

Dated: January 9, 1998.

Ralph O. Morgenweck,

Regional Director, Denver, Colorado.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

Notice of Availability of the Technical/Agency Draft Recovery Plan for the Spruce-Fir Moss Spider for Review and Comment

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of Document availability and public comment period.

SUMMARY: The U.S. Fish and Wildlife Service (Service) announces the availability for public review of the technical/agency draft recovery plan for the spruce-fir moss spider (*Microhexura montivaga*). Historically, at least five different mountain peaks in the Southern Appalachian Mountains of western North Carolina and eastern Tennessee are known to have supported populations of the spruce-fir moss spider. Today, however, only two small relict populations of the spider are known to survive—one on Grandfather Mountain in North Carolina and one on Mount LeConte in Tennessee. The typical habitat of the spruce-fir moss spider is found in well-drained moss mats growing on rocks and boulders in well-shaded situations in mature high-elevation conifer forests dominated by Fraser fir (*Abier fraseri*) and scattered red spruce (*Picea rubens*). These factors are deteriorating rapidly, primarily due to infestation and the resulting mortality of the fir by the balsam woolly adelgid (an exotic insect pest) and possibly air population and other factors now yet fully understood. The spider requires situations of high and constant humidity, and the loss of forest canopy, leading to increased light and decreased moisture on the forest floor (resulting in desiccation of the moss mats), appears to be the major threat to its continued existence. Unless new populations are found or reestablished and existing population are maintained, this species will remain in jeopardy of extinction for the foreseeable future. The Service solicits review and comments from the public on this draft plan.

DATES: Comments on this technical/agency draft recovery plan must be received on or before March 23, 1998 to receive consideration by the Service.

ADDRESSES: Persons wishing to review the technical/agency draft recovery plan may obtain a copy by contacting the Asheville Field Office, U.S. Fish and Wildlife Service, 160 Zillicoa Street, Asheville, North Carolina 28801 (Telephone 704/258–3939). Written comments and materials regarding the plan should be addressed to the Field Supervisor at the above address. Comments and materials received are available on request for public inspection, by appointment, during normal business hours at the above address.

FOR FURTHER INFORMATION CONTACT: Mr. John Fridell, Fish and Wildlife Biologist, at the address and telephone number shown in the **ADDRESSES** section (Ext. 225).

SUPPLEMENTARY INFORMATION:

Background

Restoring endangered or threatened animals and plants to the point where they are again secure, self-sustaining members of their ecosystems is a primary goal of the Service's endangered species program. To help guide the recovery effort, the Service is working to prepare recovery plans for most of the listed species native to the United States. Recovery plans describe actions considered necessary for the conservation of the species, establish criteria for recognizing the recovery levels for downlisting or delisting them, and estimate time and cost for implementing the recovery measures needed.

The Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*) (Act), requires the development of recovery plans for listed species unless such a plan would not promote the conservation of a particular species. Section 4(f) of the Act, as amended in 1988, requires that a public notice and an opportunity for public review and comment be provided during recovery plan development. The Service will consider all information presented during a public comment period prior to approval of each new or revised recovery plan. The Service and other Federal agencies will also take these comments into account in the course of implementing approved recovery plans.

The primary species considered in this draft recovery plan is the spruce-fir moss spider (*Microhexura montivaga*). The area of emphasis for recovery actions includes the Southern Appalachian Mountains of western North Carolina and eastern Tennessee. Habitat protection, reintroduction, and the preservation of genetic material are the major objectives of this recovery plan.

Public Comments Solicited

The Service solicits written comments on the recovery plan described. All comments received by the date specified above will be considered prior to approval of the final plan.

Authority

The authority for this action is section 4(f) of the Endangered Species Act, 16 U.S.C. 1533(f).

Dated: January 6, 1998.

Brian P. Cole,

State Supervisor.

Bureau of Land Management

Closure to Collection of Petrified Wood Order Established; Folsom Field Office, California

AGENCY: Bureau of Land Management, Interior.

ACTION: Establishment of petrified wood collecting closure order within public lands managed by the Folsom Field Office, California.

SUMMARY: Certain described public lands administered by the Folsom Field Office in the vicinity of the communities of Dutch Flat and Gold Run are hereby closed to the collection of petrified wood. This closure will be in effect on all the below described public lands:

Mount Diablo Meridian, California

T. 15 N., R. 10 E.,
Section 3: Lots 4,5;
Section 4: Lot 19;
Section 9: SWSE; Lots 3,4,5,7,8,9; MS1483;
Section 16: N/2NE, SWNE.

Totalling 320.29 acres, more or less.

VOL 63 ISS 12 JA 20 1998 UMI

The following persons are exempted from the closure: Any person who is in possession of a valid Paleontological Collecting Permit issued by BLM for the subject area, or who is acting as an authorized agent of an institution holding such a permit.

DATES: This order is in effect and will remain in effect until amended or canceled.

FOR FURTHER INFORMATION CONTACT: Deane Swickard, Manager, Folsom Field Office, Bureau of Land Management, 63 Natoma Street, Folsom, CA 95630; (916) 985–4474.

SUPPLEMENTARY INFORMATION: This order is necessary for protection of uncommon plant macrofossils having significant scientific value, a local resource that has been seriously depleted by unregulated collecting.

Authority for Closure orders is provided under 43 CFR 8364.1. Any person who fails to comply with this closure or restriction order shall be subject to the penalties provided in 43 CFR 8360.0–7. Violations of this closure or restriction order are punishable by a fine not to exceed $100,000 and/or imprisonment not to exceed 12 months. Any petrified wood collected in violation of this order, shall be subject to seizure, forfeiture and disposal.

Dated: January 8, 1998.

D. K. Swickard,

Field Manager.

BILLING CODE 4310–40–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[UT–060–08–1610–00]

Notice of Intent to Initiate Plan Amendments and Associated Environmental Assessment for the Grand Resource Management Plan (RMP) and the San Juan RMP

SUMMARY: Since the completion of the Grand and San Juan RMPs in southeastern Utah, changes in the scope of land uses, public expectations, and new data has resulted in the need to re-examine certain current decisions in the RMP that may no longer provide for appropriate resource use or protection in the Lockhart Basin area.

ADDRESSES: Moab Field Office, 82 East Dogwood, Moab, Utah 84532.

SUPPLEMENTARY INFORMATION: Since the completion of the Grand RMP in 1985 and the San Juan RMP in 1991, extensive changes have occurred in the Lockhart Basin. Increased public awareness, sensitivity and expectations regarding resource use and protection has been evolving. The scope of activities and interest in certain types of resource use, such as recreation uses, and oil and gas industry interest including exploration and possible production has exceeded considerations and projections that were made in the associated Environmental Impact Statements of the above mentioned RMPs. Therefore, in accordance with 43 CFR 1610.5–5-Amendments, the field offices would like to request public involvement in the possible amendment of the subject RMPs. Currently, three preliminary issues have been identified that are proposed to be addressed during the plan(s) amendment process.

Issue One is the need to review current oil and gas categories to determine if changes are necessary to protect sensitive resources. Issue Two includes the need to determine if current management decisions can continue to provide necessary protection to important wildlife populations also located in the Lockhart Basin. Issue Three includes the need to review current management decisions regarding the protection of sensitive visual resources in light of the increased potential land uses also in the Lockhart Basin Area.

No additional planning criteria beyond those previously stated in the Draft Environmental Impact Statement for the above RMPs are planned at this time.

A complete inter-disciplinary team will be utilized for the completion of the proposed amendments and associated environmental assessment.

The Field Offices would like to take this opportunity to invite the public to comment on the above preliminary issues or any others that may need to be addressed for the Lockhart Basin Area. Public comments should be submitted by February 19, 1998 in order that they may be appropriately considered in the plan amendment process. All comments or concerns should be sent to Daryl Trotter, Environmental Protection Specialist at the address listed below.

Additional opportunities to facilitate public input will be offered by holding open public meetings at the following locations:

Moab Field Office; Moab, Utah on February 4,1998 from 6:00 pm to 8:00 pm and;

Monticello Field Office, Monticello, Utah on February 5, 1998 to 6:00 pm to 8:00 pm.

FOR FURTHER INFORMATION CONTACT: Daryl Trotter, Environmental Protection Specialist for the Moab Field Office, 82 East Dogwood, Moab, Utah 84532 at the following telephone number: (435) 259–61111 or fax (435) 259–2100.

Dated: January 13, 1998.

Notice of Resource Advisory Council Meeting

AGENCY: Bureau of Land Management, Northeast California Resource Advisory Council, Susanville, California.

ACTION: Notice of meeting.

SUMMARY: Pursuant to the authorities in the Federal Advisory Committees Act (Pub. L. 92–463) and the Federal Land Policy and Management Act (Public Law 94–579), the U.S. Bureau of Land Management's Northeast California Resource Advisory Council will meet Friday, Feb. 20, beginning at 8 a.m. at the Bureau of Land Management's Eagle Lake Field Office, 2950 Riverside Dr., Susanville, CA.

SUPPLEMENTARY INFORMATION: Beginning at 8:30 a.m., members will participate in an interactive teleconference with officials from the Department of the Interior and the BLM. Members will then discuss projects upcoming for the BLM's Eagle Lake, Alturas and Surprise field offices and determine advisory council involvement. Public comments will be taken at 1 p.m.

FOR ADDITIONAL INFORMATION: Contact Jeff Fontana, public affairs officer, at (530) 257–5381.

Notice of Meeting

AGENCY: Bureau of Land Management (BLM), Montana, Miles City District, Interior.

ACTION: Notice of meeting.

SUMMARY: The Miles City District Resource Advisory Council will have a meeting Wednesday, February 11, 1998 at 9:00 a.m. in the Western Heritage Center located at 2822 Montana Avenue in Billings, Montana. The meeting is called primarily to discuss access to public lands. Updates to several other on-going BLM projects will be given. The meeting is expected to last until 4:00 p.m.

The meeting is open to the public and the public comment period is set for 1:00 p.m. The public may make oral statements before the Council or file written statements for the Council to consider. Depending on the number of persons wishing to make an oral statement, a per person time limit may be established. Summary minutes of the meeting will be available for public inspection and copying during regular business hours.

FOR FURTHER INFORMATION CONTACT: Marilyn Krause, Public Affairs Specialist, Miles City District, 111 Garryowen Road, Miles City, Montana 59301, telephone (406) 233–2831.

SUPPLEMENTARY INFORMATION: The purpose of the Council is to advise the Secretary of the Interior, through the BLM, on a variety of planning and management issues associated with public land management. The 15 member Council includes individuals who have expertise, education, training or practical experience in the planning and management of public lands and their resources and who have a knowledge of the geographical jurisdiction of the Council.

Dated: January 6, 1998

Resource Advisory Council Meeting, Butte, MT

AGENCY: Butte District Office, Bureau of Land Management, DOI.

ACTION: Notice of Butte District Resource Advisory Council Meeting, Butte, Montana.

SUMMARY: The Council will convene at 8:30 a.m., Friday, February 20, 1998. The meeting will be held in conjunction with an interactive video teleconference concerning RAC operations and which will be led by Secretary Babbitt and Director Shea. All Resource Advisory Councils will be included in the teleconference.

The teleconference and meeting will be held at the Butte District Office, 106 N. Parkmont, Butte, Montana. The teleconference will begin at 9:00 a.m. and last until 12:00 noon MST. The RAC meeting will begin at 1:00 p.m.

The only issue that will be discussed at the meeting is the Whitetail/Pipestone Off Road Vehicle alternatives.

The meeting is open to the public and written comments may be given to the Council. Oral comments may be presented to the Council at 3 p.m. The time allotted for oral comment may be limited, depending on the number of persons wishing to be heard. Individuals who plan to attend and need further information about the meeting, or need special assistance, such as sign language or other reasonable accommodations, should contact the Butte District, 106 North Parkmont (P.O. Box 3388), Butte, Montana 59702–3388, telephone 406–494–5059.

Notice of Realty Action, Direct Sale of Public Land, El Dorado County, CA

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: The following described public land (surface and mineral) is being considered for direct sale pursuant to Sections 203 and 209 of the Federal Land Policy and Management Act of October 21, 1976 (43 U.S.C. 1713 and 1719):

Mount Diablo Meridian

T. 8 N., R. 9 E.,
Sec. 24, lot 12;
Sec. 25, lot 13.

The area described contains .65 acres in El Dorado County.

The above described parcel of land would be sold to Mr. Gene Harm, an adjacent landowner, by direct sale, at fair market value. The disposal of this land will resolve an inadvertent trespass.

The parcel would be transferred subject to a reservation to the United States for a right-of-way for ditches and canals. The conveyance would also be made subject to section 24 of the Federal Power Act of June 20, 1920, as amended (16 U.S.C. 791a). All necessary clearances including clearances for archeology and for rare plants and animals would be completed prior to any conveyance of title by the United States.

The land described is hereby segregated from settlement under the public land laws including location and entry under the mining laws, pending disposition of this action, or 270 days from the date of publication of this notice, whichever occurs first.

ADDRESS: Detailed information concerning this action is available for review at the office of the Bureau of Land Management, Folsom Field Office, 63 Natoma Street, Folsom, CA 95630.

DATES: On or before March 6, 1998, interested persons may submit comments to the Field Manager, Folsom Field Office at the above address.

FOR FURTHER INFORMATION CONTACT: John Beck, Realty Specialist, at the above address or by phone at (916) 985–4474.

Dated: January 8, 1998.

Prohibition Against Target Shooting; El Centro Resource Area, CDD, CA

AGENCY: Department of the Interior, Bureau of Land Management.

ACTION: Prohibition against target shooting to conserve raptor habitat inside of the Table Mountain Area of Environmental Concern.

SUMMARY: This notice affects public lands under administration of El Centro Resource Area, CDD. The area includes public lands in the San Bernardino Meridian.

San Bernardino Meridian, San Diego County, California

T. 17S., R. 8E., sec. 26, W½, sec. 27, E½

The above listed lands located within the Table Mountain Area of Environmental Concern (ACEC) are hereby closed to shooting, except for legitimate hunting. These shooting regulations do not prohibit legitimate hunting activities and therefore do not

VOL 63 ISS 12 JA 20 1998 UMI

conflict with State Fish and Game Regulations.

This prohibition is designed to protect raptor habitat. The Table Mountain ACEC specifically noted the habitat of raptor species and they were noteworthy in the designating of the ACEC. The ACEC Plan's goals are to maintain suitability of raptor habitat throughout the ACEC. Additionally, the Eastern San Diego County Management Framework Plan provides for protecting habitat for sensitive wildlife species with emphasis on raptors.

Signs will be posted in the area restricted and a map showing the exact location of the restricted area will be available at the El Centro Resource Area office in El Centro, CA 92243.

Any person who knowingly and willfully violates these prohibitions may be subject to a $1,000.00 fine or imprisonment for not longer than 12 months, or both, under authority of 43 CFR 8365.1–6 Supplementary Rules.

FOR FURTHER INFORMATION CONTACT: Area Manager, Bureau of Land Management, 1661 South 4th Street, El Centro, CA 92243 760–337–4400.

Dated: January 8, 1998.

Draft Yosemite Valley Implementation Plan Supplemental Environmental Impact Statement; Yosemite National Park, California; Extension of Public Comment Period

SUMMARY: Pursuant to section 102(2)(C) of the National Environmental Policy Act of 1969 (Pub. L. 91–190 as amended), the National Park Service, Department of the Interior, has prepared a Draft Supplemental Environmental Impact Statement assessing alternatives for, and potential impacts of, a proposed Yosemite Valley Implementation Plan for Yosemite National Park, California. In deference to public interest expressed to date from local governmental agencies, organizations, and other interested parties, the original 75 day public comment period has been extended an additional 31 calendar days to February 23, 1998.

SUPPLEMENTARY INFORMATION: Written comments on the draft document must now be received or post-marked *not later than February 23, 1998*, and should be directed to the Superintendent, Attn: VIP Planning, Yosemite National Park, P.O. Box 577, Yosemite, CA 95389, (209) 372–0202. Comments may also be submitted through the National Park Service planning page: Yosemite Valley Implementation Plan/Supplemental Environmental Impact Statement. Also, open houses and public workshops have previously been conducted in several California cities; during the extended comment period, additional workshops are to be held in Yosemite gateway communities. Complete details may be obtained as noted above.

Dated: January 9, 1998.

John J. Reynolds,

Regional Director, Pacific West.

National Park Service

Subsistence Resource Commission Meeting

SUMMARY: The Superintendent of Lake Clark National Park and the Chairperson of the Subsistence Resource Commission for Lake Clark National Park announce a forthcoming meeting of the Lake Clark National Park Subsistence Resource Commission. The public is welcome to attend the meeting.

The following agenda items will be discussed:

(1) Chairman's welcome.
(1) Introduction of Commission members and guests.
(2) Review agenda.
(4) Approval of minutes of last meeting.
(5) Old business:
a. Roster regulation.
New Business:
a. Customary and traditional use of sheep by the villages of Iggiguk and Kokhanok.
b. Review proposal to change Federal Subsistence Management regulations.
c. Resource update.
d. Hunting plan format.
e. Subsistence Resource Commission appointments.
(7) Agency comments and public comments.
(8) Determine time and date of next meeting.
(9) Adjournment.

DATES: The meeting will be held Monday, February 9, 1998 and Tuesday, February 10, 1998. The meeting will begin on February 9, 1998 at 1:30 p.m. with an evening session at 7:00 p.m. The meeting will reconvene on February 10, 1998 at 9:00 a.m.

LOCATION: The meeting will be held at the Newhalen City Hall, Newhalen, Alaska.

FOR FURTHER INFORMATION CONTACT: Bill Pierce, Superintendent, Lake Clark National Park and Preserve, 4230 University Drive #311, Anchorage, Alaska 99508. Phone (907) 271–3751.

SUPPLEMENTARY INFORMATION: The Subsistence Resource Commissions are authorized under Title VIII, Section 808, of the Alaska National Interest Lands Conservation Act, Public Law 96–487, and operate in accordance with the provisions of the Federal Advisory Committees Act.

Paul R. Anderson,

Regional Director, Alaska Region.

DEPARTMENT OF JUSTICE

Office of Community Oriented Policing Services; Agency Information Collection Activities; Existing Collection; Comments Request

ACTION: Notice of information collection under review; Extension of a currently approved collection: Regional Community Policing Institute Quarterly projection report.

Office of Management and Budget approval is being sought for the information collection listed below. This collection was previously published in the **Federal Register** on October 28, 1997, allowing for a 60 day public comment period. No comments were received by the Office of Community Oriented Policing Services.

The purpose of this notice is to allow an additional 30 days for public comments. Comments are encouraged and will be accepted until February 19, 1998. This process is conducted in accordance with 5 CFR 3120.10.

Written comments and/or suggestions regarding the items contained in this notice, especially regarding the estimated public burden and associated response time, should be directed to the Office of Management and Budget, Office of Information and Regulatory Affairs: Attention: Ms. Victoria Wassmer, 202–395–5871, Department of Justice Desk Officer, Washington, DC 20503. Additionally, comments may be submitted to OMB via facsimile on 202–395–7285.

Written comments and suggestions from the public and affected agencies concerning this collection of information should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Comments may also be submitted to the Department of Justice, Justice Management Division, Information Management and Security Staff, Attention Department Clearance Officer, Suite 850, 1001 G Street, NW, Washington, DC 20530. Additionally, comments may be submitted to DOJ via facsimile on 202–514–1590.

Overview of this collection

(1) *Type of Information Collection:* Extension of Currently Approved Collection.

(2) *Title of the Form/Collection:* Regional Community Policing Institute Quarterly Projection Report.

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Form: COPS 22/02. Office of Community Oriented Policing Services, Department of Justice.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Regional Community Policing Institutes funded through a one-year cooperative agreement from the COPS Office are required to respond.

The Regional Community Policing Institute Quarterly Projection Report will be completed by each Regional Community Policing Institute. The information collection provides a quarterly projection of plans for performing the training and technical assistance functions of this program, as well as information concerning any changes or modifications requested in the project or cooperative agreement budgets.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* Estimated number of respondents: 35. Estimated time for average respondent to respond: 2 hours quarterly (including record-keeping).

(6) *An estimate of the total public burden (in hours) associated with the collection:* Approximately 280 annual burden hours.

If additional information is required contact: Mr. Robert B. Briggs, Clearance Officer, United States Department of Justice, Information Management and Security Staff, Justice Management Division, Suite 850, Washington Center, 1001 G Street, NW, Washington, DC 20530.

Dated: January 7, 1998.

Robert B. Briggs,

Department Clearance Officer, United States Department of Justice.

DEPARTMENT OF JUSTICE

Notice of Lodging of Consent Decree Pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 ("CERCLA"), 42 U.S.C. 9601 et seq.

Notice is hereby given that a proposed consent decree in *United States* v. *Armco Inc.*, Civil Action No. C2–95–698, was lodged on December 22, 1997, with the United States District Court for the Southern District of Ohio.

The proposed consent decree provides for the payment by defendant Armco Inc. for past costs incurred by the United States in connection with the Fultz Landfill Superfund Site (the "Site"), located near Cambridge, Ohio. Under the consent decree, the United States will provide Armco Inc. with a covenant not to sue or take administrative action pursuant to Sections 106 and 107 of CERCLA, in connection with the Site, subject to certain restrictions and limitations. The consent decree also restricts actions that Armco Inc. may take regarding litigation or settlement with others not party to the consent decree.

The Department of Justice will receive, for a period of thirty (30) days from the date of this publication, comments relating to the proposed consent decree. Comments should be addressed to the Assistant Attorney General for the Environment and Natural Resources Division, Department of Justice, Washington, DC 20530, and should refer to *United States* v. *Armco Inc.*, DOJ Ref. #90–11–3–856A.

The proposed consent decree may be examined at the office of the United States Attorney, Southern District of Ohio, 280 N. High Street, 4th Floor, Columbus, Ohio, 43215; the Region 5 Office of the Environmental Protection Agency, 77 West Jackson Boulevard, Chicago, Illinois 60604; and at the Consent Decree Library, 1120 G Street, NW., 4th Floor, Washington, DC 20005, (202) 624–0892. A copy of the proposed consent decree may be obtained in person or by mail from the Consent Decree Library, 1120 G Street, NW., 4th Floor, Washington, DC 20005. In requesting a copy please refer to the referenced case and enclose a check in the amount of $7.25 (25 cents per page reproduction costs), payable to the Consent Decree Library.

Bruce S. Gelber,

Deputy Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

BILLING CODE 4410–15–M

DEPARTMENT OF JUSTICE

Notice of Lodging of Consent Decree Under the Comprehensive, Environmental Response, Compensation and Liability Act ("CERCLA")

In accordance with Departmental policy, 28 CFR 50.7, notice is hereby given that a proposed consent decree in *United States* v. *Beaunit Corporation, et al.*, (W.D.N.C.), Civil Action No. 5:97CV198–MCK, was lodged on December 18, 1997, with the United States District Court for the Western District of North Carolina.

In this action the United States sought injunctive relief and recovery of response costs under Sections 106(a) and 107 of CERCLA, 42 U.S.C. 9606(a) and 9607, with respect to the FCX-Statesville Superfund Site, located in Iredell County, North Carolina ("the Site") the location of a textile plant owned and operated from 1927 to the present by a succession of several entities including El Paso Natural Gas Company, Beaunit Corporation and Burlington Industries, Inc., the current owner.

Under a proposed Consent Decree, El Paso Natural Gas Company has agreed to perform EPA's selected Site remedy for Operable Unit No. 3 which includes any contingency measures that EPA may determine to be necessary. If EPA determines that contingency measures are necessary, Burlington Industries Inc. will also be responsible for performing such response actions. Beaunit will be responsible for paying all of EPA's future response costs. El Paso Natural Gas Company and Burlington Industries, Inc., have previously reimbursed EPA of all of its past response costs pursuant to a June 1993 Administrative Order On Consent.

The Department of Justice will receive, for a period of thirty (30) days from the date of this publication, comments relating to the proposed consent decree. Comments should be addressed to the Assistant Attorney General for the Environment and Natural Resources Division, Department of Justice, Washington, DC 20530, and should refer to *United States* v. *Beaunit Corporation, et al.*, DOJ Ref. #90–11–3–1698.

The proposed consent decree may be examined at the office of the United States Attorney, 324 West Market Street 4th Floor, Greensboro, North Carolina, 27402; the Region 4 Office of the Environmental Protection Agency, 61 Forsythe Street, Atlanta, Georgia 30303, and at the Consent Decree Library, 1120 G Street, NW., 4th Floor, Washington, DC 20005, (202) 624–0892. A copy of the proposed consent decree may be obtained in person or by mail from the Consent Decree Library, 1120 G Street, NW., 4th Floor, Washington, DC 20005. In requesting a copy please refer to the referenced case and enclose a check in the amount of $54.75 (25 cents per page reproduction costs), payable to the Consent Decree Library. In requesting a copy exclusive of exhibits, please enclose a check for $26.50 (25 cents per page reproduction costs), payable to the Consent Decree Library.

Joel M. Gross,

Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

BILLING CODE 4410–15–M

DEPARTMENT OF JUSTICE

Notice of Lodging of Stipulation and Settlement Agreement Pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act

In accordance with Departmental policy, 28 CFR 50.7, notice is hereby given that a proposed Stipulation and Settlement Agreement in *In re HBSA Industries, Inc., et al.*, Case Nos. 91–12864/12866/12868/12869/12871/12872, was lodged on December 29, 1997 in the United States Bankruptcy Court for the Western District of New York.

The Stipulation and Settlement Agreement resolves the United States' claim, pursuant to Section 107 of the Comprehensive Environmental Response, Compensation, and Liability Act, 42 U.S.C. 9607, for response costs incurred by EPA at the Chase Interiors, Inc., Superfund Site ("the Site") in Falconer, New York. Under the Stipulation and Settlement Agreement, the United States will receive $126,500 in reimbursement of response costs incurred by EPA at the Site.

The Department of Justice will receive, for a period of thirty (30) days from the date of this publication, comments relating to the proposed Stipulation and Settlement Agreement. Comments should be addressed to the Assistant Attorney General for the Environment and Natural Resources Division, Department of Justice, Washington, DC 20530, and should refer to *In re HBSA Industries, Inc., et al.*, DOJ Ref. #90–11–3–1432.

The proposed Stipulation and Settlement Agreement may be examined at the office of the United States Attorney, Federal Center, 138 Delaware Avenue, Buffalo, New York; the Region II Office of the Environmental Protection Agency, 290 Broadway, New York, New York; and at the Consent Decree Library, 1120 G Street, NW., 4th Floor, Washington, DC 20005, (202) 624–0892. A copy of the proposed consent decree may be obtained in person or by mail from the Consent Decree Library. In requesting a copy please refer to the referenced case and enclose a check made payable to the Consent Decree Library in the amount of $3.00 (25 cents per page reproduction costs).

Federal Bureau of Investigation

DNA Advisory Board Meeting

Pursuant to the provisions of the Federal Advisory Committee Act, notice is hereby given that the DNA Advisory Board (DAB) will meet on February 19, 1998, from 10:00 am until 5:00 pm at The Washington Dulles Airport Hilton Hotel, 13869 Park Center Road, Herndon, Virginia 20171. All attendees will be admitted only after displaying personal identification which bears a photograph of the attendee.

The DAB's scope of authority is: To develop, and if appropriate, periodically revise, recommended standards for quality assurance to the Director of the FBI, including standards for testing the proficiency of forensic laboratories, and forensic analysts, in conducting analysis of DNA: To recommend standards to the Director of the FBI which specify criteria for quality assurance and proficiency tests to be applied to the various types of DNA analysis used by forensic laboratories, including statistical and population genetics issues affecting the evaluation of the frequency of occurrence of DNA profiles calculated from pertinent population database(s); To recommend standards for acceptance of DNA profiles in the FBI's Combined DNA Index System (CODIS) which take account of relevant privacy, law enforcement and technical issues; and, To make recommendations for a system for grading proficiency testing performance to determine whether a laboratory is performing acceptably.

The topics to be discussed at this meeting include: a review of minutes from the September 23, 1997, meeting; discussion of comments on the Quality Assurance Standards for DNA Testing Laboratories, as approved at the February 22, 1997 meeting; and a discussion of topics for the next DNA Advisory Board meeting.

The meeting is open to the public on a first-come, first seated basis. Anyone wishing to address the DAB must notify the Designated Federal Employee (DFE) in writing at least twenty-four hours before the DAB meets. The notification must include the requestor's name, organizational affiliation, a short statement describing the topic to be addressed, and the amount of time requested. Oral statements to the DAB will be limited to five minutes and limited to subject matter directly related to the DAB's agenda, unless otherwise permitted by the Chairman.

Any member of the public may file a written statement for the record concerning the DAB and its work before or after the meeting. Written statements for the record will be furnished to each DAB member for their consideration and will be included in the official minutes of a DAB meeting. Written statements must be type-written on 8½" X 11" xerographic weight paper, one side only, and bound only by a paper clip (not stapled). All pages must be numbered. Statements should include the Name, Organizational Affiliation, Address, and Telephone number of the author(s). Written statements for the record will be included in minutes of the meeting immediately following the receipt of the written statement, unless the statement is received within three weeks of the meeting. Under this circumstance, the written statement will be included with the minutes of the following meeting. Written statements for the record should be submitted to the DFE.

Inquiries may be addressed to the DFE, Dr. Dwight E. Adams, Chief, Scientific Analysis Section, Laboratory Division—Room 3266, Federal Bureau of Investigation, 935 Pennsylvania Avenue, N.W., Washington, DC 20535–0001, (202) 324–4416, FAX (202) 324–1462

Dated: January 12, 1998.

Dwight E. Adams,

Chief, Scientific Analysis Section, Federal Bureau of Investigation.

Aerospace Safety Advisory Panel; Meeting

AGENCY: National Aeronautics and Space Administration.

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, Pub. L. 92–463, as amended, the National Aeronautics and Space Administration announces a forthcoming meeting of the Aerospace Safety Advisory Panel.

DATES: Thursday, February 12, 1998, 1:00 p.m. to 2:30 p.m.

ADDRESSES: National Aeronautics and Space Administration, 300 E Street, SW., Room 9H40, Washington, DC 20546.

FOR FURTHER INFORMATION CONTACT: Mr. Norman B. Starkey, Code Q–1, National Aeronautics and Space Administration, Washington, DC 20546, 202/358–4453.

SUPPLEMENTARY INFORMATION: The Aerospace Safety Advisory Panel will present its annual report to the NASA Administrator and Deputy Administrator. This is pursuant to carrying out its statutory duties for which the Panel reviews, identifies, evaluates, and advises on those program activities, systems, procedures, and management activities that can contribute to program risk. Priority is given to those programs that involve the safety of human flight. The major subjects covered will be the National Space Transportation System, Space Station, and Aeronautical Operations. The Aerospace Safety Advisory Panel is currently chaired by Richard D. Blomberg, Deputy Chairman, and is composed of 8 members and 6 consultants. The meeting will be open to the public up to the capacity of the room (approximately 60 persons including members of the Panel).

Frederick D. Gregory,

Associate Administrator for Safety and Mission Assurance.

Place: National Science Foundations, 4201 Wilson Boulevard, Rooms 310 & 340, Arlington, VA 22230.

Type of Meeting: Closed.

Contact Person: Dr. Elizabeth Lyons & Dr. Charles O'Kelly, Division of Environmental Biology, Room 635, National Science Foundation, 4201 Wilson Boulevard, Arlington, VA 22230. Telephone: (703) 306–1481.

Purpose of Meeting: To provide advice and recommendations concerning proposals submitted to NSF for financial support.

Agenda: To review and evaluate Doctoral Dissertation Research proposals as part of the selection process for awards.

Reason for Closing: The proposals being reviewed include information of a proprietary or confidential nature, including technical information; financial data, such as salaries; and personal information concerning individuals associated with the proposals. These matters are exempt under 5 U.S.C. 552b(c)(4) and (6) of the Government in the Sunshine Act.

Dated: January 12, 1998.

M. Rebecca Winkler,

Committee Management Officer.

Special Emphasis Panel in Computer-Communications Research; Notice of Meeting

In accordance with the Federal Advisory Committee Act (Pub L. 92–463, as amended), the National Science Foundation announces the following meeting.

Name: Special Emphasis Panel in Computer-Communications Research (1192).

Date: February 9, 11, and 13, 1998.

Time: 8:00 a.m.–5:00 p.m.

Place: Rooms 1150 and 310, National Science Foundation, 4201 Wilson Boulevard, Arlington, VA 22230.

Type of Meeting: Closed.

Contact Person: Dr. Peter Scheuermann, Program Director/Computer Systems Software, C–CR, room 1145, National Science Foundation, 4201 Wilson Boulevard, Arlington, VA 22230, 703/306–1912.

Purpose of Meeting: To provide advice and recommendations concerning proposals submitted to the National Science Foundation for financial support.

Agenda: To review and evaluate Computer Systems Software proposals as part of the selection process for awards.

Reason for Closing: The proposals being reviewed include information of a proprietary or confidential nature, including technical information; financial data such as salaries, and personal information concerning individuals associated with the proposals. These matters are exempt under 5 U.S.C. 552b(c) (4) and (6) of the Government in the Sunshine Act.

Dated: January 16, 1998.

Special Emphasis Panel in Division of Graduate Education, Notice of Meeting

This notice is being published in accord with the Federal Advisory Committee Act (Pub. L. 92–463, as amended). During the period February 7 through 19, 1998, the Special Emphasis Panel will be meeting to review and evaluate fellowship applications. The dates, contact person, and types of applications are as follows:

Special Emphasis Panel in Division of Graduate Education (57)

Date: February 7–14, 1998.
Contact: Susan Duby, Program Director, Division of Graduate Education, Room 907, 703–306–1694.
Type of Proposal: Graduate Fellowship applications.
Date: February 17–19, 1998.
Contact: Susan Duby, Program Director, Division of Graduate Education, Room 907, 703–306–1694.
Type of Proposal: Minority Graduate Fellowship applications.
Times: 8:00 a.m. to 5:00 p.m. each day.
Place: Washington Marriott Hotel, 1221 22nd Street, NW, Washington, DC.
Type of Meetings: Closed.
Purpose of Meeting: To provide advice and recommendations concerning applications submitted to NSF for financial support.
Agenda: To review and evaluate applications submitted to the Directorate as part of the selection process for awards.
Reason for Closing: The applications being reviewed include information of a proprietary or confidential nature, including technical information and personal information concerning individuals associated with the applications. These matters are exempt under 5 U.S.C. 552b(c) (4) and (6) of the Government in the Sunshine Act.

Dated: January 12, 1998.

NUCLEAR REGULATORY COMMISSION

Regulatory Information Conference; Notice of Meeting

SUMMARY: The objectives of the conference are to give the licensees and the public insights into our approach to safety regulations and to provide a forum for feedback from those in attendance on their concerns about our overall approach, as well as, feedback on differences that may exist on technical issues. NRC staff will provide information regarding on-going programs and potential new initiatives as a basis for discussion.

Discussions will proceed from general (*i.e.*, the plenary sessions) to specific issues (*i.e.*, the breakout sessions), with emphasis on plant operations and the NRC view of these operations based on experience in carrying out its regulatory mission. Three plenary sessions are planned, two of which will be followed by breakout sessions that will include presentations by the NRC staff and industry representatives.

DATES: Conference will be held April 14 and 15, 1998.

ADDRESSES: The conference will be held at The Capital Hilton Hotel, 16th and K Street, N.W., Washington, DC 20036 TELEPHONE: (202) 393–1000 FAX (202) 639–5742 (Refer to NRC Meeting for special conference rate.)

FOR REGISTRATION INFORMATION CONTACT: ES, Inc., by facsimile on (202) 835–0118 or by phone on (202) 835–1585, *after January 20, 1998.*

Participation

This conference is open to the general public; however, advance registration is required by *March 23, 1998.* The following is the preliminary program for the conference:

Tuesday, April 14, 1998

Opening: 8:30 a.m.—8:45 a.m.
Welcome—Samuel J. Collins, Director, Office of Nuclear Reactor Regulation, NRC
Morning Speaker: Chairman Shirley Ann Jackson
8:45 a.m.–9:15 a.m.
Morning Plenary Session: 9:15 a.m.–10:00 a.m.
Regulatory Trends—Samuel J. Collins
Mid-Morning Speaker: Commissioner Nils J. Diaz
10:15 a.m.–11:00 a.m.
Mid-Morning Plenary Session: 11:00 a.m.–12:30 p.m.
Regional Administrators' Panel: Each Regional Administrator will make a presentation on a topic of current interest.
Post Luncheon Speaker: Commissioner Greta J. Dicus
1:15 p.m.–1:45 p.m.
Breakout Sessions 2:30 p.m.–3:30 p.m.
1. Restructuring and Deregulation
2. Architect/Engineer Inspections
3. Maintenance Rule
4. Public Communications Initiatives
Breakout Sessions 3:45 p.m.–5:00 p.m.
1. Allegations/Enforcement Issues
2. Probabilistic Risk Assessment Issues
3. The Role of Industry
4. Role of Potassium Iodide in

VOL 63 ISS 12 JA 20 1998 UMI

Emergency Response
Afternoon Speaker: New Commissioner, if appointed
5:00 p.m.–5:30 p.m.

Wednesday, April 15, 1998

Morning Speaker: Commissioner Edward McGaffigan, Jr.
8:30 a.m.–9:00 a.m.
Breakout Sessions 9:05 a.m.–10:15 a.m.
1. Region I/Licensee Interface & Communications
2. Region II/Licensee Interface & Communications
3. Region III/Licensee Interface & Communications
4. Region IV/Licensee Interface & Communications

Breakout Sessions 10:30 a.m.–12:00 noon
1. 10 CFR 50.59
2. Strategic Planning/Operating Plan/ Budget
3. Generic Letter 96–06, "Assurance of Equipment Operability and Containment Integrity During Design Basis Accident Conditions"
4. Licensing Actions/ Technical Specification Conversions

Post-Luncheon Speaker: TBD
1:30 p.m.–2:00 p.m.
Breakout Sessions 2:45 p.m.–4:00 p.m.
1. Improvements to NRC's Performance Assessment Process
2. License Renewal
3. Spent Fuel Storage/Dry Cask Issues
4. Core Performance/Fuels Issues

Closing Plenary Session: 4:15 p.m.–4:45 p.m.
Summary/Closing—Samuel J. Collins

Note: There will be a question and answer period after each session each day.

Next year's conference is scheduled for April 6 and 7, 1999, at The Capital Hilton Hotel, Washington, DC.

Dated in Rockville, Maryland this 12th day of January 1998.

For The Nuclear Regulatory Commission.

Kathryn O. Greene,

Chief, Administration Branch, Division of Inspection and Support Programs, Office of Nuclear Reactor Regulation.

NUCLEAR REGULATORY COMMISSION

Draft Regulatory Guide; Issuance, Availability

The Nuclear Regulatory Commission has issued for public comment a draft of a guide planned for its Regulatory Guide Series. This series has been developed to describe and make available to the public such information as methods acceptable to the NRC staff for implementing specific parts of the Commission's regulations, techniques used by the staff in evaluating specific problems or postulated accidents, and data needed by the staff in its review of applications for permits and licenses.

The draft guide, temporarily identified by its task number, DG–3013 (which should be mentioned in all correspondence concerning this draft guide), is titled "Nuclear Criticality Safety Standards for Fuels and Material Facilities." The guide is intended for Division 3, "Fuels and Materials Facilities." This draft guide is being developed to provide guidance on procedures for preventing nuclear criticality accidents in operations involving handling, processing, storing, and transporting special nuclear material at fuels and materials facilities. The guide will also endorse 13 standards on nuclear criticality safety that have been developed by the American National Standards Institute/ American Nuclear Society.

The draft guide has not received complete staff review and does not represent an official NRC staff position.

Public comments are being solicited on Draft Regulatory Guide DG–3013. Comments may be accompanied by additional relevant information or supporting data. Written comments may be submitted to the Rules and Directives Branch, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555. Copies of comments received may be examined at the NRC Public Document Room, 2120 L Street NW., Washington, DC. Comments will be most helpful if received by March 31, 1998.

You may also provide comments via the NRC's interactive rulemaking website through the NRC home page (http://www.nrc.gov). This site provides the availability to upload comments as files (any format), if your web browser supports that function. For information about the interactive rulemaking website, contact Ms. Carol Gallagher, (301) 415–5905; e-mail CAG@nrc.gov.

Although a time limit is given for comments on this draft guide, comments and suggestions in connection with items for inclusion in guides currently being developed or improvements in all published guides are encouraged at any time.

Regulatory guides are available for inspection at the Commission's Public Document Room, 2120 L Street NW., Washington, DC. Requests for single copies of draft or final guides (which may be reproduced) or for placement on an automatic distribution list for single copies of future draft guides in specific divisions should be made in writing to the U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Printing, Graphics and Distribution Branch; or by fax at (301) 415–5272. Telephone requests cannot be accommodated. Regulatory guides are not copyrighted, and Commission approval is not required to reproduce them.

(5 U.S.C. 552(a))

Dated at Rockville, Maryland, this 6th day of January 1998.

For the Nuclear Regulatory Commission.

Joseph A. Murphy,

Director, Division of Regulatory Applications, Office of Nuclear Regulatory Research.

BILLING CODE 7590–01–P

POSTAL RATE COMMISSION

[Order No. 1205; Docket No. A98–1]

In the Matter of Nassau, Minnesota 56272 (James Schneichel, Petitioner); Notice and Order Accepting Appeal and Establishing Procedural Schedule Under 39 U.S.C. 404(b)(5)

Issued January 14, 1998.

Docket Number: A98–1.

Name of Affected Post Office: Nassau, Minnesota 56272.

Name(s) of Petitioner(s): James Schneichel.

Type of Determination: Closing.

Date of Filing of Appeal Papers: December 22, 1997.

Categories of Issues Apparently Raised

1. Effect on the community (39 U.S.C. 404(b)(2)(A)).
2. Effect on postal services (39 U.S.C. 404(b)(2)(C)).

After the Postal Service files the administrative record and the Commission reviews it, the Commission may find that there are more legal issues than those set forth above. Or, the Commission may find that the Postal Service's determination disposes of one or more of those issues.

The Postal Reorganization Act requires that the Commission issue its decision within 120 days from the date this appeal was filed (39 U.S.C. 404 (b)(5)). In the interest of expedition, in light of the 120-day decision schedule, the Commission may request the Postal Service to submit memoranda of law on any appropriate issue. If requested, such memoranda will be due 20 days from the issuance of the request and the Postal Service shall serve a copy of its memoranda on the petitioners. The Postal Service may incorporate by reference in its briefs or motions, any arguments presented in memoranda it previously filed in this docket. If necessary, the Commission also may ask petitioners or the Postal Service for more information.

The Commission Orders

(a) The Postal Service shall file the record in this appeal by January 29, 1998.

(b) The Secretary of the Postal Rate Commission shall publish this Notice and Order and Procedural Schedule in the **Federal Register**.

By the Commission.

Cyril J. Pittack,

Acting Secretary.

Nassau, Minnesota 56272

[Docket No. A98–1]

Appendix

December 22, 1997: Filing of Appeal letter.
January 14, 1998: Commission Notice and Order of Filing of Appeal.
February 3, 1998: Last day of filing of petitions to intervene (see 39 CFR 3001.111(b)).
February 13, 1998: Petitioner's Participant Statement or Initial Brief (see 39 CFR 3001.115 (a) and (b)).
March 2, 1998: Postal Service's Answering Brief (see 39 CFR 3001.115(c)).
March 17, 1998: Petitioner's Reply Brief should Petitioner choose to file one (see 39 CFR 3001.115(d)).
March 24, 1998: Deadline for motions by any party requesting oral argument. The Commission will schedule oral argument only when it is a necessary addition to the written filings (see 39 CFR 3001.116).
April 21, 1998: Expiration of the Commission's 120-day decisional schedule (see 39 U.S.C. 404(b)(5)).

SECURITIES AND EXCHANGE COMMISSION

Sunshine Act Meeting

Notice is hereby given, pursuant to the provisions of the Government in the Sunshine Act, Pub. L. 94–409, that the Securities and Exchange Commission will hold the following meetings during the week of January 19, 1998.

A closed meeting will be held on Wednesday, January 21, 1998, at 3:00 p.m. An open meeting will be held on Thursday, January 22, 1998, at 10:00 a.m.

Commissioners, Counsel to the Commissioners, the Secretary to the Commission, and recording secretaries will attend the closed meeting. Certain staff members who have an interest in the matters may also be present.

The General Counsel of the Commission, or his designee, has certified that, in his opinion, one or more of the exemptions set forth in 5 U.S.C. 552b(c)(4), (8), (9)(A) and (10) and 17 CFR 200.402(a)(4), (8), (9)(i) and (10), permit consideration of the scheduled matters at the closed meeting.

Commissioner Hunt, as duty officer, voted to consider the items listed for the closed meeting in a closed session.

The subject matter of the closed meeting scheduled for Wednesday, January 21, 1998, at 3:00 p.m., will be:

Institution and settlement of injunctive actions
Institution and settlement of administrative proceedings of an enforcement nature

The subject matter of the open meeting scheduled for Thursday, January 22, 1998, at 10:00 a.m., will be:

The Commission will consider adopting (1) a rule requiring plain English for the cover page, summary, and risk factor sections of prospectuses filed under the Securities Act of 1933; and (2) codifying earlier interpretive advice on how public companies can comply with the current rule that prospectuses be clear, concise and understandable. The purpose of the proposed change is to make prospectuses simpler, clearer, more useful, and more used. For further information, please contact David Maltz at (202) 942–1921.

At times, changes in Commission priorities require alterations in the scheduling of meeting items. For further information and to ascertain what, if any, matters have been added, deleted or postponed, please contact: The Office of the Secretary at (202) 942–7070.

Dated: January 14, 1998.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010–01–M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–39524; File No. SR–CBOE–97–57]

Self-Regulatory Organizations; Chicago Board Options Exchange, Inc.; Order Granting Approval to Proposed Rule Change Relating to an Extension of the Permissible Maturity Term of FLEX Equity Options

January 8, 1998.

I. Introduction

On October 23, 1997 the Chicago Board Options Exchange, Inc. ("CBOE" or "Exchange") submitted to the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")[1] and Rule 19b–4 thereunder,[2] a proposed rule change to permit a FLEX equity option to have a term of five years in certain circumstances.

The proposed rule change was published for comment in the **Federal Register** on November 14, 1997.[3] No comments were received on the proposal. This order approves the proposal.

II. Description

The CBOE is proposing to allow FLEX equity options[4] traded on the Exchange to have a maturity beyond three years and up to five years when the longer term is requested by a submitting member and the FLEX Post Official[5] determines that sufficient liquidity exists among Equity FLEX Qualified Market Makers. Currently, FLEX equity options, by operation of Rule 24A.4(a)(4)(i), are limited to a maturity of three years.

When the Exchange filed for permission to list and trade FLEX equity options[6] it determined to limit the maturity of these options to three years because, unlike FLEX Index options which had been traded on the Exchange since February 1993 and which could have a maturity of up to five years, the Exchange was concerned that there would not be sufficient liquidity in many equity option classes to support series with a longer term to expiration. The CBOE represents, however, that since it has traded FLEX equity options, the Exchange has had numerous requests from broker-dealers to extend the maturity of FLEX equity options to five years. According to the Exchange, among the reasons the broker-dealer firms have been interested in seeking an extension in the allowable maturity is that such longer expiration FLEX equity options might be used to hedge a firm's issuance of long-term structured products linked to returns of an individual stock. The Rule would permit the longer term FLEX equity options (up to a maximum of five years) to be listed when requested by the submitting member if the FLEX Post

[3] Exchange Act Release No. 39305 (November 6, 1997), 62 FR 61156 (November 14, 1997).

[4] FLEX equity options are flexible exchange-traded options contracts which overlie equity securities. In addition, FLEX equity options provide investors with the ability to customize basic option features including size, expiration date, exercise style, and certain exercise prices.

[5] Under CBOE Rule 24A.1(g), a FLEX Post Official is the Exchange employee designated pursuant to Rule 24A.12 to perform the FLEX post functions set forth in that rule.

[6] SR–CBOE–95–43 approved in Exchange Act Release No. 36841 (February 14, 1996), 61 FR 6666 (February 21, 1996).

VOL 63 ISS 12 JA 20 1998 UMI

Official determined that sufficient liquidity existed among Equity FLEX Qualified Market Makers. The CBOE believes that by allowing for the extension of the maturity of FLEX equity options to five years in situations where there is demand for a longer term expiration and where there is sufficient liquidity among Exchange qualified market-makers to support the request, the proposed rule change will better serve the needs of CBOE's customers and the Exchange members who make a market for such customers.

III. Discussion

The Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange, and, in particular, with the requirements of Section 6(b) of the Act.[7] Specifically, the Commission believes the proposal is consistent with the Section 6(b)(5)[8] requirement that the rules of an exchange be designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and to protect investors and the public interest.[9]

The Commission believes it is appropriate to extend the maximum permissible maturity term of FLEX equity options to five years for several reasons. First, FLEX equity options with a maturity term of up to five years should benefit investors by allowing them to hedge positions on a longer term basis through investment in one options series, rather than having to roll shorter term expirations into new series to remain hedged on a longer basis. In this regard, the Commission notes that the FLEX equity options market is characterized by large, sophisticated institutional investors (or extremely high net worth individuals) who have the experience, ability and, in many cases, need to engage in negotiated, customized transactions.[10] The longer-term FLEX equity options will allow investors to customize their portfolios further over an extended period of time. Second, the extension of the permissible maturity term for FLEX equity options to five years potentially could expand the depth and liquidity of the FLEX equity market without significantly increasing concerns regarding intermarket manipulations or disruptions of the options or the underlying securities.[11] Third, under the rule, FLEX equity options with maturity terms between three and five years could only be issued if a FLEX Post Official determines that there is sufficient liquidity among Equity FLEX Qualified Market Makers. This will help to ensure that there is not a proliferation of longer term FLEX equity options series where no interest in trading such options exist. Finally, as with all exhange-traded options, the Options Clearing Corporation will act as the counter-party guarantor, thereby ensuring that obligations will be met over the long-term.[12]

For the foregoing reasons, the Commission finds that CBOE's proposal to extend the permissible maturity term of certain FLEX equity options, as described above, is consistent with the requirements of the Act and the rules and regulations thereunder.

IV. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[13] that the proposed rule change (SR–CBOE–97–57) is approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[14]

Margaret H. McFarland,

Deputy Secretary.

[FR Doc. 98–1180 Filed 1–16–98; 8:45 am]

BILLING CODE 8010–01–M

[7] 15 U.S.C. 78f(b).

[8] 15 U.S.C. 78f(b)(5).

[9] In approving this rule, the Commission has considered the proposed rule's impact on efficiency, competition, and capital formation. 15 U.S.C. 78c(f).

[10] For example, with a required minimum size of 250 contracts to open a transaction in a new series, FLEX equity options are designed to appeal to institutional investors. *See* Exchange Act Release No. 36841 (February 14, 1996), 61 FR 6666, 6669 (February 21, 1996); *see also* Exchange Act Release No. 37336 (June 19, 1996), 61 FR 33558, 33560, (June 27, 1996).

[11] Position and exercise limits for FLEX equity options have recently been eliminated. *See* Exchange Act Release No. 39032 (Sept. 9, 1997), 62 FR 48683 (Sept. 16, 1997). In eliminating these limits, the Exchange adopted several important safeguards to monitor large positions in order to identify instances of potential risk and to assess additional margin and/or capital charges, if necessary. These safeguards also continue to apply to large positions in FLEX equity options regardless of the term of the option.

[12] As to any future proposal to permit options instruments with terms longer than five years, the Commission would need to re-evaluate several issues including margin requirements, disclosure, sales practices, and other legal and regulatory issues.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–39541; File No. SR–MSRB–98–1]

Self-Regulatory Organizations; Notice of Filing of Proposed Rule Change by the Municipal Securities Rulemaking Board Relating to Interpretation of Rule G–38 on Consultants

January 12, 1998.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),[1] and Rule 19b–4, thereunder,[2] notice is hereby given that on January 9, 1998,[3] the Municipal Securities Rulemaking Board ("Board" or "MSRB") filed with the Securities and Exchange Commission ("Commission" or "SEC") the proposed rule change, (File No. SR–MSRB–98–1), as described in Items I, II, and III below, which Items have been prepared by the Board. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Board is filing herewith a notice of interpretation concerning Rule G–38 on consultants (hereafter referred to as "the proposed rule change"). The proposed rule change is as follows:

Rule G–38 Questions and Answer Bank Affiliates and Definition of Payment

Q: A bank and its employees communicate with an issuer on behalf of an affiliated dealer to obtain municipal securities business for that dealer. In return, the bank and its employees receive certain "credits" from the dealer. These credits, which do not involve any direct or indirect cash payments from the dealer to the bank or its employees, are used for internal purposes to identify the source of business referrals. Are the credits considered a "payment" under rule G–38 thereby requiring the dealer to designate the bank or its employees as consultant and comply with the requirements of rule G–38?

A: Rule G–38 defines a consultant as any person used by a dealer to obtain or retain municipal securities business through direct or indirect communication by such person with an issuer on behalf of the dealer where the communication is undertaken by the person in exchange for, or with the understanding of receiving, **payment** from the dealer or any other person.[4] The term payment, as used in rule G–38, means any gift, subscription, loan, advance, or deposit of money or **anything of value.** The absence of an immediate transfer of funds or anything of value to an affiliate or individual employed by the affiliate would not exclude the credits from the definition of payment if such credits eventually (*e.g.*, at the end of the fiscal year) result in compensation to the affiliate or individual employed by the affiliate for referring municipal securities business to the dealer. In this regard, the compensation may be in the form of cash (*e.g.*, a bonus) or non-cash. In either case, if the dealer or any other person[5] eventually gives anything of value (*i.e.*, makes a "payment") to the affiliate or individual based, even in part, on the referral, then the affiliate or individual is a consultant for purposes of rule G–38 and the dealer must comply with the various requirements of the rule. For additional guidance in this area, you may wish to review Q&A numbers 6 and 7 (dated February 28, 1996) in the MSRB Manual following Rule G–38, as well as Q&A number 4 (dated December 7, 1994) in the MSRB Manual following Rule G–37.

* * * * *

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Board included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The texts of these statements may be examined at the places specified in Item IV below. The Board has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

On January 17, 1996, the Commission approved Board Rule G–38 on consultants.[6] The Board adopted the rule because it was concerned about dealers' increasing use of consultants to obtain or retain municipal securities business, notwithstanding the requirements of Rule G–37[7] on political contributions and prohibitions on municipal securities business, Rule G–20[8] on gifts and gratuities, and Rule G–17[9] on fair dealing. Rule G–38 requires dealers to disclose information about their consultant arrangements to issuers and the public. Recently, the Board has received inquiries from market participants concerning the definition of payment, as used in Rule G–38, and whether bank affiliates and their employees may, under certain circumstances, be deemed consultants for purposes of the rule. In order to assist the municipal securities industry and, in particular, brokers, dealers and municipal securities dealers in understanding and complying with Rule G–38, the Board has determined to publish this third notice of interpretation which sets forth, in question-and-answer format, general guidance on Rule G–38.[10] The Board will continue to monitor the application of Rule G–38, and, from time to time, will publish additional notices of interpretations, as necessary.

The Board believes the proposed rule change is consistent with Section 15B(b)(2)(C) of the Act.[11]

B. Self-Regulatory Organization's Statement on Burden on Competition

The Board does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act, because it would apply equally to all brokers, dealers and municipal securities dealers.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Commission received four comment letters from banking industry participants, opposing this interpretation of Rule G–38.[12] As a result of these comments, the Board resubmitted the proposed rule change pursuant to Section 19(b)(2).[13]

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

A. By order approve such proposed rule change, or

B. Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, N.W., Washington, D.C. 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Room. Copies of the filing will also be available for inspection and copying at

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] On November 13, 1997, the Board filed the same proposal under Section 19(b)(3)(A) of the Act, which renders the proposal effective upon receipt of filing by the Commission. *See* Securities Exchange Act Release No. 39391 (December 3, 1997), 62 FR 65114 (December 10, 1997). The Commission received four comment letters on the filing. *See infra* note 12. In order to provide additional time to fully air the concerns of commenters, the Board agreed to withdraw this filing and resubmit it, pursuant to Section 19(b)(2). *See* letter from Diane G. Klinke, General Counsel, Municipal Securities Rulemaking Board, to Katherine A. England, Assistant Director, Division of Market Regulation, dated January 9, 1998.

[4] Municipal finance professionals and any person whose sole basis of compensation is the actual provision of legal, accounting or engineering advice, services or assistance are excepted from the definition of consultant.

[5] The Securities Exchange Act of 1934 (the "Act") defines the term "person" as a "natural person, company, government, or political subdivision, agency, or instrumentality of a government." Board rule D–1 provides that unless the context otherwise specifically requires, the terms used in Board rules shall have the same meanings as set forth in the Act.

[6] Securities Exchange Act Release No. 36727 (Jan. 17, 1996); 61 FR 1955 (Jan. 24, 1996). The rule became effective on March 18, 1996. *See also MSRB Manual*, General Rules, Rule G–38 (CCH) ¶3686.

[7] *MSRB Manual*, General Rules, Rule G–37 (CCH) ¶3681.

[8] *MSRB Manual*, General Rules, Rule G–20 (CCH) ¶3596.

SOCIAL SECURITY ADMINISTRATION

Privacy Act of 1974, as Amended; Computer Matching Program SSA/Office of Personnel Management (OPM)—SSA Consolidated Match Numbers 1005, 1019, 1020, 1021

AGENCY: Social Security Administration.

ACTION: Notice of Computer Matching Program.

SUMMARY: In accordance with the provisions of the Privacy Act, as amended, this notice announces a computer matching program that SSA plans to conduct with OPM.

DATES: SSA will file a report of the subject matching program with the Committee on Governmental Affairs of the Senate, the Committee on Government Reform and Oversight of the House of Representatives and the Office of Information and Regulatory Affairs, Office of Management and Budget (OMB). The matching program will be effective as indicated below.

ADDRESSES: Interested parties may comment on this notice by either telefax to (410) 966–2935 or writing to the Associate Commissioner for Program Support, 4400 West High Rise Building, 6401 Security Boulevard, Baltimore, MD 21235. All comments received will be available for public inspection at this address.

FOR FURTHER INFORMATION CONTACT: The Associate Commissioner for Program Support at the address shown above.

SUPPLEMENTARY INFORMATION:

A. General

The Computer Matching and Privacy Protection Act of 1988 (Public Law (Pub. L.) 100–503), amended the Privacy Act (5 U.S.C. 552a) by establishing the conditions under which computer matching involving the Federal government could be performed and adding certain protections for individuals applying for and receiving Federal benefits. Section 7201 of the Omnibus Budget Reconciliation Act of 1990 (Pub. L. 101–508) further amended the Privacy Act regarding protections for such individuals.

The Privacy Act, as amended, regulates the use of computer matching by Federal agencies when records in a system of records are matched with other Federal, State, or local government records. Among other things, it requires Federal agencies involved in computer matching programs to:

(1) Negotiate written agreements with the other agency or agencies participating in the matching programs;

(2) Obtain the approval of the match agreement by the Data Integrity Boards (DIB) of the participating Federal Agencies;

(3) Furnish detailed reports about matching programs to Congress and OMB;

(4) Notify applicants and beneficiaries that their records are subject to matching; and

(5) Verify match findings before reducing, suspending, terminating or denying an individual's benefits or payments.

B. SSA Computer Matches Subject to the Privacy Act

We have taken action to ensure that all of SSA's computer matching programs comply with the requirements of the Privacy Act, as amended.

Dated: December 19, 1997.

Kenneth S. Apfel,

Commissioner of Social Security.

Notice of Computer Matching Program, Social Security Administration (SSA) With the Office of Personnel Management (OPM)

A. Participating Agencies

SSA and OPM.

B. Purpose of the Matching Program

This matching program will have four separate components. The purposes of each of these parts are as follows.

SSA Match 1021: SSA will match OPM's civil service benefit and payment data with SSA's records of beneficiaries receiving Social Security spouse's benefits which are subject to reduction under the Social Security Act when the beneficiary is also receiving a government pension based on employment not covered under that Act. SSA will match the OPM data to verify information provided (or identify information that should have been provided) by the SSA beneficiary at the time of initially applying for Social Security benefits and on a continuing basis to ensure that any reduction in Social Security benefits is based on the current pension amount.

SSA Match 1020: OPM records will be used in a matching program wherein SSA will match OPM's benefit data with SSA's records for disabled and retired annuitants. These annuitants may be subject to the use of a modified benefit computation formula used by SSA under the Social Security Act for certain persons who receive both a civil service benefit and a Social Security retirement or disability benefit. SSA will use the OPM data to verify the pension or annuity information provided (or to identify such information that should have been provided) directly to SSA by the retirees/annuitants.

SSA Match 1005: OPM records will be used in a matching program where SSA will match OPM's data with SSA's records to verify the accuracy of information furnished by applicants and recipients concerning eligibility factors for the SSI program as authorized by section 1631(e)(1)(B) and (f) of the Social Security Act (42 U.S.C. 1383(e)(1)(B) and (f)). The SSI program provides payments to individuals who have income and resources below levels established by law and regulations.

SSA Match 1019: SSA will match OPM's records of civil service disability benefit and payment data with SSA's records of Social Security disability insurance (DI) benefits to identify DI beneficiaries whose benefits should be reduced under the Act because the disabled worker is receiving a civil service disability annuity benefit. SSA will match the OPM data to verify information provided (or identify such information that should have been provided) by the disabled worker at the time of initially applying for Social Security benefits and on a continuous basis to ensure any reduction in Social Security disability benefits is based on the current civil service disability benefit amount.

C. Authority for Conducting the Matching Program

SSA Match 1021: Section 202(b)(4)(A), (c)(2)(A), (e)(7)(A), (f)(2)(A), and (g)(u)(A) of the Social Security Act (42 U.S.C. 402(b)(4)(A), (c)(2)(A), (e)(7)(A), (f)(2)(A) and (g)(4)(A)).

SSA Match 1020: Sections 215 (a)(7) and 215 (d)(3) of the Social Security Act ((42 U.S.C. 415 (a)(7) and 415 (d)(3)).

SSA Match 1005: Section 1631 (e)(1)(B) and (f) of the Social Security Act (42 U.S.C. 1383 (e)(1)(B) and (f)).

SSA Match 1019: Section 224 of the Social Security Act (42 U.S.C. 424).

D. Categories of Records and Individuals Covered by the Match

OPM will provide SSA with an electronic file extracted from OPM's Annuity and Survivor Masterfile. The extracted file will contain information about each new annuitant and annuitants whose pension amount has changed. Each record on the OPM file will be matched to SSA's Master Beneficiary Record (MBR) or Supplemental Security Income Record (SSR) for the purposes described above in Section B.

E. Inclusive Dates of the Match

The matching program shall become effective upon the signing of the agreement by both parties to the agreement and approval of the agreement by the Data Integrity Boards of the respective agencies, but no sooner than 40 days after notice of this matching program is sent to Congress and the Office of Management and Budget (OMB) or 30 days after publication of this notice in the **Federal Register**, whichever is later. The matching program will continue for 18 months from the effective date and may be extended for an additional 12 months thereafter, if certain conditions are met.

VOL 63 ISS 12 JA 20 1998 UMI

DEPARTMENT OF THE TREASURY

Office of Thrift Supervision

Privacy Act of 1974; System of Records

AGENCY: Office of Thrift Supervision, Treasury.

ACTION: Notice of alteration of a system of records.

SUMMARY: In accordance with the Privacy Act of 1974, as amended (Privacy Act), the Office of Thrift Supervision (OTS) is issuing notice of its intent to alter the system of records entitled, "Treasury/OTS.012—Payroll/Personnel System & Payroll Records," by adding a new routine use. We invite public comment on this publication.

DATES: Comments must be received no later than February 19, 1998 The proposed alteration will become effective without further notice on March 2, 1998, unless comments are received that result in a contrary determination. OTS will publish a new notice if changes are made based on review of comments received.

ADDRESSES: Interested individuals may comment on this publication by writing to the Manager, Dissemination Branch, Records Management and Information Policy, Office of Thrift Supervision, 1700 G Street, NW., Washington, DC 20552, Attention: Privacy Act. These submissions may be hand-delivered to 1700 G Street, NW., from 9 a.m. to 5 p.m. on business days; they may be sent by facsimile transmission to FAX number 202/906–7755, or they may be sent by e-mail: public.info@ots.treas.gov. Those commenting by e-mail should include their name and telephone number. Comments will be available for inspection at 1700 G Street, NW. from 9 a.m. until 4 p.m. on business days.

FOR FURTHER INFORMATION CONTACT: Richard L. Abood, Planning, Budget, and Finance, (202) 906–6149, Office of Thrift Supervision, 1700 G Street, NW., Washington, DC 20552.

SUPPLEMENTARY INFORMATION: Pursuant to Pub. L. 104–193, the Personal Responsibility and Work Opportunity Reconciliation Act of 1996, the OTS will disclose data from its payroll records to the Office of Child Support Enforcement, Administration for Children and Families, Department of Health and Human Services, for use in its Federal Parent Locator System (FPLS) and Federal Tax Offset System, (DHHS/OCSE No. 09–90–0074). Information on the above system was last published at 61 FR 38754 (July 25, 1996).

FPLS is a computerized network through which States may request location information from Federal and State agencies to find non-custodial parents and/or their employers for purposes of establishing paternity and securing support. Effective October 1, 1997, the FPLS was enlarged to include the National Directory of New Hires, a database containing information on unemployment compensation benefits. Effective October 1, 1998, the FPLS will be expanded to include a Federal Case Registry. The Federal Case Registry will contain abstracts on all participants involved in child support enforcement cases. When the Federal Case Registry is instituted, its files will be matched on an ongoing basis against the files in the National Directory of New Hires to determine if an employee is a participant in a child support case anywhere in the country. If the FPLS identifies a person as being a participant in a State child support case, that State will be notified of the participant's current employer. State requests to the FPLS for location information will also continue to be processed after October 1, 1998. The data to be disclosed by the OTS to the FPLS include: name, address, social security number and name and address of the agency.

We are proposing this routine use in accordance with the Privacy Act (5 U.S.C. 552a(b)(3)). The Privacy Act permits the disclosure of information about individuals without their consent for a routine use where the information will be used for a purpose which is compatible with the purpose for which the information was originally collected. The Office of Management and Budget has indicated that a "compatible" use is a use which is necessary and proper. See OMB Guidelines, 51 FR 18982, 18985 (May 23, 1986). Since the proposed uses of the data are required by Pub. L. 104–193, they are clearly necessary and proper uses, and therefore "compatible" uses which meet Privacy Act requirements. We will disclose information under the proposed routine use only as required by Pub L. 104–193 and as permitted by the Privacy Act.

Accordingly, the Payroll/Personnel System & Payroll Records System notice originally published at 60 FR 13776 (March 14, 1995), is amended as set forth below:

Treasury/OTS .012

SYSTEM NAME:

Payroll/Personnel System & Payroll Records System

* * * * *

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

* * * * *

(5) records from this system may be disclosed to the Office of Child Support Enforcement, Administration for Children and Families, Department of Health and Human Services, for the purpose of locating individuals to establish paternity, establishing and modifying orders of child support, and identifying sources of income, and for other child support enforcement actions as required by the Personal Responsibility and Work Opportunity Reconciliation Act (Welfare Reform Law, Pub. L. 104–193).

UNITED STATES INFORMATION AGENCY

Culturally Significant Objects Imported for Exhibition; Determinations

Notice is hereby given of the following determinations: Pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985, 22 U.S.C. 2459), Executive Order 12047 of March 27, 1978 (43 FR 13359, March 29, 1978), and Delegation Order No. 85–5 of June 27, 1985 (50 FR 27393, July 2, 1985), I hereby determine that the objects to be included in the exhibit, "Ancient Gold: The Wealth of the Thracians, Treasures from the Republic of Bulgaria" (See list [1]) imported from abroad for the temporary exhibition without profit within the United States, are of cultural significance. These objects are imported pursuant to a loan agreement with the foreign lender. I also determine that the exhibition or display of the listed exhibit objects at Saint Louis Art Museum, Saint Louis, MO, from on or about February 5, 1998, to on or about April 5, 1998; Kimbell Art Museum, Fort Worth, TX, from on or about May 3, 1998, to on or about July 19, 1998; California Palace of the Legion of Honor, San Francisco, CA, from on or about July 31, 1998, to on or about October 25, 1998; New Orleans Museum of Art, New Orleans, LA, from on or about October 31, 1998, to on or about January 31, 1999; Memphis Brooks Museum of Art, Memphis, TN, from on or about January 17, 1999, to on or about March 28, 1999; Museum of Fine Arts, Boston, MA, from on or about April 2, 1999, to on or about June 7, 1999; The Detroit Institute of Arts, Detroit, MI, from on or about June 19, 1999, to on or about August 29, 1999, is in the national interest. Public Notice of these determinations is ordered to be published in the **Federal Register.**

Dated: January 14, 1998.

Les Jin,

General Counsel.

UNITED STATES INFORMATION AGENCY

Culturally Significant Objects Imported for Exhibition; Determinations

Notice is hereby given of the following determinations: Pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985, 22 U.S.C. 2459), Executive Order 12047 of March 27, 1978 (43 FR 13359, March 29, 1978), and Delegation Order No. 85–5 of June 27, 1985 (50 FR 27393, July 2, 1985), I hereby determine that the objects on the list specified below, to be included in the exhibit, "Pierre-Paul Prud'hon" (See list[1]), imported from abroad for the temporary exhibition without profit within the United States, are of cultural significance. These objects are imported pursuant to a loan agreement with the foreign lenders. I also determine that the exhibition or display of the listed exhibit objects at the Metropolitan Museum of Art, New York City, New York, from on or about March 2, 1998, to on or about June 7, 1998, is in the national interest. Public Notice of these determinations is ordered to be published in the **Federal Register**.

Dated: January 14, 1998.

Les Jin,

General Counsel.

Contracting by negotiation; procedures; comments due by 1-26-98; published 11-26-97
Restructuring bonuses; allowability of costs; comments due by 1-26-98; published 11-26-97
Vocational rehabilitation and education:
Veterans education—
Election of education benefits; comments due by 1-26-98; published 11-25-97
ENVIRONMENTAL PROTECTION AGENCY
Air pollutants, hazardous; national emission standards:
Hazardous waste combustors; total mercury and particulate continuous emissions monitoring systems, etc.; comments due by 1-29-98; published 12-30-97
Air pollution control; new motor vehicles and engines:
New nonroad compression-ignition engines at or above 37 kilowatts—
Nonroad engine and vehicle standards; State regulation preemption; comments due by 1-29-98; published 12-30-97
Air quality implementation plans; approval and promulgation; various States; air quality planning purposes; designation of areas:
Colorado; comments due by 1-30-98; published 12-31-97
Hazardous waste program authorizations:
Louisiana; comments due by 1-28-98; published 12-29-97
Pesticides; tolerances in food, animal feeds, and raw agricultural commodities:
Bifenthrin; comments due by 1-26-98; published 11-26-97
Cyfluthrin; comments due by 1-26-98; published 11-26-97
Cypermethrin; comments due by 1-26-98; published 11-26-97

VOL 63 ISS 12 JA 20 1998 UMI

Deltamethrin, etc.; comments due by 1-26-98; published 11-26-97
Fenpropathrin; comments due by 1-26-98; published 11-26-97
Fenvalerate; comments due by 1-26-98; published 11-26-97
Fipronil; comments due by 1-26-98; published 11-26-97
Hexythiazox; comments due by 1-26-98; published 11-26-97
Lambda-cyhalothrin; comments due by 1-26-98; published 11-26-97
Tebufenozide; comments due by 1-26-98; published 11-26-97
Tefluthrin; comments due by 1-26-98; published 11-26-97
Zeta-cypermethrin; comments due by 1-26-98; published 11-26-97
Toxic substances:
Testing requirements—
1,1,2-trichloroethane; comments due by 1-27-98; published 12-23-97
Ethylene dichloride; comments due by 1-27-98; published 12-23-97

FEDERAL COMMUNICATIONS COMMISSION
Common carrier services:
Commercial broadcast and instructional television fixed service licenses; competitive bidding procedures; comment request; comments due by 1-26-98; published 12-12-97
Radio stations; table of assignments:
California; comments due by 1-26-98; published 12-16-97
Texas; comments due by 1-26-98; published 12-16-97

HEALTH AND HUMAN SERVICES DEPARTMENT
Food and Drug Administration
Human drugs:
Labeling of drug products (OTC)—
Analgesic/antipyretic active ingredients for internal use; required alcohol warning; comments due by 1-28-98; published 11-14-97

HOUSING AND URBAN DEVELOPMENT DEPARTMENT
Public and Indian housing:
Ceiling rents on total tenant payments for public housing projects; comments due by 1-26-98; published 11-25-97

INTERIOR DEPARTMENT
Fish and Wildlife Service
Endangered and threatened species:
West Indian manatee; comments due by 1-26-98; published 11-26-97

INTERIOR DEPARTMENT
Minerals Management Service
Royalty management:
Administrative appeals process and alternative dispute resolution; release of third-party proprietary information; comments due by 1-27-98; published 12-31-97

INTERIOR DEPARTMENT
National Park Service
National Park System:
Right-of-way permits; issuance; comments due by 1-30-98; published 12-1-97

INTERIOR DEPARTMENT
Surface Mining Reclamation and Enforcement Office
Permanent program and abandoned mine land reclamation plan submissions:
Pennsylvania; comments due by 1-28-98; published 12-29-97
Texas; comments due by 1-28-98; published 12-29-97
Utah; comments due by 1-29-98; published 1-14-98

TRANSPORTATION DEPARTMENT
Coast Guard
Anchorage regualtions:
California; comments due by 1-26-98; published 11-25-97
Vocational rehabilitation and education:
Veterans education—
Election of education benefits; comments due by 1-26-98; published 11-25-97

TRANSPORTATION DEPARTMENT
Federal Aviation Administration
Airworthiness directives:
Boeing; comments due by 1-26-98; published 12-11-97
Construcciones Aeronauticas, S.A.; comments due by 1-30-98; published 12-31-97
Empresa Brasileria de Aeronautica S.A.; comments due by 1-28-98; published 12-29-97
EXTRA Flugzeugbau; comments due by 1-27-98; published 12-31-97
SOCATA-Groupe AEROSPATIALE; comments due by 1-26-98; published 12-24-97
Class D and Class E airspace; comments due by 1-26-98; published 12-22-97
Class E airspace; comments due by 1-26-98; published 12-4-97

Elective entity classification; treatment of changes; comments due by 1-26-98; published 10-28-97

VETERANS AFFAIRS DEPARTMENT
Vocational rehabilitation and education:
Veterans education—
Election of education benefits; comments due by 1-26-98; published 11-25-97

CFR CHECKLIST

This checklist, prepared by the Office of the Federal Register, is published weekly. It is arranged in the order of CFR titles, stock numbers, prices, and revision dates.

An asterisk (*) precedes each entry that has been issued since last week and which is now available for sale at the Government Printing Office.

A "●" precedes each entry that is now available on-line through the Government Printing Office's *GPO Access* service at http://www.access.gpo.gov/nara/cfr. For information about *GPO Access* call 1-888-293-6498 (toll free).

A checklist of current CFR volumes comprising a complete CFR set, also appears in the latest issue of the LSA (List of CFR Sections Affected), which is revised monthly.

The annual rate for subscription to all revised volumes is $951.00 domestic, $237.75 additional for foreign mailing.

Mail orders to the Superintendent of Documents, Attn: New Orders, P.O. Box 371954, Pittsburgh, PA 15250–7954. All orders must be accompanied by remittance (check, money order, GPO Deposit Account, VISA, Master Card, or Discover). Charge orders may be telephoned to the GPO Order Desk, Monday through Friday, at **(202) 512–1800** from 8:00 a.m. to 4:00 p.m. eastern time, or FAX your charge orders to **(202) 512-2250**.

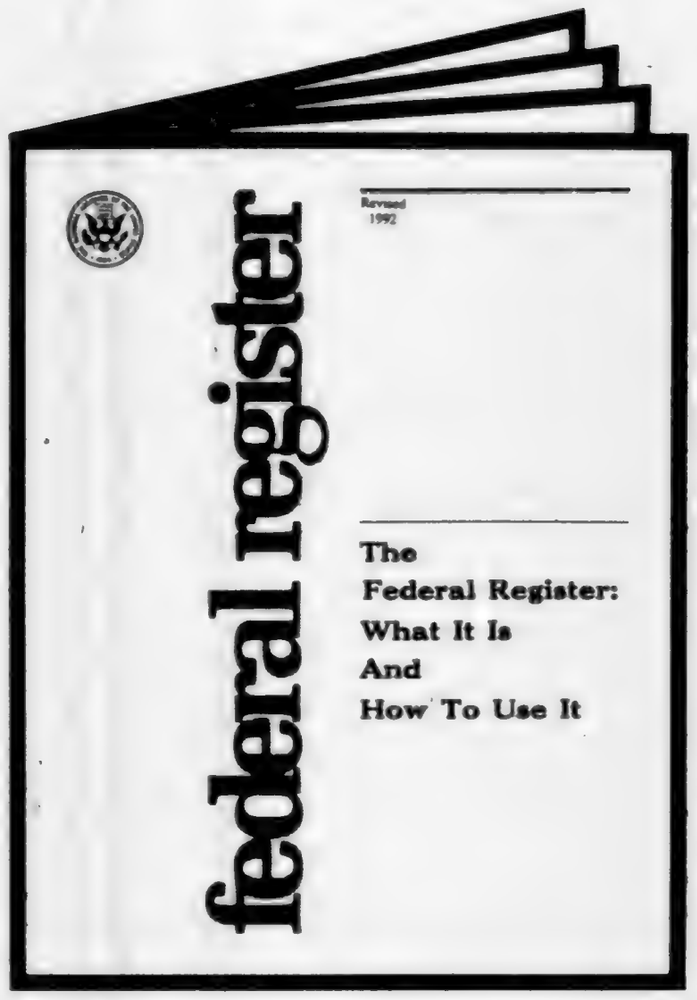
[1] Because Title 3 is an annual compilation, this volume and all previous volumes should be retained as a permanent reference source.



[2] The July 1, 1985 edition of 32 CFR Parts 1–189 contains a note only for Parts 1–39 inclusive. For the full text of the Defense Acquisition Regulations in Parts 1–39, consult the three CFR volumes issued as of July 1, 1984, containing those parts.

[3] The July 1, 1985 edition of 41 CFR Chapters 1–100 contains a note only for Chapters 1 to 49 inclusive. For the full text of procurement regulations in Chapters 1 to 49, consult the eleven CFR volumes issued as of July 1, 1984 containing those chapters.

[4] No amendments to this volume were promulgated during the period Apr. 1, 1990 to Mar. 31, 1997. The CFR volume issued April 1, 1990, should be retained.

[5] No amendments to this volume were promulgated during the period July 1, 1996 to June 30, 1997. The volume issued July 1, 1996, should be retained.

The Federal Register: What It Is and How to Use It

A Guide for the User of the Federal Register—Code of Federal Regulations System

This handbook is used for the educational workshops conducted by the Office of the Federal Register. For those persons unable to attend a workshop, this handbook will provide guidelines for using the *Federal Register* and related publications, as well as an explanation of how to solve a sample research problem.

Price $7.00

For information on briefings in Washington, DC, see announcement on the inside cover of this issue.

Now Available Online

Code of Federal Regulations

via

GPO Access

(Selected Volumes)

Free, easy, online access to selected *Code of Federal Regulations (CFR)* volumes is now available via *GPO Access*, a service of the United States Government Printing Office (GPO). *CFR* titles will be added to *GPO Access* incrementally throughout calendar years 1996 and 1997 until a complete set is available. GPO is taking steps so that the online and printed versions of the *CFR* will be released concurrently.

The *CFR* and *Federal Register* on *GPO Access*, are the official online editions authorized by the Administrative Committee of the Federal Register.

New titles and/or volumes will be added to this online service as they become available.

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The Federal Register provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The seal of the National Archives and Records Administration authenticates this issue of the Federal Register as the official serial publication established under the Federal Register Act. 44 U.S.C. 1507 provides that the contents of the **Federal Register** shall be judicially noticed.

The Federal Register is published in paper, 24x microfiche and as an online database through *GPO Access*, a service of the U.S. Government Printing Office. The online edition of the **Federal Register** on *GPO Access* is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions. The online database is updated by 6 a.m. each day the **Federal Register** is published. The database includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward. Free public access is available on a Wide Area Information Server (WAIS) through the Internet and via asynchronous dial-in. Internet users can access the database by using the World Wide Web; the Superintendent of Documents home page address is http://www.access.gpo.gov/su_docs/, by using local WAIS client software, or by telnet to swais.access.gpo.gov, then login as guest, (no password required). Dial-in users should use communications software and modem to call (202) 512–1661; type swais, then login as guest (no password required). For general information about *GPO Access*, contact the *GPO Access* User Support Team by sending Internet e-mail to gpoaccess@gpo.gov; by faxing to (202) 512–1262; or by calling toll free 1–888–293–6498 or (202) 512–1530 between 7 a.m. and 5 p.m. Eastern time, Monday–Friday, except for Federal holidays.

The annual subscription price for the **Federal Register** paper edition is $555, or $607 for a combined **Federal Register**, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the Federal Register Index and LSA is $220. Six month subscriptions are available for one-half the annual rate. The charge for individual copies in paper form is **$8.00** for each issue, or $8.00 for each group of pages as actually bound; or $1.50 for each issue in microfiche form. All prices include regular domestic postage and handling. International customers please add 25% for foreign handling. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard or Discover. Mail to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250–7954.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 60 FR 12345.

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: Sponsored by the Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:
1. The regulatory process, with a focus on the Federal Register system and the public's role in the development regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

WASHINGTON, DC

[Two Sessions]

WHEN: January 27, 1998 at 9:00 am, and February 17, 1998 at 9:00 am.

WHERE: Office of the Federal Register Conference Room 800 North Capitol Street NW., Washington, DC (3 blocks north of Union Station Metro)

RESERVATIONS: 202–523–4538

Printed on recycled paper containing 100% post consumer waste

[Docket No. 97–024–1]

RIN 0579–AA89

Animal Welfare; Regulation of Pocket Pets

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Policy statement.

SUMMARY: This document gives notice that we are now regulating under the Animal Welfare Act the handling, care, and treatment at retail pet stores of small mammals commonly referred to as "pocket pets" and requiring any retail pet store that sells pocket pets to be licensed as a dealer under the Animal Welfare Act. This action is necessary because the Animal Welfare Act regulations require regulation of all persons who sell exotic or wild animals for research, exhibition, or for use as a pet, and we consider pocket pets to be exotic or wild animals for this purpose.

FOR FURTHER INFORMATION CONTACT: Dr. Bettye K. Walters, Staff Veterinarian, Animal Care, APHIS, USDA, 4700 River Road Unit 84, Riverdale, MD 20737–1234, (301) 734–7833.

SUPPLEMENTARY INFORMATION: The Animal Welfare Act (AWA)(7 U.S.C. 2131 *et seq.*) authorizes the Secretary of Agriculture to promulgate standards and other requirements governing the humane handling, housing, care, treatment, and transportation of certain animals by dealers and other regulated businesses. The Secretary of Agriculture has delegated the responsibility for enforcing the AWA to the Administrator of the Animal and Plant Health Inspection Service (APHIS). Regulations established under the AWA are contained in 9 CFR parts 1, 2, and 3. APHIS regulates animal dealers by issuing them annual licenses and conducting unannounced inspections of their premises to check for compliance with the AWA standards and regulations.

In recent years, several species of small, generally nondangerous mammals, including hedgehogs, degus, spiny mice, prairie dogs, flying squirrels, and jerboas, have increasingly been sold at retail pet stores in the United States. These and other small mammalian species are collectively and commonly referred to as "pocket pets." However, none of these species, some of which are native to the United States and others of which are native to foreign countries, have been domesticated as pets in the United States in the sense that dogs, cats, and other common pet-type animals have been domesticated. Therefore, APHIS considers pocket pets to be exotic or wild animals under the AWA regulations, and any retail pet store that sells a pocket pet is subject to AWA regulation.

Several years ago, some retail pet stores across the United States started selling limited numbers of pocket pets on a sporadic basis. In general, retail pet stores are exempt from AWA regulation unless they sell animals to a research facility, an exhibitor, or a dealer. Our policy was not to regulate the retail pet stores that were selling pocket pets because the effort needed to identify and regulate these stores did not appear to be a prudent use of our AWA enforcement resources. However, we continued to reevaluate this policy as the popularity of pocket pets grew among U.S. consumers. Because many retail pet stores are now selling pocket pets on a regular basis, we now believe that it is feasible and necessary to identify and regulate these stores.

Therefore, we are giving notice that, in order to ensure the humane care and treatment of pocket pets in the commercial pet trade, we are now regulating the handling, care, treatment, and transportation provided to such animals by retail pet stores and requiring that retail pet stores dealing in these animals be licensed under the AWA. The AWA licensing requirements for animal dealers are specified in 9 CFR part 2, subpart A, and the care standards for pocket pets are covered in 9 CFR part 3, subpart F. For information about becoming licensed as a dealer under the AWA, contact the person listed above under **FOR FURTHER INFORMATION CONTACT.**

Done in Washington, DC, this 13th day of January 1998.

Craig A. Reed,

Acting Administrator, Animal and Plant Health Inspection Service.

RIN 0579–AA78

Humane Treatment of Dogs and Cats; Wire Flooring

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Final rule.

SUMMARY: We are amending the regulations under the Animal Welfare Act regarding suspended flooring of mesh or slatted construction in primary enclosures for dogs and cats. We are requiring that such flooring made of metal strands be constructed either of metal strands greater than ⅛ of an inch in diameter or of metal strands equal to or less than ⅛ of an inch in diameter coated with a material such as plastic or fiberglass. We are also requiring that any primary enclosure with a suspended floor for a dog or cat be constructed so that the floor does not bend or sag between the supports. It is our experience that suspended flooring made of wire (by which we mean any metal strand that has a diameter equal

VOL
63
ISS
13
JA
21
1998
UMI

to or less than ⅛ of an inch) is uncomfortable on animals' feet and contributes to foot injuries and that suspended flooring made of coated wire or made of metal strands larger than wire causes fewer such problems. It is also our experience that suspended floors that bend and sag can cause psychological trauma for dogs who must try to balance on them. We believe that adding these requirements will improve comfort for dogs and cats housed in primary enclosures with suspended floors and will help eliminate foot injuries to these animals.

DATES: *Effective date:* February 20, 1998. *Compliance dates:* February 20, 1998 for primary enclosures constructed on or after that date and for floors installed or replaced on or after that date and January 21, 2000 for all other primary enclosures.

FOR FURTHER INFORMATION CONTACT: Mr. Stephen Smith, Staff Animal Health Technician, Animal Care, APHIS, 4700 River Road Unit 84, Riverdale, MD 20737–1234, (301) 734–4972.

SUPPLEMENTARY INFORMATION:

Background

Under the Animal Welfare Act (AWA) (7 U.S.C. 2131 et seq.), the Secretary of Agriculture is authorized to promulgate standards and other requirements governing the humane handling, housing, care, treatment, and transportation of certain animals by dealers, research facilities, exhibitors, and carriers and intermediate handlers. The Secretary of Agriculture has delegated the responsibility for enforcing the AWA to the Animal and Plant Health Inspection Service (APHIS). Regulations established under the AWA are contained in 9 CFR parts 1, 2, and 3. Subpart A of 9 CFR part 3 (referred to below as the regulations) contains specific standards for the humane handling, care, treatment, and transportation of dogs and cats.

The standards for primary enclosures for dogs and cats are found in § 3.6. The regulations require that, among other things, all surfaces in contact with the animals must be able to be readily cleaned and sanitized or replaced when worn or soiled. Primary enclosures must also "(h)ave floors that are constructed in a manner that protects the dogs" and cats' feet and legs from injury, and that, if of mesh or slatted construction, do not allow the dogs' and cats' feet to pass through any openings in the floor. If the floor of the primary enclosure is constructed of wire, a solid resting surface or surfaces that, in the aggregate, are large enough to hold all the occupants of the primary enclosure at the same time comfortably must be provided."

On July 2, 1996, we published in the **Federal Register** (61 FR 34389–34391, Docket No. 95–100–1) a proposal to amend the regulations to require that, if the floor of a primary enclosure for a dog or cat is constructed of wire, the wire must be coated with a material, such as plastic or fiberglass, that can be cleaned and sanitized readily. We further proposed to require that the coated wire must have a well-rounded surface and must be of a large enough diameter so that it is comfortable on the animals' feet and protects the animals' feet from injury, and that it must be strong enough that the floor does not sag or bend between structural supports. We believed that these requirements would improve comfort for dogs and cats housed in wire-floored enclosures, would help eliminate foot injuries for such animals, and would ensure that wire flooring for dogs and cats is clean and sanitary.

We solicited comments concerning our proposal for 60 days ending September 3, 1996. We received 51 comments by that date. They were from dog breeders, humane organizations, veterinarians, trade associations, and a Federal government agency, among others. Thirty-seven comments opposed the proposal, seven favored the proposal, and seven did not explicitly favor or oppose the proposal but asked for some clarifications. The comments are discussed below by topic.

The proposed rule referenced three public meetings APHIS held in 1996 to gather information on the requirements in 9 CFR part 3, subpart A, that apply to the care of dogs and cats in the commercial pet trade. At those meetings, we met with members of affected industries, such as dealers, research facilities, and commercial animal transporters, and animal protection organizations. Each of the three meetings was divided into four workshops covering specific topic areas. One of the workshops covered sanitation, materials, flooring, and construction of primary enclosures. Several commenters on the proposal stated that, by issuing the proposed rule, APHIS had ignored input received from the public meetings because a common opinion expressed at those meetings was that APHIS should not issue new rules regarding primary enclosures for dogs and cats but instead concentrate on enforcing the current regulations. We have considered that recommendation and all of the others we received at the public meetings, and further rulemaking may result from our continued analysis of the input we obtained at those meetings. However, we believe that, with regard to suspended flooring made of mesh or slatted construction, a more specific standard is necessary to make it clear how such flooring should be constructed in order to protect the dogs and cats from injury. This specificity will make it easier for APHIS inspectors to ensure consistency in judging the soundness of such floors and for regulated individuals to comply with the regulations.

Many commenters requested a more specific definition of wire. They wanted to know if we consider expanded metal, welded rods, and other types of metal flooring of mesh or slatted construction to be wire; many commenters stated that galvanized expanded metal works well for flooring in primary enclosures for dogs and cats. Some commenters requested that the regulations specify a certain width of diameter (gauge) to differentiate between wire and other types of metal strands, such as rods.

We agree that we need to be more specific about what we consider wire, and we regret any confusion that was caused by this lack of specificity in the proposed rule. Moreover, we agree that certain types of suspended flooring made of metal strands in a mesh or slatted configuration are not harmful to dogs and cats and do not need to be coated with a material such as plastic or fiberglass to ensure the animals' comfort and safety. We do not want to place an unnecessary burden on the regulated industry by establishing a requirement that would cause AWA licensees and registrants to replace types of suspended floors that are not known to cause harm to dogs and cats.

We do not consider any flooring material that is inflexible, such as expanded metal, to be wire. Floors made of inflexible metal strands do not bend and sag and, therefore, provide an even resting surface for the animals. Moreover, floors made of inflexible metal strands cause fewer foot problems than floors made of flexible strands, such as wire, because, to be inflexible, the strands must be of a substantial diameter. We agree with the commenters who stated that we need to be more specific regarding acceptable diameters of metal strands used in flooring for dogs and cats. The diameter of the metal strands plays a significant role in regard to ensuring the comfort and safety for the animals because strands of a relatively large diameter are less likely to cause injuries and discomfort to the animals than strands with very narrow diameters. Animals housed on floors made of metal strands of a relatively large diameter are less likely to suffer from interdigital cysts

and lesions caused by the digits of the animals' paws passing around the individual strands.

In this final rule, we are requiring that metal strands used in flooring be coated if the metal strands have a diameter equal to or less than ⅛ of an inch (9 gauge). We chose ⅛ of an inch as the defining measurement, in part, because that measurement is used by the metalworking industry as the point of demarcation between welded wire and welded rods. In addition, many cage manufacturers currently use metal strands with diameters greater than ⅛ of an inch in cage production. Therefore, cages made with floors of such metal strands are easily available to consumers. Such cages are sturdy, and the floors are less likely to break easily from rust or from the weight of the animal than cages made of metal strands with a diameter of ⅛ of an inch or less (hereafter in this document referred to as wire).

We are making changes in other areas of the regulations to be consistent with this use of the word "wire." The word "wire" appears in reference to flooring in §§ 3.6(a)(2)(x), 3.11(a), and 3.14(a)(9) and refers to metal strands in general. We are amending these sections to remove the word "wire" from them.

Several commenters questioned APHIS' justification for the proposal and asked if APHIS has scientific evidence to show that wire flooring is harmful to dogs and cats.

We are not aware of any scientific research that has been done regarding the inadequacy of wire flooring in providing for the comfort and well-being of dogs and cats. As stated in the proposed rule, this belief is based on our own experience in AWA enforcement. Because APHIS has been enforcing the AWA for over 30 years, our field staff of Animal Care inspectors has extensive experience in monitoring the well-being of dogs and cats raised for breeding. The idea to prohibit bare wire flooring in primary enclosures for dogs and cats originated within the Animal Care staff. APHIS veterinarians have been concerned for some time that bare wire flooring often causes discomfort for dogs and cats, provides inadequate support for them, and has the potential to cause lesions and sores on the animals' feet. This perception was confirmed in a recent survey of Animal Care inspectors. The responses indicated that, in the year preceding the survey, the 39 inspectors who responded to the survey were aware of a total of 238 animals that were injured as the result of being housed on bare wire flooring. A majority of the survey respondents indicated that bare wire flooring often sags or bends, creating an uncomfortable resting place for animals, and causes lesions or sores to animals' feet; the majority of respondents further indicated that coated wire flooring does not cause these problems.

One commenter said that not enough information was provided in the proposal to explain why the current standards for flooring are ineffective for protecting the animals or how requiring coated wire will correct the inadequacy.

While the current regulations regarding primary enclosures for dogs and cats require that the floors be constructed in a manner that protects the dogs' and cats' feet and legs from injury, the regulations do not address the issue of basic comfort for the animals. In enforcing the AWA, APHIS is charged with, among other things, promulgating standards to govern the humane care and treatment of animals covered by the law. Therefore, in carrying out the AWA, we believe that we are responsible for establishing minimum levels of comfort for regulated animals. We have come to believe that, while wire flooring may not actually cause injury to all dogs and cats housed on it, such flooring is generally uncomfortable for these animals. Coated wire provides a stronger mesh and a more inflexible surface than bare wire. Because many dogs acquire foot lesions and suffer psychological trauma from trying to balance on wire floors, which often sag and bend, we believe that it is necessary to change the existing regulations concerning flooring for dogs and cats to prohibit bare wire flooring.

Some commenters stated that coated or bare wire of the same diameter and mesh size are likely to be equal in terms of comfort under foot. We disagree. Our inspectors have found that coated wire generally causes fewer lesions on animals' feet than bare wire.

Other commenters suggested that we require a certain width of the mesh at a size small enough to prevent foot and leg injuries. We do not believe that it is necessary to specify a mesh width for wire flooring. The regulations currently specify that, if the floor of the primary enclosure is of mesh or slatted construction, the floor may not allow the dogs' and cats' feet to pass through any openings in the floor. We believe that this requirement is specific enough to ensure that the mesh is of a sufficient size to prevent foot and leg injuries from passage through the floor.

Some commenters questioned the quality of wire coatings currently available on the commercial market. Others stated that, once cracks develop in the coating of coated wire, germs can accumulate in the cracks, and the wire under the coating can rust badly as such wire is often not galvanized.

We have found that high-quality coated wire is readily available to consumers through kennel magazines and building supply stores and can be purchased in bulk rolls. According to our inspectors, most licensees are already using coated wire or some other acceptable type of mesh or slatted flooring, such as galvanized expanded metal. Some commenters who currently use coated wire stated that they think coated wire makes an excellent floor for both comfort and cleanliness and that they have never experienced problems with flooring made of coated wire. In our experience, coated wire is generally easier to keep clean than bare wire because it provides a smoother surface. Bare wire is prone to rust, which creates a rough surface that is hard to clean. When a coated wire floor becomes cracked to the point that rust develops, the floor should be replaced.

Many commenters expressed concern about the length of time a plastic or fiberglass coating would remain on wire used for flooring for dogs and cats. Some commenters stated that dogs chew on coated wire, destroying the coating. The commenters wanted to know whether they would be in violation of the regulations if their dogs chewed off the coating and whether they would be required to replace the flooring as soon as it was damaged from being chewed. Other commenters expressed concern that dogs could become ill from ingesting the coating material.

Breeders who experience extensive problems with dogs chewing on coated wire are probably not providing enough physical or psychological stimulation for their dogs and should perhaps provide them with diversions such as pet chews or toys. While we recognize that the possibility exists for dogs to become ill from ingesting the coating material, we have not been made aware of such incidents from the many licensees who already use coated wire flooring. We believe that it is unlikely that the relatively small amounts of coating that an animal would ingest before human intervention occurred would seriously harm the animal. We will expect breeders whose dogs chew on the coating of coated wire floors to replace the flooring when an APHIS inspector determines that the flooring is too worn for further use. However, breeders who have chronic difficulties with dogs chewing on flooring made of coated wire have the option of using flooring made of metal strands that are of a diameter greater than ⅛ of an inch or any of the many other types of acceptable flooring.

VOL
63
ISS
13
JA
21
1998
UMI

Two commenters recommended that APHIS prohibit the use of any type of flooring of mesh or slatted construction in primary enclosures for dogs and cats and instead require the use of solid flooring made of such materials as impervious concrete or stainless steel. We have found that, for animals raised in the commercial pet breeding industry, primary enclosures with flooring that allows the passage of excrement are generally kept cleaner than primary enclosures with solid flooring surfaces. We believe that the commercial pet breeding industry has demonstrated that animals can successfully be raised on suspended flooring of mesh or slatted construction. AWA licensees may certainly choose to use primary enclosures with floors made of solid surfaces, but we do not believe that it is necessary to require the use of such floors at this time.

One commenter requested that we allow uncoated wire to be used in the flooring of primary enclosures of dogs and cats in research projects in which fecal collection is required, to prevent any interference with the research as a result of the adherence of fecal material to coated wire flooring. Researchers in this situation may use flooring made of metal strands of a diameter greater than ⅛ of an inch. If a researcher can prove that, for the purposes of the research, the dog or cat needs to be housed on bare wire flooring, the researcher may request approval through the laboratory's Institutional Animal Care and Use Committee in accordance with 9 CFR part 2.38(k)(1) for an exemption to the flooring requirements.

Two commenters made comments and recommendations regarding AWA enforcement, the AWA regulations pertaining to veterinary care provided to regulated animals, and the breeding frequency for female animals in the commercial pet trade. In addition, one of the commenters had recommendations regarding reclassification of animal dealers, primary enclosures, exercise requirements, and air transit of animals. Although these comments are outside the scope of the proposed regulation, we are taking them into consideration. If we decide to make any changes to the AWA regulations in response to these comments, we will publish a proposed rule in the **Federal Register**.

One commenter indicated that we should extend the proposed regulation to cover dogs and cats in the care of show breeders, pounds, humane societies, groomers, and boarding kennels. While we agree that all dogs and cats should be treated in a humane manner, the AWA does not authorize us to promulgate standards for the care of animals in these circumstances.

As stated in the proposal, we will have two compliance dates for this final rule. We are requiring that any new primary enclosures constructed on or after 30 days from the date of publication of this final rule in the **Federal Register**, and any floors installed on or after that date, will have to comply with the final rule. Other existing enclosures must be brought into compliance within 2 years. Although several commenters stated that the 2-year compliance period was reasonable, some thought that this timeframe was too long, and one thought that it was too short. Several commenters thought that the rule change should include a "grandfather clause" to allow the use of existing flooring in primary enclosures until it wears out. One commenter proposed that the 2-year compliance period apply "also to those which are able to demonstrate that wire flooring was installed within 90 days of final publication in a manner consistent with current requirements" to prevent facilities that have new construction under way at the time of final rule publication from having to destroy partially completed facilities. We have considered these comments, but we are not making any change to the proposed phase-in of compliance dates. We believe that the two timeframes discussed above provide ample time for licensees and registrants who have primary enclosures with wire flooring to convert the flooring to any of the many acceptable types.

Therefore, based on the rationale set forth in the proposed rule and in this document, we are adopting the provisions of the proposal as a final rule with the changes discussed in this document.

Executive Order 12866 and Regulatory Flexibility Act

This rule has been reviewed under Executive Order 12866. The rule has been determined to be significant for the purposes of Executive Order 12866 and, therefore, has been reviewed by the Office of Management and Budget.

In accordance with 5 U.S.C. 604, we have prepared a Final Regulatory Flexibility Analysis, which is set out below, regarding the economic impact of this rule on small entities. The discussion also serves as our cost-benefit analysis under Executive Order 12866.

APHIS administers the Animal Welfare Act (AWA), which requires that minimum standards of care and treatment be established for certain animals bred for commercial sale, used in research, transported commercially, or exhibited to the public. Dogs and cats are covered under the AWA.

In the July 2, 1996, **Federal Register**, APHIS proposed (61 FR 34389–34391) that, if the floor of a primary enclosure for dogs or cats covered by the AWA is constructed of wire, the wire must be coated with a material such as plastic or fiberglass. APHIS further proposed that the coated wire: (1) have a well-rounded surface and be large enough in diameter so that it is comfortable on the animals' feet and protects the animals' feet from injury; and (2) be strong enough so that the floor does not sag or bend between the structural supports. The proposed rule suggested two effective dates: The first would have required that all new construction and replacements be in compliance 30 days after publication of the final rule; the second would have required that all regulated facilities be in compliance no later than 2 years after publication of the final rule.

The proposal was in response to concern that wire flooring is inadequate in providing for the comfort and well-being of dogs and cats. In developing the proposal, APHIS considered its own experience in enforcing the AWA, as well as the recommendations and opinions expressed by participants at three public meetings hosted by the agency in 1996 to gather information on the regulations that cover the care of cats and dogs in the commercial trade. The current AWA standards do not specifically preclude wire flooring for housing dogs and cats, and the proposal pointed out a number of problems with such flooring. Bare wire can be uncomfortable on the animals' feet because of its narrow diameter. Bare wire is prone to rust, which not only affects the structural integrity of the primary enclosure but can also cause foot injuries because rusty wire is abrasive. Bare wire is difficult to clean and sanitize thoroughly because rust makes the wire semiporous in places. Finally, bare wire flooring often sags or bends between structural supports, creating an uncomfortable resting surface. The proposed rule change was intended to eliminate or mitigate these problems.

APHIS received 51 comments on the proposal. Thirty-seven commenters opposed the proposal, seven favored it, and seven did not indicate a preference. Many of those opposed to the proposal argued that it was not adequately justified, both in terms of any hard evidence (e.g., inspection reports, documented cases) and in terms of the insufficiency of the current regulations. The U.S. Small Business Administration (SBA) commented that, prior to issuing a final rule, APHIS should better articulate the scope of the problem and should consider the possibility of viable alternatives.

The final rule is essentially a refined version of the proposed rule. The proposed rule did not define wire, and many commenters requested clarification as to what APHIS considers to be wire. Under the final rule, APHIS defines wire as flexible metal strands ⅛ of an inch or less in diameter. The rule change is needed because the current regulations do not specifically preclude wire flooring, a documented source of injuries and discomfort. The commenters' arguments that the rule is not needed are not persuasive. Many commenters argued that the rule was not justified with any scientific evidence. That argument is correct, to the extent that the published proposal did not include any hard evidence supporting the rule change. However, the absence of hard evidence does not mean that the rule is not needed or that it was initiated without adequate forethought. APHIS proposed the rule change only after carefully considering the views of persons within and outside the agency.

In early 1997 (following the receipt of public comment), APHIS conducted a survey of its field inspectors. The inspectors, many of whom are licensed veterinarians, have extensive experience in monitoring the well-being of dogs and cats raised for breeding. Of the 39 inspectors responding to the survey, over half had more than 21 percent of their facilities having dogs and cats; one-third of the respondents had more than 50 percent of their facilities having dogs and cats.

The survey results document the problems with wire flooring that were identified in the proposal. The survey revealed that, during the past year alone, the inspectors were aware of 238 animal injuries that resulted from wire flooring at facilities under their inspection. The number of reported injuries would no doubt have been even higher if inspections were conducted on a more frequent basis. (Inspectors visit each facility on an average of only 1.46 times per year.)

Of the five most common types of flooring used in suspended enclosures for dogs and cats (coated wire, molded plastic, expanded metal, metal rods, and bare metal wire), the inspectors ranked bare wire last in terms of what is best for the animals; coated wire was ranked second. Molded-plastic flooring was ranked first, but that type of flooring has been rejected as a viable alternative because of its cost. The advantages of molded-plastic flooring are not justified by its additional cost.

Some commenters agreed with the intent of the rule but disagreed with the proposed solution. They maintained that any type of mesh flooring is inadequate and that APHIS should instead require flooring made of impervious concrete, Teflon, stainless steel, or fiberglass. APHIS agrees that these materials can make excellent flooring surfaces for dogs and cats, if a concerted effort is made to keep them clean. However, APHIS inspectors have found that animals raised in primary enclosures with suspended flooring that allows the passage of fecal material are often kept in cleaner conditions than animals raised on flooring made of solid surfaces. Therefore, to protect the health of AWA-regulated animals by helping to ensure the cleanliness of their enclosures, APHIS will continue to allow dogs and cats to be raised in enclosures with suspended floors that allow the passage of fecal material.

Many commenters argued against the rule on the grounds that the current standards are already sufficient; they stated that those standards merely need to be enforced uniformly. However, enforcement activity, regardless of how diligent or aggressive, will never solve the injury and discomfort problems if the regulations continue to allow for the use of the material that causes the problems in the first place. Likewise, one commenter suggested that the injuries might be due more to neglect than to wire flooring and that an increase in the caretaker-to-animal ratio might be a better solution than requiring coated wire. However, the injuries and discomfort caused by wire flooring are not directly related to the level of supervision provided. Even if the caretaker-to-animal ratio were increased, the animals would still experience problems on floors made of bare wire.

Over half of the surveyed inspectors disagreed that the current regulations on wire flooring are sufficient. Furthermore, any corrective action taken as a result of enforcement activity is likely to produce the very same results that this rule change is intended to achieve, i.e., the replacement of bare metal strands that are ⅛ of an inch or less in diameter with an acceptable flooring material. From a regulatory standpoint, there seem to be only two solutions: Have regulated entities replace the unacceptable flooring in existing enclosures or have them purchase new or used enclosures with acceptable flooring already built in. The rule change allows regulated entities the option of choosing either solution, thereby minimizing the rule's economic impact.

Finally, many commenters were concerned about the proposed rule's lack of specificity. They pointed out that the term "wire" was not clearly defined, an important consideration as not all metal strands used in flooring are harmful to animals. That concern is a reasonable one and, for that reason, the final rule defines wire as flexible metal strands that are ⅛ of an inch or less in diameter. This modification was made to distinguish between metal strands that can be harmful to animals and inflexible metal strands, such as rods, that are not. This modification will allow APHIS inspectors to be consistent when judging the soundness of suspended floors of mesh or slatted construction. This modification will also make it easier for regulated individuals and organizations to comply with the new rule and significantly reduce the rule's impact.

Small Entity Impact

The Regulatory Flexibility Act requires that agencies consider the economic impact of rule changes on small entities. In its initial regulatory flexibility analysis, APHIS stated that the proposed rule change would affect all breeders, dealers, research facilities, and exhibitors of dogs and cats that are licensed or registered under the AWA and that house their animals in primary enclosures with wire floors. However, APHIS stated that it could not at that time make a definitive finding as to the proposed rule's impact because certain critical information was not available. For example, the total number of licensees and registrants was known, but the number who housed dogs and cats on wire flooring was not available. Nor was information available on the number of animals involved. For that reason, APHIS sought comments on the proposed rule's potential effects. APHIS specifically sought comment on the number of licensees and registrants who would have to replace wire flooring as a result of the proposed rule and the average number of animals these licensees house.

Unfortunately, the commenters furnished little or no new information on the rule's overall impact on small entities. Several commenters stated that it would be too costly to implement, but none provided details to support that statement. One commenter stated that it would cost $27,949 (labor and materials) to replace his galvanized expanded metal with coated wire (the commenter further stated the cost would be $42,949, or $15,000 more in additional labor costs, if the commenter

VOL 63 ISS 13 JA 21 1998 UMI

could not "rent, borrow, or buy" two winches). However, galvanized expanded metal would not have to be replaced under the rule, so that cost estimate is not relevant. In any event, the commenter provided no details as to how the dollar amount was arrived at, including information on the square footage of the flooring to be replaced.

In fiscal year 1995, 10,108 facilities were licensed or registered under the AWA. Of that number, 4,325 were licensed dealers, 2,304 were licensed exhibitors, and 3,479 were registrants. The dealers are subdivided into two classes. Class A dealers (3,056) breed animals, and Class B dealers (1,269) serve as animal brokers. The registrants comprise research facilities (2,688), carriers and intermediate handlers (756), and exhibitors (35).

It is not known how many of the licensees and registrants are considered small entities under SBA standards, since information as to their size (in terms of gross receipts or number of employees) is not available. However, it is reasonable to assume that most are small, based on composite data for providers of the same and similar services in the United States. In 1992, the per-firm average gross receipts for all 6,804 firms in SIC 0752 (which includes breeders) was $115,290, well below the SBA's small-entity threshold of $5.0 million. Similarly, the 1992 per-establishment average employment for all 3,826 U.S. establishments in SIC 8731 (which includes research facilities) was 29, well below the SBA's small-entity threshold of 500 employees.

The economic impact of the rule change cannot be determined with certainty because critical information, such as the number of licensees and registrants who currently house dogs and cats on wire flooring is not available. However, based on information furnished by APHIS and the industry, discussed below, the economic impact is not expected to be significant.

For the overwhelming bulk of research facilities, the final rule will have virtually no economic impact because the use of wire flooring of any diameter size for dogs and cats in those facilities is rare.[1] Nor will the rule significantly affect regulated exhibitors because few use dogs and cats as exhibit animals. Registered carriers and intermediate handlers will also be largely unaffected because the enclosures they use to transport animals are not considered to be the animals' "primary" enclosures.

As a group, dealers (breeders and brokers) of dogs stand to be affected most by the rule change. However, even the impact on dog dealers should be minimal. (The impact on AWA-licensed cat dealers is likely to be negligible because most raise their animals on solid flooring surfaces in primary enclosures containing litter boxes, which are required by the regulations. Moreover, the percentage of licensed dealers who deal in cats is extremely small; the vast majority of licensed dealers deal in dogs.)

It is estimated that there are approximately 2,000 Class A dog breeders in the United States, who produce about 175,000 dogs annually—an average of 90 dogs per breeder.[2] To support the production of 90 dogs annually, each breeder would need about 16 separate enclosures—13 to accommodate the mothers and their newborns and 3 to accommodate the fathers. (This calculation assumes that: (1) newborns are housed with their mothers before being sold; (2) each mother produces about 7 newborns annually; (3) fathers are housed separately from the mothers and the newborns; and (4) the ratio of mothers to fathers at each facility is 4 to 1.) The 16 enclosures, in turn, would translate into a total of 156 square feet of needed floor space, assuming all mothers and fathers are medium-sized. (Floor space requirements for primary enclosures vary depending on the size of the animals; large dogs on average require 13 square feet of floor space, but small dogs require only 6.5 square feet. Medium-sized dogs are assumed to need 9.75 square feet, an average of the large and small dog requirements.)

Based on a recent quote, the material cost for a 200-square-foot roll of 14-gauge vinyl-coated galvanized wire is $148.60. The same roll without the vinyl coating costs $78.70.[3] The cost difference, therefore, is $69.90, or $0.35 per square foot. Based on the average floor space of 156 square feet, the maximum additional cost per breeder for the coated wire would be $55 (156 × $0.35). The maximum additional cost for all 2,000 dog breeders would be $110,000 (2,000 × $55). These cost figures represent a worst-case scenario because they assume that each breeder would have to replace all 156 square feet of floor space under the new rule. Such a scenario is unlikely because not all flooring used by dealers in housing for dogs is wire.

It is estimated that there are approximately 75 Class B dog brokers in the United States and that these brokers purchase/sell about 315,000 dogs annually—an average of 4,200 dogs per broker.[4] To support the purchase/sale of 4,200 dogs annually, each broker would need about 27 separate enclosures. (This calculation assumes that: (1) the brokers have custody of each dog for 1 week; and (2) the dogs are housed three to an enclosure.) The 27 enclosures, in turn, would translate into a total of 176 square feet of needed floor space, assuming that all dogs are small-sized. (Most dogs in the custody of brokers are puppies, and small dogs require only 6.5 square feet of floor space.) Based on the average floor space of 176 square feet, the maximum additional cost per broker for the coated wire would be $62 (176×$0.35). The maximum additional cost for all 75 dog brokers would be $4,650 (75×$62). Again, these cost figures represent a worst-case scenario because they assume that each broker would have to replace all 176 square feet of floor space under the new rule. Such a scenario is unlikely.

Small entities should not experience any additional labor costs as a result of the rule. Regulated entities have 2 years to bring existing flooring into compliance. By that time, it is likely that all bare wire flooring will have been replaced anyway, due to its limited useful life. The rule, therefore, should not force regulated entities into premature replacement of existing flooring. Because of that, and because the labor cost to replace wire flooring should be the same regardless of whether the wire is coated or uncoated, the rule should have no impact on small entities' labor costs.

On average, therefore, it would cost each breeder only about $55 to switch from bare wire to coated wire. This amount is relatively insignificant; it represents less than 1 percent of the per-firm average gross receipts for all firms in SIC 0752, which includes breeders. The average cost of $62 for each broker would also be relatively insignificant—less than 1 percent of the per-establishment average sales for all establishments in SIC 5199, which includes brokers. The rule would have a carryover cost effect because each subsequent replacement would require coated wire or some other acceptable material, such as galvanized expanded metal. However, the increased cost of coated wire would be made up, at least partially, over time because coated wire will provide longer use.

This rule contains no reporting or recordkeeping requirements.

[1] Members of the National Association for Biomedical Research (NABR) account for between 50 and 60 percent of all dogs used in research. Barbara Rich of NABR said that members' use of bare wire flooring is rare. Steve Smith (APHIS) indicated that use of bare wire flooring by non-NABR research facilities is also rare.

[2] Per N. Marshall Myers (Pet Industry Joint Advisory Council).

[3] These material quotes were obtained by Steve Smith (APHIS). In the initial analysis, APHIS stated that the market price of both bare and coated wire varies, depending on the quality and diameter width of the material. APHIS asserted that bare wire of the type most often used as flooring sells for approximately $1.50 per square foot and that coated wire (that meets the other standards) sells for between $2.25 and $5.00 per square foot.

[4] Per N. Marshall Myers (Pet Industry Joint Advisory Council).

Executive Order 12372

This program/activity is listed in the Catalog of Federal Domestic Assistance under No. 10.025 and is subject to Executive Order 12372, which requires intergovernmental consultation with State and local officials. (See 7 CFR part 3015, subpart V.)

Executive Order 12988

This final rule has been reviewed under Executive Order 12988, Civil Justice Reform. It is not intended to have retroactive effect. This rule would not preempt any State or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule. The Act does not provide administrative procedures which must be exhausted prior to a judicial challenge to the provisions of this rule.

Paperwork Reduction Act

This rule contains no information collection or recordkeeping requirements under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

List of Subjects in 9 CFR Part 3

Animal welfare, Marine mammals, Pets, Reporting and recordkeeping requirements, Research, Transportation.

Accordingly, 9 CFR part 3 is amended as follows:

PART 3—STANDARDS

1. The authority citation for part 3 continues to read as follows:

Authority: 7 U.S.C. 2131–2159; 7 CFR 2.22, 2.80, and 371.2(d).

2. Section 3.6 is amended as follows:

a. In paragraph (a)(2)(x), the words "constructed of wire" are removed, and the words "of mesh or slatted construction" are added in their place, and the word "and" at the end of the paragraph is removed.

b. In paragraph (a)(2)(xi), the period at the end of the paragraph is removed, and "; and" is added in its place.

c. A new paragraph (a)(2)(xii) is added to read as follows:

§ 3.6 Primary enclosures.

* * * * *

(a) * * *

(2) * * *

(xii) Primary enclosures constructed on or after February 20, 1998 and floors replaced on or after that date, must comply with the requirements in this paragraph (a)(2). On or after January 21, 2000, all primary enclosures must be in compliance with the requirements in this paragraph (a)(2). If the suspended floor of a primary enclosure is constructed of metal strands, the strands must either be greater than ⅛ of an inch in diameter (9 gauge) or coated with a material such as plastic or fiberglass. The suspended floor of any primary enclosure must be strong enough so that the floor does not sag or bend between the structural supports.

* * * * *

§ 3.11 [Amended]

3. In § 3.11(a), the word "wire" is removed from the last sentence, and the word "mesh" is added in its place.

§ 3.14 [Amended]

4. In § 3.14(a)(9), the word "wire" is removed each time it appears.

Done in Washington, DC, this 13th day of January 1998.

Craig A. Reed,

Acting Administrator, Animal and Plant Health Inspection Service.

[FR Doc. 98–1311 Filed 1–20–98; 8:45 am]

BILLING CODE 3410–34–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 25

[Docket No. NM–139, Special Conditions No. 25–ANM–135]

Special Conditions: Ilyushin Aviation Complex Model Il–96T Airplane

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final special conditions.

SUMMARY: These special conditions are issued for the Ilyushin Aviation Complex Model Il–96T airplane. This airplane will have novel and unusual design features when compared to the state of technology envisioned in the airworthiness standards of part 25 of the Federal Aviation Regulations (FAR). These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that provided by the airworthiness standards of part 25.

EFFECTIVE DATE: February 20, 1998.

FOR FURTHER INFORMATION CONTACT: Norm Martenson, FAA, International Office, ANM–116, Transport Airplane Directorate, Aircraft Certification Service, 1601 Lind Avenue SW., Renton, WA 98055–4056; telephone (425) 227–2196.

SUPPLEMENTARY INFORMATION:

Background

Ilyushin Aviation Complex, 45 Leningradsky Prospect, Moscow, 125190, Russia, has applied for Russian type certification of their Model Il–96T airplane by the Aviation Register (AR) of the Interstate Aviation Committee in accordance with existing AR standards. The AR is authorized to perform airworthiness certification functions on behalf of the Commonwealth of Independent States, including the Russian government. In addition, Ilyushin applied for U.S. type certification of the Model Il–96T on February 16, 1993.

Section 21.29 of 14 CFR part 21 of the Federal Aviation Regulations (FAR) prescribes a reciprocal bilateral agreement between the U.S. and exporting country as a requirement for consideration of U.S. design or airworthiness approval of an imported aeronautical product. Such agreements are known as bilateral aviation safety agreements (BASA). Although the U.S. does not presently have a BASA with Russia providing reciprocal acceptance of transport category airplanes, the FAA is working with the AR and Russian government officials to conclude an agreement of this nature. FAA Advisory Circular (AC) 21–23, Airworthiness Certification of Civil Aircraft, Engines, Propellers, and Related Products Imported to the United States, provides further guidance in this regard.

A BASA with Russia may be concluded following successful completion of an assessment by the FAA and the AR of each other's technical competence and regulatory capability for performing airworthiness certification functions. The scope of the agreement is defined by each authority in Implementation Procedures. FAA type certification of the Model Il–96T transport airplane is therefore conditional upon successful implementation of a BASA with Russia, providing acceptance of transport category airplanes.

One of the key elements of any BASA assessment program is the shadow certification program. Under the Russian shadow certification program, FAA specialists are "shadowing" their AR counterpart specialists during AR certification of an example of the

VOL 63 ISS 13 JA 21 1998 UMI

aeronautical product that the BASA is intended to cover. This program is intended to provide FAA assessment specialists with ample opportunity to evaluate the AR certification process and the AR specialists' technical competencies to support the airworthiness authority responsibilities inherent in a bilateral agreement. The Ilyushin Model Il–96T was selected as the product for this shadow certification which, if successful, would lead to a U.S.-Russian BASA. Conclusion of the BASA and related implementation procedures would, in turn, be followed by issuance of a U.S. type certificate for that model.

Under the anticipated provisions of the future BASA, the AR has elected to certify that the Model Il–96T complies with the AP–25 type certification standards, plus any additional requirements identified by the FAA to ensure an equivalent level of safety to that provided by the U.S. type certification standards. The AP–25 airworthiness standards, which were developed as the successor to the NLGS–3 standards of the former Soviet Union, were approved by the AR in November 1993 and implemented in Russia in July 1994. These standards have also been accepted by many of the other Commonwealth of Independent States for type certification of transport category airplanes. They were established after extensive harmonization with part 25 of the FAR and the European Joint Airworthiness Requirements (JAR)–25. The AP–25 standards are similar to part 25 of the FAR; however, there are certain specified differences in the requirements of the two documents.

Based on the application date of February 16, 1993, the U.S. type certification standards are part 25 of the FAR, as amended by Amendments 25–1 through 25–77, and these special conditions. In addition, the type certification basis includes the sections of part 25, as amended by Amendment 25–80, pertaining to lightning protection. Compliance with those sections is required under the provisions of § 21.17(a)(1)(ii).

Because the AR has elected to certify that the Model Il–96T complies with the Russian type certification standards, the FAA will make a comparison of the Russian type certification basis and the U.S. type certification standards described above. Based on this comparison, the FAA will prescribe any additional requirements that are necessary to ensure that the Model Il–96T meets a level of safety equivalent to that provided by the U.S. type certification standards. For U.S. certification of the Model Il–96T, the FAA will therefore accept the Russian type certification basis, plus any additional requirements, and these special conditions. As the program progresses, other features of the Model Il–96T may be determined to be novel or unusual. The equivalent certification basis may therefore include other special conditions or exemptions not pertinent to these special conditions.

Since noise certification and emission requirements are beyond the scope of the possible future bilateral agreement, the FAA will make findings of compliance with the applicable U.S. noise, fuel venting, and exhaust emission requirements. The U.S. noise certification basis for the Model Il–96T is 14 CFR part 36 of the FAR, as amended by Amendments 36–1 through 36–21, and any subsequent amendments that are applicable on the date on which the U.S. type certificate is issued. In addition to compliance with part 36, the statutory provisions of Public Law 92–574, "Noise Control Act of 1972," require that the FAA issue a finding of regulatory adequacy pursuant to Section 611 of that Act. The Model Il–96T must also comply with the fuel venting and exhaust emission requirements of 14 CFR part 34 of the FAR, as amended by Amendment 34–1, and any subsequent amendments that are applicable on the date the type certificate is issued.

Special conditions are prescribed under the provisions of § 21.16 of the FAR when the applicable regulations for type certification do not contain adequate or appropriate standards because of novel or unusual design features. As discussed below, the new Ilyushin Model Il–96T airplane incorporates a number of such design features.

Il–96T Design Features

General

The Model Il–96T airplane presented for U.S. type certification is a long range, four engine, transport category cargo airplane powered by four (4) Pratt & Whitney PW2337 engines with 37,500 lbs. thrust ratings and incorporating Rockwell/Collins avionics. It is designed to be flown by a two-man crew; however, it incorporates seats for 2 additional crewmembers. The airplane is intended for cargo operation only and is designed to carry cargo on main and lower decks. The aircraft cargo loading system includes a large main deck cargo door (15.91 feet × 9.43 feet) and two lower deck cargo doors (8.69 feet × 5.74 feet). The main cargo compartment on the upper deck has a volume of 20,480 cubic feet and can accommodate 25 P–6 pallets. The two cargo compartments on the lower deck have a total volume of 6,900 cubic feet, and can accommodate a total of 32 LD–3 containers or 9 P–6 pallets. The Il–96T has a maximum takeoff weight of 595,240 lbs. and a maximum landing weight of 485,000 lbs. The maximum cruise altitude is 43,000 feet.

The structure of the Il–96T is generally of conventional design and construction. The landing gear system employs a center landing gear for use during ground handling conditions with heavy airplane weights. The structural design also makes use of an electronic flight control system which provides the potential for a wide range of structural and system interactions.

The Model Il–96T flight control system is an electro-hydromechanical system utilizing both fly-by-wire (FBW) and conventional mechanical (cables and push-pull rods) linkages between pilot control column and control surface hydraulic actuators in two simultaneously operated and synchronized channels. The conventional mechanical channel, in normal operation, functions as a passive redundancy of the FBW channel and provides feedback to the pilots via the Automatic Feel Load System.

Hydraulic power to the flight control system is simultaneously provided by four independent hydraulic systems. Functions are shared among these systems in order to ensure airplane control in the event of loss of one, two, or three systems. The four systems are pressurized by variable displacement pumps driven by the engine accessory gearbox. In addition, the systems can be powered by electrically driven pumps. A ram air turbine (RAT)-driven pump is available as an emergency hydraulic power source.

Normal electrical power is supplied by four constant frequency generators, one on each engine. An auxiliary power unit (APU) providing electrical and hydraulic supply is available for ground use only and is not used in flight. Five batteries provide an alternative source of electrical power for loads required to continue safe flight and landing in the case of failure of four generators.

The engine control system consists of a dual-channel electronic engine control (EEC) mounted on the fan case of each engine. Each EEC interfaces with various airplane computer systems. The EEC provides gas generator control, engine limit protection, power management, thrust reverser control, and engine parameter inputs for the flight deck displays. The engine EEC and associated airplane related systems form the complete propulsion control system.

Pitch and roll control inputs are made through conventional flight deck central control columns. The flight instruments are displayed on six cathode ray tube (CRT) displays. Two CRT's are mounted directly in front of both the pilot and copilot and display primary flight instruments and navigational information. The other two CRT's are located in the center of the instrument panel and display engine parameters, warnings, and system diagnostics.

The type design of the Model Il–96T contains novel or unusual design features not envisioned by the applicable part 25 airworthiness standards and therefore special conditions are considered necessary in the following areas:

Airframe

1. Center Landing Gear

The Ilyushin Il–96T landing gear arrangement includes a center braking landing gear under the fuselage. The center main landing gear does not differ from that of the right or left main landing gear in construction and performs the same functions. The current landing gear design criteria are applicable to conventional landing gear arrangements. Special Condition No. 1 provides additional taxi, takeoff, and landing criteria for this arrangement.

2. Design Maneuver Requirements

In a conventional airplane with a hydro-mechanical flight control system, pilot inputs directly affect control surface movement (both rate and displacement) for a given flight condition. In the Il–96T, the pilot's controls and the flight control surfaces are connected through the electronic flight control system, which introduces additional surface movements based on its design control laws. The control surface movement during maneuvers differs from the pilot control displacements in terms of both rate and displacement. The additional effects of the electronic flight control system are not reflected in the current FAR; therefore, Special Condition No. 2 is provided.

3. Interaction of Systems and Structure

The Ilyushin Model Il–96T is equipped with an electrical flight control system and a load alleviation system that effects both gust and maneuver loads. These systems can directly, or as a result of failure or malfunction, affect structural performance. This degree of system and structures interaction was not envisioned in the structural design regulations of part 25 of the FAR for transport airplanes. Special Condition 3 provides comprehensive criteria in which the structural design safety margins are dependent on systems reliability.

Systems

4. Protection From Unwanted Effects of High Intensity Radiated Fields (HIRF)

The use of fly-by-wire designs to command and control engines and flight control surfaces increases the airplane's susceptibility to HIRF sources external to the airplane. The airworthiness regulations do not provide adequate requirements for protection from unwanted effects of HIRF.

High intensity radiated fields have the potential to cause adverse and potentially hazardous effects on fly-by-wire systems if design measures are not taken to ensure the immunity of such systems. This is particularly true with the trend toward increased power levels from ground based transmitters and the advent of space and satellite communications.

The Model Il–96T is being designed with electrical interfaces between crew inputs and (1) the flight control surfaces, and (2) the engines. These interfaces, and the interconnection among the electronic subsystems controlling these functions, can be susceptible to disruption of both command/response signals and the operational mode logic as a result of electrical and magnetic interference. Traditional airplane designs have utilized mechanical means to connect the primary flight controls and the engine to the flight deck. This traditional design results in control paths that are substantially immune to the effects of HIRF. A special condition is required to ensure that critical and essential systems be designed and installed to preclude component damage and system upset or malfunction due to the unwanted effects of HIRF. Therefore, Special Condition No. 4 is provided.

Special conditions may be issued and amended, as necessary, as part of the type certification basis if the Administrator finds that the airworthiness standards designated in accordance with § 21.17(a)(1) do not contain adequate or appropriate safety standards because of novel or unusual design features of an airplane.

Special conditions, as appropriate, are issued in accordance with § 11.49 after public notice, as required by §§ 11.28 and 11.29(b), effective October 14, 1980, and become part of the type certification basis in accordance with § 21.17(a)(2).

Discussion of Comments

Notice of proposed special conditions No. SC–97–2–NM was published in the **Federal Register** on April 9, 1997 (62 FR 17117). No comments were received, and the special conditions are adopted as proposed.

Applicability

These special conditions are applicable initially to the Ilyushin Model Il–96T airplane. Should Ilyushin Aviation Complex apply at a later date for a change to the type certificate to include another model incorporating the same novel or unusual design features, the special conditions would apply to that model as well under the provisions of § 21.101(a)(1).

Conclusion

This action affects only certain unusual or novel design features on one model series of airplanes. It is not a rule of general applicability and affects only the manufacturer who applied to the FAA for approval of these features on the airplane.

List of Subjects in 14 CFR Part 25

Aircraft, Aviation Safety, Reporting and recordkeeping requirements.

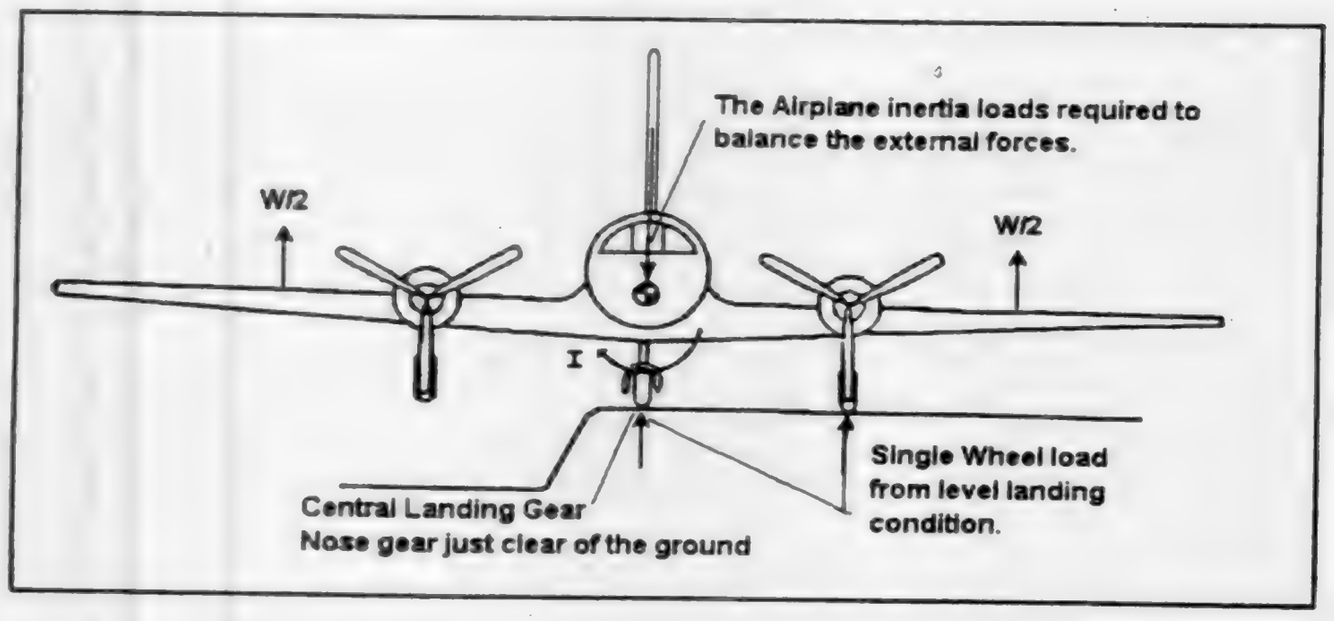
The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701, 44702, 44704.

The Special Conditions

Accordingly, pursuant to the authority delegated to me by the Administrator, the following special conditions are issued as part of the type certification basis for the Ilyushin Aviation Complex Model Il–96T series airplanes.

1. *Center Landing Gear.* Notwithstanding § 25.477 of the FAR, the requirements of §§ 25.473 and 25.479 through § 25.485 apply, except as noted:



(a) In addition to the requirements of § 25.473, landing should be considered on a level runway and on a runway having a convex upward shape that may be approximated by a slope of 1.5 percent with the horizontal at main landing gear stations. The maximum loads determined from these two conditions must be applied to each main landing gear and to the center landing gear.

(b) The requirements of § 25.483 apply and, in addition, the condition represented by the following figure also applies:

BILLING CODE 4910–13–P

VOL 63 ISS 13 JA 21 1998 UMI

Figure 1. Center gear landing Condition

BILLING CODE 4910-13-C

(c) In lieu of the requirements of § 25.485, the following apply:

(1) The airplane is considered to be in the level attitude with only the main and central wheels contacting the ground.

(2) Vertical reactions of one-half of the maximum vertical reaction obtained at each main and center gear in the level landing conditions should be considered. The vertical loads must be combined with side loads that for the main gear are 0.8 of the vertical reaction (on one side) acting inward and 0.6 of the vertical reaction (on the other side) acting outward, and for the center gear are 0.7 of the vertical reaction acting in the same direction as main gear side loads. (Drag load=0)

(d) In addition to the requirements of § 25.489, "Ground handling conditions," the following applies: The airplane should be considered to be on a level runway and on a runway having a convex upward shape that may be approximated by a slope of 1.5 percent with the horizontal at main landing gear stations. The ground reactions must be distributed to the individual landing gear units in a rational or conservative manner (zero lift, shock struts in the static position).

(e) In lieu of the requirements of § 25.503, the following apply:

(1) The airplane is assumed to pivot about one of the outer main gears with the brakes locked on the selected gear. The limit vertical load factor must be 1.0 and the coefficient of friction must be 0.8.

(2) The airplane is assumed to be in static equilibrium, with the loads being applied at the ground contact points.

(3) All of the main gear units must be designed for the scrubbing or torsion loads, or both, induced by pivoting during ground maneuvers produced by:

(i) Towing at the nose gear, no brakes applied; and

(ii) Application of symmetrical or unsymmetrical forward thrust to aid pivoting and with or without braking on the outside main gear closest to the pivot center.

(f) The following applies to the center landing gear in lieu of § 25.723, "Shock absorption tests":

(1) The center landing gear should not fail in a test demonstrating its reserve energy absorption capacity at design landing weight, assuming airplane lift no greater than the airplane weight acting during an impact simulating:

(i) A center landing gear descent velocity of 120 percent of the maximum aircraft descent velocity at the time of center landing gear ground contact; or

(ii) A 12 fps airplane landing impact taking into account both the main and center landing gears acting during the impact, whichever is more critical.

2. *Design Maneuver Requirements.* (a) *Maximum elevator displacement at V_A.* In lieu of compliance with § 25.331(c)(1) of the FAR, the airplane is assumed to be flying in steady level flight (point A1 within the maneuvering envelope of § 25.333(b)) and, except as limited by pilot effort as specified in § 25.397 concerning pilot effort forces, the cockpit pitching control device is suddenly moved to obtain extreme positive pitching acceleration (nose up). In defining the tail load condition, the response of the airplane must be taken into account. Airplane loads which occur subsequent to the point at which the normal acceleration at the center of gravity exceeds the maximum positive limit maneuvering factor, n, need not be considered.

(b) *Pitch maneuvering loads induced by the system.* In addition to the requirements of § 25.331(c) of the FAR, it must be established that pitch maneuver loads induced by the system itself (e.g. abrupt changes in orders made possible by electrical rather than mechanical combination of different inputs) are acceptably accounted for.

(c) *Roll maneuver loads.* In lieu of compliance with § 25.349(a) of the FAR, the following conditions, speeds, spoiler and aileron deflections (except as the deflections may be limited by pilot effort) must be considered in combination with an airplane load factor of zero and of two-thirds of the positive maneuvering factor used in design. In determining the required aileron and spoiler deflections, the torsional flexibility of the wing must be considered in accordance with § 25.301(b).

(1) Conditions corresponding to steady rolling velocities must be investigated. In addition, conditions corresponding to maximum angular acceleration must be investigated. For the angular acceleration conditions, zero rolling velocity may be assumed in the absence of a rational time history investigation of the maneuver.

(2) At V_A, sudden deflection of the cockpit roll control up to the limit is assumed. The position of the cockpit roll control must be maintained until a steady roll rate is achieved and then must be returned suddenly to the neutral position.

(3) At V_C, the cockpit roll control must be moved suddenly and maintained so as to achieve a rate of roll not less than that obtained in paragraph (2).

(4) At V_D, the cockpit roll control must be moved suddenly and maintained so as to achieve a rate of roll not less than one third of that obtained in paragraph (2) of this paragraph.

(5) It must also be established that roll maneuver loads induced by the system itself (i.e., abrupt changes in orders made possible rather than mechanical combination of different inputs) are acceptably accounted for.

(d) *Yaw maneuver loads.* In lieu of compliance with § 25.351 of the FAR, the airplane must be designed for loads resulting from the conditions specified in subparagraphs (a) and (b) of this paragraph. Unbalanced aerodynamic moments about the center of gravity must be reacted in a rational or conservative manner, considering the principal masses furnishing the reacting inertia forces. Physical limitations of the airplane from the cockpit yaw control device to the control surface deflection, such as control stop position, maximum power and displacement rate of the servo controls, and control law limiters may be taken into account.

(1) Maneuvering. At speeds from V_{MC} to V_D, the following maneuvers must be considered. In computing the tail loads, the yawing velocity may be assumed to be zero:

(i) With the airplane in unaccelerated flight at zero yaw, it is assumed that the cockpit yaw control device (pedal) is suddenly displaced (with critical rate) to the maximum deflection, as limited by the stops.

(ii) With the cockpit yaw control device (pedal) deflected as specified in subparagraph (1) of this paragraph, it is assumed that the airplane yaws to the resulting sideslip angle (beyond the static sideslip angle).

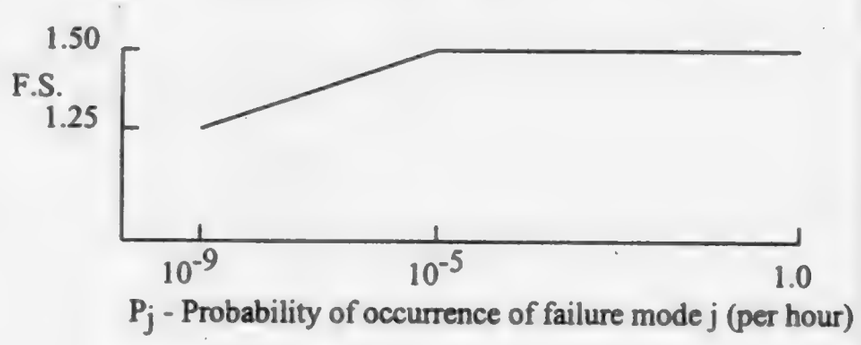
(iii) With the airplane yawed to the static sideslip angle with the cockpit yaw control device deflected as specified in sub-paragraph (1) of this paragraph, it is assumed that the cockpit yaw control device is returned to neutral.

3. *Interaction of Systems and Structure.* (a) *General.* For an airplane equipped with flight control systems, load alleviation systems, or flutter control systems that directly, or as a result of a failure or malfunction, affect its structural performance, the influence of these systems and their failure conditions shall be taken into account in showing compliance with subparts C and D of part 25 of the FAR.

(b) *System fully operative.* With the system fully operative, the following apply:

(1) Limit loads must be derived in all normal operating configurations of the systems from all the deterministic limit conditions specified in subpart C, taking into account any special behavior of such systems or associated functions, or any effect on the structural performance of the airplane that may occur up to the limit loads. In particular, any significant nonlinearity (rate of displacement of control surface, thresholds, or any other system nonlinearities) must be accounted for in a realistic or conservative way when deriving limit loads from limit conditions.

(2) The airplane must meet the strength requirements of part 25 (static strength, residual strength), using the specified factors to derive ultimate loads from the limit loads defined above. The effect of nonlinearities must be investigated beyond limit conditions to ensure the behavior of the systems presents no anomaly compared to the behavior below limit conditions. However, conditions beyond limit conditions need not be considered when it can be shown that the airplane has design features that make it impossible to exceed those limit conditions.



(3) The airplane must meet the aeroelastic stability requirements of § 25.629.

(c) *System in the failure condition.* For any system failure condition not shown to be extremely improbable, the following apply:

(1) *At the time of occurrence.* Starting from 1g level flight conditions, a realistic scenario, including pilot corrective actions, must be established to determine the loads occurring at the time of failure and immediately after failure. The airplane must be able to withstand these loads, multiplied by an appropriate factor of safety, related to the probability of occurrence of the failure. These loads should be considered as ultimate loads for this evaluation. The factor of safety is defined as follows:

BILLING CODE 4910-13-P

Factor of Safety at Time of Occurrence

VOL 63 ISS 13 JA 21 1998 UMI

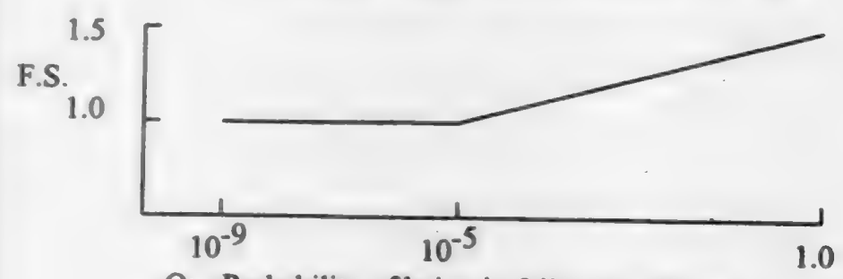
BILLING CODE 4910-13-C

(i) The loads must also be used in the damage tolerance evaluation required in § 25.571(b), if the failure condition is probable. The loads may be considered as ultimate loads for the damage tolerant evaluation.

(ii) Freedom from flutter and divergence must be shown at speeds up to V_D or 1.15 V_C, whichever is greater. However, at altitudes where the speed is limited by Mach number, compliance need be shown only up to M_D, as defined in § 25.335(d). For failure conditions that result in speed increases beyond V_C/M_C, freedom from flutter and divergence must be shown at increased speeds, so that the above margins are maintained.

(iii) Notwithstanding subparagraph (1) of this paragraph, failures of the system that result in forced structural vibrations (oscillatory failures) must not produce peak loads that could result in permanent deformation of primary structure.

(2) *For the continuation of the flight.* For the airplane, in the failed configuration and considering any appropriate flight limitations, the following apply:



(i) Static and residual strength must be determined for loads induced by the failure condition, if the loads could continue to the end of the flight. These loads must be combined with the deterministic limit load conditions specified in subpart C.

(ii) For static strength substantiation, each part of the structure must be able to withstand the loads specified in subparagraph (2)(i) of this paragraph multiplied by a safety factor depending on the probability of being in this failure state.

The factor of safety is defined as follows:

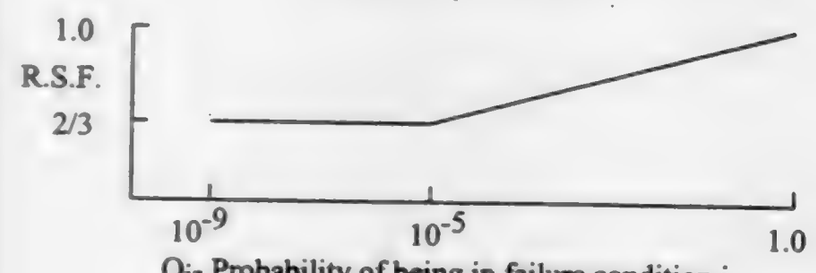
BILLING CODE 4910-13-P

Factor of Safety for Continuation of Flight

BILLING CODE 4910-13-C

Qj=(Tj)(Pj) where:

Tj=Average time spent in failure condition j (in hours)



Pj=Probability of occurrence of failure mode j (per hour)

Note: If Pj is greater than 10^{-3} per flight hour, then a 1.5 factor of safety must be used.

(iii) For residual strength substantiation as defined in § 25.571(b), for structures also affected by failure of the system and with damage in combination with the system failure, a reduction factor may be applied to the residual strength loads of § 25.571(b). However, the residual strength level must not be less than the 1g flight load, combined with the loads introduced by the failure condition plus two-thirds of the load increments of the conditions specified in § 25.571(b) in both positive and negative directions (if appropriate). The reduction factor is defined as follows:

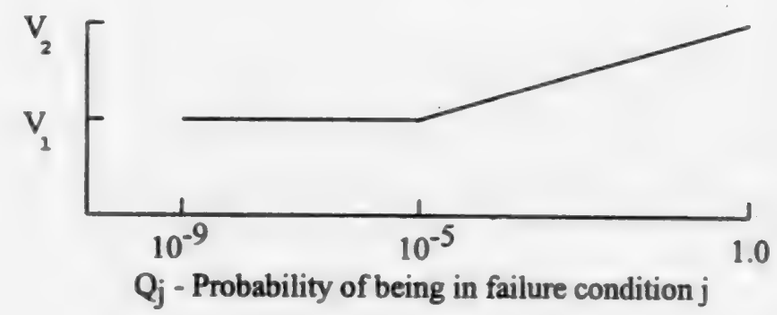
BILLING CODE 4910-13-P

Residual Strength Reduction Factor

BILLING CODE 4910-13-C

Qj=(Tj)(Pj) where:

Tj=Average time spent in failure condition j (in hours)



Pj=Probability of occurrence of failure mode j (per hour)

Note: If Pj is greater than 10^{-3} per flight hour, then a residual strength factor of 1.0 must be used.

(iv) Freedom from flutter and divergence must be shown up to a speed determined by the following figure:

BILLING 4910-13-P

Flutter Clearance Speed

BILLING CODE 4910-13-C

V_1=Clearance speed as defined in § 25.629(b)(2).

V_2=Clearance speed as defined in § 25.629(b)(1).

Qj=(Tj)(Pj) where:

Tj=Average time spent in failure condition j (in hours)

Pj=Probability of occurrence of failure mode j (per hour)

Note: If Pj is greater than 10^{-3} per flight hour, then the flutter clearance speed must not be less than V_2.

(v) Freedom from flutter and divergence must also be shown up to V_1 in the above figure for any probable system failure condition combined with any damage required or selected for investigation in § 25.571(b).

(vi) If the time likely to be spent in the failure condition is not small compared to the damage propagation period, or if the loads induced by the failure condition may have a significant influence on the damage propagation, then the effects of the particular failure condition must be addressed and the corresponding inspection intervals adjusted to adequately cover this situation.

(vii) If the mission analysis method is used to account for continuous turbulence, all the systems failure conditions associated with their probability must be accounted for in a rational or conservative manner in order to ensure that the probability of exceeding the limit load is not higher than the prescribed value of the current requirement.

(d) *Warning considerations.* For system failure detection and warning, the following apply:

(1) Before flight, the system must be checked for failure conditions, not shown to be extremely improbable, that degrade the structural capability of the airplane below the level intended in paragraph (b) of this special condition. The crew must be made aware of these failures, if they exist, before flight.

(2) An evaluation must be made of the necessity to signal, during the flight, the existence of any failure condition that could significantly affect the structural capability of the airplane and for which the associated reduction in airworthiness can be minimized by suitable flight limitations. The assessment of the need for such signals must be carried out in a manner consistent with the approved general warning philosophy for the airplane.

(3) During flight, any failure condition not shown to be extremely improbable, in which the safety factor existing between the airplane strength capability and loads induced by the deterministic limit conditions of subpart C of part 25 is reduced to 1.3 or less, must be signaled to the crew if appropriate procedures and limitations can be provided so that the crew can take action to minimize the associated reduction in airworthiness during the remainder of the flight.

(e) *Dispatch with failure conditions.* If the airplane is to be knowingly dispatched in a system failure condition that reduces the structural performance of the airplane, then operational limitations must be provided whose effects, combined with those of the failure condition, allow the airplane to meet the structural requirements described in paragraph (b) of this special condition. Subsequent system failures must also be considered.

Discussion: This special condition is intended to be applicable to flight controls, load alleviation systems, and flutter control systems. The criteria provided by the special condition only address the direct structural consequences of the systems responses and performances and therefore cannot be considered in isolation but should be included in the overall safety evaluation of the airplane. The presentation of these criteria may, in some instances, duplicate standards already established for this evaluation. The criteria are applicable to structure, the failure of which could prevent continued safe flight and landing. The following definitions are applicable to this special condition:

Structural performance: Capability of the airplane to meet the structural requirements of part 25.

Flight limitations: Limitations that can be applied to the airplane flight conditions following an inflight occurrence and which are included in the flight manual (e.g., speed limitations, avoidance of severe weather conditions, etc.).

Operational limitations: Limitations, including flight limitations, that can be applied to the airplane operating conditions before dispatch (e.g., payload limitations).

Probabilistic terms: The probabilistic terms (probable, improbable, extremely improbable) used in this special condition should be understood as defined in AC 25.1309–1.

Failure condition: The term failure condition is defined in AC 25.1309–1; however, this special condition applies only to system failure conditions that have a direct impact on the structural performance of the airplane (e.g., failure conditions that induce loads or change the response of the airplane to inputs such as gusts or pilot actions).

4. *Protection from Unwanted Effects of High Intensity Radiated Fields (HIRF).* In the absence of specific requirements for protection from the unwanted effects of HIRF, the following apply:

Each airplane system that performs critical functions must be designed and installed to ensure that the operation and operational capabilities of these systems to perform critical functions are not adversely affected when the airplane is exposed to high intensity radiated fields.

Discussion: The Ilyushin Model Il–96T will utilize electrical and electronic systems that perform critical functions. These systems include the electronic

VOL
63
ISS
13
JA
21
1998
UMI

displays, integrated avionics computer, electronic engine controls, etc. The existing airworthiness regulations do not contain adequate or appropriate safety standards for the protection of these systems from the effects of HIRF which are external to the airplane.

Airplane designs that utilize metal skins and mechanical command and control means have traditionally been shown to be immune from the effects of HIRF energy from ground-based and airborne transmitters. With the trend toward increased power levels from these sources, plus the advent of space and satellite communications, the immunity of the airplane to HIRF energy must be established. No universally accepted guidance to define the maximum energy level in which civilian airplane system installations must be capable of operating safely has been established.

For the purposes of this special condition, the following definition applies:

Critical Functions: Functions whose failure would contribute to or cause a failure condition that would prevent the continued safe flight and landing of the airplane. At this time the FAA and other airworthiness authorities are unable to precisely define or control the HIRF energy level to which the airplane will be exposed in service. Therefore, the FAA hereby defines two acceptable interim methods for complying with the requirement for protection of systems that perform critical functions.

(1) The applicant may demonstrate that the critical systems, as installed in the airplane, are protected from the external HIRF threat environment defined in the following table:

Frequency	Field peak (V/M)	Strength average V/M
10 KHz-500 KHz	60	60
500 KHz-2 MHz	80	80
2 MHz-30 MHz	200	200
30 MHz-100 MHz	33	33
100 MHz-200 MHz	150	33
200 MHz-400 MHz	56	33
400 MHz-1 GHz	4,020	935
1 GHz-2 GHz	7,850	1,750
2 GHz-4 GHz	6,000	1,150
4 GHz-6 GHz	6,800	310
6 GHz-8 GHz	3,600	666
8 GHz-12 GHz	5,100	1,270
12 GHz-18 GHz	3,500	551
18 GHz-40 GHz	2,400	750

or,

(2) The applicant may demonstrate by laboratory test that the critical systems elements and their associated wiring harnesses can withstand a peak electromagnetic field strength of 100 volts per meter, without the benefit of airplane structural shielding, in the frequency range of 10 KHz to 18 GHz.

Compliance Method: This paragraph describes an acceptable method of showing compliance with the HIRF energy protection requirements.

(1) *Compliance Plan:* The applicant should present a plan for Aviation Register approval, outlining how compliance with the HIRF energy protection requirements will be attained. This plan should also propose pass/fail criteria for the operation of critical systems in the HIRF environment.

(2) *System Criticality:* A hazard analysis should be performed by the applicant for approval by Aviation Register to identify electrical and/or electronic systems which perform critical functions. These systems are candidates for the application of HIRF energy protection requirements.

(3) *Compliance Verification:* Compliance with the HIRF energy protection requirements may be demonstrated by tests, analysis, models, similarity with existing systems, or a combination thereof as acceptable to Aviation Register. Service experience alone is not acceptable since such experience in normal flight operations may not include an exposure to the HIRF environmental condition.

(4) *Pass/Fail Criteria:* Acceptable system performance is attained by demonstrating that the system under consideration continues to perform its intended function during and after exposure to the required electromagnetic fields. Deviations from system specification may be acceptable depending on an independent assessment of the deviations for each application.

(5) *Test Methods and Procedures:* RTCA document DO–160C, Section 20, provides information on acceptable test procedures. In addition, the following information on modulation is presented to supplement that found in DO–160C. Equipment and subsystem radiated susceptibility qualification tests should be conducted by slowly scanning the entire frequency spectrum with an unmodulated signal which produces the required average electric field strength as the equipment under test (EUT) and its wiring. A peak level detector should be used to monitor the peak values of the signal and these values should be recorded at each test point. The EUT should not be damaged by this test and should operate normally for frequencies under 400 MHz. Deviations from normal operation for test frequencies above 400 MHz should be recorded. The test should be repeated with an appropriate modulation applied to the test signal. At each test point, the amplitude of the RF test signal should be adjusted to the peak values recorded during the unmodulated test. The modulation should be selected as the signal most likely to disrupt operation of the equipment under test based on its design characteristics. For example, flight control systems might be susceptible to 3 Hz square wave modulation while the video signals for CRT displays may be susceptible to 400 Hz sinusoidal modulation. If the worst case modulation is unknown or cannot be determined, default modulations can be used. Suggested default values are 1 KHz sine wave with 80% depth of modulation in the frequency range from 10 KHz to 400 MHz and 1 KHz square wave with greater than 90% depth of modulation from 400 MHz to 18 GHz. For frequencies where the unmodulated signal caused deviations from normal operation of the EUT, several different modulating signals with various waveforms and frequencies should be applied. Modern laboratory equipment may not be able to continuously scan the spectrum in the manner of analog equipment. These units will only generate discrete frequencies. For such equipment, the number of test points and the dwell time at each test point must be specified. For each decade of the frequency test spectrum (a ten times increase in frequency (i.e., 10 Kz to 100 KHz) there should be at least 25 test points, and for the decades from 10 MHz to 100 MHz, and 100 MHz to 1 GHz there should be a minimum of 180 test points each. The dwell time at each test point should be at least 0.5 second.

(6) *Data Submittal:* An accomplishment report should be submitted to the Aviation Register showing fulfillment of the HIRF energy protection requirements. This report should contain test results, analysis and other pertinent data.

(7) *Maintenance Requirements:* The applicant (manufacturer) must provide maintenance requirements to assure the continued airworthiness of the installed system(s).

Issued in Renton, Washington, on December 16, 1997.

Gilbert L. Thompson,

Assistant Manager, Transport Airplane Directorate, Aircraft Certification Service, ANM–101.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 97–ANE–29–AD; Amendment 39–10286; AD 98–02–04]

RIN 2120–AA64

Airworthiness Directives; CFM International CFM56–5B/2P Series Turbofan Engines

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to CFM International (CFMI) CFM56–5B/2P series turbofan engines, that requires a reduction of the low cycle fatigue (LCF) retirement life for certain low pressure turbine (LPT) cases. This amendment is prompted by the results of a refined life analysis performed by the manufacturer which revealed minimum calculated LCF lives significantly lower than the published LCF retirement life. The actions specified by this AD are intended to prevent a LCF failure of the LPT case, which could result in damage to the aircraft.

DATES: Effective March 23, 1998.

ADDRESSES: This information may be examined at the Federal Aviation Administration (FAA), New England Region, Office of the Regional Counsel, 12 New England Executive Park, Burlington, MA; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Robert J. Ganley, Aerospace Engineer, Engine Certification Office, FAA, Engine and Propeller Directorate, 12 New England Executive Park, Burlington, MA 01803–5299; telephone (781) 238–7138; fax (781) 238–7199.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to CFM International (CFMI) CFM56–5B/2P series turbofan engines was published in the **Federal Register** on September 19, 1997 (62 FR 49179). That action proposed to require a reduction of the low cycle fatigue (LCF) retirement life for certain low pressure turbine (LPT) cases.

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the comment received.

One commenter supports the rule as proposed.

After careful review of the available data, including the comment noted above, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed.

There are approximately 18 engines of the affected design in the worldwide fleet. The manufacturer has advised the FAA that there are no engines installed on U.S. registered aircraft that are affected by this AD. Therefore, there is no associated cost impact on U.S. operators as a result of this AD. However, should an affected engine be imported on an aircraft and placed on the U.S. registry in the future, and assuming that the parts cost is proportional to the reduction of the LCF retirement life, the required parts would cost approximately $40,423 per engine. Based on these figures, the total cost impact of the AD is estimated to be $40,423 per engine.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

98–02–04 CFM International: Amendment 39–10286. Docket 97–ANE–29–AD.

Applicability: CFM International (CFMI) CFM56–5B1/2P, –5B2/2P, –5B3/2P, and –5B4/2P turbofan engines, installed with low pressure turbine (LPT) case, Part Number (P/N) 338–117–004–0, installed on but not limited to Airbus A320 and A321 series aircraft.

Note 1: This airworthiness directive (AD) applies to each engine identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For engines that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (e) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent a low cycle fatigue (LCF) failure of the LPT case, which could result in damage to the aircraft, accomplish the following:

(a) Remove from service LPT case, P/N 338–117–004–0, and replace with a serviceable part, as follows:

(1) For CFM56–5B2/2P and –5B3/2P engines, prior to accumulating 10,500 cycles.

(2) For CFM56–5B1/2P and –5B4/2P engines, prior to accumulating 15,500 cycles.

(b) This action establishes the new LCF retirement lives of 10,500 and 15,500 cycles for the engines stated in paragraphs (a)(1) and (a)(2) of this AD, which are published in Chapter 05 of CFM56–5B Engine Shop Manual, CFMI–TP.SM.9.

(c) For the purpose of this AD, a "serviceable part" is one that has not exceeded its respective new life limit as set out in this AD.

(d) Except as provided in paragraph (e) of this AD, no alternative replacement times may be approved for LPT case, P/N 338–117–004–0.

(e) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Engine Certification Office. The request should be forwarded through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Engine Certification Office.

VOL 63 ISS 13 JA 21 1998 UMI

Note 2: Information concerning the existence of approved alternative methods of compliance with this airworthiness directive, if any, may be obtained from the Engine Certification Office.

(f) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the aircraft to a location where the requirements of this AD can be accomplished.

(g) This amendment becomes effective on March 23, 1998.

Issued in Burlington, Massachusetts, on January 7, 1998.

Jay J. Pardee,

Manager, Engine and Propeller Directorate, Aircraft Certification Service.

RIN 3235–AH18

Covered Securities Pursuant to Section 18 of the Securities Act of 1933

AGENCY: Securities and Exchange Commission.

ACTION: Final rule.

SUMMARY: The Securities and Exchange Commission ("SEC" or "Commission") is adopting Rule 146(b) under Section 18 the Securities Act of 1933, as amended ("Securities Act"). The purpose of the Rule is to designate securities listed on the Chicago Board Options Exchange, Tier I of the Pacific Exchange, and Tier I of the Philadelphia Stock Exchange as covered securities for the purposes of Section 18 of the Securities Act. Covered Securities under Section 18 are exempt from state law registration requirements.

EFFECTIVE DATE: This final rule is effective January 21, 1998.

FOR FURTHER INFORMATION CONTACT: Sharon M. Lawson, Senior Special Counsel, James T. McHale, Special Counsel, or David S. Sieradzki, Esq., at 202/942–0181, 202/942–0190, or 202/942–0135; Office of Market Supervision, Division of Market Regulation, Securities and Exchange Commission (Mail Stop 2–2), 450 Fifth Street, N.W., Washington, D.C. 20549.

SUPPLEMENTARY INFORMATION:

I. Introduction

On October 11, 1996, The National Securities Markets Improvement Act of 1996 ("NSMIA")[1] was signed into law. Among other changes made to the federal securities laws, NSMIA amends Section 18 of the Securities Act[2] to provide for exclusive federal registration of securities listed, or authorized for listing, on the New York Stock Exchange ("NYSE"), the American Stock Exchange ("Amex"), or listed on the National Market System of the Nasdaq Stock Market ("Nasdaq/NMS"), or any other national securities exchange designated by the Commission to have substantially similar listing standards to those markets. More specifically, Section 18(a) provides that "no law, rule, regulation, or order, or other administrative action of any State * * * requiring, or with respect to, registration or qualification of securities * * * shall directly or indirectly apply to a security that—(A) is a covered security." Covered securities are defined in Section 18(b)(1) to include those securities listed, or authorized for listing, on the NYSE, Amex, or listed on Nasdaq/NMS (collectively the "Named Markets"), or those securities listed, or authorized for listing, on a national securities exchange (or tier or segment thereof) that has listing standards that the Commission determines by rule are "substantially similar" to one of the Named Markets.

The Pacific Exchange, Incorporated ("PCX"), the Chicago Board Options Exchange, Incorporated ("CBOE"), the Chicago Stock Exchange, Incorporated ("CHX"), and the Philadelphia Stock Exchange, Incorporated ("Phlx") (collectively the "Petitioners") have petitioned the Commission to adopt a rule which finds their listing standards to be substantially similar to those of the NYSE, Amex, or Nasdaq/NMS and, therefore, entitling securities listed pursuant thereto to be deemed covered securities under Section 18 of the Securities Act.[3]

On June 10, 1997, the Commission issued a release proposing to adopt Rule 146(b) that would designate securities listed on the CBOE and Tier I of the PCX as designated securities for the purposes of Section 18(a) of the Securities Act, and soliciting comment on whether Tier I securities of the CHX and Phlx should be included in Rule 146(b).[4] The Commission received three comment letters in response to the proposal.[5]

As to the inclusion of securities listed on Tier I of the CHX and Tier I of the Phlx in Rule 146(b), the Commission stated that while most of their Tier I listing standards are substantially similar to one of the Named Markets, they differed in several important respects.[6] The Commission also indicated, however, that if the CHX and Phlx were to revise their Tier I listing standards in these areas to conform them to those of the NYSE, Amex, or Nasdaq/NMS prior to the adoption of the proposed Rule, the Commission likely would include securities listed on these markets in final Rule 146(b). Accordingly, in order to obtain the benefits of the exemption under the proposed Rule, the CHX and Phlx[7] both revised their Tier I listing standards to address the noted deficiencies. Although CHX has modified its listing and maintenance standards as suggested, the Commission has concerns regarding the CHX's listing and maintenance procedures and thus does not include CHX in the final Rule. The Commission will continue to review the CHX's listing program, including listing standards and operations, and may determine to include securities listed on CHX Tier I in the future.

After careful comparison, the Commission concludes that currently

[5] *See* Letter from J. Craig Long, Esq., Foley & Lardner, to Jonathan G. Katz, Secretary, Commission, dated June 26, 1997 (received June 30, 1997) ("Foley letter"); letter from Ira L. Kotel, Esq., Roberts, Sheridan & Kotel, to Jonathan G. Katz, Secretary, Commission, dated July 16, 1997 (received July 21, 1997) ("Kotel letter"); and letter from James C. Yong, First Vice President and General Counsel, The Options Clearing Corporation ("OCC"), to Jonathan G. Katz, Secretary, Commission, dated July 8, 1997 (received July 22, 1997) ("OCC letter").

[6] Specifically, the Commission noted that unlike the NYSE, Amex, or Nasdaq/NMS, the CHX did not have a minimum share price requirement for continued listing of common stock on Tier I. With regard to the Phlx, the Commission identified the Exchange's lack of a maintenance standard for bonds and debentures listed on Tier I of the Exchange as a deficiency in their listing standards. Moreover, with respect to stock index, currency and currency index warrants, the Phlx had no public distribution, aggregate market value, nor term to maturity requirements. Finally, the Commission noted that issuers of "other securities" listed on Tier I of the Phlx were required to have pre-tax income of only $100,000 in three of the four last fiscal years, versus the Amex requirement that issuers have $750,000 in pre-tax income in their last fiscal year, or in two of their last three fiscal years. *See* proposing release, *supra* note 4.

[7] *See* Phlx Listing Standards Order, *infra* note 18.

the listing standards of Tier I of the PCX, and Phlx, and the listing standards of the CBOE are substantially similar to the listing standards of the NYSE, Amex or Nasdaq/NMS. Accordingly, the Commission today is adopting Rule 146(b) which designates securities listed on such markets as covered securities under Section 18(b)(1) of the Securities Act. As adopted, Rule 146(b) will provide those covered securities with an exemption from state blue sky provisions as set forth under Section 18(a) of the Securities Act.

II. Background

The development and enforcement of adequate standards governing the initial and continued listing of securities on an exchange is of critical importance to financial markets and the investing public. Listing standards serve as a means for a self-regulatory organization ("SRO") to screen issuers and to provide listed status only to bona fide companies with sufficient float, investor base and trading interest to maintain fair and orderly markets. Once a security has been approved for initial listing, maintenance criteria allow an exchange to monitor the status and trading characteristics of that issue to ensure that it continues to meet the exchange's standards for market depth and liquidity.

Many States have recognized the importance of listing standards by excepting from state registration requirements securities traded on the Named Markets.[8] In enacting Section 18, Congress intended to codify in the Securities Act an exemption from state registration requirements similar to these state law provisions.[9] In order to avoid competitive disparities, Congress provided the Commission with the discretionary authority to extend similar preemption treatment to other national securities exchanges (or tiers or segments thereof) that have substantially similar listing standards.[10]

As noted above, the PCX, CBOE, CHX, and Phlx all have petitioned the Commission to adopt a rule as contemplated by Section 18.[11] The Petitioners assert that their Tier I listing standards[12] are substantially similar to those of the Named Markets, and that until the Commission acts to provide them with the benefits of the Section 18 exemption, they will be at a competitive disadvantage to these markets. The Commission recognizes the competitive concerns raised by the Petitioners, but notes that the statute requires the Commission to make an independent finding that the Petitioners' listing standards are substantially similar to those of the NYSE, the Amex or Nasdaq/NMS.

III. Comment Letters

As noted above, the Commission received three comment letters in response to the proposal.[13] The Foley letter, filed on behalf of the CHX, noted that the CHX had submitted a proposed rule change with the Commission to amend its maintenance standards for common stock listed on Tier I of the Exchange to add a minimum share price. The Foley letter urged that once approved, the amendment should resolve the Commission's concerns relating to the CHX's Tier I standards and that the Commission should include securities listed on CHX's Tier I in Rule 146(b).

The Kotel letter did not address the desirability of adopting proposed Rule 146(b) generally, but urged the Commission to include securities listed on the Nasdaq SmallCap Market ("SmallCap") in the Rule. In support of this view, the Kotel letter noted that the National Association of Securities Dealers, Inc. ("NASD") recently proposed to amend the requirements for initial listing on SmallCap and that once the new SmallCap listing standards were approved, they would be substantially similar to those of the Amex.[14] Accordingly, the Kotel letter urged that securities listed on SmallCap should be deemed covered securities for purposes of Rule 146(b). In addition, the Kotel letter stated that extending the benefits of the Rule to securities listed on SmallCap would further the Commission's policy of simplifying securities regulation for small businesses and would lower the costs for small businesses in complying with federal and state regulations.

The third comment letter received by the Commission, the OCC letter, generally supported the proposed Rule. In addition, the OCC letter urged the Commission to designate standardized options traded on Tier I of the Phlx as covered securities under the Rule, in the event the Phlx did not file to amend its listing standards to address the concerns raised by the Commission in the proposing release.

IV. Discussion

The Commission has reviewed extensively the listing and maintenance standards for all securities listed and traded on the Petitioners' markets, including common stock, preferred stock, bonds and debentures, and options.[15] With regard to applying the "substantially similar" standard, the Commission notes that under Section 18(b)(1)(B) of the Securities Act the Commission has the authority to compare the listing standards of a petitioner with those of either the NYSE, Amex, or Nasdaq/NMS. The Commission attempted initially to compare a petitioner's listing standards for all securities with only one of these markets.[16] If a petitioner's listing standards in a particular category did not meet the standards of that market, however, the Commission compared the petitioner's standards to the other two markets. Additionally, the Commission interpreted the substantially similar standard to require listing standards at least as comprehensive as those of the markets named in Section 18(b)(1)(A). If a petitioner's standards were higher than such markets, then the Commission still determined that the petitioner's standards were substantially similar to these markets. Finally, the Commission reviewed the listing standards for each type of security in making the substantially similar determination. Differences in language or approach of the listing standards for a particular security did not necessarily lead to a determination that the listing standards of a petitioner were not substantially similar to those of the named exchange.

After careful comparison, using the approach outlined above, the Commission concludes that currently the listing standards of the CBOE and Tier I of the PCX, and Phlx are substantially similar to the listing standards of the NYSE, Amex or Nasdaq/NMS.[17] Therefore, the

[8] *See, e.g.*, Del. Code Ann. tit. 6 sec. 7309(a)(8) (1996).

[9] H.R. Rep. No. 622, 104th Cong., 2d Sess., pt. 1, at 30 (1996) ("Legislative History"). As a result of this federal preemption of the state registration process, SRO listing standards have become all the more important to preserving the integrity of U.S financial markets and protecting investors.

[10] *See* Legislative History, *supra* note 9.

[11] *See* Petitions, *supra* note 3.

[12] The Commission notes that presently the CBOE only has one tier, or segment, for listing purposes.

[13] *See supra* note 5.

[14] The changes to the SmallCap listing standards referred to in the Kotel letter were recently approved by the Commission. *See* Securities Exchange Act Release No. 38961 (August 22, 1997) ("Nasdaq Listing Standards Order").

[15] The Commission also has reviewed each exchange's listing and maintenance standards for warrants, currency and index warrants, other securities, contingent value rights, equity linked notes, and unit investment trusts. *See* proposing release, *supra* note 4.

[16] For purposes of comparing the listing standards of the CBOE and Tier I of the PCX, Phlx and CHX, the Commission used the listing standards applicable to securities listed on the Amex.

[17] The proposing release contains a more detailed description of the comparison of these exchanges to the Named Markets. *See* proposing release, *supra note 4.*

VOL 63 ISS 13 JA 21 1998 UMI

Commission is adopting Rule 146(b), designating securities listed on these markets as "covered securities" for purposes of Section 18 of the Securities Act. With regard to the CHX, the Commission has determined not to include securities listed on Tier I of the Exchange at this time. Although the Exchange has modified its listing and maintenance standards as suggested, the Commission has concerns regarding the CHX's listing and maintenance procedures. The Commission will continue to review the CHX's listing program, including listing standards and operations, and may determine to include securities listed on CHX Tier I in the future.

With regard to the Phlx, the Commission concludes that the changes recently made by the Exchange to its Tier I listing standards [18] enable the Commission to make the substantially similar finding.[19] First, the Phlx amended Rule 803(e) to adopt additional listing standards for stock index warrants, currency warrants and currency index warrants (collectively "non-equity warrants"). New subsection (2) to Rule 803(e) requires that non-equity warrants have a term of between one and five years from the date of issuance. Rule 803(e)(3) imposes a minimum public distribution and market value requirement of 1,000,000 non-equity warrants with at least 400 public warrant holders and a minimum aggregate market value of $4,000,000. Finally, new subsection (9) to Rule 803(e) requires that non-equity warrants be cash-settled in U.S. dollars.[20]

Second, the Phlx increased the pre-tax income requirement for issuers of "other securities" in Rule 803(f)(2) from $100,000 in three of the four prior fiscal years to $750,000 in the issuer's last fiscal year or in two of its last three fiscal years.[21] Other securities are hybrid securities that have features common to both equity and debt securities, yet do not fit within the traditional definitions of either.

Third, the Phlx amended Rule 810(a), which contains the maintenance standards for Tier I securities, to add maintenance standards for bonds, notes and debentures. New subsection (5) to Rule 810(a) requires that debt securities maintain an aggregate market value or principal amount of bonds that are publicly held of $400,000 and that the issuer is able to meet its obligations in the listed debt securities. Also, for any debt security convertible into a listed equity security, the debt security will be reviewed when the underlying equity security is delisted and will be delisted when the underlying equity security is no longer subject to real-time trade reporting in the United States. In addition, if common stock is delisted for violation of any of the corporate governance criteria in Phlx Rules 812 through 899, the Exchange also will delist any listed debt security convertible into that common stock.[22]

In light of the above changes made by the Phlx to its Tier I listing standards, the Commission concludes that the Phlx's Tier I listing standards, when taken as a whole, are substantially similar to those of the Amex, and that securities listed on Tier I of the Phlx should be included in Rule 146(b) as covered securities. In addition, because Phlx Tier I securities include options, the Commission need not consider whether standardized options traded on the Phlx could be deemed covered securities separately from other Phlx Tier I securities, as suggested in the OCC letter.

With regard to the Kotel letter, while it does appear that the SmallCap initial listing standards for common stock are similar to those of the Amex, the Commission has determined not to include securities listed on SmallCap in Rule 146(b) at this time. First, the proposing release did not solicit comment on whether SmallCap listing standards are substantially similar to one of the Named Markets. Second, the Commission has identified several aspects of the SmallCap listing standards which appear to differ significantly from those of the Amex and the other primary markets.[23] Third, pursuant to the Nasdaq Listing Standards Order, the new maintenance standards do not become effective until six months after the Order was issued (February 22, 1998), and the existing maintenance standards for securities listed on SmallCap are considerably less stringent than those of any one of the Named Markets. Finally, the Commission notes that it has the authority to undertake a more extensive review of the SmallCap listing standards in the future and, if appropriate, propose an amendment to Rule 146(b) to include securities listed on SmallCap in the Rule.

With respect to a designated exchange maintaining its status under Rule 146(b), the Commission notes that Congress intended for the Commission to monitor the listing requirements of the regional exchanges, consistent with its supervisory authority under the Securities Exchange Act of 1934 ("Exchange Act"), to ensure the continued integrity of these markets and the protection of investors.[24] For example, if a regional exchange proposed to lower its listing standards for common stock, the Commission likely would consider this to be a substantive revision which may change the finding that the regional exchange's listing standards are substantially similar to those of the Named Markets.[25] Accordingly, in reviewing future proposed changes to SRO listing standards, the Commission will consider whether the proposed change(s) will require an amendment to Rule 146(b). In the event that the Commission determines that a proposed change in listing standards would require an amendment to Rule 146(b), and where the proposed rule change is subject to full notice and comment under Section 19(b) of the Exchange Act, the Commission may conclude that it is unnecessary to provide notice and comment for the corresponding amendment to this Rule.[26] Finally, the Commission notes that enforcement of an SRO's listing standards is subject to periodic inspections by Commission staff, as is enforcement of all SRO rules, and should the Commission find that an exchange designated in Rule 146(b) is not adequately enforcing its requirements for initial and continued listing, the Commission will take appropriate action to revoke that exchange's exemption.

[18] See Securities Exchange Act Release No. 39053 (September 11, 1997), 62 FR 49286 (September 19, 1997) ("Phlx Listing Standards Order").

[19] As noted above, the Commission stated in the proposing release that if the Phlx were to revise its Tier I listing standards in the areas where the Commission identified deficiencies prior to the adoption of the proposed Rule, the Commission likely would include securities listed on the Phlx in final Rule 146(b).

[20] Although the Commission did not identify the lack of a cash-settlement requirement as a deficiency in the Phlx's Tier I listing standards, the Phlx determined to codify its existing requirement that non-equity warrants be cash-settled in U.S. dollars. This requirement is identical to Section 106(d) of the Amex Company Guide.

[21] This provision is substantially similar to Section 107 and, by reference, Section 101(b) of the Amex Company Guide.

[22] These provisions are substantially similar to Section 1003(b)(iii) and (e) of the Amex Company Guide.

[23] Specifically, the minimum share price for preferred stock to be listed on SmallCap is $4 per share, while the minimum share price for initial inclusion of preferred shares on the Amex is $10. See Section 103(b) of the Amex Company Guide and NASD Rule 4310(c)(4). In addition, SmallCap does not have a minimum distribution requirement for preferred stock, while the Amex requires a minimum of 100,000 publicly held shares when the issuer of the preferred shares has common stock listed on the Amex or NYSE. See Amex Section 103(b). Lastly, warrants listed on SmallCap are required to have a minimum distribution of 100,000 warrants for initial inclusion, while Amex requires a minimum distribution of 1,000,000 warrants to 400 public holders or 500,000 warrants to 800 public holders. See Amex Section 105(b) and NASD Rule 4310(c)(9).

[24] See Legislative History, *supra* note 9.

[25] If, however, one of the Named Markets raised its listing standards with respect to a particular security, a conforming change by the exchanges designated in Rule 146(b) may not necessarily be required for two reasons. First, Section 18(b)(1)(B) requires that the regional exchanges' listing standards be substantially similar to only one of the Named Markets in order to qualify for the exemption. Second, a listing standard change made by one of the Named Markets should not force the exchanges designated in Rule 146(b) to conform their listing standards. Otherwise, a single Named Market would be, in effect, setting the listing standards for all the regional exchanges. If, however, all three Named Markets were to raise their listing standards, and the Commission believed that the change was significant enough so that failure to adopt the new standard rendered the exchanges designated in Rule 146(b) to have substantially inferior standards, then the Commission may require the latter exchanges to raise their standards in order to maintain their exemption under the Rule.

[26] Although the Administrative Procedure Act states that an agency must provide general notice of the proposed rulemaking and an opportunity for comment, these requirements do not apply if the agency for good cause, finds that those procedures are "impracticable, unnecessary, or contrary to the public interest." 5 U.S.C. 553(b)(B).

V. Conclusion

For the reasons discussed above, as supplemented by the Commission's detailed discussion in the proposing release, the Commission concludes that the listing standards of the CBOE, and Tier I of the PCX, and Phlx are substantially similar to those of the NYSE, Amex or Nasdaq/NMS. Accordingly, securities listed on these Exchanges should be deemed covered securities and entitled to an exemption from state blue sky provisions as set forth in Section 18(a) of the Securities Act.

The Commission concludes that the Rule offers potential benefits for investors. The Rule should facilitate listings on qualifying exchanges, or tiers or segments thereof, which should increase competition and enhance the overall liquidity of the U.S. securities markets. The Commission does not anticipate that the Rule would result in any costs for U.S. investors or others. As noted above, through the review of SRO listing standards pursuant to Section 19(b) of the Exchange Act, the Commission will be able to continue to ensure such listing standards are sufficient to protect investors. The Commission also concludes that Rule 146(b) should serve to reduce the cost of raising capital because it will streamline the registration process for issuers listing on the Exchanges designated in the Rule. Thus, the Commission has considered the Rule's impact on efficiency, competition and capital formation and concludes that it would promote these three objectives.[27] At the same time, Rule 146(b) does not undercut the state securities review of offerings because the listing standards of the CBOE and Tier I of the PCX, and Phlx are substantially similar to the Named Markets, which are already exempt from state registration. Finally, Rule 146(b) imposes no recordkeeping or compliance burdens, and merely provides a limited purpose exemption under the federal securities laws.

VI. Administrative Requirements

Pursuant to Section 605(b) of the Regulatory Flexibility Act, 5 U.S.C. 605(b), the Chairman of the Commission has certified that Rule 146(b) should not have a significant economic impact on a substantial number of small entities. This certification, including the reasons therefor, is attached to this release as Appendix A. The Paperwork Reduction Act does not apply because the proposed amendments do not impose recordkeeping or information collection requirements, or other collections of information which require the approval of the Office of Management and Budget under 44 U.S.C. 3501, et. seq.

VII. Statutory Basis

Rule 146(b) is being adopted pursuant to 15 U.S.C. 77r *et seq.*, particularly Section 18 of the Securities Act unless otherwise noted.

List of Subjects in 17 CFR Part 230

Securities.

Text of the Rule

For the reasons set forth in the preamble, Title 17, Chapter II of the *Code of Federal Regulations* is amended as follows:

PART 230—GENERAL RULES AND REGULATIONS, SECURITIES ACT OF 1933

1. The authority citation for Part 230 continues to read, in part, as follows:

Authority: 15 U.S.C. 77b, 77f, 77g, 77h, 77j, 77s, 77sss, 78c, 78d, 78*l*, 78m, 78n, 78o, 78w, 78*ll*(d), 78t, 80a–8, 80a–29, 80a–30, and 80a–37, unless otherwise noted.

* * * * *

2. Section 230.146 is amended by revising the section heading, redesignating the introductory text and paragraphs (a) and (b) as paragraph (a) introductory text and paragraphs (a)(1) and (a)(2), respectively, and adding paragraph (b) to read as follows:

§ 230.146 Rules under Section 18 of the Act.

* * * * *

[27] 15 U.S.C. 77b(b).

(b) *Covered securities for purposes of Section 18.* (1) For purposes of Section 18(b) of the Act (15 U.S.C. 77r), the Commission finds that the following national securities exchanges, or segments or tiers thereof, have listing standards that are substantially similar to those of the New York Stock Exchange ("NYSE"), the American Stock Exchange ("Amex"), or the National Market System of the Nasdaq Stock Market ("Nasdaq/NMS"), and that securities listed on such exchanges shall be deemed covered securities:

(i) Tier I of the Pacific Exchange, Incorporated;

(ii) Tier I of the Philadelphia Stock Exchange, Incorporated; and

(iii) The Chicago Board Options Exchange, Incorporated.

(2) The designation of securities in paragraphs (b)(1)(i) through (iii) of this section as covered securities is conditioned on such exchanges' listing standards (or segments or tiers thereof) continuing to be substantially similar to those of the NYSE, Amex, or Nasdaq/NMS.

By the Commission.

Dated: January 13, 1998.

Margaret H. McFarland,

Deputy Secretary.

Note: Appendix A to the Preamble will not appear in the Code of Federal Regulations.

Appendix A—Regulatory Flexibility Act Certification

I, Arthur Levitt, Jr., Chairman of the Securities and Exchange Commission, hereby certify, pursuant to 5 U.S.C. 605(b), that Rule 146(b) ("Rule") under the Securities Act of 1933 ("Securities Act"), which will designate securities listed on certain national securities exchanges, or tiers or segments thereof, as covered securities under Section 18 of the Securities Act, and therefore provide them with an exemption from state registration requirements, will not have a significant economic impact on a substantial number of small entities for the following reasons. Under the Securities Act, a small entity is defined as "an issuer whose total assets on the last day of its most recent fiscal year were $5,000,000 or less." Issuers of this size generally will not qualify for listing on the national securities exchanges, or tiers or segments thereof, designated in Rule 146(b). More specifically, both the Chicago Board Options Exchange, Incorporated and Tier I of the Pacific Exchange, Incorporated require issuers of common stock to have net worth of at least $4,000,000. To be listed on Tier I of the Philadelphia Stock Exchange, Incorporated issuers of common stock must have net tangible assets of at least $4,000,000. I do not believe that there are a substantial number of small entities which have total assets less than $5,000,000, yet a net worth or net tangible assets of at least $4,000,000. For example, none of the issuers of common stock listed exclusively on Tier I of the

VOL 63 ISS 13 JA 21 1998 UMI

Pacific Exchange have total assets of $5,000,000 or less. In addition, the proposed rule imposes no record-keeping or compliance burden, but merely exempts certain qualifying securities from state law registration requirements.

Dated: January 2, 1998.

Arthur Levitt, Jr.,

Chairman.

BILLING CODE 8015–01–P

DEPARTMENT OF TRANSPORTATION

Coast Guard

33 CFR Part 100

[CGD11–97–004]

RIN 2115–AE46

Special Local Regulation; Laughlin, Nevada

AGENCY: Coast Guard, DOT.

ACTION: Final Rule.

SUMMARY: The Coast Guard amends the table of events in 33 CFR 100.1102 by adding the Laughlin Aquamoto Sports Challenge and Expo being conducted in the waters of the Colorado River from Davis Dam south to Harrah's Hotel and Casino on the following dates: annually, commencing on the last Thursday of May every year, and lasting a total of 4 days, ending on Sunday. These regulations are necessary to provide for the safety of life, property, and navigation on the navigable waters of the United States during scheduled events.

EFFECTIVE DATE: May 28, 1998.

FOR FURTHER INFORMATION CONTACT: Lieutenant Mike A. Arguelles, Coast Guard Marine Safety Office San Diego; telephone number (619) 683–6484.

SUPPLEMENTARY INFORMATION:

Regulatory History

On March 27, 1997, the Coast Guard published a notice of proposed rulemaking (NPRM) for this regulation in the **Federal Register** (62 FR 14379). The comment period ended May 10, 1997. The Coast Guard received one letter commenting on the proposal. A public hearing was not requested and no hearing was held. The only change the Coast Guard has made to the language of this regulation since the publication of the NPRM is to specify a more certain date and time schedule for the annual Laughlin Aquamoto Sports Challenge and Expo.

Background and Purpose

The Laughlin Aquamoto Sports Challenge and Expo will consist of five various styles of watercraft racing. The races will take place, annually, over a four day period beginning on the last Thursday of May, and ending on Sunday. These regulations are necessary to provide for the safety of life, property, and navigation on the navigable waters of the United States during scheduled events. The race zone encompasses the Colorado River from the Davis Dam south to Harrah's Hotel and Casino. The race courses will be marked by vessels with signs, and both north and south boundaries of the race zone will have major signs to alert non-participants using the river. On the following days and times, the race zone will be in use by vessels competing in the event: (1) the first day of the event, the last Thursday of each May each year, from 3:00 PM PDT to 5:00 PM PDT, (2) the second day of the event, Friday, from 8:00 AM PDT to 2:00 PM PDT, and from 3:30 PM PDT to 6:00 PM PDT, (3) the third day of the event, Saturday, from 8:00 AM PDT to 1:30 PM PDT, and from 4:00 PM PDT to 5:00 PM PDT; and, (4) the fourth and final day of the event, Sunday, from 9:00 AM PDT to 1:30 PM PDT, from 3:00 PM PDT to 4:00 PD PDT, and from 6:00 PM PDT to 7:00 PM PDT. During these times the Colorado River from Davis Dam south to Harrah's Hotel and Casino will be closed with the exception of emergency vessels. No vessels other than participants or official patrol vessels will be allowed to enter this zone unless specifically cleared by or through an official patrol vessel. Once the zone is established, authorization to remain within the zone is subject to termination at any time.

The Patrol Commander may impose other restrictions within the zone if circumstances dictate. Restrictions will be tailored to impose the least impact on maritime interests yet provide the level of security deemed necessary to safely conduct the Aquamoto and Expo.

Discussion of Comments

The only comment received was from a local business that sought notice of the exact date of the event. The comment also expressed concern that closure of the area of the Colorado River specified in the NPRM for an entire Saturday afternoon in May or June might prejudice business; suggested that the river be open for unrestricted use on Saturday afternoon from 1 p.m. PDT until Sunday morning. The language of this Final Rule provides the public with more specific notice of the date and time schedule for the annual Laughlin Aquamoto Sports Challenge and Expo. It also alleviates the concern that the river not be closed for an entire Saturday afternoon, because on Saturday, the river will be open from 1:30 P.M. PDT to 4 P.M. PDT, and from 5 P.M. PDT on.

Regulatory Evaluation

This regulation is not a significant regulatory action under section 3(f) of Executive Order 12866 and does not require assessment of potential cost and benefits under section 6(a)(3) of that order. It has been exempted from review by the Office of Management and Budget under that Order.

It is not significant under the regulatory policies and procedures of the Department of Transportation (DOT) (44 FR 11040, February 26, 1979). The Coast Guard expects the economic impact of this regulation to be so minimal that a full Regulatory Evaluation under paragraph 10(e) of the regulatory policies and procedures of the Department of Transportation is unnecessary.

Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*), the Coast Guard must consider whether this rule will have a significant economic impact on a substantial number of small entities. "Small entities" may include small businesses and not-for-profit organizations that are not dominant in their fields and (2) governmental jurisdictions with populations less than 50,000. Because it expects the impact of this proposal to be so minimal, the Coast Guard certifies under section 605(b) of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) that this proposal, if adopted, will not have a substantial impact on a significant number of small entities.

Collection of Information

This rule contains no collection of information requirements under the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.).*

Federalism

The Coast Guard has analyzed this regulation under the principles and criteria in Executive Order 12612 and has determined that this rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

Environment

The Coast Guard considered the environmental impact and concluded that under paragraph 2.B.2 of Commandant Instruction M16475.1B as revised in 59 CFR 38654, July 29 1994 and 61 FR 13563, March 27, 1996, it will have no significant environmental impact and it is categorically excluded from further environmental documentation. A Categorical Exclusion Determination and environmental analysis checklist will be available for inspection and copying in the docket to be maintained at the address listed in **ADDRESSES.**

List of Subjects in 33 CFR Part 100

Marine safety, Navigation (water), Regattas and Marine parades.

Regulation

For the reasons set out in the preamble the Coast Guard proposes to amend 33 CFR Part 100, section 100.1102, Table I, as follows:

PART 100—[AMENDED]

1. The authority citation for Part 100 continues to read as follows:

Authority: 33 U.S.C. 1233; 49 CFR 1.46.

2. Section 100.1102, Table I is amended by adding an entry for the Laughlin Aquamoto Sports Challenge and Expo immediately following the entry for the Laughlin Classic to read as follows:

§ 100.102— Marine Events on the Colorado River, between Davis Dam (Bullhead City, Arizona) and Headgate Dam (Parker, Arizona).

BILLING CODE 4910–14–M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[MO 041–1041; FRL–5948–4]

Approval and Promulgation of Implementation Plans; State of Missouri

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The EPA is approving revisions to the Missouri State Implementation Plan (SIP) related to the regulation of emissions of particulate matter as fugitive dust. These revisions include the addition of a new fugitive dust rule which replaces four previous fugitive dust rules. The new fugitive dust rule provides a consistent and enforceable mechanism to help maintain compliance with the National Ambient Air Quality Standards (NAAQS) for particulate matter.

DATES: This rule is effective on February 20, 1998.

ADDRESSES: Copies of the documents relevant to this action are available for public inspection during normal business hours at the: Environmental Protection Agency, Air Planning and Development Branch, 726 Minnesota Avenue, Kansas City, Kansas 66101; and the EPA Air & Radiation Docket and Information Center, 401 M Street, SW., Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: Aaron J. Worstell at (913) 551–7787.

SUPPLEMENTARY INFORMATION:

I. Background and Purpose

A. Introduction

On August 15, 1997, the EPA proposed revisions to the Missouri SIP related to the regulation of fugitive particulate emissions (see 62 FR 43679). Today, the EPA is taking final action on those proposed SIP revisions and is responding to comments received during the public comment period.

Missouri originally adopted new rule 10 CSR 10–6.170 (the fugitive dust rule) on June 28, 1990. The new fugitive dust rule replaced four previous SIP-approved rules that were rescinded by the state on September 28, 1990 (effective date). The new fugitive dust rule was amended by Missouri and submitted to the EPA for SIP approval on November 20, 1996. The SIP revisions approved here, the incorporation of the new fugitive dust rule and rescission of the four previous rules, will reconcile the Missouri state regulations with the Federally approved SIP. In addition, the SIP revisions will strengthen the existing SIP by making the fugitive control requirements consistent throughout the state, by clarifying the actions which constitute prohibited emissions, and by clarifying the types of measures which must be implemented to minimize such emissions.

B. Response to Comments

On September 2, 1997, the EPA received comments from the Missouri AG Industry Council (MO–AG) on the proposed fugitive dust SIP revisions. Subsequently, the EPA received comments from the Missouri Limestone Producers Association (MLPA) on September 5, 1997, and additional comments from MO–AG on September 11, 1997. Many of the comments submitted from MO–AG and MLPA overlap and will be addressed together where appropriate.

Both commentors contend that the EPA has no authority to take final action on the fugitive dust SIP revisions in light of the pending appeal to the Missouri Air Conservation Commission (MACC). The appeal was requested on behalf of MLPA, the Missouri Concrete Association, and others, and is in regard to the Missouri Department of Natural Resources' (MDNR) request that the EPA approve 10 CSR 10–6.170 for incorporation into the SIP.

The EPA acknowledges that an appeal has been granted by the MACC in regard to inclusion of the fugitive dust rule in the Missouri SIP. However, this in no way stays the EPA's processing of the SIP revisions. The fugitive dust rule was submitted by the Director of the MDNR on February 24, 1997, pursuant to authority granted by the Missouri statutes and rule 10 CSR 10–1.010(2)(B)6. Moreover, Missouri has not withdrawn its request to include the fugitive dust rule in the SIP. Therefore, the EPA has determined that Missouri's submission meets the requirements of 40 CFR 51.103(a), relating to procedures for submission of plan revisions.

Additionally, the commentors dispute the EPA's statement that the fugitive dust rule will help maintain compliance with the PM_{10} NAAQS. The commentors assert that the EPA has failed to provide sufficient scientific evidence to support this claim, that it is contrary to assertions made by MDNR staff when the consolidated rule was originally adopted, that the fugitive dust rule is in fact a "nuisance rule," and that EPA entered into an "agreement" with the MDNR not to include the fugitive dust rule in the SIP. The EPA does not believe that any of the

VOL 63 ISS 13 JA 21 1998 UMI

commentors' contentions are an adequate basis, nor are they fully accurate, to disapprove the Missouri submission, as discussed below.

In regard to the scientific evidence supporting the regulation of fugitive dust as a means of reducing PM_{10} emissions and thereby contributing to efforts to maintain the NAAQS, it is well established that particulate matter size distribution for fugitive dust emissions typically includes a significant subset of particles with aerodynamic diameters in the range of 0 to 10 microns (i.e., particles meeting the definition of PM_{10}). This is evidenced by the particle size distributions provided in Appendix B of the EPA's Compilation of Air Pollution Emission Factors (AP–42), 5th ed. (1995). For example, when considering uncontrolled process fugitive emissions from material handling and processing of aggregate and unprocessed ore, Appendix B, Table B.2.2 of AP–42 indicates that the cumulative percent of particles with a particle diameter less than 10 microns is 50 percent. In addition, in AP–42 the emission factors and estimation methods provided for certain fugitive sources reinforce that fugitive dust is a significant source of PM_{10}. For example, particle size multipliers provided in the estimation methods for calculating fugitive PM_{10} emissions from unpaved roads (section 13.2.1) and aggregate handling and storage (section 13.2.2) also indicate that PM_{10} accounts for approximately 50 percent of all fugitive particulate emitted. These estimation methods are based on tests performed by a sound methodology at many randomly chosen facilities with a source population sufficient to minimize variability, and are therefore considered capable of providing an excellent estimation of emissions.

In light of the available technical information, the EPA has determined that control of fugitive dust emissions will assist in the protection of the PM_{10} NAAQS, and is an appropriate emission control for meeting applicable requirements of the Act (section 110(a)(2)(A)). The EPA has also determined that the Missouri rule meets the other applicable requirements of section 110 of the Act. Although one commentor referenced an assertion by an MDNR official from a public hearing held in 1990 indicating that, at least at that time, MDNR did not believe that the then-existing fugitive dust rule had direct relevance to section 110, the commentor did not provide any technical information indicating the basis for this assertion, and the EPA is not aware of a technical basis for it. In fact, when Missouri adopted revisions to the rule in 1996, MDNR specifically concluded that the Missouri rule helps to protect public welfare (21 MoReg 2015, col. 2, September 16, 1996), which is also the basis for the EPA's secondary PM_{10}, as explained below. Whatever the position might have been in 1990, Missouri now believes that the rule should be included in the SIP, and the available technical information clearly supports the benefit of fugitive dust controls in protecting the NAAQS. Therefore, the EPA does not have a basis under the Act to disapprove the state's submission, and is taking final action to approve it.

The commentors also assert that the fugitive dust rule should be treated as a nuisance rule. In fact, MO–AG specifically states that "the fugitive dust rule is a "nuisance rule" and not a NAAQS compliance rule." The term "nuisance rule" is often associated with rules such as odor rules that may not be considered to directly protect public health. However, a nuisance rule may in fact have a beneficial impact on public welfare. For example, the reduction of fugitive particulate matter may help to protect vegetation and to prevent damage to and deterioration of property. In this respect, the fugitive dust rule will help to maintain secondary PM_{10} NAAQS which is associated with public welfare. (See, section 302(h), which defines welfare effects, which secondary NAAQS are set to protect, to include effects on "damage to and deterioration of property" and effects on "personal comfort and well-being.") Thus, the mere fact that an air pollution control requirement may be characterized as a "nuisance rule" does not mean that the requirement is unrelated to protection of the NAAQS. In addition to the role of the fugitive dust rule in maintaining the secondary PM_{10} NAAQS, it also serves to protect the primary PM_{10} NAAQS. See the EPA's response to the previous comment.

Also, one commentor takes issue with the EPA's statement that "the impetus for the development of 10 CSR 10–6.170 was the need for a consistent, statewide rule that serves to protect the particulate matter NAAQS by limiting fugitive dust emissions." However, the rule was developed to replace four existing SIP rules that served just that function. These fugitive dust rules have been part of the Federally enforceable SIP since originally submitted in 1972 and have been revised as part of the SIP on a number of occasions. To remove these rules from the SIP, without replacing them with equivalent fugitive dust rule(s), would be considered a relaxation of the SIP under section 110, the state would then be required to demonstrate that the rules are not needed for maintenance of the standard. The state has chosen to retain the fugitive dust controls in the SIP. The EPA has no basis under the Act for rejecting the state's choice. The EPA did receive a letter from the Director of MDNR requesting that the EPA rescind four old fugitive dust rules from the SIP, but suggesting that by "prior agreement" with the EPA the rescinded rules not be replaced by 10 CSR 10–6.170. This letter was dated September 6, 1990, and is acknowledged in Part II of the proposed rulemaking published in the August 15, 1997, **Federal Register**. However, any determination to include the fugitive dust rule in the SIP is appropriately made in consideration of specific technical, economic, and environmental factors, and in relation to relevant statutory and regulatory requirements, and not on any informal agreement that may have existed between the EPA and MDNR. The MDNR has determined that the consolidated fugitive dust rule should be submitted as part of the SIP, and the EPA has no basis to reject the state's determination. Moreover, the commentor has not provided any support for the assertion that the purported "breach" of some agreement between the EPA and MDNR is detrimental to the public. In fact, as has been substantiated here, the inclusion of the rule in the SIP is to the public benefit since it helps to maintain compliance with the PM_{10} NAAQS and thereby protects the public health and welfare.

Although not specifically a concern relating to the SIP, the EPA also notes that the state determined that inclusion of the consolidated rule in the SIP would simplify the permitting process under Title V of the Act. This is accomplished by ensuring that the regulations adopted by the state and those maintained as part of the SIP are consistent, since both types of regulations would be required to be included in state operating permits. The state has determined that consolidation of the various fugitive dust rules and inclusion of all of the rules in the SIP will reduce the regulatory burden on the permitting authority and on regulated sources.

II. Final Action

In this document, the EPA takes final action to approve revisions to the Missouri SIP as submitted on September 25, 1990, and November 20, 1996 (with supplemental information submitted February 24, 1997). These revisions include the addition of new rule 10 CSR 10–6.170, Restriction of Particulate Matter to the Ambient Air Beyond the Premises of Origin, and the rescission of rules 10 CSR 10–2.050, Preventing Particulate Matter From Becoming Airborne (Kansas City); 10 CSR 10–3.070 Restriction of Particulate Matter From Becoming Airborne (Outstate); 10 CSR 10–4.050, Preventing Particulate Matter From Becoming Airborne (Springfield); and CSR 10–5.100, Preventing Particulate Matter From Becoming Airborne (St. Louis).

Nothing in this action should be construed as permitting or allowing or establishing a precedent for any future request for revision to any SIP. Each request for revision to the SIP shall be considered separately in light of specific technical, economic, and environmental factors, and in relation to relevant statutory and regulatory requirements.

III. Administrative Requirements

A. Executive Order 12866

The Office of Management and Budget has exempted this regulatory action from Executive Order 12866 review.

B. Regulatory Flexibility Act

SIP approvals under section 110 and subchapter I, Part D of the CAA do not create any new requirements but simply approve requirements that the state is already imposing. Therefore, because the Federal SIP approval does not impose any new requirements, the Administrator certifies that it does not have a significant impact on any small entities affected. Moreover, due to the nature of the Federal-state relationship under the CAA, preparation of a regulatory flexibility analysis would constitute Federal inquiry into the economic reasonableness of state action. The CAA forbids the EPA to base its actions concerning SIPs on such grounds (*Union Electric Co.* v. *U.S. E.P.A.*, 427 U.S. 246, 256–66 (S.Ct. 1976); 42 U.S.C. 7410(a)(2)).

C. Unfunded Mandates

Under section 202 of the Unfunded Mandates Reform Act of 1995 ("Unfunded Mandates Act"), signed into law on March 22, 1995, the EPA must prepare a budgetary impact statement to accompany any proposed or final rule that includes a Federal mandate that may result in estimated costs to state, local, or tribal governments in the aggregate; or to private sector, of $100 million or more. Under section 205, the EPA must select the most cost-effective and least burdensome alternative that achieves the objectives of the rule and is consistent with statutory requirements. Section 203 requires the EPA to establish a plan for informing and advising any small governments that may be significantly or uniquely impacted by the rule.

The EPA has determined that the approval action promulgated does not include a Federal mandate that may result in estimated costs of $100 million or more to either state, local, or tribal governments in the aggregate, or to the private sector. This Federal action approves preexisting requirements under state or local law, and imposes no new requirements. Accordingly, no additional costs to state, local, or tribal governments, or to the private sector, result from this action.

D. Submission to Congress and the General Accounting Office

Under 5 U.S.C. 801(a)(1)(A) as added by the Small Business Regulatory Enforcement Fairness Act of 1996, the EPA submitted a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the General Accounting Office prior to publication of this rule in today's **Federal Register**. This rule is not a "major rule" as defined by 5 U.S.C. 804(2).

E. Petitions for Judicial Review

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by March 23, 1998. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review, nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2)).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Particulate matter, Reporting and recordkeeping requirements.

Authority: 42 U.S.C. 7401–7671q.

Dated: December 15, 1997.

Dennis Grams,

Regional Administrator.

Part 52, chapter I, title 40 of the Code of Federal Regulations is amended as follows:

PART 52—[AMENDED]

1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart AA—Missouri

2. Section 52.1320 is amended by adding paragraph (c)(102) to read as follows:

§ 52.1320 Identification of plan.

* * * * *

(c) * * *

(102) Revised regulations for the control of fugitive particulate matter emissions were submitted by the Missouri Department of Natural Resources (MDNR) on September 25, 1990, and on November 20, 1996.

(i) Incorporation by reference.

(A) Regulation 10 CSR 10–6.170, entitled Restriction of Particulate Matter Beyond the Premises of Origin, effective November 30, 1990, as amended October 30, 1996.

(B) Rescission of regulation 10 CSR 10–2.050, entitled Preventing Particulate Matter From Becoming Airborne, effective September 28, 1990.

(C) Rescission of regulation 10 CSR 10–3.070, entitled Restriction of Particulate Matter From Becoming Airborne, effective September 28, 1990.

(D) Rescission of regulation 10 CSR 10–4.050, entitled Preventing Particulate Matter From Becoming Airborne, effective September 28, 1990.

(E) Rescission of regulation 10 CSR 10–5.100, entitled Preventing Particulate Matter From Becoming Airborne, effective on September 28, 1990.

(ii) Additional material.

(A) Letter from Missouri submitted on February 24, 1997, pertaining to the submission of supplemental documentation.

[FR Doc. 98–1354 Filed 1–20–98; 8:45 am]

BILLING CODE 6560–50–P

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 65

[Docket No. FEMA–7245]

Changes in Flood Elevation Determinations

AGENCY: Federal Emergency Management Agency, FEMA.

ACTION: Interim rule.

SUMMARY: This interim rule lists communities where modification of the base (1% annual chance) flood elevations is appropriate because of new scientific or technical data. New flood insurance premium rates will be calculated from the modified base flood

VOL 63 ISS 13 JA 21 1998 UMI

elevations for new buildings and their contents.

DATES: These modified base flood elevations are currently in effect on the dates listed in the table and revise the Flood Insurance Rate Map(s) (FIRMs) in effect prior to this determination for each listed community.

From the date of the second publication of these changes in a newspaper of local circulation, any person has ninety (90) days in which to request through the community that the Associate Director reconsider the changes. The modified elevations may be changed during the 90-day period.

ADDRESSES: The modified base flood elevations for each community are available for inspection at the office of the Chief Executive Officer of each community. The respective addresses are listed in the following table.

FOR FURTHER INFORMATION CONTACT: Frederick H. Sharrocks, Jr., Chief, Hazard Identification Branch, Mitigation Directorate, 500 C Street, SW., Washington, DC 20472, (202) 646–2796.

SUPPLEMENTARY INFORMATION: The modified base flood elevations are not listed for each community in this interim rule. However, the address of the Chief Executive Officer of the community where the modified base flood elevation determinations are available for inspection is provided.

Any request for reconsideration must be based upon knowledge of changed conditions, or upon new scientific or technical data.

The modifications are made pursuant to section 201 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.*, and with 44 CFR part 65.

For rating purposes, the currently effective community number is shown and must be used for all new policies and renewals.

The modified base flood elevations are the basis for the floodplain management measures that the community is required to either adopt or to show evidence of being already in effect in order to qualify or to remain qualified for participation in the National Flood Insurance Program.

These modified elevations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own, or pursuant to policies established by other Federal, state or regional entities.

The changes in base flood elevations are in accordance with 44 CFR 65.4.

National Environmental Policy Act

This rule is categorically excluded from the requirements of 44 CFR Part 10, Environmental Consideration. No environmental impact assessment has been prepared.

Regulatory Flexibility Act

The Associate Director, Mitigation Directorate, certifies that this rule is exempt from the requirements of the Regulatory Flexibility Act because modified base flood elevations are required by the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are required to maintain community eligibility in the National Flood Insurance Program. No regulatory flexibility analysis has been prepared.

Regulatory Classification. This interim rule is not a significant regulatory action under the criteria of section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

Executive Order 12612, Federalism

This rule involves no policies that have federalism implications under Executive Order 12612, Federalism, dated October 26, 1987.

Executive Order 12778, Civil Justice Reform

This rule meets the applicable standards of section 2(b)(2) of Executive Order 12778.

List of Subjects in 44 CFR Part 65

Flood insurance, Floodplains, Reporting and recordkeeping requirements. Accordingly, 44 CFR part 65 is amended to read as follows:

PART 65—[AMENDED]

1. The authority citation for part 65 continues to read as follows:

Authority: 42 U.S.C. 4001 et seq.; Reorganization Plan No. 3 of 1978, 3 CFR, 1978 Comp., p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp., p. 376.

§ 65.4 [Amended]

2. The tables published under the authority of § 65.4 are amended as follows:

State and county	Location	Dates and name of newspaper where notice was published	Chief executive officer of community	Effective date of modification	Community No.
Alabama: Lauderdale.	City of Florence	Oct. 8, 1997, Oct. 15, 1997, *Times Daily.*	The Honorable Eddie Frost, Mayor of the City of Florence, P.O. Box 98, Florence, Alabama 35631.	Jan. 13, 1998 ...	010140 C

BILLING CODE 6718–03–P

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 65

Changes in Flood Elevation Determinations

AGENCY: Federal Emergency Management Agency, FEMA.

ACTION: Final rule.

SUMMARY: Modified base (1% annual chance) flood elevations are finalized for the communities listed below. These modified elevations will be used to calculate flood insurance premium rates for new buildings and their contents.

EFFECTIVE DATES: The effective dates for these modified base flood elevations are indicated on the following table and revise the Flood Insurance Rate Map(s) (FIRMs) in effect for each listed community prior to this date.

ADDRESSES: The modified base flood elevations for each community are available for inspection at the office of the Chief Executive Officer of each community. The respective addresses are listed in the following table.

FOR FURTHER INFORMATION CONTACT: Frederick H. Sharrocks, Jr., Chief, Hazard Identification Branch, Mitigation Directorate, 500 C Street SW., Washington, DC 20472, (202) 646–2796.

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency makes the final determinations listed below of modified base flood elevations for each community listed. These modified elevations have been published in newspapers of local circulation and ninety (90) days have elapsed since that publication. The Associate Director has resolved any appeals resulting from this notification.

The modified base flood elevations are not listed for each community in this notice. However, this rule includes the address of the Chief Executive Officer of the community where the modified base flood elevation determinations are available for inspection.

The modifications are made pursuant to section 206 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.*, and with 44 CFR part 65.

For rating purposes, the currently effective community number is shown and must be used for all new policies and renewals.

The modified base flood elevations are the basis for the floodplain management measures that the community is required to either adopt or to show evidence of being already in effect in order to qualify or to remain qualified for participation in the National Flood Insurance Program.

These modified elevations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any

VOL 63 ISS 13 JA 21 1998 UMI

existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own, or pursuant to policies established by other Federal, state or regional entities.

These modified elevations are used to meet the floodplain management requirements of the NFIP and are also used to calculate the appropriate flood insurance premium rates for new buildings built after these elevations are made final, and for the contents in these buildings.

The changes in base flood elevations are in accordance with 44 CFR 65.4.

National Environmental Policy Act

This rule is categorically excluded from the requirements of 44 CFR Part 10, Environmental Consideration. No environmental impact assessment has been prepared.

Regulatory Flexibility Act

The Associate Director, Mitigation Directorate, certifies that this rule is exempt from the requirements of the Regulatory Flexibility Act because modified base flood elevations are required by the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are required to maintain community eligibility in the National Flood Insurance Program. No regulatory flexibility analysis has been prepared.

Regulatory Classification

This final rule is not a significant regulatory action under the criteria of section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

Executive Order 12612, Federalism

This rule involves no policies that have federalism implications under Executive Order 12612, Federalism, dated October 26, 1987.

Executive Order 12778, Civil Justice Reform

This rule meets the applicable standards of section 2(b)(2) of Executive Order 12778.

List of Subjects in 44 CFR Part 65

Flood insurance, Floodplains, Reporting and recordkeeping requirements.

Accordingly, 44 CFR part 65 is amended to read as follows:

PART 65—[AMENDED]

1. The authority citation for part 65 continues to read as follows:

Authority: 42 U.S.C. 4001 *et seq.*; Reorganization Plan No. 3 of 1978, 3 CFR, 1978 Comp., p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp., p. 376.

§ 65.4 [Amended]

2. The tables published under the authority of § 65.4 are amended as follows:

BILLING CODE 6718–03–P

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 67

Final Flood Elevation Determinations

AGENCY: Federal Emergency Management Agency (FEMA).

ACTION: Final rule.

SUMMARY: Base (1% annual chance) flood elevations and modified base flood elevations are made final for the communities listed below. The base flood elevations and modified base flood elevations are the basis for the floodplain management measures that each community is required either to adopt or to show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

EFFECTIVE DATES: The date of issuance of the Flood Insurance Rate Map (FIRM) showing base flood elevations and modified base flood elevations for each community. This date may be obtained by contacting the office where the maps are available for inspection as indicated on the table below.

ADDRESSES: The final base flood elevations for each community are available for inspection at the office of the Chief Executive Officer of each community. The respective addresses are listed in the table below.

FOR FURTHER INFORMATION CONTACT: Frederick H. Sharrocks, Jr., Chief, Hazard Identification Branch, Mitigation Directorate, 500 C Street SW., Washington, DC 20472, (202) 646–2796.

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency (FEMA or Agency) makes final determinations listed below of base flood elevations and modified base flood elevations for each community listed. The proposed base flood elevations and proposed modified base flood elevations were published in newspapers of local circulation and an opportunity for the community or individuals to appeal the proposed determinations to or through the community was provided for a period of ninety (90) days. The proposed base flood elevations and proposed modified base flood elevations were also published in the **Federal Register**.

This final rule is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR part 67.

The Agency has developed criteria for floodplain management in floodprone areas in accordance with 44 CFR part 60.

Interested lessees and owners of real property are encouraged to review the proof Flood Insurance Study and Flood Insurance Rate Map available at the address cited below for each community.

The base flood elevations and modified base flood elevations are made final in the communities listed below. Elevations at selected locations in each community are shown.

National Environmental Policy Act

This rule is categorically excluded from the requirements of 44 CFR Part 10, Environmental Consideration. No environmental impact assessment has been prepared.

Regulatory Flexibility Act

The Associate Director, Mitigation Directorate, certifies that this rule is exempt from the requirements of the Regulatory Flexibility Act because final or modified base flood elevations are required by the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and are required to establish and maintain community eligibility in the National Flood Insurance Program. No regulatory flexibility analysis has been prepared.

Regulatory Classification

This final rule is not a significant regulatory action under the criteria of section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735

Executive Order 12612, Federalism

This rule involves no policies that have federalism implications under Executive Order 12612, Federalism, dated October 26, 1987.

Executive Order 12778, Civil Justice Reform

This rule meets the applicable standards of section 2(b)(2) of Executive Order 12778.

List of Subjects in 44 CFR Part 67

Administrative practice and procedure, Flood insurance, Reporting and recordkeeping requirements.

Accordingly, 44 CFR part 67 is amended as follows:

PART 67—[AMENDED]

1. The authority citation for part 67 continues to read as follows:

Authority: 42 U.S.C. 4001 *et seq.*; Reorganization Plan No. 3 of 1978, 3 CFR, 1978 Comp., p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp., p. 376.

§ 67.11 [Amended]

2. The tables published under the authority of § 67.11 are amended as follows:

Source of flooding and location	#Depth in feet above ground. *Elevation in feet (NGVD)

Proposed Rules

Federal Register
Vol. 63, No. 13
Wednesday, January 21, 1998

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 930

[Docket No. FV97–930–6 PR]

Tart Cherries Grown in the States of Michigan, et al.; Final Free and Restricted Percentages for the 1997–98 Crop Year for Tart Cherries

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule.

SUMMARY: This proposal invites comments on the establishment of final free and restricted percentages for the 1997–98 crop year. The percentages are 55 percent free and 45 percent restricted. These percentages would establish the proportion of cherries from the 1997 crop which may be handled in normal commercial outlets and are intended to stabilize supplies and prices, and strengthen market conditions. This proposed rule would also establish the date by which restricted percentage obligations must be satisfied and a 30-day grace period. This rule was recommended by the Cherry Industry Administrative Board (Board), which locally administers the marketing order. The free and restricted percentages in this proposal would not apply to handlers in the districts of Southwest Michigan, Oregon, Pennsylvania, Washington and Wisconsin.

DATES: Comments must be received by February 5, 1998.

ADDRESSES: Interested persons are invited to submit written comments concerning this action. Comments must be sent in triplicate to the Docket Clerk, Fruit and Vegetable Division, AMS, USDA, room 2525–S, P.O. Box 96456, Washington, DC 20090–6456; Fax: (202) 720–5698. All comments should reference the docket number and the date and page number of this issue of the **Federal Register** and will be made available for public inspection in the Office of the Docket Clerk during regular business hours.

FOR FURTHER INFORMATION CONTACT: Patricia A. Petrella or Kenneth G. Johnson, Marketing Order Administration Branch, Fruit and Vegetable Division, AMS, USDA, room 2525–S, P.O. Box 96456, Washington, DC 20090–6456; telephone: (202) 720–2491. Small businesses may request information on compliance with this regulation by contacting: Jay Guerber, Marketing Order Administration Branch, Fruit and Vegetable Division, AMS, USDA, P.O. Box 96456, room 2525–S, Washington, DC 20090–6456; telephone: (202) 720–2491; Fax: (202) 720–5698.

SUPPLEMENTARY INFORMATION: This proposal is issued under marketing agreement and Order No. 930 (7 CFR part 930), regulating the handling of tart cherries produced in the States of Michigan, New York, Pennsylvania, Oregon, Utah, Washington, and Wisconsin, hereinafter referred to as the "order." The order is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the "Act."

The Department of Agriculture (USDA) is issuing this rule in conformance with Executive Order 12866.

This proposal has been reviewed under Executive Order 12988, Civil Justice Reform. Under the marketing order provisions now in effect, final free and restricted percentages may be established for tart cherries handled by handlers during the crop year. This rule establishes final free and restricted percentages for tart cherries for the 1997–98 crop year, July 1, 1997, through June 30, 1998. This rule would not preempt any State or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with the Secretary a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and requesting a modification of the order or to be exempt therefrom. Such handler is afforded the opportunity for a hearing on the petition. After the hearing, the Secretary would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction in equity to review the Secretary's ruling on the petition, provided an action is filed not later than 20 days after the date of the entry of the ruling.

The order prescribes procedures for computing an optimum supply and preliminary and final percentages that establish the amount of tart cherries that can be marketed throughout the season. Regulations setting free and restricted percentages apply to all handlers of tart cherries that are in the regulated districts. Tart cherries in the free percentage category may be marketed, while restricted percentage cherries must be held by handlers in a primary or secondary reserve, or be diverted in accordance with section 930.59. The regulated Districts for this season are: District one—Northern Michigan; District two—Central Michigan; District four—New York; and District seven—Utah. Districts three, five, six, eight and nine (Southwest Michigan, Oregon, Pennsylvania, Washington, and Wisconsin, respectively) would not be regulated for the 1997–98 season.

The order prescribes under section 930.52 that the districts to be regulated shall be those districts in which the average annual production of cherries over the prior three years has exceeded 15 million pounds. Districts not meeting the 15 million pound requirement would not be regulated. Therefore, for this season, handlers in the districts of Oregon, Pennsylvania, Washington, and Wisconsin would not be subject to volume regulation. In addition, Southwest Michigan handlers would not be subject to volume regulation this season because their estimated production fell below 50 percent of the average annual processed production in that district in the previous five years. Section 930.52(d) of the order provides that when this occurs that district would be exempt from any volume regulation if, in that year, a restricted percentage is established. Southwest Michigan's tart cherry production was subjected to a freeze during early bud development that reduced its crop yield for the 1997 season.

Section 930.50(a) describes procedures for computing an optimum

supply for each crop year. The Board must meet on or about July 1 to review sales data, inventory data, current crop forecasts and market conditions in order to establish an optimum supply level for the crop year. The optimum supply is calculated as 100 percent of the average sales of the prior three years to which shall be added a desirable carryout inventory not to exceed 20 million pounds or such other amount as the Board, with the approval of the Secretary may establish. The optimum supply represents the desirable volume of tart cherries that should be available for sale in the coming crop year. This optimum supply volume shall be announced by the Board in accordance with section 930.50(h).

The order also provides that on or about July 1 of each crop year, the Board should establish a preliminary free market tonnage percentage based on the optimum supply formula. To calculate such percentage the Board should deduct the carryin inventory to determine the tonnage requirements (adjusted to raw product equivalent—the actual weight of cherries handled to process into cherry products) for the current crop year which will be subtracted by the current year USDA crop forecast. If the resulting number is positive, this would represent the estimated over-production which would need to be the restricted percentage tonnage. This restricted percentage tonnage would then be divided by the sum of the USDA crop forecast for the regulated districts to obtain the percentages for the regulated districts. If the resulting quotient is 100 percent or more, the Board should establish a preliminary free market tonnage percentage of 100 percent. If the quotient is less than 100 percent, the Board should establish a preliminary restricted tonnage percentage equivalent to the quotient, rounded to the nearest whole number, with the compliment being the preliminary free tonnage percentage.

The Board met on June 26–27, 1997, and computed, for the 1997–98 crop year, an optimum supply of 247 million pounds. This number was calculated by using 270 million pounds for the average three year sales figure and subtracting 23 million pounds for exports that could have received diversion credit. The Board recommended that the carryout figure be zero pounds. The Board calculated preliminary free and restricted percentages as follows: The optimum supply was 247 million pounds; a 70 million pound carryin subtracted from that yielded a tonnage requirement for the current crop year of 177 million pounds. The tonnage requirement for the current crop year was subtracted from the USDA crop estimate of 242 million pounds, resulting in an estimated restricted percentage tonnage of 65 million pounds of tart cherries. The estimated restricted percentage tonnage was divided by the USDA crop estimate for the regulated districts of 192 million pounds which resulted in 66 percent free and 34 percent restricted for the 1997–98 season. The Board recommended these percentages by a 17 to 1 vote. No reason was provided for the one dissenting vote. The Board recommended the percentages and announced them to the industry as required by the order.

The preliminary percentages were based on the USDA production estimate and the following supply and demand information for the 1997–98 crop year:

	Millions of pounds
Optimum Supply Formula	
(1) Average sales of the prior three years	270
(2) Plus carryout	0
(3) Less amount for exports that would have received diversion credit	23
(4) Optimum Supply calculated by the Board at the June meeting	247
Preliminary Percentages	
(5) Less carryin as of July 1, 1997	70
(6) Tonnage requirement for current crop year	177
(7) USDA crop estimate	242
(8) Estimated restricted percentage tonnage (item 7 minus item 6)	65
(9) USDA crop estimate for regulated districts	192

Percentages	Free	Restricted
(10) Preliminary percentages (item 8 divided by item 9)×100	66	34

The Board may adjust the estimated crop production as the actual pack is realized and interim percentages may be announced between July 1 and September 15 of the crop year.

Section 930.50(d) of the order requires the Board to meet no later than September 15 to recommend final free and restricted percentages to the Secretary. The Board met on September 11–12, 1997, and recommended final free and restricted percentages of 55 and 45, respectively. At that time, the Board had available actual production amounts to review and made the necessary adjustments to the percentages. The Board used a revised optimum supply figure of 270 million pounds for its final percentage calculations because it was determined that exports of 23 million pounds should not have been deducted from the average sales figure.

A 70 million pound carryin was subtracted from the optimum supply, which yields a tonnage requirement for the current crop year of 200 million pounds. The actual production reported by the Board was 284 pounds, a 42 million pound increase from the USDA crop estimate. The increase in the crop was due to very favorable growing conditions in portions of the State of Michigan this season. Subtracted from the Board reported production is the tonnage required for the current crop year (200 million pounds) which results in an 84 million pound surplus. An adjustment for changed economic conditions of 23 million pounds was added to the surplus, pursuant to section 930.50(f). This adjustment is discussed later in this document. This yielded a total surplus of 107 million pounds of tart cherries. The free and restricted percentages would only apply to those handlers in regulated districts. Therefore, the percentages would be calculated by dividing the restricted tonnage volume by the regulated districts' production. The total surplus

VOL 63 ISS 13 JA 21 1998 UMI

of 107 million pounds is divided by the 239 million pound volume of tart cherries produced in the regulated districts. This results in a 45 percent restricted percentage and a corresponding 55 percent free percentage for those districts that would be regulated.

Section 930.51(d) provides that the Board, with the approval of the Secretary, shall develop rules and regulations which shall provide guidelines for handlers in complying with any restricted tonnage requirements, including but not limited to, a grace period of at least 30 days to segregate and appropriately document any tonnage they wish to place in the inventory reserve and to assemble any applicable diversion certificates. A previous rulemaking action published in the **Federal Register** on January 6, 1998, [63 FR 399], provided such guidelines. However, that action did not establish a date by which restricted tonnage requirements must be satisfied or a 30-day grace period. This rule proposes to require that restricted tonnage obligations must be met when this proposed rule becomes final with a 30-day grace period added to that date.

The final percentages are based on the Board's reported production figures and the following supply and demand information for the 1997–98 crop year:

	Millions of pounds
Optimum Supply Formula	
(1) Average sales of the prior three years	270
(2) Plus carryout	0
(3) Optimum Supply calculated by the Board at the September meeting	270
Final Percentages	
(4) Less carryin as of July 1, 1997	70
(5) Tonnage required current crop year	200
(6) Board reported production	284
(7) Surplus (item 6 minus item 5)	84
Modification to Marketing Policy	
(8) Economic adjustment to surplus	23
(9) Adjusted surplus (item 7 plus item 8)	107
(10) Production in regulated districts	239

Percentages	Free	Restricted
(11) Final Percentages (item 9 divided by item 10)×100	55	45

As previously mentioned, the Board had made an earlier recommendation to modify the optimum supply formula by defining average sales to not include exports that were granted diversion credit. However, it was determined that exports should not have been subtracted from the average sales figure. The Board thus recommended at its September meeting that the marketing policy be modified by 23 million pounds due to changes in economic conditions as provided under section 930.50(e)(5) and (7) and (f).

By recommending the 23 million pound modification, the Board believes that it will provide stability to the marketplace and the industry will be in a better situation for future years since new markets will have been developed. Board members discussed at that meeting that, if this adjustment is not made, growers, due to an abundant supply of available tart cherries, could be paid less than their production costs, because handlers could suffer financial losses. Handlers might have to default or renegotiate contracts with buyers due to additional cherries being available on the domestic market, which could have a depressing impact on prices received for all tart cherries. These costs would likely be passed on to growers. In addition, the value of cherries already in inventory could be depressed by 20 to 50 percent due to a 23 million pound increase to an already abundant supply of available cherries, a result inconsistent with the intent of the order.

The changes in economic conditions that caused the Board to modify its marketing policy are as follows: (1) the determination that export sales could not be subtracted from the optimum supply formula calculation was made late in the season; (2) handlers had made marketing plans, sales and sales commitments (including exports) based on the Board's recommendations made in March and June; and (3) prices received for tart cherries and tart cherry products would be severely impacted by an additional large volume of cherries being made available to the market when there is already an abundant supply of cherries.

USDA's "Guidelines for Fruit, Vegetable, and Specialty Crop Marketing Orders" provide that 110 percent of recent years' sales should be made available to primary markets each season before recommendations for volume regulation are approved. This goal would be met by the establishment of a final percentage which releases 100 percent of the optimum supply and the additional release of tart cherries provided under section 930.50(g). This release of tonnage, equal to 10 percent of the average sales of the prior three years sales, is made available to handlers each season. The Board will make such cherries available to handlers for one or more weeks during the crop year. Handlers can decide how much of the 10 percent release they would like to receive during such releases. Once released, such cherries are released for free use by such handler. Approximately 27 million pounds should be made available to handlers this season in accordance with USDA Guidelines. This release would be made available to every handler and released to such handler in proportion to its percentage of the total regulated crop handled. If such handler does not take such handler's proportionate amount, such amount shall remain in the inventory reserve.

The Regulatory Flexibility Act and Effects on Small Businesses

The Agricultural Marketing Service (AMS) has considered the economic impact of this action on small entities and has prepared this initial regulatory flexibility analysis. The Regulatory Flexibility Act (RFA) would allow AMS to certify that regulations do not have a significant economic impact on a substantial number of small entities.

However, as a matter of general policy, AMS' Fruit and Vegetable Programs (Programs) no longer opt for such certification, but rather perform regulatory flexibility analyses for any rulemaking that would generate the interest of a significant number of small entities. Performing such analyses shifts the Programs' efforts from determining whether regulatory flexibility analyses are required to the consideration of regulatory options and economic or regulatory impacts.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

There are approximately 40 handlers of tart cherries who are subject to regulation under the tart cherry marketing order and approximately 1,220 producers of tart cherries in the regulated area. Small agricultural service firms, which includes handlers, have been defined by the Small Business Administration (13 CFR 121.601) as those having annual receipts of less than $5,000,000, and small agricultural producers are defined as those having annual receipts of less than $500,000.

Marketing order board and subcommittee meetings are widely publicized in advance and are held in a location central to the production area. The meetings are open to all industry members and entities (including small business entities) and other interested persons—who are encouraged to participate in the deliberations and voice their opinions on topics under discussion. Thus, Board recommendations usually represent the interests of both small and large business entities in the industry.

The principal demand for tart cherries is in the form of processed products. Tart cherries are dried, frozen, canned, juiced and pureed. During the period 1993/94 through 1996/97, approximately 94 percent of the U.S. tart cherry crop, or 285.7 million pounds, was processed annually. Of the 285.7 million pounds of tart cherries processed, 63 percent was frozen, 32 percent canned and 3 percent utilized for juice. The remaining 2 percent was dried or assembled into juice packs.

Based on National Agricultural Statistics Service data, acreage in the United States devoted to tart cherry production has been trending downward since the 1991/92 season. In the ten-year period, 1986/87 through 1996/97, tart cherry area decreased from 48,180 acres, to less than 42,000 acres. Approximately 78 percent of domestic tart cherry acreage is located in four States: Michigan, New York, Utah and Wisconsin. Michigan leads the nation in tart cherry acreage with 65 percent of the total. Michigan produces about 72 percent of the U.S. tart cherry crop each year. In 1996/97, tart cherry acreage in Michigan was down 2,700 acres, to 27,300.

In crop years 1986 through 1993, tart cherry production ranged from a high of 359 million pounds in 1987 to a low of 189.9 million pounds in 1991. The price per pound to tart cherry growers ranged from a low of 7.3 cents in 1987 to a high of 46.4 cents in 1991. These problems of wide supply and price fluctuation in the tart cherry industry are national in scope and impact. Growers testified during the order promulgation process that the average prices of 12 to 17 cents per pound which they received during this period did not come close to covering the costs of production for the vast majority of tart cherry growers. They also testified that production costs for most growers range between 20 and 22 cents per pound, which is well above average prices received.

As previously stated, this is the first year of operation for this marketing order. The industry demonstrated a need for such order during the order promulgation process based on the argument that large variations in annual tart cherry supplies and prices tend to lead to disorderly marketing. As a result of these fluctuations in supplies and prices, growers realize a smaller return for their crop. Therefore, the industry elected the establishment of a volume control marketing order to even out the wide variations in supply and thereby improve returns to growers. During the promulgation process, proponents testified that small growers and processors would have the most to gain from implementation of a marketing order because many such growers and handlers have been going out of business over most of the last eight years due to low tart cherry prices. They also testified that, since an order would help increase grower returns, this should increase the buffer between business success and failure because small growers and handlers tend to be less capitalized than larger growers and handlers.

In discussing the possibility of marketing percentages for the 1997–98 crop year, the Board considered: (1) The estimated and actual total production of tart cherries; (2) the estimated and actual size of the crop to be handled; (3) the expected and actual general quality of such cherry production; (4) the expected and actual carryover as of July 1 of canned and frozen cherries and other cherry products; (5) the expected demand conditions for cherries in different market segments; (6) supplies of competing commodities; (7) an analysis of economic factors having a bearing on the marketing of cherries; (8) the estimated tonnage held by handlers in primary or secondary inventory reserves; and (9) any estimated release of primary or secondary inventory reserve cherries during the crop year.

The Board's review of these factors resulted in the computation and announcement in July 1997 of preliminary free and restricted percentages, and subsequent recommendation of interim and final percentages at its September meeting. At its September 1997 meeting, the Board recommended that the interim percentages and final percentages (55 percent free and 45 percent restricted) be the same percentages.

The Board considered the fact that the demand for tart cherries is inelastic at high and low levels of production. At the extremes, various factors become operational. The promulgation record stated that when crops are very low there is limited but sufficient exclusive demand for cherries that can cause processor prices to double and grower prices to triple. In the event of large crops, there seems to be no price low enough to expand tart cherry sales in the marketplace sufficient to market the crops. This year the crop has been a large one.

The Board discussed alternatives to the volume recommendation including not having volume regulation this season. Board members stated that no volume regulation would be detrimental to the tart cherry industry. Returns to growers would not even cover their production costs for this season causing some to go out of business.

The Board also discussed not granting exemptions, and diversion credit for such exemptions, for exports to eligible countries (including juice and juice concentrate), other exempt uses, and charitable donations. However, the Board felt this would not be in the best interest of the industry or the public. The Board expressed that not allowing the export and other exemptions would have a detrimental effect on the market this season if free and restricted percentages are imposed. Without such exemptions and diversion credits for export sales, new market development and other specified uses, about 50

VOL 63 ISS 13 JA 21 1998 UMI

million pounds of cherries would not be removed from the domestic market this season, depressing grower returns for all cherries. The marketing order was designed to increase grower returns by stabilizing supplies with demand as well as stabilizing prices and creating a more orderly and predictable marketing environment. Expanding markets and developing new products is key to meeting this marketing order's goals.

Not granting exemptions and diversion credit for exports to countries other than Canada, Mexico, and Japan was also discussed at Board meetings. However, the Board expressed that this recommendation is very important to creating stable conditions in the export marketplace this season and would encourage future market growth. The Board further stated that such action will improve returns to growers because of the tremendous growth in the export market this season. Exemptions and diversion credit have been addressed in other rulemaking actions.

As mentioned earlier, USDA's "Guidelines for Fruit, Vegetable, and Specialty Crop Marketing Orders" specify that 110 percent of recent years' sales should be made available to primary markets each season before recommendations for volume regulation are approved. The quantity available under this rule is 110 percent of the quantity shipped in the prior three years.

The free and restricted percentages proposed to be established by this rule release the optimum supply and apply uniformly to all regulated handlers in the industry, regardless of size. There are no known additional costs incurred by small handlers that are not incurred by large handlers. The stabilizing effects of the percentages impact all handlers positively by helping them maintain and expand markets, despite seasonal supply fluctuations. Likewise, price stability positively impacts all producers by allowing them to better anticipate the revenues their tart cherries will generate.

USDA has not identified any relevant Federal rules that duplicate, overlap, or conflict with this proposed regulation.

While the level of benefits of this rulemaking are difficult to quantify, the stabilizing effects of the volume regulations impact both small and large handlers positively by helping them maintain markets even though tart cherry supplies fluctuate widely from season to season.

Interested persons are invited to submit information on the regulatory and informational impacts of this action on small businesses.

Paperwork Reduction

In compliance with Office of Management and Budget (OMB) regulations (5 CFR part 1320) which implement the Paperwork Reduction Act of 1995 (Pub. L. 104–13), the information collection and recordkeeping requirements have been previously approved by OMB and the assigned OMB Number 0581–0177.

There are some reporting, recordkeeping and other compliance requirements under the marketing order. The reporting and recordkeeping burdens are necessary for compliance purposes and for developing statistical data for maintenance of the program. The forms related to handler diversion and handlers meeting restricted percentage obligations (*i.e.*, Inventory Reserve Summary, Cherries Acquired From Producers, Handler Reserve Plan and Final Pack Report, and Inventory Location Report) have received approval by OMB. The forms require information which is readily available from handler records and which can be provided without data processing equipment or trained statistical staff. It was anticipated that as many as 45 handlers might be regulated if volume regulations are established. Many reports are submitted a single time each season, while some are submitted more frequently. In addition, the bulk of the information handlers must report is obtained during the normal course of their business operations. It would take handlers approximately 15 minutes per report to complete for a total of 60 minutes per handler and approximately 2,700 minutes annually for the estimated 45 handlers. As with other, similar marketing order programs, reports and forms are periodically studied to reduce or eliminate duplicate information collection burdens by industry and public sector agencies. This proposed rule does not change those requirements.

A 15-day comment period is provided to allow interested persons to respond to this proposal. Fifteen days is deemed appropriate because this rule needs to be in place as soon as possible since handlers are currently marketing 1997–98 crop tart cherries and this action should be taken promptly to achieve the intended purpose of making the optimum supply quantity computed by the Board available to handlers. All written comments timely received will be considered before a final determination is made on this matter.

List of Subjects in 7 CFR Part 930

Marketing agreements, Reporting and recordkeeping requirements, Tart cherries.

For the reasons set forth in the preamble, 7 CFR part 930 is proposed to be amended as follows:

PART 930—TART CHERRIES GROWN IN THE STATES OF MICHIGAN, NEW YORK, PENNSYLVANIA, OREGON, UTAH, WASHINGTON, AND WISCONSIN

1. The authority citation for 7 CFR part 930 continues to read as follows:

Authority: 7 U.S.C. 601–674.

2. A new Subpart—Supplementary Regulations consisting of § 930.250 is added to read as follows:

Note: This subpart will consist of handling regulations which will not appear in the annual Code of Federal Regulations.

Subpart—Supplementary Regulations

§ 930.250 Final free and restricted percentages for the 1997–98 crop year.

The final percentages for tart cherries handled by handlers in volume regulated districts during the crop year beginning on July 1, 1997, which shall be free and restricted, respectively, are designated as follows: Free percentage, 55 percent and restricted percentage, 45 percent. Restricted percentage obligations must be satisfied on or before the effective date of this rule. A grace period of 30 days will be allowed for handlers to segregate and appropriately document any tonnage they wish to place in the inventory reserve and to assemble any applicable diversion certificates.

Dated: January 15, 1998.

Robert C. Keeney,

Deputy Administrator, Fruit and Vegetable Programs.

BILLING CODE 3410–02–P

NUCLEAR REGULATORY COMMISSION

10 CFR Part 50

[Docket No. PRM–50–63A]

Peter G. Crane; Receipt of an Amended Petition for Rulemaking, Extension of Comment Period

AGENCY: Nuclear Regulatory Commission.

ACTION: Amended petition for rulemaking: extension of comment period.

SUMMARY: On December 17, 1997 (62 FR 66038), the Nuclear Regulatory Commission published a notice of receipt of an amended petition for rulemaking filed by Peter G. Crane and requested public comment on the amended petition. In the amended petition for rulemaking, the petitioner seeks to amend NRC's emergency planning regulations to require consideration of sheltering, evacuation, and the prophylactic use of potassium iodide for the general public in developing a range of emergency planning protective actions. In addition, the petitioner has filed supplemental information in support of his amended petition which is available in the NRC Public Document Room. The comment period on the amended petition was to have expired on January 16, 1998. In response to several requests, the NRC has decided to extend the comment period for this action.

DATES: The comment period has been extended and now expires on February 17, 1998. Comments received after this date will be considered if it is practical to do so, but assurance of consideration cannot be given except to those comments received on or before this date.

ADDRESSES: Submit comments to: Secretary, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555–0001, Attention: Rulemakings and Adjudications Staff.

Deliver comments to 11555 Rockville Pike, Rockville, Maryland, between 7:30 a.m. and 4:15 p.m. on Federal workdays.

You may also provide comments via the NRC's interactive rulemaking website through the NRC home page (http://www.nrc.gov). This site provides the availability to upload comments as files (any format), if your web browser supports that function. For information about the interactive rulemaking website, contact Ms. Carol Gallagher, 301–415–5905; E-mail CAG@nrc.gov.

For a copy of the amended petition, write: Rules and Directives Branch, Division of Administrative Services, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555–0001. A copy of the amended petition and other documentation filed by the petitioner are also available for public inspection, and copying for a fee, in the NRC Public Document Room, 2120 L Street NW (Lower Level), Washington, D.C.

FOR FURTHER INFORMATION CONTACT: Michael Jamgochian, Office of Nuclear Regulatory Research, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555–0001, telephone: 301–415–6534, E-mail: MTJ1@nrc.gov; or Michael T. Lesar, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555–0001, telephone: 301–415–7163 or Toll Free: 1–800–368–5642, E-mail: MTL@nrc.gov.

For the Nuclear Regulatory Commission.

Dated at Rockville, Maryland, this 14th day of January, 1998.

Annette Vietti-Cook,

Acting Secretary of the Commission.

[FR Doc. 98–1379 Filed 1–20–98; 8:45 am]

BILLING CODE 7590–01–P

DEPARTMENT OF ENERGY

Office of Energy Efficiency and Renewable Energy

10 CFR Part 430

Energy Efficiency Test Procedures for Distribution Transformers

[Docket Number EE–DET–97–550]

RIN 1904–AA85

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Notice of public workshop.

SUMMARY: The Department of Energy (DOE) will hold an informal public workshop to discuss issues and gather information related to test procedures for electric distribution transformers. All persons are hereby given notice of the opportunity to attend this public workshop and to submit written comments.

DATES: The public workshop will be held on Tuesday, February 10, 1998, from 9 a.m. to 4 p.m.

ADDRESSES: The workshop will be held at the U.S. Department of Energy, Forrestal Building, Room 1E–245, 1000 Independence Avenue, SW, Washington, DC 20585.

Written comments are welcome, especially following the workshop. Please submit 10 copies (no faxes) to: Ms. Kathi Epping, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, "Energy Conservation Program for Consumer Products: Test Procedures for Distribution Transformers, Docket No. EE–DET–97–550," EE–43, 1000 Independence Avenue, SW, Washington, DC 20585–0121. Telephone: (202) 586–7425; Telefax: (202) 586–4617.

Copies of the transcript of the public workshop, public comments received, and this notice may be read (or copied) at the Freedom of Information Reading Room, U.S. Department of Energy, Forrestal Building, Room 1E–190, 1000 Independence Avenue, SW, Washington, DC 20585, (202) 586–7574, between the hours of 9:00 a.m. and 4:00 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Kathi Epping, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, EE–43, 1000 Independence Avenue, SW, Washington, DC 20585–0121, (202) 586–7425, email: Kathi.Epping@hq.doe.gov, or Edward Levy, Esq., U.S. Department of Energy, Office of General Counsel, GC–72, 1000 Independence Avenue, SW, Washington, DC 20585, (202) 586–9507, email: Edward.Levy@hq.doe.gov.

SUPPLEMENTARY INFORMATION: On October 22, 1997, the Secretary determined, based on the best information currently available, that energy conservation standards for electric distribution transformers are technologically feasible, economically justified, and would result in a significant energy savings. This determination initiated the process of establishing, by notice and comment rulemaking, test procedures and energy conservation standards for this product.

The Department of Energy is drafting a proposed rule to implement the provisions of the Energy Policy and Conservation Act, 42 U.S.C. 6317, for test procedures for distribution transformers. However, several issues have been raised. The purpose of the public workshop is to discuss the following issues for developing the notice of proposed rulemaking:

a. Adoption of national and international consensus standards in the test procedures for determining energy efficiency of distribution transformers;

b. Burden imposed on industry, especially on manufacturers, by additional testing and data processing;

c. The definition of "basic model" for distribution transformers;

d. Sampling plan for units to be tested;

e. Selection of a measure of energy consumption for distribution transformers;

f. Selecting reference temperatures—the reference temperatures in the consensus standards lack uniformity;

g. Requirement for applying corrections to measurement data of both liquid-immersed and dry-types of transformers; and

h. Requirement for quality assurance in testing.

The Department has prepared a paper entitled "Issues Paper for the Distribution Transformers Test Procedures Workshop on February 10, 1998" that explains and discusses these

VOL 63 ISS 13 JA 21 1998 UMI

issues in greater detail. For many of the issues, the paper sets forth approaches that the Department is considering and may propose in the notice of proposed rulemaking (NOPR). In addition, the National Institute of Standards and Technology (NIST) has prepared a draft set of test procedures for transformers, and the Department is considering these as well in preparing the NOPR. Copies of the issues paper and the NIST draft are available upon request.

The Department is particularly interested in receiving at the workshop comments and views of interested parties concerning (1) the above-listed issues, (2) the approaches the Department is considering for addressing these issues, (3) the NIST draft of test procedures, and (4) possible alternatives to the approaches the Department is considering and to the provisions in NIST's draft test procedures. The Department encourages those who wish to participate in the workshop to obtain the issue paper and the NIST draft, and to make presentations that address their contents. Workshop participants need not limit their statements to those topics, however. The Department is interested in receiving views concerning other issues that participants believe would affect the content of distribution transformer test procedures.

The meeting will be conducted in an informal, conference style. A court reporter will be present to record the minutes of the meeting. There shall be no discussion of proprietary information, costs or prices, market shares, or other commercial matters regulated by antitrust law. After the meeting and a period for written statements, the Department will consider the views presented in formulating a Notice of Proposed Rulemaking regarding energy efficiency test procedures for distribution transformers.

If you would like to participate in the workshop, to receive workshop materials, or to be added to the DOE mailing list to receive future notices and information regarding distribution transformers, please contact Ms. Brenda Edwards-Jones at (202) 586–2945.

Issued in Washington, DC, on January 14, 1998.

Dan W. Reicher,

Assistant Secretary for Energy Efficiency and Renewable Energy.

BILLING CODE 6450–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 97–CE–127–AD]

RIN 2120–AA64

Airworthiness Directives; Stemme GmbH & Co. KG Models S10 and S10–V Sailplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes to adopt a new airworthiness directive (AD) that would apply to certain Stemme GmbH & Co. KG (Stemme) Models S10 and S10–V sailplanes. The proposed AD would require replacing the horizontal stabilizer rear fittings with parts of improved design. The proposed AD is the result of mandatory continuing airworthiness information (MCAI) issued by the airworthiness authority for Germany. The actions specified by the proposed AD are intended to prevent structural failure of the horizontal stabilizer caused by cracked rear fittings, which could result in reduced sailplane controllability.

DATES: Comments must be received on or before February 23, 1998.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Central Region, Office of the Regional Counsel, Attention: Rules Docket No. 97–CE–127–AD, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106. Comments may be inspected at this location between 8 a.m. and 4 p.m., Monday through Friday, holidays excepted.

Service information that applies to the proposed AD may be obtained from Stemme GmbH & Co. KG, Gustav-Meyer-Allee 25, D–13355 Berlin, Germany; telephone: 49.33.41.31.11.70; facsimile: 49.33.41.31.11.73. This information also may be examined at the Rules Docket at the address above.

FOR FURTHER INFORMATION CONTACT: Mr. Mike Kiesov, Aerospace Engineer, Small Airplane Directorate, Aircraft Certification Service, FAA, 1201 Walnut, suite 900, Kansas City, Missouri 64106; telephone (816) 426–6934; facsimile (816) 426–2169.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications should identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report that summarizes each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket No. 97–CE–127–AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, Central Region, Office of the Regional Counsel, Attention: Rules Docket No. 97–CE–127–AD, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106.

Discussion

The Luftfahrt-Bundesamt (LBA), which is the airworthiness authority for Germany, notified the FAA that an unsafe condition may exist on certain Stemme S10 and S10–V sailplanes. The LBA reports that operational loads are causing internal stress on the welds of the rear fitting of the horizontal stabilizer of the above-referenced sailplanes.

This condition, if not detected and corrected, could result in failure of the horizontal stabilizer with possible reduced sailplane controllability.

Relevant Service Information

Stemme has issued Service Bulletin No. A31–10–022, dated August 16, 1996, which specifies procedures for inspecting the horizontal stabilizer rear fittings for cracks and replacing any cracked fittings with parts of improved design obtained from Stemme; and also specifies revising the maintenance manual.

The LBA classified this service bulletin as mandatory and issued German AD 96–300, effective October 24, 1996, in order to assure the continued airworthiness of these sailplanes in Germany.

The FAA's Determination

This sailplane model is manufactured in Germany and is type certificated for operation in the United States under the provisions of section 21.29 of the Federal Aviation Regulations (14 CFR 21.29) and the applicable bilateral airworthiness agreement. Pursuant to this bilateral airworthiness agreement, the LBA has kept the FAA informed of the situation described above.

The FAA has examined the findings of the LBA; reviewed all available information, including the service information referenced above; and determined that AD action is necessary for products of this type design that are certificated for operation in the United States.

Explanation of the Provisions of the Proposed AD

Since an unsafe condition has been identified that is likely to exist or develop in other Stemme Model S10 and S10–V sailplanes of the same type design registered in the United States, the FAA is proposing AD action. The proposed AD would require replacing the horizontal stabilizer rear fittings with parts of improved design. Accomplishment of the proposed installation would be in accordance with the service information previously referenced.

Differences Between the Service Bulletin, German AD, and This Proposed AD

Stemme Service Bulletin No. A31–10–022, dated August 16, 1996, and German AD No. 96–300, effective October 24, 1996, both require inspecting the horizontal stabilizer fittings for cracks and replacing the fittings if found cracked. Stemme Service Bulletin No. A31–10–022 specifies changing the maintenance manual to include repetitive inspections of these fittings.

The FAA's policy is to provide corrective action that will eliminate the need for repetitive inspections. The FAA has determined that long-term operational safety will be better assured by design changes that remove the source of the problem, rather than by repetitive inspections or other special procedures.

Because replacing the horizontal stabilizer rear fittings with parts of improved design on the affected sailplanes eliminates the need for repetitive inspections, the proposed AD differs from the service bulletin and German AD in that it would mandate replacement of the horizontal stabilizer rear fittings.

Cost Impact

The FAA estimates that 9 sailplanes in the U.S. registry would be affected by the proposed AD, that it would take approximately 3 workhours per sailplane to accomplish the proposed replacement, and that the average labor rate is approximately $60 an hour. Parts cost approximately $200 per sailplane. Based on these figures, the total cost impact of the proposed AD on U.S. operators is estimated to be $3,420.

Regulatory Impact

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action has been placed in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding a new airworthiness directive (AD) to read as follows:

Stemme GmbH & Co. KG: Docket No. 97–CE–127–AD.

Applicability: The following sailplane models and serial numbers, certificated in any category:

Models	Serial Nos.
S10	10–03 through 10–63.
S10V	14–002 through 14–026 and transformed S10V airplanes with serial numbers of 14–012M through 14–063M.

Note 1: This AD applies to each sailplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For sailplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required within the next 25 hours time-in-service (TIS) after the effective date of this AD, unless already accomplished.

To prevent structural failure of the horizontal stabilizer caused by cracked rear fittings, which could result in reduced sailplane controllability, accomplish the following:

(a) Replace the horizontal stabilizer rear fittings with improved design fittings in accordance with the instructions in Stemme Service Bulletin No. A31–10–022, dated August 16, 1996.

(b) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the sailplane to a location where the requirements of this AD can be accomplished.

(c) An alternative method of compliance or adjustment of the compliance time that provides an equivalent level of safety may be approved by the Manager, Small Airplane Directorate, FAA, 1201 Walnut, suite 900, Kansas City, Missouri 64106. The request shall be forwarded through an appropriate FAA Maintenance Inspector, who may add comments and then send it to the Manager, Small Airplane Directorate.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Small Airplane Directorate.

(d) Questions or technical information related to Stemme Service Bulletin No. A31–10–022 dated August 16, 1996, should be directed to Stemme GmbH & Co. KG, Gustav-Meyer-Allee 25, D–13355 Berlin, Germany;

VOL 63 ISS 13 JA 21 1998 UMI

telephone: 49.33.41.31.11.70; facsimile: 49.33.41.31.11.73. This service information may be examined at the FAA, Central Region, Office of the Regional Counsel, Room 1558, 601 E. 12th Street, Kansas City, Missouri 64106.

Note 3: The subject of this AD is addressed in German AD 96–300, dated October 24, 1996.

Issued in Kansas City, Missouri, on January 12, 1998.

Michael Gallagher,

Manager, Small Airplane Directorate, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; AlliedSignal Inc. Model TPE331 Series Turboprop Engines

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes the adoption of a new airworthiness directive (AD) that is applicable to AlliedSignal Inc. Model TPE331 series turboprop engines. This proposal would require removal of suspect fuel manifold assemblies and replacement with serviceable assemblies. This proposal is prompted by an FAA investigation into Hoses Unlimited's repairs of TPE331 fuel manifolds, which were not approved by the FAA. The actions specified by the proposed AD are intended to prevent fuel leakage at the fuel manifold fittings, resulting in fuel spraying on hot turbine components, which could result in an engine fire.

DATES: Comments must be received by March 23, 1998.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), New England Region, Office of the Assistant Chief Counsel, Attention: Rules Docket No. 97–ANE–47–AD, 12 New England Executive Park, Burlington, MA 01803–5299. Comments also may be submitted to the Rules Docket by using the following Internet address: "9-ad-engineprop@faa.dot.gov". All comments must contain the Docket No. in the subject line of the comment. Comments may be inspected at this location between 8:00 a.m. and 4:30 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Joseph Costa, Aerospace Engineer, Federal Aviation Administration, Transport Airplane Directorate, Los Angeles Aircraft Certification Office, 3960 Paramount Blvd., Lakewood, CA 90712–4137; Telephone (562) 627–5246, Fax (562) 627–5210.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of the proposed rule by submitting such written data, views, or arguments as they may desire. Communications should identify the Rules Docket number and be submitted in triplicate to the address specified above. All communications received on or before the closing date for comments, specified above, will be considered before taking action on the proposed rule. The proposals contained in this notice may be changed in light of the comments received.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the proposed rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report summarizing each FAA-public contact concerned with the substance of this proposal will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket Number 97–ANE–47–AD." The postcard will be date stamped and returned to the commenter.

Availability of NPRMs

Any person may obtain a copy of this NPRM by submitting a request to the FAA, New England Region, Office of the Assistant Chief Counsel, Attention: Rules Docket No. 97–ANE–28–AD, 12 New England Executive Park, Burlington, MA 01803–5299.

Discussion

This proposed airworthiness directive (AD) is applicable to AlliedSignal Inc. Model TPE331–8, –10, –11 and –12 series turboprop engines with fuel manifold, Part Number (P/N) 3102469–1 or –2, repaired by Hoses Unlimited, Inc. prior to November 11, 1995. Following an FAA investigation into Hoses Unlimited's repairs of TPE331 fuel manifolds, which was not approved by the agency, the FAA determined that the repair processes were not consistent and some manifolds were repaired using procedures not approved and substantiated by the FAA. The FAA discovered that Hoses Unlimited crimped fittings of unfamiliar configuration with unsubstantiated force causing excessive deformation of the fitting and Teflon tube. Excessive crimping of the tetraflourethelene hose onto the fitting's nipple causes reduced fatigue resistance of the internal Teflon tube. Reduced fatigue resistance may lead to premature and unexpected failure of the fuel hose. Although there have been no reported incidents of fuel leakage from fuel manifolds repaired by Hoses Unlimited, this condition, if not corrected, could result in fuel leakage of the fuel manifold, resulting in fuel spraying on hot turbine components, which could result in an engine fire.

Since an unsafe condition has been identified that is likely to exist or develop on other products of this same type design, the proposed AD would require removal of suspect fuel manifold assemblies and replacement with serviceable assemblies.

There are approximately 70 engines of the affected design in the worldwide fleet. The FAA estimates that 50 engines installed on aircraft of U.S. registry would be affected by this proposed AD, that it would take approximately 5 work hours per engine to accomplish the proposed actions, and that the average labor rate is $60 per work hour. Required parts would cost approximately $1,800 per engine. Based on these figures, the total cost impact of the proposed AD on U.S. operators is estimated to be $105,000.

The regulations proposed herein would not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this proposal would not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this proposed regulation (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) if promulgated, will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the draft regulatory evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption "**ADDRESSES.**"

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Safety.

The Proposed Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration proposes to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

AlliedSignal Inc.: Docket No. 97–ANE–47–AD.

Applicability: AlliedSignal Inc. (formerly Allied-Signal Aerospace Company, Garrett Engine Division and Garrett Turbine Engine Co.) Model TPE331–8, –10, –11 and –12 series turboprop engines with fuel manifold, Part Number (P/N) 3102469–1 or –2, repaired by Hoses Unlimited, Inc. prior to November 20, 1995. These engines are installed on but not limited to Ayres S2R–G10; Cessna Model 441; Construcciones Aeronauticas, S.A. (CASA) C–212 series; Dornier 228 series; Fairchild SA226 and SA227 series; Jetstream 3101 and 3201 series; Mitsubishi MU–2B series (MU–2 series); and Twin Commander Aircraft Corp. Models 695 and 695A aircraft.

Note 1: This airworthiness directive (AD) applies to each aircraft identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For engines that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (d) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent fuel leakage of the fuel manifold, resulting in fuel spraying on hot turbine components, which could result in an engine fire, accomplish the following:

(a) Check all fuel manifold identification bands for P/Ns 3102469–1 or –2 and the Hoses Unlimited, Inc. name, or review engine and aircraft maintenance records and purchase receipts to establish the origin and repairs on all fuel manifolds. If records indicate that fuel manifolds, P/Ns 3102469–1 or –2, are not installed in an engine or that Hoses Unlimited, Inc. has not been used as a repair facility, no further AD action is required.

(b) Remove from service all fuel manifolds with the Hoses Unlimited, Inc. name and P/Ns 3102469–1 or –2 and replace with a serviceable fuel manifold in accordance with the applicable AlliedSignal engine maintenance manual, at first access to the fuel manifold assembly, at the next engine hot section inspection, or 3 years after the effective date of this AD, whichever occurs first.

(c) For the purposes of this AD, first access to the fuel manifold is defined as any repair, modification, removal, or testing of the fuel manifold assembly or components of the fuel manifold assembly.'

(d) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Los Angeles Aircraft Certification Office. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Los Angeles Aircraft Certification Office.

Note 2: Information concerning the existence of approved alternative methods of compliance with this airworthiness directive, if any, may be obtained from the Los Angeles Aircraft Certification Office.

(e) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the aircraft to a location where the requirements of this AD can be accomplished.

Issued in Burlington, Massachusetts, on January 7, 1998.

James C. Jones,

Assistant Manager, Engine and Propeller Directorate, Aircraft Certification Service.

Withholding on Interest in the Case of Sales of Obligations Between Interest Payment Dates; Hearing Cancellation

AGENCY: Internal Revenue Service, Treasury.

ACTION: Cancellation of notice of public hearing on proposed regulations.

SUMMARY: This document provides notice of cancellation of a public hearing on proposed regulations under section 1441 regarding the obligation to withhold on interest paid with respect to obligations in the case of the sale of obligations between interest payment dates.

DATES: The public hearing originally scheduled for Monday, January 26, 1998, beginning at 10:00 a.m. is canceled.

FOR FURTHER INFORMATION CONTACT: Mike Slaughter of the Regulations Unit, Assistant Chief Counsel (Corporate), (202) 622–7190, (not a toll-free number).

SUPPLEMENTARY INFORMATION: The subject of the public hearing is proposed regulations under section 1441 of the Internal Revenue Code. A notice of proposed rulemaking and notice of public hearing appearing in the **Federal Register** on Tuesday, October 14, 1997 (62 FR 53503), announced that the public hearing on proposed regulations under section 1441 of the Internal Revenue Code would be held on Monday, January 26, 1998, beginning at 10:00 a.m., in the Commissioner's Conference Room, Room 3313, Internal Revenue Building, 1111 Constitution Avenue, NW., Washington, DC.

The public hearing scheduled for Monday, January 26, 1998, is canceled.

Cynthia E. Grigsby,

Chief, Regulations Unit, Assistant Chief Counsel (Corporate).

Revocation of Tolerances and Exemptions From the Requirement of a Tolerance for Canceled Pesticide Active Ingredients

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: This document proposes to revoke the tolerances and exemptions from the requirement of a tolerance listed in this document. EPA is proposing to revoke these tolerances and exemptions because there are no active registrations for the pesticide chemicals covered by these tolerances and exemptions.

DATES: Written comments should be submitted to EPA by March 23, 1998.

VOL 63 ISS 13 JA 21 1998 UMI

ADDRESSES: By mail, submit written comments to the Public Information and Records Integrity Branch, Information Resources and Services Division (7506C), Office of Pesticide Programs, 401 M St., SW., Washington, DC 20460. In person, deliver comments to Rm. 1132, Crystal Mall #2, 1921 Jefferson Davis Highway, Arlington, VA.

Comments and data may also be submitted electronically by following the instructions under Unit V. of this document. No Confidential Business Information (CBI) should be submitted through e-mail.

FOR FURTHER INFORMATION CONTACT: By mail: Jeff Morris, Special Review and Reregistration Division (7508W), Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. Office location, telephone number, and e-mail address: Special Review Branch, Crystal Station #1, 3rd floor, 2800 Crystal Drive, Arlington, VA, Telephone: (703) 308–8029; e-mail: morris.jeffrey@epamail.epa.gov.

SUPPLEMENTARY INFORMATION:

I. Legal Authority

The Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 301 *et seq.*, as amended by the Food Quality Protection Act of 1996 (FQPA), Pub. L. 104–170, authorizes the establishment of tolerances (maximum residue levels), exemptions from the requirement of a tolerance, modifications in tolerances, and revocation of tolerances for residues of pesticide chemicals in or on raw agricultural commodities and processed foods pursuant to section 408, 21 U.S.C. 346(a), as amended. Without a tolerance or exemption, food containing pesticide residues is considered to be unsafe and therefore "adulterated" under section 402(a) of the FFDCA, and hence may not legally be moved in interstate commerce (21 U.S.C. 331(a) and 342(a)). For a pesticide to be sold and distributed, the pesticide must not only have appropriate tolerances or exemptions under the FFDCA, but also must be registered under section 3 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), 7 U.S.C. 136a.

Under FFDCA section 408(f), if EPA determines that additional data are needed to support continuation of a tolerance, EPA may require that those data be submitted by registrants under FIFRA section 3(c)(2)(B), by producers under the Toxic Substances Control Act (TSCA) section 4, or by other persons by order after opportunity for hearing. EPA intends to use Data Call-In (DCI) procedures for pesticide registrants, and FFDCA section 408(f)(1)(C) orders for non-registrants as its primary means of obtaining data. In general, EPA does not intend to use the procedures under TSCA section 4, because such procedures generally will not be applicable to pesticides.

Section 408(f) of the FFDCA states that if EPA determines that additional data are needed to support the continuation of an existing tolerance or exemption, EPA shall issue a notice that: (1) Requests that any parties identify their interest in supporting the tolerance or exemption, (2) solicits the submission of data and information from interested parties, (3) describes the data and information needed to retain the tolerance or exemption, (4) outlines how EPA will respond to the submission of supporting data, and (5) provides time frames and deadlines for the submission of such data and information.

II. Regulatory Background

It is EPA's general practice to propose revocation of tolerances for residues of pesticide active ingredients for which FIFRA registrations no longer exist. In accord with FFDCA section 408, however, EPA will not revoke any tolerance or exemption proposed for revocation if any person will commit to support its retention, and if retention of the tolerance will meet the tolerance standard established under FQPA. Generally, interested parties commit to support the retention of such tolerances in order to permit treated commodities to be legally imported into the United States, since raw or processed food or feed commodities containing pesticide residues not covered by a tolerance or exemption are considered to be adulterated.

Tolerances and exemptions established for pesticide chemicals with FIFRA registrations cover residues in or on both domestic and imported commodities. To retain these tolerances and exemptions for import purposes only, EPA must make a finding that the tolerances and exemptions are safe. To make this safety finding, EPA needs data and information indicating that there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide residues covered by the tolerances and exemptions.

EPA determines on a case-by-case basis the data required to determine that a tolerance or exemption is safe, and in general requires the same technical chemistry and toxicology data for tolerances without related U.S. registrations as are required to support U.S. food-use registrations and any resulting tolerances or exemptions. (See 40 CFR part 158 for EPA's data requirements to support domestic use of a pesticide and the establishment and maintenance of a tolerance. At a future date, EPA will issue its import tolerance policy.) In most cases, EPA also requires residue chemistry data (crop field trials) that are representative of growing conditions in exporting countries in the same manner that EPA requires representative residue chemistry data from different U.S. regions to support domestic use of a pesticide and any resulting tolerance(s) or exemption(s). Good Laboratory Practice (GLP) requirements for studies submitted in support of tolerances and exemptions for import purposes only are the same as for domestic purposes; i.e., the studies are required to either fully meet GLP standards, or have sufficient justification presented to show that deviations from GLP requirements do not significantly affect the results of the studies.

Monitoring and enforcement of pesticide tolerances and exemptions are carried out by the U.S. Food and Drug Administration (FDA) and the U.S. Department of Agriculture (USDA). This includes monitoring for pesticide residues in or on commodities imported into the United States.

III. Proposed Actions

This document proposes to revoke the tolerances and exemptions from the requirement of a tolerance listed at the regulatory text of this document. EPA is proposing these revocations because EPA has cancelled the registrations for the pesticide chemicals associated with the tolerances and exemptions, and it is EPA's general practice to propose revocation of those tolerances and exemptions for residues of pesticide chemicals for which there are no active registrations.

IV. Effective Date

EPA proposes that these actions become effective 30 days following publication in the **Federal Register** of a final rule revoking the tolerances. EPA is proposing this effective date because EPA believes that all existing stocks of pesticide products labeled for the uses associated with the tolerances proposed for revocation were exhausted more than 1 year ago, giving ample time for any treated fresh produce to clear trade channels.

Any commodities listed in the regulatory text of this document that are treated with the pesticides subject to this proposal, and that are in the channels of trade following the tolerance revocations, shall be subject to FFDCA section 408(l)(5), as established by FQPA. Under this section, any residue of these pesticides in or on such food shall not render the food adulterated so long as it is shown to the satisfaction of FDA that: (1) The residue is present as the result of an application or use of the pesticide at a time and in a manner that was lawful under FIFRA, and (2) the residue does not exceed the level that was authorized at the time of the application or use to be present on the food under a tolerance or exemption from a tolerance. Evidence to show that food was lawfully treated may include records that verify the dates that the pesticide was applied to such food.

V. Public Comment Procedures

EPA invites interested persons to submit written comments, information, or data in response to this proposed rule. After consideration of comments, EPA will issue a final rule. Such rule will be subject to objections. Failure to file an objection within the appointed period will constitute waiver of the right to raise in future proceedings issues resolved in the final rule.

Comments must be submitted by March 23, 1998. Comments must bear a notation indicating the docket number OPP–300551. Three copies of the comments should be submitted to either location listed under "ADDRESSES" at the beginning of this proposal.

This proposal provides 60 days for any interested person to request that a tolerance be retained. If EPA receives a comment to that effect, EPA will not revoke the tolerance, but will take steps to ensure the submission of supporting data and will issue an order in the **Federal Register** under FFDCA section 408(f). The order would specify the data needed, the time frames for its submission, and would require that within 90 days some person or persons notify EPA that they will submit the data. Thereafter, if the data are not submitted as required, EPA will take appropriate action under FIFRA or FFDCA.

Information submitted as a comment concerning this proposal may be claimed confidential by marking any or all of that information as CBI. EPA will not disclose information so marked, except in accordance with procedures set forth in 40 CFR part 2. A second copy of such comments, with the CBI deleted, also must be submitted for inclusion in the public record. EPA may publicly disclose without prior notice information not marked confidential. A record has been established for this proposal under docket number OPP–300551 (including comments and data submitted electronically as described below). A public version of this record, including printed, paper versions of electronic comments, which does not include any information claimed as CBI, is available for inspection from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The public record is located in room 1132 of the Public Information and Records Integrity Branch, Information Resources and Services Division (7506C), Office of Pesticide Programs, Environmental Protection Agency, Crystal Mall #2, 1921 Jefferson Davis Highway, Arlington, VA.

Electronic comments can be sent directly to EPA at:

opp-docket@epamail.epa.gov.

Electronic comments must be submitted as an ASCII file avoiding the use of special characters and any form of encryption.

The official record for this proposal, as well as the public version, as described above will be kept in paper form. Accordingly, EPA will transfer all comments received electronically into printed, paper form as they are received and will place the paper copies in the official record, which will also include all comments submitted directly in writing. The official rulemaking record is the paper record maintained at the address in "ADDRESSES" at the beginning of this proposal.

VI. Regulatory Assessment Requirements

A. Executive Order 12866

Under Executive Order 12866 (58 FR 51735, October 4, 1993), EPA must determine whether the regulatory action is "significant" and therefore subject to review by the Office of Management and Budget (OMB) and the requirements of the Executive Order. Under section 3(f), E.O. 12866 defines a "significant regulatory action" as an action that is likely to result in a rule: (1) Having an annual effect on the economy of $100 million or more, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local, or tribal governments or communities; (2) creating serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement, grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President's priorities, or principles set forth in this Executive Order.

Pursuant to the terms of E.O. 12866, EPA has determined that this proposed rule is not a significant regulatory action and, since this action does not impose any information collection requirements subject to approval under the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*), it is not subject to review by OMB. In addition, this action does not impose any enforceable duty, or contain any "unfunded mandates" as described in Title II of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4), or require prior consultation as specified by Executive Order 12875 (58 FR 58093, October 28, 1993), entitled Enhancing the Intergovernmental Partnership, or special considerations as required by Executive Order 12898 (59 FR 7629, February 16, 1994).

B. Regulatory Flexibility

The Regulatory Flexibility Act (RFA) generally requires an agency to conduct a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. Small entities include small businesses, small not-for-profit enterprises, and small governmental jurisdictions. EPA believes that revocation of a tolerance after use of the pesticide becomes illegal in this country will generally not have a significant impact on a substantial number of small entities.

In the case of domestically grown food, the tolerances proposed for revocation by this proposal will have no economic impact. The associated pesticide registered uses have already been canceled. Since U.S. growers may no longer use these pesticides on such crops, revoking the tolerances should have no effect on food grown in the U.S. after cancellation of registered uses. As for food legally treated under FIFRA before the cancellation occurred, it will not be considered adulterated if the residue level complies with the tolerance in effect at the time of treatment.

Revocation has a greater potential to affect foreign-grown food, since the uses of a pesticide prohibited in the U.S. may still be lawful in other countries. If foreign growers use a pesticide on crops for which there is no tolerance, the food they grow will be considered adulterated and subject to detention and regulatory action when offered for import or imported into the United States. However, while revocation may have an economic effect on foreign growers that export food to the U.S., the RFA is concerned only with the effect of U.S. regulations on domestic small entities.

Revocation may also have an effect on domestic importers of foreign-grown

VOL 63 ISS 13 JA 21 1998 UMI

food to the extent their suppliers use pesticides in ways that result in residues no longer allowed in the U.S. Theoretically, U.S. importers could face higher food prices and transactions costs. However, EPA believes that the effect on U.S. importers will be minimal. The revocation of a particular tolerance is unlikely to have a significant impact on the price of a commodity on the international market. Transaction costs may occur as a result of having to find alternative suppliers of food untreated with pesticides for which tolerances were revoked. Affected importers, however, would have the options of finding other suppliers in the same country or in other countries, or inducing the same supplier to switch to alternative pest controls. Given the existence of these options, EPA expects any price increases or transaction costs resulting from revocations will be minor. As to the pesticide uses involved in this action, EPA has reviewed its available data on imports and foreign pesticide usage and concludes that there is a reasonable international supply of food not treated with these pesticides, generally within the same countries from which the relevant commodities are currently imported.

Moreover, whatever the effect on U.S. importers of foreign-grown food, EPA believes that it would be inappropriate and inconsistent with the purpose of the RFA to ameliorate that effect. To the extent any adverse effect occurs, it will be the result of foreign growers using pesticides in ways or on crops not allowed in the U.S. Domestic growers have no choice but to refrain from using pesticides in ways or on crops prohibited by U.S. law. U.S. growers and those who follow them in the chain of commerce distributors and consumers will bear the cost of complying with U.S. law. For EPA to somehow address the economic effect of the revocation on U.S. distributors of foreign-grown food would potentially give those distributors a competitive advantage over distributors of U.S.-grown food, and that advantage could potentially translate to a competitive advantage for foreign growers over domestic growers. The RFA was enacted in part to preserve competition in the marketplace, and it would be perverse to implement it in a way that creates competitive inequities, particularly between U.S. and foreign products. Finally, EPA notes that potential increased costs to importers would not be cognizable as grounds for not revoking the tolerances.

Based on the above analysis, I certify that this action will not have a significant economic impact on a substantial number of small entities.

List of Subjects

40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

40 CFR Part 185

40 CFR Part 186

Environmental protection, Animal feeds, Pesticide and pests.

Dated: January 12, 1998.

Lois Rossi,

Director, Special Review and Reregistration Division, Office of Pesticide Programs.

Therefore, it is proposed that 40 CFR parts 180, 185, and 186 be amended as follows:

PART 180—[AMENDED]

1. In part 180:

a. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 346a and 371.

b. In § 180.2, by revising paragraph (a) to read as follows:

§ 180.2 Pesticide chemicals considered safe.

(a) As a general rule, pesticide chemicals other than benzaldehyde (when used as a bee repellant in the harvesting of honey), ferrous sulfate, lime, lime-sulfur, potassium sorbate, sodium carbonate, sodium chloride, sodium hypochlorite, sulfur, and when used as plant desiccants, sodium metasilicate (not to exceed 4 percent by weight in aqueous solution) and when used as postharvest fungicide, citric acid, fumaric acid, oil of lemon, and oil of orange are not for the purposes of section 408(a) of the Act generally recognized as safe.

* * * * *

§§ 180.115, 180.118, 180.144, 180.148, 180.158, 180.159, 180.162, 180.171, 180.219, 180.239, 180.263, 180.277, 180.305, and 180.306 [Removed]

c. By removing §§ 180.115, 180.118, 180.144, 180.148, 180.158, 180.159, 180.162, 180.171, 180.219, 180.239, 180.263, 180.277, 180.305, and 180.306.

§ 180.319 [Amended]

d. By removing from the table in § 180.319, the entire entry for Isopropyl carbanilate (IPC).

§§ 180.321, 180.325, 180.326, 180.347, 180.357, 180.374 [Removed]

e. By removing §§ 180.321, 180.325, 180.326, 180.347, 180.357, 180.374.

f. In § 180.1001, by revising paragraph (b)(1), removing paragraphs (b)(6) and (b)(9) and redesignating paragraphs (b)(7), (b)(8), and (b)(10) as (b)(6), (b)(7), and (b)(8), respectively and removing from the table in paragraph (d) the entry for Fumaric acid to read as follows:

§ 180.1001 Exemptions from the requirement of a tolerance.

* * * * *

(b) * * *

(1) The following copper compounds: Bordeaux mixture, basic copper carbonate (malachite), copper hydroxide, copper-lime mixtures, copper oxychloride, copper octanoate, copper sulfate basic, copper sulfate pentahydrate, cupric oxide, cuprous oxide. These compounds are used primarily as fungicides.

* * * * *

§§ 180.1010, 180.1018, 180.1030, 180.1031, 180.1034, 180.1055, 180.1059, 180.1061, 180.1067, 180.1079, 180.1081, and 180.1085 [Removed]

g. By removing § 180.1010, 180.1018, 180.1030, 180.1031, 180.1034, 180.1055, 180.1059, 180.1061, 180.1067, 180.1079, 180.1081, and 180.1085.

PART 185—[AMENDED]

2. In part 185:

a. The authority citation for part 185 continues to read as follows:

Authority: 21 U.S.C. 348.

§§ 185.1350, 185.1650, 185.3600, 185.4250, 185.4300, and 185.4800 [Removed]

b. By removing §§ 185.1350, 185.1650, 185.3600, 185.4250, 185.4300, and 185.4800.

PART 186—[AMENDED]

3. In part 186:

a. The authority citation for part 186 continues to read as follows:

Authority: 21 U.S.C. 348.

§§ 186.450, 186.850, 186.1350, 186.1650, 186.2450, and 186.3000 [Removed]

b. By removing §§ 186.450, 186.850, 186.1350, 186.1650, 186.2450, and 186.3000.

BILLING CODE 6560–50–F

ENVIRONMENTAL PROTECTION AGENCY

[FRL–5951–1]

40 CFR Part 300

National Oil and Hazardous Substances Pollution Contingency Plan; National Priorities List

AGENCY: Environmental Protection Agency.

ACTION: Notice of intent to delete the Berlin and Farro Liquid Incineration Site from the national priorities list; request for comments.

SUMMARY: The United States Environmental Protection Agency (U.S. EPA) Region V announces its intent to delete the Berlin and Farro Liquid Incineration Site (the Site) from the National Priorities List (NPL) and requests public comment on this action. The NPL constitutes Appendix B of 40 CFR part 300 which is the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), which U.S. EPA promulgated pursuant to section 105 of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) as amended. This action is being taken by U.S. EPA, because it has been determined that responsible parties have implemented all appropriate response actions required under CERCLA. U.S. EPA, in consultation with the State of Michigan, has determined that no further response is appropriate. Moreover, U.S. EPA and the State have determined that remedial activities conducted at the Site to date have been protective of public health, welfare, and the environment.

DATES: Comments concerning the proposed deletion of the Site from the NPL may be submitted on or before February 20, 1998.

ADDRESSES: Comments may be mailed to Gladys Beard, Associate Remedial Project Manager, Superfund Division, U.S. EPA, Region V, 77 W. Jackson Blvd. (SR–6J), Chicago, IL 60604. Comprehensive information on the Site is available at U.S. EPA's Region V office and at the local information repository located at: Gaines Township Hall, 9255 W. Grand Blanc Rd., Gaines, Michigan 48436. Requests for comprehensive copies of documents should be directed formally to the Region V Docket Office. The address and phone number for the Regional Docket Officer is Jan Pfundheller (H–7J), U.S. EPA, Region V, 77 W. Jackson Blvd., Chicago, IL 60604, (312) 353–5821.

FOR FURTHER INFORMATION CONTACT: Robert Whippo at (312) 886–4759 (SR–6J), Remedial Project Manager or Gladys Beard (SR–6J), Associate Remedial Project Manager, Superfund Division, U.S. EPA, Region V, 77 W. Jackson Blvd., Chicago, IL 60604, (312) 886–7253 or Don Deblasio, (P–19J), Office of Public Affairs, U.S. EPA, Region V, 77 W. Jackson Blvd., Chicago, IL 60604, (312) 886–4360.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction
II. NPL Deletion Criteria
III. Deletion Procedures
IV. Basis for Intended Site Deletion

I. Introduction

The U.S. Environmental Protection Agency (EPA) Region V announces its intent to delete the Berlin and Farro Liquid Incineration Site from the National Priorities List (NPL), which constitutes Appendix B of the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), and requests comments on the proposed deletion. The EPA identifies sites that appear to present a significant risk to public health, welfare or the environment, and maintains the NPL as the list of those sites. Sites on the NPL may be the subject of remedial actions financed by the Potentially Responsible Parties or the Hazardous Substance Superfund Response Trust Fund (Fund). Pursuant to section 300.425(e)(3) of the NCP, any site deleted from the NPL remains eligible for Fund-financed remedial actions if the conditions at the Site warrant such action.

The U.S. EPA will accept comments on this proposal for thirty (30) days after publication of this document in the **Federal Register**.

Section II of this document explains the criteria for deleting sites from the NPL. Section III discusses procedures that EPA is using for this action. Section IV discusses the history of this site and explains how the Site meets the deletion criteria.

Deletion of sites from the NPL does not itself create, alter, or revoke any individual's rights or obligations. Furthermore, deletion from the NPL does not in any way alter U.S. EPA's right to take enforcement actions, as appropriate. The NPL is designed primarily for informational purposes and to assist in Agency management.

II. NPL Deletion Criteria

The NCP establishes the criteria that the Agency uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. In making this determination, U.S. EPA will consider, in consultation with the State, whether any of the following criteria have been met:

(i) Responsible parties or other persons have implemented all appropriate response actions required; or

(ii) All appropriate Fund-financed responses under CERCLA have been implemented, and no further response action by responsible parties is appropriate; or

(iii) The Remedial investigation has shown that the release poses no significant threat to public health or the environment and, therefore, remedial measures are not appropriate.

III. Deletion Procedures

Upon determination that at least one of the criteria described in 300.425(e) has been met, U.S. EPA may formally begin deletion procedures once the State has concurred. This **Federal Register** notice, and a concurrent notice in the local newspaper in the vicinity of the Site, announce the initiation of a 30-day comment period. The public is asked to comment on U.S. EPA's intention to delete the Site from the NPL. All critical documents needed to evaluate U.S. EPA's decision are included in the information repository and the deletion docket.

Upon completion of the public comment period, if necessary, the U.S. EPA Regional Office will prepare a Responsiveness Summary to evaluate and address comments that were received. The public is welcome to contact the U.S. EPA Region V Office to obtain a copy of this responsiveness summary, if one is prepared. If U.S. EPA then determines the deletion from the NPL is appropriate, final notice of deletion will be published in the **Federal Register**.

IV. Basis for Intended Site Deletion

The Berlin and Farro facility is a 40-acre site situated in a primarily rural area approximately 3½ miles south of the town of Swartz Creek in Gaines Township, Genesee County, Michigan. The Site is located at 8322 South Morrish Road, Swartz Creek, Michigan. Primary land use in the area consists of agricultural row crops and small deciduous woodlands. Residences are located within about 500 feet of the northeast and southeast boundaries of the Site. Approximately 80 permanent residences are located within a ½ mile radius of the Site. There are no known endangered species or critical habitats within close proximity of the Site.

VOL
63
ISS
13
JA

1998
UMI

Residents near the Site obtain groundwater from wells in glacial till aquifers and from the underlying bedrock. There are 115 residential wells within one mile of the Site. Approximately ⅓ of the residential wells draw water from the glacial till aquifers. At least one well in the area draws water from the shallow portion of the aquifer. The remaining residential wells draw water from the bedrock.

Berlin and Farro Liquid Incineration, Inc. began operations at the site in April 1971. The facility was permitted to accept industrial waste for incineration, to store waste prior to incineration, and to operate an on-site 1.1 acre landfill for disposal of crushed used drums. Numerous violations of permit requirements were cited during the period of operation, until September 1975 when Berlin and Farro lost its operating incinerator permit for the incinerator. Permit violations included failure to comply with air emission standards and on-site storage volume limits, and failure to meet permit standards prohibiting on-site disposal of wastes other than solid wastes. The facility also operated two unauthorized waste storage lagoons and two unlined storage lagoons, illegally buried five tanks of waste water, buried liquid wastes, operated underground storage tanks, poured liquid wastes into subsurface agricultural drains and dumped large volumes of gallons of barreled waste into two pits. These permit violations and unpermitted activities led to the revocation of Berlin and Farro's incinerator and landfill permits on September 16, 1975. From 1975 until 1978, while the permit revocations were under appeal, Berlin and Farro was permitted by the State of Michigan (the State) to transport industrial waste for other generators, but not to transport wastes to its own site. Michigan Department of Environmental Quality (MDEQ) investigations indicated that illegal dumping of industrial wastes into the lagoons apparently continued after 1975. In 1978, Berlin and Farro's appeal of its permit revocation failed.

Limited cleanup activities were conducted by Berlin and Farro under a plan submitted to MDEQ from 1978 until 1980, when Berlin and Farro filed for chapter 11 Bankruptcy.

In 1978 and 1981, ownership of the property was transferred to the State for nonpayment of property taxes. Ten acres of the site remained under the jurisdiction of the Genesee County Circuit Court as a result of a lawsuit filed by the State. The site was proposal for the National Priorities List (NPL) on July 16, 1992 and was placed on the NPL on September 8, 1983.

U.S. EPA identified more than 125 generators through review of site records. U.S. EPA, the State, and certain settling PRPs undertook surface cleanup actions intermittently from December 1981 through October 1984.

A Remedial Investigation (RI) was conducted from March 1986 through January 1989. A Remedial Investigation/ Feasibility Study (RI/FS) Report and a Proposed Plan were released to the public on July 20, 1990. A fact sheet summarizing this Proposed Plan and remedial alternatives were released to the public on August 2, 1990. The notice of availability for the RI/FS Report and the Proposed Plan was published in the Flint Journal on July 20, 1990. A sixty-day public comment period was held from July 20, 1990 through September 19, 1990. On September 7, 1990, U.S. EPA sent a letter to all persons on the site mailing list informing them about a change in its preference among the various alternatives under consideration, subject to review of public comments.

At the start of the 1990 public comment period, U.S. EPA proposed a remedial alternative which addressed both groundwater and soil contamination at the Berlin and Farro Liquid Incineration Site, Swartz Creek, Michigan. The alternative, as specified in the proposed plan, called for on-site incineration of contaminated soils and for the extraction of contaminated groundwater with treatment via air stripping. On-site incineration was projected to last for approximately 1 year and extraction and treatment of the groundwater was projected to last for at least 30 years. In addition, the Berlin and Farro proposed planned required groundwater monitoring and long-term maintenance of the air stripper.

Initial written comments received by the U.S. EPA and those voiced at the August 9, 1990 public meeting in Swartz Creek indicated that most concerned members of the public were strongly opposed to on-site incineration.

The strong opposition to the proposed plan expressed early in the comment period, especially those comments offered at the public meeting, led the U.S. EPA and the MDEQ to alter the preferred soil cleanup plan. This opposition was based on the short term risk presented by the estimated 380 days of operation of the on-site incinerator. In addition, information was provided indicating that much of the volume of soil proposed to be remediated was to be treated based only on metal, contamination. Incineration is not generally considered an effective treatment for metals, and in fact may produce treatment residuals that could require significant additional treatment. The new plan called for the removal of excavated soils to a licensed off-site facility for treatment and disposal. This plan retained the use of an air stripper for treatment of contaminated groundwater.

A second public meeting was held on September 12, 1990. At this meeting representatives from U.S. EPA and MDEQ discussed the changes that the Agencies were considering based on public comments. During this 1990 public comment period U.S. EPA continued negotiations with PRPs regarding cleanup options at Berlin and Farro as required under the terms of the RI/FS Consent Decree (Decree). U.S. EPA made it clear that at the end of the public comment period, following response to all comments, the terms of the Decree would be met and it intended to sign a ROD as early as the last week of September 1990. PRPs filed for and were granted an order which enjoined the U.S. EPA from issuing a ROD as planned. The Court ruled on September 27, 1990 that terms of the Decree would not be fulfilled and a ROD could not be issued, until an additional sixty-day period of negotiations had been held.

U.S. EPA and MDEQ determined, based on information developed and clarified during these extended negotiations that remedial action to address soil contamination other than the previously proposed options is most appropriate for Berlin and Farro.

A Proposed Plan for this remedial alternative was released July 11, 1991. The notice of availability for the Proposed Plan was published in the Flint Journal on July 8, 1991. A sixty-day public comment period was held from July 11, 1991 through September 9, 1991. In addition, a public meeting was held on August 8, 1991. At this meeting, representatives of the U.S. EPA and MDEQ answered questions about problems at the site and the remedial alternatives under consideration and accepted formal comments from the Public regarding the proposed alternative and other alternatives analyzed in the FS.

On September 30, 1991, U.S. EPA signed a Record of Decision (ROD) for the final remedy at the Site. The ROD required: (1) excavation of on-site soil and sediment and sediments from Slocum Drain where levels of contamination exceed ROD cleanup standards; (2) disposal of these materials in an on-site hazardous waste disposal cell; and (3) extraction and treatment by air stripping of ground water with

contaminant levels above the ROD cleanup standards. Following completion of these elements of the cleanup, permanent deed and land use restrictions were to be implemented to control land use, to restrict development of the Site and to prohibit installation of ground water wells.

U.S. EPA issued a Unilateral Administrative Order (UAO) to PRPs September 24, 1993. During an October 28, 1994 meeting attended by representatives of U.S. EPA, MDEQ and the PRP technical committee and by follow-up letter dated December 2, 1994 responsible party representatives requested U.S. EPA and MDEQ to consider an alternate cleanup option for remediation of contaminated soil and sediment and contaminated groundwater. In addition, the Predesign Report submitted in March 1995 included a contingency proposal for modification of the groundwater remedy, if necessary, following assessment of monitoring results.

Following public review of and comment upon the proposed changes to remedial action at the Site, the ROD was amended on October 24, 1995. The amended ROD specified a revised Remedial Action (RA) for the Site soils/ sediments and groundwater based on the RI and predesign data and reevaluation of the cleanup standards for soil and groundwater.

An Amended ROD was signed on October 24, 1995. The major components of this remedy include:

- Excavation of contaminated soil and sediment from the central site area and Slocum Drain and transportation to an off-site facility for appropriate treatment/disposal.
- Excavation of the water-bearing zones in the area of highest groundwater contamination and off-site disposal of the excavated materials.
- Implementation of a groundwater monitoring program and implementation of site deed restrictions on the installation of drinking water wells until all cleanup standards have been met and maintained.

Activities at the Site were consistent with the amended ROD and the RD/RA statement of work for design and construction. The RD Report, including a Quality Assurance Project Plan (QAPP), incorporated all necessary U.S. EPA and State quality assurance and quality control (QA/QC) procedures and protocol. U.S. EPA analytical methods were used for all validation and monitoring samples during RA activities. All procedures and protocol followed for soil, groundwater, and air sample during the RA are documented in the RD Report and were conducted through a participating Contract Laboratory Program (CLP) in accordance with the statement of work.

A Close Out Report was signed on September 18, 1996, which stated that the Site meets all site completion requirements as specified in OSWER Directive 9320.2–3c, *Procedures for Completion and Deletion of National Priorities Sites and Update*. Specifically, confirmatory sampling verifies that the Site has achieved the ROD cleanup objective, that all soil, sediment, and groundwater cleanup standards have been met and that all cleanup actions specified in the amended ROD have been implemented. Furthermore, U.SS. EPA has removed all other contamination detected to acceptable levels. Confirmatory groundwater sampling and backfilling and grading the Site with unaffected Site soils provide further assurance that the Site no longer poses unacceptable threats to human health or the environment. No further activity is planned at the Site.

A five-year review pursuant to OSWER Directive 9355.7–02 ("Structure and Components of Five-Year Reviews") will not be conducted at the Site. There are no hazardous Substances that remain at the Site above health-based levels, U.S. EPA will not conduct a five-year review.

EPA, with concurrence from the State of Michigan, has determined that responsible parties have implemented all appropriate responses under CERCLA at the Berlin and Farro Liquid Incineration Site, and no further CERCLA response actions are appropriate in order to provide protection of human health and environment. Therefore, EPA proposes to delete the Site from the NPL.

Dated: December 9, 1997.

David A. Ullrich,

Acting Regional Administrator, Region V.

[FR Doc. 98–1249 Filed 1–20–98; 8:45 am]

BILLING CODE 6560–60–P

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 67

[Docket No. FEMA–7243]

Proposed Flood Elevation Determinations

AGENCY: Federal Emergency Management Agency, FEMA.

ACTION: Proposed rule.

SUMMARY: Technical information or comments are requested on the proposed base (1% annual chance) flood elevations and proposed base flood elevation modifications for the communities listed below. The base flood elevations are the basis for the floodplain management measures that the community is required either to adopt or to show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

DATES: The comment period is ninety (90) days following the second publication of this proposed rule in a newspaper of local circulation in each community.

ADDRESSES: The proposed base flood elevations for each community are available for inspection at the office of the Chief Executive Officer of each community. The respective addresses are listed in the following table.

FOR FURTHER INFORMATION CONTACT: Frederick H. Sharrocks, Jr., Chief, Hazard Identification Branch, Mitigation Directorate, 500 C Street, SW., Washington, DC 20472, (202) 646–2796.

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency (FEMA or Agency) proposes to make determinations of base flood elevations and modified base flood elevations for each community listed below, in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR 67.4(a).

These proposed base flood and modified base flood elevations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own, or pursuant to policies established by other Federal, state or regional entities. These proposed elevations are used to meet the floodplain management requirements of the NFIP and are also used to calculate the appropriate flood insurance premium rates for new buildings built after these elevations are made final, and for the contents in these buildings.

National Environmental Policy Act

This proposed rule is categorically excluded from the requirements of 44 CFR Part 10, Environmental Consideration. No environmental impact assessment has been prepared.

VOL 63 ISS 13 JA 21 1998 UMI

Regulatory Flexibility Act

The Associate Director, Mitigation Directorate, certifies that this proposed rule is exempt from the requirements of the Regulatory Flexibility Act because proposed or modified base flood elevations are required by the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and are required to establish and maintain community eligibility in the National Flood Insurance Program. As a result, a regulatory flexibility analysis has not been prepared.

Regulatory Classification

This proposed rule is not a significant regulatory action under the criteria of section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

Executive Order 12612, Federalism

This proposed rule involves no policies that have federalism implications under Executive Order 12612, Federalism, dated October 26, 1987.

Executive Order 12778, Civil Justice Reform

This proposed rule meets the applicable standards of section 2(b)(2) of Executive Order 12778.

List of Subjects in 44 CFR Part 67

Administrative practice and procedure, Flood insurance, Reporting and recordkeeping requirements.

Accordingly, 44 CFR part 67 is proposed to be amended as follows:

PART 67—[AMENDED]

1. The authority citation for part 67 continues to read as follows:

Authority: 42 U.S.C. 4001 *et seq.*; Reorganization Plan No. 3 of 1978, 3 CFR, 1978 Comp., p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp., p. 376.

§ 67.4 [Amended]

2. The tables published under the authority of § 67.4 are proposed to be amended as follows:

DEPARTMENT OF TRANSPORTATION

Coast Guard

46 CFR Parts 10 and 15

[CGD 94–055]

RIN 2115–AF23

Licensing and Manning for Officers of Towing Vessels

AGENCY: Coast Guard, DOT.

ACTION: Notice of public meetings; request for comments.

SUMMARY: The Coast Guard is holding four public meetings on its proposed rule to revise the requirements for licensing mariners who operate inspected as well as uninspected towing vessels. The proposed rule would ensure that all towing vessels are manned by officers holding licenses specifically authorizing their service. The Coast Guard is holding the public meetings to receive additional views on the licensing issues in the proposed rule.

DATES: The meeting in Memphis, Tennessee. will be held on February 11, 1998, from 9 a.m. to 5 p.m. The meeting in Houston, Texas, will be held on February 13, 1998, from 9 a.m. to 5 p.m. The meeting in Boston, Massachusetts, will be held on February 18, 1998, from 9 a.m. to 5 p.m. The meeting in Seattle, Washington, will be held on February 24, 1998, from 9 a.m. to 5 p.m. Written material must reach the Coast Guard not later than February 20, 1998. Comments on the supplemental notice of proposed rulemaking must be received on or before February 24, 1998.

ADDRESSES: The Memphis meeting will be held in the City Council Chambers, 125 North Main, Memphis, TN 38103. The Boston meeting will be held in the Coast Guard Marine Safety Office, 455 Commercial Street, Boston, MA 02109–1045. The Houston meeting will be held at Hollywood Marine Inc., 16402–1/2 Dezavala, Channelview, TX 77530. The Seattle meeting will be held in the South Auditorium, Federal Building, 915 Second Avenue, Seattle, WA 98174–1067. You may send written comments to the Executive Secretary, Marine Safety Council (G–LRA) [CGD 94–055], U.S. Coast Guard Headquarters, 2100 Second Street, SW., Washington, DC 20593–0001, or deliver them to room 3406 at the same address between 9:30 a.m. and 2 p.m., Monday through Friday, except Federal holidays. The telephone number is 202–267–1477.

The Executive Secretary maintains the public docket for this rulemaking. Comments will become part of this docket and will be available for inspection or copying at room 3406, U.S. Coast Guard Headquarters, between 9:30 a.m. and 2 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: LCDR Don Darcy, Operating and Environmental Standards Division (G–MSO–1), U.S. Coast Guard Headquarters, 2100 Second Street, SW., Washington, DC 20593–0001, telephone 202–267–0221.

SUPPLEMENTARY INFORMATION:

Request for Comments

The Coast Guard encourages interested persons to participate in this rulemaking by submitting written data, views, or arguments. Persons submitting comments should include their names and addresses, identify this rulemaking [CGD 94–055] and the specific section of the proposed rule to which each comment applies, and give the reasons for each comment. Please submit two copies of all comments and attachments in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. Persons wanting acknowledgment of receipt of comment should enclose stamped, self-addressed postcards or envelopes.

The Coast Guard will consider all comments received during the comment period. It may change this proposed rule in view of the comments.

Public Meeting

Attendance is open to the public. Persons who are hearing-impaired may request sign translation by asking the person under **FOR FURTHER INFORMATION CONTACT** at least one week before the meeting. With advance notice, and as time permits members of the public may make oral presentations during the meeting. Persons wishing to make oral presentations should notify the person listed under **FOR FURTHER INFORMATION CONTACT** no later than the day before the meeting. Written material may be submitted before, during, or after the meeting. Persons unable to attend the public meetings should submit written comments as outlined in the interim rule by February 24, 1998.

Dated: January 13, 1998.

R. L. Skewes,

Captain, U.S. Coast Guard, Acting Director of Standards Marine Safety and Environmental Protection.

[FR Doc. 98–1399 Filed 1–20–98; 8:45 am]

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 79

[MM Docket No. 95–176; FCC 98–3]

Closed Captioning of Video Programming

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: Viewers with hearing disabilities may not always have access to the same televised emergency information that is currently available to other viewers. The Commission adopted this *Further Notice of Proposed Rulemaking ("Further Notice")* seeking information and comment regarding appropriate rules and policies to promote and to ensure the accessibility of televised emergency information to persons with hearing disabilities. Closed captioning rules for emergency information programs were not adopted in the *Report and Order* in MM Docket No. 95–176, *In the Matter of Closed Captioning and Video Description of Video Programming, Video Programming Accessibility ("Closed Captioning Order")* due to the limited comments submitted in that proceeding on the issue of captioning of such programs.

The *Further Notice* does not contain proposed or modified information collections subject to the Paperwork Reduction Act of 1995 (PRA), Public Law 104–13.

DATES: Comments are due on or before February 25, 1998 and reply comments are due on or before March 27, 1998.

ADDRESSES: Office of the Secretary, Federal Communications Commission, 1919 M Street, NW, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Alexis D. Johns, Cable Services Bureau, (202) 418–7038, TTY (202) 418–7172.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's *Further Notice of Proposed Rulemaking*, MM Docket 95–176, adopted January 9, 1998 and released January 14, 1998. The full text of this *Further Notice* is available for inspection and copying during normal business hours in the FCC Reference Center (Room 239), 1919 M Street, NW, Washington, D.C. 20554, and may be purchased from the Commission's copy contractor, International Transcription Service, (202) 857–3800, 1231 20th Street, NW, Washington, D.C. 20036.

Synopsis of the Further Notice of Proposed Rulemaking

1. The rules we adopted in the *Closed Captioning Order* require video program providers to increase gradually the amount of captioned new programming offered over time. The rules require minimum captioning benchmarks to be met at two year intervals, starting on January 1, 2000. Appendix B at § 79.1(b)(1) (62 FR 48487, September 16, 1997). New programming is defined as programs first published or exhibited after January 1, 1998. Appendix B at § 79.1(a)(5) (62 FR 48487, September 16, 1997). The rules allow video program providers to exercise discretion with respect to what types of programs to caption first, and permit video program providers to caption news programming using the electronic newsroom ("ENR") method. Para. 47 and Appendix B at § 79.1(e)(3) (62 FR 48487, September 16, 1997). ENR captions are created from the text in the station's news script computers. With ENR, only text transmitted from the scripting computers onto teleprompters is captioned; unscripted material, such as live reports from the field, reports of breaking news, and weather and sports reporting, is not captioned.

2. The emergency information which we address in this *Further Notice* falls under the *Closed Captioning Order's* definition of new programming. By "emergency information," we generally mean state, local and regional emergency announcements or reports, including interruptions of regularly-scheduled programming and late-breaking reports during live news programs. Pursuant to the rules adopted in the *Closed Captioning Order*, emergency information would be subject to the same closed captioning requirements as other new programming. Such programming would not be required to be offered with closed captioning before 2000 at the earliest, and each video program provider would have the discretion to determine whether to give emergency information priority for captioning relative to other new programming. In addition, under the rules, a video program provider could caption its live news programming using the ENR method, which could leave much emergency information inaccessible to persons with hearing disabilities since it is likely to be late-breaking news and unscripted.

3. Given the significant health and safety issues inherent in emergency information, in the *Closed Captioning Order* we concluded that closed captioning requirements for emergency information should be considered further. In this *Further Notice*, we seek comment on how our rules can best ensure that such programs are accessible to viewers with hearing disabilities. We request comment on whether separate transitional closed captioning requirements are needed for emergency information or whether there are other methods of providing accessibility for this type of programming.

4. As we stated in the *Closed Captioning Order*, providing all viewers with accurate information regarding emergencies is of great importance, and we are concerned that viewers with hearing disabilities may not always have access to the same information that is available to other viewers. As a threshold matter, we seek comment on the types of information and programs that should be considered "emergency information" for the purposes of our rules. We note that the Commission currently requires broadcast licensees to make the emergency information programming that they transmit accessible to persons who are deaf or hard of hearing. *See* 47 CFR 73.1250(h). The types of emergency information contemplated in the *Further Notice* are not those which must be transmitted by the Emergency Alert System ("EAS") under our existing rules. *See* 47 CFR 11.1 *et seq*. Use of the EAS is required only in the event of a national emergency, though state and local authorities may use the EAS to provide early warnings to communities about regional, state and local emergencies. The rules and policies proposed in this *Further Notice* are not intended to conflict with or supersede the EAS rules in any way. The broadcast rule enumerates the following examples of emergency situations as being subject to the rule: tornadoes, hurricanes, floods, tidal waves, earthquakes, icing conditions, heavy snows, widespread fires, discharge of toxic gases, widespread power failures, industrial explosions, civil disorders, and school closings and changes in school bus schedules resulting from such conditions. We tentatively conclude that for this purpose, we should broadly define emergency information to ensure that sufficient information regarding situations that affect the safety of viewers is available to persons with hearing disabilities with the same immediacy as it is for other viewers. To the types of situations cited in the existing broadcast rule, we believe that it would be appropriate to add warnings and watches of impending changes in weather affecting the safety of viewers, and seek comment on how to define such situations. We also seek comment on whether defining emergency information more broadly here than in the broadcast rule would cause any practical problems or other complications for entities subject to emergency closed captioning requirements.

5. We seek comment on whether it is feasible to require video program providers to supply closed captions for emergency information programs. By its nature, emergency information is not typically programming that can be pre-recorded and captioned in advance of airing. A requirement that such programs be captioned would therefore oblige providers to obtain real-time captioning services for such programs. As we described in the *Closed Captioning Order*, real-time captioning resources are somewhat limited at this time. We declined to require that all live news programming be captioned using real-time captioners in part due to concerns about the limited real-time resources in existence and the need to allow captioning companies sufficient time to recruit and train more captioners to meet the increased demands for their services that the rules will create.

6. We seek comment on the estimated costs, in both financial and human resource terms, that a captioning requirement for emergency information will impose on video providers. In particular, we seek updated information on the number of real-time captioners currently available as well as the number projected to be available in the near future. In the event a real-time captioning requirement is instituted for emergency information, we seek comment on the effect such a rule will have on the availability of live captioning resources for other types of live programming. Captioning companies and commenters who regularly use real-time captioning services should submit detailed information on the hourly costs charged for such services, and whether and under what conditions those costs vary. Is it feasible for video program providers to have real-time captioners "on call" for closed captioning when emergencies arise, or would providers have to hire full-time staff to produce live closed captions? What would it cost to hire an "on call" real-time captioner?

7. We request information on the availability and feasibility of providing live captions remotely in emergency situations. Where an emergency affects a large geographic region, all video providers in that region will need to access real-time captioning resources at the same time. Given the limited number of real-time captioning

VOL 63 ISS 13 JA 21 1998 UMI

resources available at present, it may not be possible for each provider to obtain the necessary captioning assistance within its geographic region. For example, a major snowstorm such as that which occurred on the East Coast in early 1996 could place a significant strain on real-time resources throughout the northeast and mid-Atlantic states. Could video program providers use real-time captioners located in other areas (e.g., California) unaffected by the emergency to offer remote captioning under such circumstances? Would remote real-time captioning incur greater costs or be less costly than local live captioning under such circumstances?

8. We specifically seek comment on whether emergency programming should be given a higher priority for captioning than other types of new programs. Specifically, should we require that emergency information be provided with captions prior to the commencement of the captioning requirement for other new programs? If so, when should video program providers be required to begin captioning these programs? With respect to the minimum benchmarks for captioning of new programs, we ask whether video program providers should be required to supply closed captions for emergency information programs during the transition period, regardless of whether the provider has already met its captioning benchmark for new programs. Would such a requirement be feasible, or would it pose significant logistical problems or economic burdens on video program providers? We tentatively conclude that any textual presentation of emergency information programs should be required to incorporate substantially the entire text of the audio portion of the program. We seek comment on this tentative conclusion.

9. The closed captioning rules also include exemptions based on video program providers' gross revenues. Under the revenue exemption, video program providers with annual gross revenues of less than $3 million per channel are exempt from all captioning requirements, except for the obligation to pass through captions where programs are received from the program supplier with captions. Appendix B at § 79.1(d)(12) (62 FR 48487, September 16, 1997). Also, our rules provide that once a video program provider has spent an amount equal to 2% of its gross annual revenues on captioning, that provider need not spend any more money on captioning. Appendix B at § 79.1(d)(11) (62 FR 48487, September 16, 1997). We seek comment as to whether these exemptions should be suspended for the limited purpose of emergency information programming closed captioning. Should all video program providers be required to supply closed captions for emergency information, even where the provider is otherwise eligible for one of our revenue-based exemptions? How would such a rule affect small entities such as small or low power television stations and small cable operators? Commenters should submit proposals for reducing the burdens on small entities that such a mandatory closed captioning rule might impose.

10. Alternatively, we ask whether other methods of visually presenting emergency information would be acceptable in lieu of a closed captioning requirement. As noted above, the Commission currently requires broadcast licensees to make such programming accessible to persons who are deaf or hard of hearing. To the extent broadcast licensees transmit emergency information programming, they are required by our rules to transmit such programs both aurally and visually or only visually. The broadcast rules allow television stations to "use any method of visual presentation which results in a legible message conveying the essential emergency information," including, but not limited to, slides, electronic captioning, manual methods (e.g., hand printing), or mechanical printing processes. 47 CFR 73.1250(h). However, no equivalent obligation exists for emergency information transmitted by cable television operators or other multichannel video program distributors ("MVPDs"). We seek comment as to whether an extension of the existing broadcast rules to cover emergency information disseminated by MVPDs, in conjunction with our existing captioning rules, would be appropriate or sufficient to address the concerns raised in this *Further Notice*.

11. In addition, an emergency information program may consist of an audio report that is not displayed visually, or the audio portion of the report may be longer and offer more complete information than that displayed visually, leaving viewers with hearing disabilities without full details on the situation. We seek information on methods or requirements that could be adopted to ensure that all pertinent details are accessible. We also seek comment on a proposal submitted by Cal-TVA for cases where local stations are unable to provide an instant visual transcription of audio emergency messages. Cal-TVA recommends use of a second text channel that a viewer may switch to within ten minutes of the airing of an emergency message, to read a typed report of the audio message and any actions the viewer is being instructed to take. We seek comment regarding the feasibility of this proposal, and request information regarding other possible methods of ensuring the accessibility of this information to persons with hearing disabilities.

12. Finally, we seek comment on any other proposals to promote and to ensure the accessibility of emergency programming and other special reports that have not already been raised in this *Further Notice* or in the closed captioning proceeding. In particular, we ask commenters to address the legal, policy, and practical implications of any such proposals.

Initial Regulatory Flexibility Analysis

13. Pursuant to Section 603 of the Regulatory Flexibility Act ("RFA"), 5 U.S.C. 603, the Commission has prepared the following initial regulatory flexibility analysis ("IRFA") of the expected impact of these proposed policies and rules on small entities. Written public comments are requested on the IRFA. These comments must be filed in accordance with the same filing deadlines as comments on the rest of the *Further Notice*, but they must have a separate and distinct heading designating them as responses to the IRFA. The Secretary shall cause a copy of this *Further Notice* to be sent to the Chief Counsel for Advocacy of the Small Business Administration ("SBA") in accordance with section 603(a) of the RFA, 5 U.S.C. 603(a).

14. *Reason for Action and Objectives of the Proposed Rule:* Section 713 of the 1996 Act required the Commission to adopt rules and timetables for the captioning of video programming by August 8, 1997. In the course of the closed captioning proceeding, a few commenters addressed the particular need for captioning of emergency programming and similar special reports, but the information submitted to the Commission regarding this issue was insufficient to support the adoption of specific captioning rules for emergency programming. Instead, the *Closed Captioning Order* directed that a separate proceeding be initiated to address this issue. In this *Further Notice*, we seek comment on appropriate requirements for promoting and ensuring the accessibility of emergency programming to viewers with hearing disabilities.

15. *Legal Basis:* This *Further Notice* is adopted pursuant to Sections 4(i), 303(r), and 713 of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 303(r), and 613.

16. *Description and Number of Small Entities Affected:* The RFA defines the term "small entity" as having the same meaning as the terms "small business," "small organization," and "small business concern" under Section 3 of the Small Business Act. 5 U.S.C. 601(3). A small business concern is one which: (1) is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the SBA. 15 U.S.C. 632.

17. *Small MVPDs:* The SBA has developed a definition of small entities for cable and other pay television services, which includes all such companies generating $11 million or less in annual receipts. 13 CFR 121.201 (SIC 4841). This definition includes cable system operators, closed circuit television services, direct broadcast satellite services, multipoint distribution systems, satellite master antenna systems and subscription television services. According to the Bureau of the Census, there were 1,758 total cable and other pay television services and 1,423 had less than $11 million in revenue. We address below each service individually to provide a more precise estimate of small entities. We seek comment on the tentative conclusions below.

18. *Cable Systems:* The Commission has developed, with SBA's approval, our own definition of a small cable system operator for the purposes of rate regulation. Under the Commission's rules, a "small cable company" is one serving fewer than 400,000 subscribers nationwide. 47 CFR 76.901(e). Based on our most recent information, we estimate that there were 1,439 cable operators that qualified as small cable companies at the end of 1995. Since then, some of those companies may have grown to serve over 400,000 subscribers, and others may have been involved in transactions that caused them to be combined with other cable operators. Consequently, we estimate that there are fewer than 1,439 small entity cable system operators that may be affected by the decisions and rules proposed in this *Futher Notice*.

19. The Communications Act also contains a definition of a small cable system operator, which is "a cable operator that, directly or through an affiliate, serves in the aggregate fewer than 1% of all subscribers in the United States and is not affiliated with any entity or entities whose gross annual revenues in the aggregate exceed $250,000,000." 47 U.S.C. § 543(m)(2). The Commission has determined that there are 61,700,000 subscribers in the United States. Therefore, we found that an operator serving fewer than 617,000 subscribers shall be deemed a small operator, if its annual revenues, when combined with the total annual revenues of all of its affiliates, do not exceed $250 million in the aggregate. 47 CFR 76.1403(b) (SIC 4833). Based on available data, we find that the number of cable operators serving 617,000 subscribers or less totals 1,450. Although it seems certain that some of these cable system operators are affiliated with entities whose gross annual revenues exceed $250,000,000 we are unable at this time to estimate with greater precision the number of cable system operators that would qualify as small cable operators under the definition in the Communications Act.

20. *Multipoint Multichannel Distribution Systems ("MMDS"):* The Commission refined the definition of "small entity" for the auction of MMDS as an entity that together with its affiliates has average gross annual revenues that are not more than $40 million for the preceding three calendar years. 47 CFR 21.961(b)(1). This definition of a small entity in the context of MMDS auctions has been approved by the SBA.

21. The Commission completed its MMDS auction in March 1996 for authorizations in 493 basic trading areas ("BTAs"). Of 67 winning bidders, 61 qualified as small entities. Five bidders indicated that they were minority-owned and four winners indicated that they were women-owned businesses. MMDS is an especially competitive service, with approximately 1,573 previously authorized and proposed MMDS facilities. Information available to us indicates that no MMDS facility generates revenue in excess of $11 million annually. We tentatively conclude that, for purposes of this IRFA, there are approximately 1,634 small MMDS providers as defined by the SBA and the Commission's auction rules.

22. *ITFS:* There are presently 2,032 ITFS licensees. All but 100 of these licenses are held by educational institutions. Educational institutions are included in the definition of a small business. 5 U.S.C. § 601(5). However, we do not collect annual revenue data for ITFS licensees, and are not able to ascertain how many of the 100 non-educational licensees would be categorized as small under the SBA definition. Thus, we tentatively conclude that at least 1,932 licensees are small businesses.

23. *Direct Broadcast Satellite ("DBS"):* Because DBS provides subscription services, DBS falls within the SBA definition of cable and other pay television services (SIC 4841). As of December 1996, there were eight DBS licensees. The Commission does not collect annual revenue data for DBS, and is unable to determine with certainty the number of small DBS licensees that could be affected by these proposed rules. However, estimates of 1996 revenues for various DBS operators are significantly greater than $11,000,000, and range from a low of $31,132,000 for Alphastar to a high of $1,100,000,000 for Primestar. Accordingly, we tentatively conclude that no DBS operator qualifies as a small entity.

24. *Home Satellite Dish ("HSD"):* The market for HSD service is difficult to quantify. Indeed, the service itself bears little resemblance to other MVPDs. HSD owners have access to more than 265 channels of programming placed on C-band satellites by programmers for receipt and distribution by MVPDs, of which 115 channels are scrambled and approximately 150 are unscrambled. HSD owners can watch unscrambled channels without paying a subscription fee. To receive scrambled channels, however, an HSD owner must purchase an integrated receiver-decoder from an equipment dealer and pay a subscription fee to an HSD programming packager. Thus, HSD users include: (1) Viewers who subscribe to a packaged programming service, which affords them access to most of the same programming provided to subscribers of other MVPDs; (2) viewers who receive only nonsubscription programming; and (3) viewers who receive satellite programming services illegally without subscribing.

25. According to the most recently available information, there are approximately 30 program packagers nationwide offering packages of scrambled programming to retail consumers. These program packagers provide subscriptions to approximately 2,314,900 subscribers nationwide. This is an average of about 77,163 subscribers per program packager. This is substantially smaller than the 400,000 subscribers used in the Commission's definition of a small multiple system operator ("MSO"). Furthermore, because this is an average, it is likely that some program packagers may be substantially smaller. We seek comment on these tentative conclusions.

26. *Open Video Systems ("OVS"):* The Commission has certified nine OVS operators. Of these nine, only two are providing service. On October 17, 1996, Bell Atlantic received approval for its

VOL 63 ISS 13 JA 21 1998 UMI

certification to convert its Dover, New Jersey Video Dialtone ("VDT") system to OVS. Bell Atlantic subsequently purchased the division of Futurevision which had been the only operating program package provider on the Dover system, and has begun offering programming on this system using these resources. Metropolitan Fiber Systems was granted certifications on December 9, 1996, for the operation of OVS systems in Boston and New York, both of which are being used to provide programming. Bell Atlantic and Metropolitan Fiber Systems have sufficient revenues to assure us that they do not qualify as small business entities. On October 10, 1996, Digital Broadcasting Open Video Systems received approval to offer OVS service in southern California. Digital Broadcasting Open Video Systems is a general partnership just beginning operations. Little financial information is available for the other entities authorized to provide OVS that are not yet operational. Given that other entities have been authorized to provide OVS service but have not yet begun to generate revenues, we tentatively conclude that at least some of the OVS operators qualify as small entities.

27. *Satellite Master Antenna Television ("SMATVs"):* Industry sources estimate that approximately 5,200 SMATV operators were providing service as of December 1995. Other estimates indicate that SMATV operators served approximately 1.05 million residential subscribers as of September 1996. The ten largest SMATV operators together pass 815,740 units. If we assume that these SMATV operators serve 50% of the units passed, the ten largest SMATV operators serve approximately 40% of the total number of SMATV subscribers. Because these operators are not rate regulated, they are not required to file financial data with the Commission. Furthermore, we are not aware of any privately published financial information regarding these operators. Based on the estimated number of operators and the estimated number of units served by the largest ten SMATVs, we tentatively conclude that a substantial number of SMATV operators qualify as small entities.

28. *Local Multipoint Distribution System ("LMDS"):* Unlike the above pay television services, LMDS technology and spectrum allocation will allow licensees to provide wireless telephony, data, and/or video services. A LMDS provider is not limited in the number of potential applications that will be available for this service. Therefore, the definition of a small LMDS entity may be applicable to both cable and other pay television (SIC 4841) and/or radiotelephone communications companies (SIC 4812). The SBA definition for cable and other pay services is defined in paragraph 16 *supra*. A small radiotelephone entity is one with 1500 employees or less. 13 CFR 121.201. However, for the purposes of this *Further Notice*, we include only an estimate of LMDS video service providers.

29. LMDS is a service that was expected to be auctioned by the FCC in 1997. The vast majority of LMDS entities providing video distribution could be small businesses under the SBA's definition of cable and pay television (SIC 4841). However, in *In the Matter of Rulemaking to Amend Parts 1, 2, 21, and 25 of the Commission's Rules to Redesignate the 27.5–29.5 GHz Frequency Band, to Reallocate the 29.5–30.0 GHz Frequency Band, to Establish Rules and Policies for Local Multipoint Distribution Service and for Fixed Satellite Services and Suite 12 Group Petition for Pioneer's Preference*, CC Docket No. 92–297 (60 FR 43740 at ¶ 188, August 23, 1995), we proposed to define a small LMDS provider as an entity that, together with affiliates and attributable investors, has average gross revenues for the three preceding calendar years of less than $40 million. We have not yet received approval by the SBA for this definition.

30. There is only one company, CellularVision, that is currently providing LMDS video services. Although the Commission does not collect data on annual receipts, we assume that CellularVision is a small business under both the SBA definition and our proposed auction rules. No commenters addressed the tentative conclusions we reached in the Further Notice. We tentatively conclude that a majority of the potential LMDS licensees will be small entities, as that term is defined by the SBA.

31. *Small Broadcast Stations:* The SBA defines small television broadcasting stations as television broadcasting stations with $10.5 million or less in annual receipts. 13 CFR 121.201.

32. *Estimates Based on Census and BIA Data:* According to the Bureau of the Census, in 1992, 1,155 out of 1,478 operating television stations reported revenues of less than $10 million for 1992. This represents 78% of all television stations, including noncommercial stations. The Bureau of the Census does not separate the revenue data by commercial and noncommercial stations in this report. Neither does it allow us to determine the number of stations with a maximum of $10.5 million in annual receipts. Census data also indicate that 81% of operating firms (that owned at least one television station) had revenues of less than $10 million.

33. We also have performed a separate study based on the data contained in the BIA Publications, Inc. Master Access Television Analyzer Database, which lists a total of 1,141 full power commercial television stations. It should be noted that, using the SBA definition of small business concern, the percentage figures derived from the BIA database may be underinclusive because the database does not list revenue estimates for noncommercial educational stations, and these therefore are excluded from our calculations based on the database. The BIA data indicate that, based on 1995 revenue estimates, 440 full power commercial television stations had an estimated revenue of $10.5 million or less. That represents 54% of full power commercial television stations with revenue estimates listed in the BIA program. The database does not list estimated revenues for 331 stations. Using a worst case scenario, if those 331 stations for which no revenue is listed are counted as small stations, there would be a total of 771 stations with an estimated revenue of $10.5 million or less, representing approximately 68% of the 1,141 full power commercial television stations listed in the BIA data base.

34. Alternatively, if we look at owners of commercial television stations as listed in the BIA database, there are a total of 488 owners. The database lists estimated revenues for 60% of these owners, or 295. Of these 295 owners, 156 or 53% had annual revenues of less than $10.5 million. Using a worst case scenario, if the 193 owners for which revenue is not listed are assumed to be small, then small entities would constitute 72% of the total number of owners.

35. In summary, based on the foregoing worst case analysis using Bureau of the Census data, we estimate that our proposed rules will apply to as many as 1,150 commercial and noncommercial television stations (78% of all stations) that could be classified as small entities. Using a worst case analysis based on the data in the BIA data base, we estimate that as many as 771 commercial television stations (about 68% of all commercial television stations) could be classified as small entities. As we noted above, these estimates are based on a definition that we tentatively believe greatly overstates the number of television broadcasters that are small businesses. Further, it should be noted that, under the SBA's definitions, revenues of affiliates that are not television stations should be aggregated with the television station revenues in determining whether a concern is small. The estimates overstate the number of small entities since the revenue figures on which they are based do not include or aggregate such revenues from nontelevision affiliated companies.

36. *Reporting, Recordkeeping and Compliance Requirements:* The *Further Notice* seeks comment on whether we should require video programming providers (including broadcast licensees and MVPDs) to closed caption or otherwise visually display emergency programming and similar special reports to ensure the accessibility of these types of video programs to viewers with hearing disabilities. If this proposal is adopted, video programming providers may choose to maintain records of the closed captioned emergency programming carried in order to resolve any disputes which may arise regarding compliance.

37. *Federal Rules Which Overlap, Duplicate or Conflict With the Commission's Proposal:* None.

38. *Any Significant Alternatives Minimizing the Impact on Small Entities and Consistent With the Stated Objectives:* The *Closed Captioning Order* directs us to initiate proceedings to establish captioning requirements for emergency programming. We seek comment on proposals to promote and ensure the accessibility of emergency programming and other special reports to persons with hearing disabilities. We also seek comment on methods of visually displaying emergency information to viewers other than closed captioning which may be less costly or burdensome than captioning.

Ex Parte

39. This is a non-restricted notice and comment rule making proceeding. *Ex parte* presentations are permitted, provided they are disclosed as provided in the Commission's Rules. *See generally* 47 CFR 1.1202, 1.1203 and 1.1206(a).

Comment Dates

40. Pursuant to applicable procedures set forth in §§ 1.415 and 1.419 of the Commission's Rules, interested parties may file comments on or before February 25, 1998 and reply comments on or before March 27, 1998. All relevant and timely comments will be considered before final action is taken in this proceeeding. To file formally in this proceeding, participants must file an original and four copies of all comments, reply comments, and supporting comments. If participants want each Commissioner to receive a personal copy of their comments, an original plus nine copies must be filed. Comments and reply comments should be sent to the Office of the Secretary, Federal Communications Commission, Washington, D.C. 20554. Comments and reply comments will be available for public inspection during regular business hours in the FCC Reference Center (Room 239) of the Federal Communications Commission, 1919 M Street, N.W., Washington, D.C. 20554.

41. Accordingly, *It is ordered* that pursuant to the authority contained in Sections 4(i), 303(r), and 713 of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 303(r), and 613, the *Further Notice of Proposed Rulemaking* IS ADOPTED.

42. *It is further ordered* that the Office of Public Affairs shall send a copy of this *Further Notice of Proposed Rulemaking*, including the Initial Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration, in accordance with paragraph 603(a) of the Regulatory Flexibility Act, Pub. L. 96–354, 94 Stat. 1164, 5 U.S.C. §§ 601 *et seq.* (1981).

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 101

[ET Docket No. 95–183; PP Docket No. 93–253; FCC 97–391]

Use of the 38.6–40.0 GHz Band for Fixed Microwave Service

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: The Commission adopts a *Second Notice of Proposed Rule Making* regarding the use of the 38.6–40.0 GHz Band for fixed microwave services. Specifically, the Commission seeks comment on the appropriate unjust enrichment requirements for approving partitioning and disaggregation arrangements involving a complete or partial transfer of a license owned by a qualified small business to a non-small business or a small business eligible for a smaller bidding credit.

DATES: Comments are due on or before February 20, 1998, and reply comments are due on or before March 9, 1998.

ADDRESSES: Federal Communications Commission, 1919 M Street, N.W., Room 222, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Susan Magnotti, Public Safety and Private Wireless Division, (202) 418–0871, or Christina Eads Clearwater, Auctions Division, (202) 418–0660.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's *Second Notice of Proposed Rule Making* in the *Report and Order and Second Notice of Proposed Rule Making*, ET Docket No. 95–183, PP Docket No. 93–253, FCC 97–391, adopted October 24, 1997, and released November 3, 1997. The complete text of this *Report and Order and Second Notice of Proposed Rule Making* is available for inspection and copying during normal business hours in the FCC Reference Center (Room 239), 1919 M Street, NW., Washington, DC, and also may be purchased from the Commission's copy contractor, International Transcription Service, (202) 857–3800, 1231 20th Street, N.W., Washington, DC 20036.

Synopsis of the Second Notice of Proposed Rule Making in the Report and Order and Second Notice of Proposed Rule Making

1. The Commission has concluded in the *Report and Order* that any 39 GHz licensee will be permitted to partition or disaggregate portions of its authorization. In the *Second Notice of Proposed Rule Making*, the Commission seeks comment regarding what restrictions to impose on partitioning and/or disaggregation by licensees that have received bidding credits when the buyer is a small business subject to less favorable bidding credits or a non-small business not eligible for bidding credits.

2. The Commission seeks comment on the type of unjust enrichment requirements that should be placed as a condition for approval of partitioning and disaggregation arrangements, *e.g.*, an application for a partial transfer of a license owned by a qualified small business to a non-small business. The Commission tentatively concludes that these unjust enrichment provisions would include payment of any bidding credit that it may adopt for small business and would be applied on a proportional basis. The Commission seeks comment on how such unjust enrichment amounts should be calculated, especially in light of the difficulty of devising a methodology or

VOL 63 ISS 13 JA 21 1998 UMI

formula that will differentiate the relative market value of the opportunities to provide service to various partitioned areas within a geographic or market area. The Commission seeks comment on whether it should consider the price paid by the partitionee in determining the percentage of the outstanding principal balance to be repaid.

3. The Commission tentatively concludes that if it permits a small business licensee to disaggregate to another qualified small business that would not qualify for the same level of bidding credit as the disaggregating licensee, the disaggregating licensee will be required to repay a portion of the benefit it received. The Commission seeks comment on how that amount should be calculated. The Commission seeks comment on what provisions, if any, it should adopt to address the situation of a small business licensee's disaggregation followed by default in payment of a winning bid at auction.

Regulatory Flexibility Act/Initial Regulatory Flexibility Analysis

4. As required by section 603 of the Regulatory Flexibility Act, 5 U.S.C. 603, the Commission has prepared an Initial Regulatory Flexibility Analysis (IRFA) of the expected impact on small entities of the proposals suggested in the *Second Notice of Proposed Rule Making*. Written public comments are requested on the IRFA. These comments must be filed in accordance with the same filing deadlines as comments on this *Second Notice of Proposed Rule Making*, but they must have a separate and distinct heading designating them as responses to the IRFA. The Secretary shall send a copy of this *Second Notice of Proposed Rule Making*, including the IRFA, to the Chief Counsel for Advocacy of the Small Business Administration in accordance with paragraph 603(a) of the Regulatory Flexibility Act. Public Law 96–354, 94 Stat. 1164, 5 U.S.C. 601 *et seq.* (1981).

5. *Need for and Objectives of the Action.* In the companion *Report and Order*, the Commission expanded the Commission's geographic partitioning provisions to all 39 GHz licensees and permitted spectrum disaggregation. The Commission seeks further comment on the use of partitioning and disaggregation by parties taking advantage of bidding credits under the Commission's competitive bidding licensing rules, and certain technical rules. The expansion of the partitioning and disaggregation rules in the *Report and Order* to include all 39 GHz licensees implements, in part, the requirements of section 257 of the Telecommunications Act of 1996, which requires that the Commission eliminate entry barriers into the telecommunications market for small businesses. In the *Second Notice of Proposed Rule Making*, the Commission tentatively concludes that unjust enrichment provisions should apply when a licensee has benefitted from the small business provisions (*i.e.*, installment plans and bidding credits) in the auction rules and then partitions a portion of the license area to another entity that would not qualify for such benefits or would not qualify for the same level of benefits. The Commission seeks comment on how such unjust enrichment should be calculated under each scenario. The Commission further seeks comments on what the respective obligations of the participants in partitioning transfer should be.

6. *Legal Basis.* The proposed action is authorized under sections 4(i), 257, 303(r), and 309(j) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 257, 303(r), and 309(j).

7. *Description and Number of Small Entities Involved.* The unjust enrichment proposals with respect to partitioning and disaggregation will affect all small businesses that avail themselves of partitioning and/or disaggregation, including small businesses currently holding 39 GHz licenses who choose to partition and/or disaggregate and small businesses who may acquire licenses through partitioning and/or disaggregation. The Commission is required to estimate in its Final Regulatory Flexibility Analysis the number of small entities to which a rule will apply, provide a description of such entities, and assess the impact of the rule on such entities.

8. To assist the Commission in this analysis, commenters are requested to provide information regarding how many total entities, existing and potential, would be affected by the proposed rules in the *Second Notice of Proposed Rule Making*. In particular, the Commission seeks estimates of how many such entities will be considered small businesses. As explained in the Final Regulatory Flexibility Analysis in the *Report and Order*, the Commission is utilizing the SBA definition applicable to radiotelephone companies, *i.e.*, an entity employing less than 1,500 persons. The Commission seeks comment on whether this definition is appropriate for 39 GHz licensees in this context. Additionally, the Commission requests each commenter to identify whether it is a "small business" under this definition. If a commenter is a subsidiary of another entity, this information should be provided for both the subsidiary and the parent corporation or entity.

9. *Reporting, Recordkeeping, and Other Compliance Requirements.* The proposals in the *Second Notice of Proposed Rule Making* include the possibility of imposing additional reporting and/or recordkeeping requirements in connection with businesses obtaining licenses through the partitioning and disaggregation rules. The information requirements placed on businesses seeking to obtain licenses through partitioning or disaggregation will be used to determine if the licensee is a qualifying entity to obtain a partitioned license or disaggregated spectrum. Those reporting requirements are stated in the companion Final Regulatory Flexibility Act. Those reporting requirements also will likely be used to ensure that a licensee is not unjustly enriched by a partitioning or disaggregation arrangement.

10. *Federal Rules that Overlap, Duplicate, or Conflict with These Proposals.* None.

11. *Significant Alternatives Minimizing the Impact on Small Entities Consistent with the Stated Objectives.* In the *Second Notice of Proposed Rule Making*, the Commission tentatively concludes that unjust enrichment provisions should apply when a licensee has benefitted from the small business provisions in the auctions rules and partitions a portion of the license area to another entity that would not qualify for such benefits. The alternative to applying the unjust enrichment provisions would be to allow an entity who had benefitted from the special bidding provisions for small businesses to become unjustly enriched by partitioning a portion of their license area to parties that do not qualify for such benefits.

12. *Paperwork Reduction Act.* This *Second Notice of Proposed Rule Making* contains either a proposed or modified information collection. As part of its continuing effort to reduce paperwork burdens, the Commission invites the general public and the Office of Management and Budget (OMB) to take this opportunity to comment on the information collections contained in this *Second Notice of Proposed Rule Making*, as required by the Paperwork Reduction Act of 1995, Pub. L. 104–13. Public and agency comments are due at the same time as other comments on this *Second Notice of Proposed Rule Making;* OMB comments are due March 23, 1998. Comments should address: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimates; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology.

13. *Ex Parte Rules.* This is a non-restricted notice and comment rulemaking proceeding. *Ex parte* presentations are permitted except during the Sunshine Agenda period, provided they are disclosed as provided in the Commission's rules. *See generally* 47 CFR 1.1201, 1.1203, 1.1206(a).

14. *Comment Filing Procedures.* Pursuant to applicable procedures set forth in §§ 1.415 and 1.419 of the Commission's Rules, 47 CFR 1.415 and 1.419, interested parties may file comments on or before February 20, 1998, and reply comments on or before March 9, 1998. To file formally in this proceeding, interested parties must file an original plus four copies of all comments, reply comments, and supporting comments. If commenters want each Commissioner to receive a personal copy of their comments, they must file an original plus nine copies. Comments and reply comments should be sent to: the Office of the Secretary, Federal Communications Commission, Washington, D.C. 20554. Comments and reply comments will be available for public inspection during regular business hours in the FCC Reference Center (Room 239), 1919 M Street, N.W., Washington, D.C. 20554.

15. Authority for issuance of this *Report and Order and Second Notice of Proposed Rule Making*, is contained in §§ 4(i), 257, 303(r), and 309(j) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 257, 303(r), and 309(j).

DEPARTMENT OF AGRICULTURE

Forest Service

Routt Divide Blowdown Analysis, Medicine Bow-Routt National Forest, Hahns Peak/Bears Ears Ranger District, Routt County, CO

AGENCY: Forest Service, USDA.

ACTION: Notice; intent to prepare an Environmental Impact Statement.

SUMMARY: The U.S. Department of Agriculture, Forest Service, Medicine Bow-Routt National Forest will prepare an Environmental Impact Statement (EIS) to assess and disclose the environmental effects of proposed salvage logging of a portion of the Routt Divide Blowdown outside the Mount Zirkel Wilderness Area on the Hans Peak/Bears Ears Ranger District. The analysis area location is approximately 24 miles north of Steamboat Springs, Colorado, in portions of sections 3, 4, 5, 8, 9 and 10 of T9N, R83W; sections 1, 2, and 11 of T9N, R84W; sections 17, 20, 21, 27, 28, 29, 32, 33 and 34 of T10N, R83W; sections 1, 2, 3, 4, 10, 11, 12, 13, 14, 15, 22, 23, 24, 25, 26, 27, 34, 35 and 36 of T10N, R84W; and sections 33, 34, 35, and 36 of T11N, R84W.

This Notice of Intent is being issued under the authority of the Routt National Forest Land and Resource Management Plan and Final EIS of November 1983, which is the current guidance for forest management of the area. It is anticipated that the final Revised Land and Resource Management Plan for the Routt National Forest will be issued before the project decision for the Routt Divide Blowdown Analysis is complete. Therefore, information from the draft Proposed Revised Land and Resource Management Plan, issued in January 1996, is also included so readers can evaluate how the project would fit within guidance provided by the revised plan. The project will tier to the plan that is in effect when the project decision is made.

The majority of lands affected by the blowdown event within the analysis area are currently allocated to Management Area 4B (wildlife habitat), as described in the current Forest Land and Resource Management Plan for the Routt National Forest, approved in 1983. There are also some inclusions of blowdown within Management Areas 2A (semiprimitive motorized recreation) and 6B (range management). The North Fork and Middle Fork of Elk River are identified as eligible for consideration by Congress for Scenic River designation. Forested lands within management areas 4B, 6B and 2A are designated as suitable for timber production by the forest plan and do contribute to the Allowable Sale Quantity (ASQ) calculation. Following is a summary of the general forest plan direction for the area.

Management Area 4B—Wildlife Habitat: Emphasizes wildlife habitat for one or more indicator species. Semiprivate motorized recreation opportunities will be provided, but vegetation manipulation and human activities are managed to provide optimum habitat for the selected species.

Management Area 2A—Semiprimitive motorized recreation: Emphasizes semiprimitive motorized recreation opportunities such as snowmobiling, four-wheel driving and motorcycling both on and off roads and trails in a naturally appearing environment. Management activities are visually subordinate. Timber harvest includes clearcutting and shelterwood and will enhance wildlife diversity.

Management area 6B—Rangeland Management: Emphasizes improving and/or maintaining rangeland. Improvements may include seeding, burning, spraying, crushing, or plowing as well as structural improvements.

The Forest Plan is being revised as required by the National Forest Management Act. The Draft Revised Land and Resource Management Plan for the Routt National Forest was issued in January 1996. The preferred alternative for the forest plan revision (Alternative C as described in the DEIS) allocates the majority of the project area to management area 5.11 (General Forest and Rangelands—Forest Vegetation Emphasis, which provides for a mix of forest products, forage, wildlife habitat and recreation), and management area 5.13 (Forest Products, which is managed to produce commercial wood products). These lands are included in the ASQ calculations as suitable lands. The analysis area also includes lands allocated to management area 1.32 (Backcountry Recreation with Limited Motorized Winter Use), which provides for backcountry recreation opportunities in a natural-appearing landscape and continues to consider the North Fork and Middle Fork of Elk River as eligible for Scenic River designation. These lands are not included in the ASQ calculations as suitable lands.

DATES: Written comments and suggestions should be postmarked or received by February 21, 1998. The estimated date for filing the draft EIS is March 1998, followed by the final decision in May 1998.

ADDRESSES: The Responsible Official is Jerry E. Schmidt, Forest Supervisor; Medicine Bow—Routt National Forest; 925 Weiss Drive; Steamboat Springs, CO 80487–9315. Written comments and suggestions concerning the scope of the analysis may be sent to him at that address.

FOR FURTHER INFORMATION CONTACT: Larry Lindner, Interdisciplinary Team Leader. Phone: 970–870–2220 (Steamboat Springs, CO) or 307–745–2424 (Laramie, WY).

SUPPLEMENTARY INFORMATION: On October 25, 1997, approximately 20,000 acres of Engelmann spruce and subalpine fir along the western boundary of the Mount Zirkel Wilderness Area were subjected to a windthrow event. The majority of trees were windthrown in about 40–50 patches ranging in size from about 50 to 4,000 acres. Approximately 12,000 acres of windthrow are within the Mount Zirkel Wilderness and approximately 8,000 acres are outside and to the west of the wilderness boundary. This Notice of Intent to prepare an Environmental Impact Statement concerns a portion of the blowdown that is within the North Fork and Middle Fork of Elk River watersheds outside the Mount Zirkel Wilderness Area. Additional analysis responsive to the National Environmental Policy Act (NEPA) will be completed for any activities that may be proposed for the remaining blowdown area.

Preliminary estimates indicate that as much as 80 million board feet of timber may be salvageable within the analysis area. Insects, rots and stains are expected to greatly reduce the economic value of the logs within a few years. Therefore, a timely decision is needed to maximize any economic benefit the people of the United States would achieve should the decision be made to salvage the blowdown sawtimber or any efforts to do so would be foregone.

Proposed Action

To restore recreation opportunities, to enhance regeneration of stands, and to use blowdown timber through salvage logging opportunities in response to the Routt Divide Blowdown event within one of the largest patches where road access already exists. The Forest Service intends to analyze: (a) The effects of the blowdown to the natural, social and economic resources; (b) the opportunities to mitigate the effects of the blowdown through salvage logging or other methods; and (c) the effects of salvage logging as well as any needed mitigation measures.

Most projects developed by the Forest Service are tailored to fit on-the-ground conditions and must meet numerous design constraints, such as size and shape of units, etc. The Routt Divide Blowdown was a natural disturbance rather than the result of a planned activity by the Forest Service. Since the blowdown was an act of nature rather than of Forest Service design, some aspects of projects developed in response to the blowdown may not look like projects that are regularly conceived, designed and implemented by the Forest Service.

Much of the analysis area has been inventoried as part of the analysis process for past and proposed sales, so there is already specific data and general information available. The Interdisciplinary Team will develop a site specific proposed action as part of its analysis for disclosure in the draft EIS. The design of any activities proposed for the area must be responsive to the effects of the event itself and will be guided by applicable Forest Plan Standards and Guidelines. Should circumstances warrant deviation from the Forest Plan Standards and Guidelines, an amendment(s) to the Plan subject to the NEPA process may be necessary. Some proposed activities may be innovative and non-traditional due to the nature of the blowdown itself.

This environmental analysis shall consider the environmental consequences of the proposed action, as well as alternatives reasonably implemented, while meeting the purpose and need of the action.

Decision To Be Made

The Medicine Bow-Routt Forest Supervisor will make a decision about the selection of one alternative among several concerning whether a portion of the Routt Divide Blowdown outside wilderness will be salvage logged and what mitigation measures will be required. The issues and alternatives developed from public comment and Interdisciplinary Team analysis will be clearly disclosed in the Environmental Impact Statement. From the project record alone, the Forest Supervisor and others who may review the decision, will be able to fully understand the consequences of implementing the selected alternative.

Preliminary Issues

—Effects to recreation
—Effects to Mount Zirkel Wilderness area
—Effects to Wild and Scenic River classification
—Effects to Roadless areas
—Effects to National Forest permittees
—Effects to local communities and Forest Users
—Effects to channel stability from increased water yield
—Effects to soil productivity from surface erosion
—Effects to wildlife and fish, including Threatened, Endangered and Sensitive species
—Social effects
—Safety
—Regeneration of new forests in the blowdown
—Effects of salvage logging
—Effects of road construction required to salvage logs
—Visual effects (including those resulting from the need to maintain roughness, shade and structure within a contiguous large area of blowdown)
—Potential that the blowdown material may lead to epidemic levels of insect populations and the effects of such an epidemic

Reviewers Obligations

The Forest Service believes, at this early stage, it is important to give reviewers notice of several court rulings related to public participation in the environmental review process. First, reviewers of draft Environmental Impact Statements must structure their participation in the environmental review of the proposal so that it is meaningful and alerts an agency to the reviewer's position and contentions. *Vermont Yankee Nuclear Power Corp.* v. *NRDC*, 435 U.S. 519, 553 (1978). Also, environmental objections that could be raised at the draft Environmental Impact Statement stage but that are not raised until after completion of the final Environmental Impact Statement may be waived or dismissed by the courts. *City of Angoon* v. *Hodel*, 803 F.2d 1016, 1022 (9th Cir. 1986) and *Wisconsin Heritages, Inc.* v. *Harris*, 490 F. Supp. 1334, 1338 (E.D. Wis. 1980). Because of these court rulings, it is very important that those interested in this proposed action participate by the close of the draft Environmental Impact Statement 45-day comment period so that substantive comments and objections are made available to the Forest Service at a time when it can meaningfully consider them and respond to them in the final Environmental Impact Statement.

To assist the Forest Service in identifying and considering issues and concerns on the proposed action, comments on the draft Environmental Impact Statement should be as specific as possible. It is also helpful if comments refer to specific pages or chapters of the draft statement. Comments may also address the adequacy of the draft Environmental Impact Statement or the merits of the alternatives formulated and discussed in the statement. Reviewers may wish to refer to the Council on Environmental Quality Regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3 in addressing these points.

Comments received in response to this solicitation, including names and addresses of those who comment, will be considered part of the public record on this proposed action and will be available for public inspection. Comments submitted anonymously will be accepted and considered; however, those who submit anonymous comments will not have standing to appeal the subsequent decision under 36 CFR Parts 215 or 217. Additionally, pursuant to 7 CFR 1.27(d), any person may request the agency to withhold a submission from the public record by showing how the Freedom of Information Act (FOIA) permits such confidentiality. Persons requesting such confidentiality should be aware that, under the FOIA, confidentiality may be granted in only very limited circumstances, such as to protect trade secrets. The Forest Service will inform the requester of the agency's decision regarding the request for confidentiality, and where the request is denied, the agency will return the submission and notify the requester that the comments may be resubmitted with or without name and address within 10 days.

VOL 63 ISS 13 JA 21 1998 UMI

Responsible Official

Jerry E. Schmidt, Forest Supervisor; Medicine Bow—Routt National Forest; 2468 Jackson Street, Laramie, WY 82070 is the Responsible Official. As the Responsible Official, I will decide which, if any of the alternatives to be described in the draft Environmental Impact Statement will be implemented. I will document the decision and the reasons for my selection of the decision in the Record of Decision.

Dated: January 14, 1998.

Jerry E. Schmidt,

Forest Supervisor.

BILLING CODE 3410–GM–M

DEPARTMENT OF AGRICULTURE

National Agricultural Statistics Service

Notice of Intent To Request an Extension of a Currently Approved Information Collection

AGENCY: National Agricultural Statistics Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13) and Office of Management and Budget (OMB) regulations at 5 CFR part 1320 (60 FR 44978, August 29, 1995), this notice announces the National Agricultural Statistics Service's (NASS) intention to request an extension of a currently approved information collection, the Agricultural Prices that expires May 31, 1998.

DATES: Comments on this notice must be received by March 27, 1998 to be assured of consideration.

ADDITIONAL INFORMATION OR COMMENTS: Contact Rich Allen, Associate Administrator, National Agricultural Statistics Service, U.S. Department of Agriculture, 1400 Independence Avenue, SW, Room 4117 South Building, Washington, DC 20250–2000, (202) 720–4333.

SUPPLEMENTARY INFORMATION:

Title: Agricultural Prices.

OMB Number: 0535–0003.

Expiration Date of Approval: May 31, 1998.

Type of Request: To extend a currently approved information collection.

Abstract: The primary objective of the National Agricultural Statistics Service is to prepare and issue state and national estimates of crop and livestock production and prices. The Agricultural Prices surveys provide estimates of prices received by farmers and prices paid for production goods and services needed by the U.S. Department of Agriculture. These price estimates are used to compute Parity Prices in accordance with requirements of the Agricultural Adjustment Act of 1938 as amended (Title III, Subtitle A, Section 301a). In addition, price data are used to administer target price provisions (deficiency payments) of the Food, Agriculture, Conservation, and Trade Act of 1990. The Agricultural Prices Surveys has approval from OMB for a 3-year period. NASS intends to request that the survey be approved for another 3 years.

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 11 minutes per response.

Respondents: Individual Job Applicants.

Estimated Number of Respondents: 81,800.

Estimated Total Annual Burden on Respondents: 15,000 hours.

Copies of this information collection and related instructions can be obtained without charge from Larry Gambrell, the Agency OMB Clearance Officer, at (202) 720–5778.

Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, such as through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology. Comments may be sent to: Larry Gambrell, Agency OMB Clearance Officer, U.S. Department of Agriculture, 1400 Independence Ave., SW, Room 4162 South Building, Washington, DC, 20250–2000. All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Signed at Washington, DC, January 14, 1998.

Rich Allen,

Acting Administrator, National Agricultural Statistics Service.

Notice of Intent To Request an Extension of a Currently Approved Information Collection

AGENCY: National Agricultural Statistics Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13) and Office of Management and Budget (OMB) regulations at 5 CFR part 1320 (60 FR 44978, August 29, 1995), this notice announces the National Agricultural Statistics Service's (NASS) intention to request an extension of a currently approved information collection, the Fruits, Nuts, and Specialty Crops that expires May 31, 1998.

DATES: Comments on this notice must be received by March 27, 1998 to be assured of consideration.

ADDITIONAL INFORMATION OR COMMENTS: Contact Rich Allen, Associate Administrator, National Agricultural Statistics Service, U.S. Department of Agriculture, 1400 Independence Avenue, SW, Room 4117, South Building, Washington, D.C. 20250–2000, (202) 720–4333.

SUPPLEMENTARY INFORMATION:

Title: Fruits, Nuts, and Specialty Crops.

OMB Number: 0535–0039.

Expiration Date of Approval: May 31, 1998.

Type of Request: To extend a currently approved information collection.

Abstract: The primary objective of the National Agricultural Statistics Service is to prepare and issue state and national estimates of crop and livestock production. The Fruits, Nuts, and Specialty Crops survey program collects information on acreage, yield, production, and value of non-citrus fruits and nuts and other specialty crops in states with significant commercial production. The program provides data needed by the U.S. Department of Agriculture and other government agencies to administer programs and to set trade quotas and tariffs. State universities and agriculture departments also use data from this survey. The Fruits, Nuts, and Specialty Crops program has approval from OMB for a 3-year period. NASS intends to request that the survey be approved for another 3 years.

Estimate of Burden: Public reporting burden for this collection of information is estimated to average 17 minutes per response.

Respondents: Individual Job Applicants.

Estimated Number of Respondents: 53,000.

Estimated Total Annual Burden on Respondents: 15,000 hours.

Copies of this information collection and related instructions can be obtained without charge from Larry Gambrell, the Agency OMB Clearance Officer, at (202) 720–5778.

DEPARTMENT OF AGRICULTURE

Rural Business-Cooperative Service

National Sheep Industry Improvement Center; Notice of Annual Board of Directors Meeting

AGENCY: Rural Business-Cooperative Service, USDA.

ACTION: Notice of annual board meeting.

SUMMARY: The Board of Directors of the National Sheep Industry Improvement Center announces that it will hold its annual Board of Directors meeting. The meeting will be held over 2 days in the Washington, DC area.

DATES: The meeting dates are:

1. Februrary 11, 1998, 7:00 p.m. to 10 p.m., Arlington, VA.

2. February 12, 1998, 8:30 a.m. to 2:00 pm, Washington, DC.

ADDRESSES: The meeting locations are:

1. Arlington, VA—Holiday Inn Westpark, 1900 N. Ft. Meyer Drive, Arlington, VA (Call hotel, 703/807–2000, for conference room number).

2. Washington, DC—USDA South Building, 1400 Independence Avenue, SW, Washington, DC, Room 3107.

FOR FURTHER INFORMATION CONTACT: Thomas Stafford, Director, Cooperative Marketing Division, Cooperative Services, RBS, USDA, Stop 3252, Room 4204, 1400 Independence Ave., SW., Washington, DC 20250–3252, telephone (202) 690–0368. (This is not a toll free number.) E-mail: thomas.stafford@usda.gov. The Federal Information Relay service on 1–800–877–8339 may be used by TDD users.

SUPPLEMENTARY INFORMATION: This board meeting will serve as the National Sheep Industry Improvement Center's annual meeting.

Background

In response to challenges facing the sheep and goat industries, the 1996 Farm Bill established the National Sheep Industry Improvement Center to assist and strengthen the U.S. sheep and goat industries through projects and assistance financed through the Center's revolving fund. The Center will manage a revolving fund of up to $50 million in Federal funds to facilitate the production and marketing of sheep and goats, and their products.

Treasury has deposited the initial $20 million into the Center's fund. This fund is capped at $50 million Federal funds—where authorization was provided for an additional $30 million in appropriated funds. After 10 years or upon receipt of $50 million in Federal funds to the revolving fund, the Center and its activities shall be privatized and no additional Federal funds shall be used to carry out the activities of the Center.

The Center is managed by a nine member (7 voting and 2 nonvoting members), non-compensated board. The seven voting members were chosen by the Secretary of Agriculture from the sheep and goat industries and the two non-voting members from the USDA are the Under Secretary for Rural Development and the Under Secretary for Research, Education and Economics. The Board of Directors may use the monies in the fund to make grants, and intermediate and long-term loans, contracts, cooperative repayable agreements, or cooperative agreements in accordance with an annual strategic plan submitted to the Secretary of Agriculture. Funds may be used to participate with Federal and State agencies, other public and private funding sources, and in regional efforts. Funding activities include providing security for, or making principal or interest payments on, revenue or general obligation bond issues, accruing interest, guaranteeing or purchasing insurance for local obligations, and selling acquired assets or loans.

Purposes of the Center

The purposes of the Center are to:

(1) Promote strategic development activities and collaborative efforts by private and State entities to maximize the impact of Federal assistance to strengthen and enhance production and marketing of sheep or goat products in the United States;

(2) Optimize the use of available human capital and resources within the sheep or goat industries;

(3) Provide assistance to meet the needs of the sheep or goat industry for infrastructure development, business development, production, resource development, and market and environmental research;

(4) Advance activities that empower and build the capacity of the United States sheep or goat industry to design unique responses to the special needs of the sheep or goat industries on both a regional and national basis; and

(5) Adopt flexible and innovative approaches to solving the long-term needs of the United States sheep and goat industries.

Board Meetings

The Board meetings are open to the public.

Authority: 7 U.S.C. 2008j, Pub.L. 104–130.

Bureau of Export Administration

Written Assurances for Exports of Technical Data Under General License GTDR (to be Renamed, "Written Assurances for Exports of Technical Data Under License Exception TSR")

ACTION: Proposed collection; comment request.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)).

DATES: Written comments must be submitted on or before March 23, 1998.

ADDRESSES: Direct all written comments to Linda Engelmeier, Departmental Clearance Officer, Department of Commerce, Room 5327, 14th and Constitution Avenue, NW., Washington, DC 20230.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument(s) and instructions should be directed to Stephen Baker, Department of Commerce, 14th and Constitution Avenue, NW., room 6877, Washington, DC 20230.

SUPPLEMENTARY INFORMATION:

I. Abstract

U.S. exporters are required to receive letters of assurance from their foreign importers stating that they will not export or reexport technical data to destinations outlined in the E.A.R. unless they have received prior authorization from BXA.

II. Method of Collection

Submitted in written form.

III. Data

OMB Number: 0694–0023.
Form Number: n/a.
Type of Review: Regular submission.
Affected Public: Individuals, businesses or other for-profit and not-for-profit institutions.
Estimated Number of Respondents: 226.
Estimated Time Per Response: 30 minutes per response.
Estimated Total Annual Burden Hours: 117.
Estimated Total Annual Cost: $0 (no capital expenditures are required).

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they will also become a matter of public record.

Dated: January 13, 1998.

Estimated Time Per Response: 20 hours per response.
Estimated Total Annual Burden Hours: 3,036.
Estimated Total Annual Cost: $0 (no capital expenditure are required).

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they will also become a matter of public record.

BILLING CODE 3510–DT–P

DEPARTMENT OF COMMERCE

Bureau of Export Administration

Technical Data Letter of Explanation

ACTION: Proposed collection; comment request.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)).

DATES: Written comments must be submitted on or before March 23, 1998.

ADDRESSES: Direct all written comments to Linda Engelmeier, Departmental Clearance Officer, Department of Commerce, Room 5327, 14th and Constitution Avenue, NW, Washington DC 20230.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument(s) and instructions should be directed to Stephen Baker, Department of Commerce, 14th & Constitution Avenue, NW, room 6877, Washington, DC, 20230.

SUPPLEMENTARY INFORMATION:

I. Abstract

The information contained in these letters will assure BXA that no unauthorized technical data will be exported for unauthorized end-uses or to unauthorized destinations and thus provide assurance that U.S. national security and foreign policy programs are followed. In addition, shipments to Poland, Hungary, and Czechoslovakia, need an Import Certificate issued by the appropriate national government.

II. Method of Collection

Submitted, as appropriate, with form BXA–748P.

III. Data

OMB Number: 0694–0047.
Form Number: BXA 748–P.
Type of Review: Regular submission for extension of a currently approved collection.

Affected Public: Individuals, businesses or other for-profit and not-for-profit institutions.
Estimated Number of Respondents: 570.
Estimated Time Per Response: 2–4 hours per response.
Estimated Total Annual Burden Hours: 935.
Estimated Total Annual Cost: $0 (no capital expenditures are required).

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they will also become a matter of public record.

Dated: January 14, 1998.

Linda Engelmeier,

Departmental Forms Clearance Officer, Office of Management and Organization.

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[Docket 2–98]

Proposed Foreign-Trade Zone—Palm Springs, California; Application and Public Hearing

An application has been submitted to the Foreign-Trade Zones (FTZ) Board (the Board) by the City of Palm Springs, California, to establish a general-purpose foreign-trade zone at sites in Palm Springs, California. The Palm Springs Regional Airport has been designated a Customs user fee airport facility by the U.S. Customs Service. The application was submitted pursuant to the provisions of the FTZ Act, as amended (19 U.S.C. 81a–81u), and the regulations of the Board (15 CFR Part 400). It was formally filed on January 12, 1998. The applicant is authorized to make the proposal under Section 6302 of the California Code.

The proposed zone would consist of 2 sites (918 acres) in Palm Springs: *Site 1* (904 acres)—Palm Springs Regional Airport complex, 3400 E. Tahquitz Canyon Way, Palm Springs; and, *Site 2* (14 acres)—an industrial development within the 18-acre Palm Springs Rail Station, 63950 Palm Springs Station Road, Palm Springs. The airport site includes aviation fuel facilities. Both sites are owned by the City of Palm Springs and operated by the City's Department of Transportation.

The application contains evidence of the need for zone services in the Palm Springs (Coachella Valley) area. Several firms have indicated an interest in using zone procedures for warehousing/distribution activity. Specific manufacturing approvals are not being sought at this time. Requests would be made to the Board on a case-by-case basis.

In accordance with the Board's regulations, a member of the FTZ Staff has been designated examiner to investigate the application and report to the Board.

As part of the investigation, the Commerce examiner will hold a public hearing on February 19, 1998, 9:00 a.m., City of Palm Springs, City Council Chambers, 3200 E. Tahquitz Canyon Way, Palm Springs, California 92262.

Public comment on the application is invited from interested parties. Submissions (original and 3 copies) shall be addressed to the Board's Executive Secretary at the address below. The closing period for their receipt is March 23, 1998. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period (to April 6, 1998).

A copy of the application and accompanying exhibits will be available during this time for public inspection at the following locations:

City of Palm Springs City Hall, City Clerk's Office, 3200 E. Tahquitz Canyon Way, Palm Springs, CA 92262

Office of the Executive Secretary, Foreign-Trade Zones Board, Room 3716, U.S. Department of Commerce, 14th and Pennsylvania Avenue, NW, Washington, DC 20230.

Dated: January 13, 1998.

Dennis Puccinelli,

Acting Executive Secretary.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[Docket 3–98]

Foreign-Trade Zone 93—Raleigh/Durham, NC; Request for Manufacturing Authority Rike Industries, Inc. (In-Line Skates)

An application has been submitted to the Foreign-Trade Zones Board (the Board) by the Triangle J Council of Governments, grantee of FTZ 93, pursuant to § 400.28(a)(2) of the Board's regulations (15 CFR part 400), requesting authority on behalf of Rike Industries, Inc. (Rike), to assemble in-line skates under FTZ procedures within FTZ 93. It was formally filed on January 13, 1998.

The Rike facility (41,000 sq. ft.) is located within Site 1 of FTZ 93 at 1000 Parliament Court in the Imperial Business Center, in Durham, North Carolina. The Rike facility (12 employees) is used to assemble in-line skates under contract for Fila Sports, Inc., for the U.S. market and export. The assembly process involves the attachment of domestically sourced in-line skate chassis to foreign-origin textile/leather boots (HTSUS 6402–6404, as sports footwear; duty rate: 20%). The finished in-line skates are classified under HTSUS 9506.70 (duty free). The application indicates that 15 percent of the facility's shipments will be exported.

FTZ procedures would exempt Rike from Customs duty payments on the foreign components used in export production. On its domestic sales, Rike would be able to elect the Customs duty rate during Customs entry procedures that applies to finished in-line skates (duty free) for the foreign boots/footwear noted above. The request indicates that the savings from FTZ procedures would help improve the facility's international competitiveness.

In accordance with the Board's regulations, a member of the FTZ Staff has been designated examiner to investigate the application and report to the Board.

Public comment on the application is invited from interested parties. Submissions (original and three copies) shall be addressed to the Board's Executive Secretary at the address below. The closing period for their receipt is March 23, 1998. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period (to April 6, 1998).

A copy of the application and the accompanying exhibits will be available for public inspection at the following locations:

Office of the Executive Secretary, Foreign-Trade Zones Board, U.S. Department of Commerce, Room 3716, 14th Street & Pennsylvania Avenue, NW, Washington, DC 20230–0002

Office of the Service Area Port Director, U.S. Customs Service—Raleigh/Durham, 120 South Center Court, Morrisville, NC 27560.

Dated: January 13, 1998.

Dennis Puccinelli,

Acting Executive Secretary.

International Trade Administration

[A–570–832]

Pure Magnesium From the People's Republic of China: Final Results of Antidumping Duty New Shipper Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: On October 23, 1997, the Department of Commerce published the preliminary results of the new shipper administrative review of the antidumping duty order on pure magnesium from the People's Republic of China (62 FR 55215). This review covers one manufacturer/exporter of the subject merchandise to the United States, Taiyuan Heavy Machinery Import and Export Corporation, and the period of review is May 1, 1996, through October 31, 1996. We gave interested parties an opportunity to comment on our preliminary results.

We have determined that U.S. sales have been made below the normal value, and we will instruct the U.S. Customs Service to assess antidumping duties based on the difference between Export Price and Normal Value.

EFFECTIVE DATE: January 21, 1998.

FOR FURTHER INFORMATION CONTACT: Everett Kelly or Brian C. Smith, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230; telephone: (202) 482–4194 or (202) 482–1766, respectively.

SUPPLEMENTARY INFORMATION: Unless otherwise indicated, all citations to the statute are references to the provisions effective January 1, 1995, the effective date of the amendments made to the Tariff Act of 1930, as amended (the Act), by the Uruguay Round Agreements Act (URAA). In addition, unless otherwise indicated, all citations to the Department of Commerce (the Department) regulations are to those codified at 19 CFR part 353 (April 1997). Where appropriate, references are made to the Department's final regulations, codified at 19 CFR part 351 (62 FR 27296), as a statement of current departmental practice.

Background

On October 23, 1997, the Department published in the **Federal Register** (62 FR 55215) the preliminary results of its new shipper administrative review of the antidumping duty order on pure magnesium from the PRC (62 FR 55215). On November 13, the petitioner [1] and Taiyuan Heavy Machinery Import and Export Corporation (Taiyuan) submitted publicly available information on surrogate values for factors of production for consideration in the final results. On November 18, the petitioner and Taiyuan each submitted case briefs. On November 20, both parties submitted comments on the other's publicly available information submitted on November 13. On November 26, the parties submitted rebuttal briefs. On December 2, 1997, the Department held a public hearing.

Scope of Order

The product covered by this order is pure primary magnesium regardless of chemistry, form or size, unless expressly excluded from the scope of this order. Primary magnesium is a metal or alloy containing by weight primarily the element magnesium and produced by decomposing raw materials into magnesium metal. Pure primary magnesium is used primarily as a chemical in the aluminum alloying, desulfurization, and chemical reduction industries. In addition, pure primary magnesium is used as an input in producing magnesium alloy.

Pure primary magnesium encompasses products (including, but not limited to, butt ends, stubs, crowns and crystals) [2] with the following primary magnesium contents:

(1) Products that contain at least 99.95% primary magnesium, by weight

[1] The petitioner includes the following entities: Magnesium Corporation of America, International Union of Operating Engineers, Local 564, and the United Steelworkers of America, Local 8319.

[2] Since the antidumping duty order was issued, we have clarified that the scope of the original order includes, but is not limited to, butt ends, stubs, crowns and crystals. *See* May 22, 1997, instructions in U.S. customs and November 14, 1997, *Final Scope Rule of Antidumping Duty Order on Pure Magnesium from the PRC.*

VOL 63 ISS 13 JA 21 1998 UMI

(generally referred to as "ultra-pure" magnesium);

(2) Products that contain less than 99.95% but not less than 99.8% primary magnesium, by weight (generally referred to as "pure" magnesium); and

(3) Products (generally referred to as "off-specification pure" magnesium) that contain 50% or greater, but less than 99.8% primary magnesium, by weight, and that do not conform to ASTM specifications for alloy magnesium.

"Off-specification pure" magnesium is pure primary magnesium containing magnesium scrap, secondary magnesium, oxidized magnesium or impurities (whether or not intentionally added) that cause the primary magnesium content to fall below 99.8% by weight. It generally does not contain, individually or in combination, 1.5% or more, by weight, of the following alloying elements: Aluminum, manganese, zinc, silicon, thorium, zirconium and rare earths.

Excluded from the scope of this order are alloy primary magnesium (that meets specifications for alloy magnesium), primary magnesium anodes, granular primary magnesium (including turnings, chips and powder), having a maximum physical dimension (i.e., length or diameter) of one inch or less, secondary magnesium (which has pure primary magnesium content of less than 50% by weight), and remelted magnesium whose pure primary magnesium content is less than 50% by weight.

Pure magnesium products covered by this order are currently classifiable under *Harmonized Tariff Schedule of the United States* (HTSUS) subheadings 8104.11.00, 8104.19.00, 8104.20.00, 8104.30.00, 8104.90.00, 3824.90.11, 3824.90.19 and 9817.00.90. Although the HTSUS subheadings are provided for convenience and customs purposes, our written description of the scope is dispositive.

Separate Rates

In proceedings involving non-market-economy ("NME") countries, the Department begins with a rebuttable presumption that all companies within the country are subject to government control and thus should be assessed a single antidumping duty deposit rate. To establish whether a firm is sufficiently independent from government control to be entitled to a separate rate, the Department analyzes each exporting entity under a test arising out of the *Final Determination of Sales at Less Than Fair Value: Sparklers from the People's Republic of China* (56 FR 20588, May 6, 1991) and amplified in *Final Determination of Sales at Less Than Fair Value: Silicon Carbide from the People's Republic of China* (59 FR 22585, May 2, 1994) (*Silicon Carbide*). Under the separate rates criteria, the Department assigns separate rates in nonmarket economy cases only if the respondent can demonstrate the absence of both *de jure* and *de facto* governmental control over export activities.

1. De Jure Control

Taiyuan has placed on the administrative record documents to demonstrate absence of *de jure* control: the "Law of the People's Republic of China on Industrial Enterprises Owned by the Whole People," adopted on April 13, 1988; (the Industrial Enterprises Law), and the 1992 regulations that supplemented it, "Regulations for Transformation of Operational Mechanisms of State-Owned Industrial Enterprises" (Business Operation Provisions). We have analyzed these laws in previous cases and have found them sufficiently to establish an absence of *de jure* control of companies "owned by the whole people," such as Taiyuan. (*See, e.g., Final Determination of Sales at Less than Fair Value: Furfuryl Alcohol from the People's Republic of China* ("*Furfuryl Alcohol*") 60 FR 22544 (May 8, 1995)). The Industrial Enterprises Law provides that enterprises owned by "the whole people" shall make their own management decisions, be responsible for their own profits and losses, choose their own suppliers, and purchase their own goods and materials. The Business Operation Provisions confer upon state-owned enterprises the responsibility for making investment decisions, the right to dispose of retained capital and assets, and the authority to form joint ventures and to merge with other enterprises. Taiyuan also states that pure magnesium does not appear on any government lists regarding export provisions or export licensing, and that no quotas are imposed on pure magnesium. In sum, in prior cases, the Department examined both the Industrial Enterprises Law and the Business Operations Provisions, and found that they establish an absence of *de jure* control. We have no new information in this proceedings which would cause us to reconsider this determination with regard to Taiyuan.

2. De Facto Control

The Department typically considers four factors in evaluating whether each respondent is subject to *de facto* governmental control of its export functions: (1) Whether the export prices are set by or subject to the approval of a governmental authority; (2) whether the respondent has authority to negotiate and sign contracts and other agreements; (3) whether the respondent has autonomy from the government in making decisions regarding the selection of management; and (4) whether the respondent retains the proceeds of its export sales and makes independent decisions regarding disposition of profits or financing of losses. *See Silicon Carbide* and *Furfuryl Alcohol*.

Taiyuan asserted the following: (1) It establishes its own export prices; (2) it negotiates contracts, without guidance from any governmental entities or organizations; (3) it makes its own personnel decisions; and (4) it retains the proceeds of its export sales, uses profits according to its business needs and has the authority to sell its assets and to obtain loans. During verification proceedings, Department officials viewed such evidence as sales documents that showed Taiyuan sales prices were negotiated solely by Taiyuan and its customer. In addition, the Department generally noted no significant indication of government involvement in Taiyuan's business operations. Taiyuan officials are appointed by a bureau of the provincial government, rather than the central government, and there are no other known exporters of the subject merchandise under the control of the provincial government. Sales documents reviewed indicated that Taiyuan sales prices were negotiated solely by Taiyuan and its customer. In addition, the Department reviewed sales payments, bank statements and accounting documentation that provided evidence that Taiyuan received payment in U.S. dollars, which was deposited into its bank account after being converted to renminbi (RMB). *See* Taiyuan Sales Verification Report. This information, taken in its entirety, supports a finding that there is *de facto* an absence of governmental control of export functions. Consequently, we have determined that Taiyuan has met the criteria for the application of separate rates. *See Notice of Final Determination at Less Than Fair Value: Persulfates from the Peoples Republic of China*, 62 FR 27222 (May 19, 1997).

Fair Value Comparisons

To determine whether sales of the subject merchandise by Taiyuan to the United States were made at less than fair value, we compared the export price (EP) to the normal value (NV), as described in the "Export Price and Constructed Export Price" and "Normal Value" sections of this notice, below.

Export Price

We calculated EP in accordance with section 772(a) of the Act, because the subject merchandise was sold directly by the PRC exporter to unaffiliated parties in the United States prior to importation into the United States and the constructed export price methodology was not warranted based on the facts of record. We calculated EP based on the same methodology used in the preliminary results, with the following exception:

To value foreign inland freight, we used the average rate contained in the Indian periodical *The Times of India*. We have used this same rate in numerous NME cases where India has been selected as the primary surrogate. *See Final Determinations of Sales at Less Than Fair Value: Brake Drums and Brake Rotors from the People's Republic of China (PRC)*, 62 FR 9160 (February 28, 1997) (*Brake Rotors*)).

Normal Value

We calculated NV in accordance with section 773(c) of the Act, which applies to non-market economy countries. In accordance with section 773(c)(4) of the Act, we must, to the extent possible, value the factors of production in one or more market economy countries that (1) are at a level of economic development comparable to that of the non-market economy country, and (2) are significant producers of comparable merchandise. We have determined that Indonesia and India are the countries most comparable to the PRC in terms of overall economic development and both are significant producers of comparable merchandise (aluminum). Further, India also produces magnesium. For these final results, we have continued to use India as a surrogate country because it meets the Department's criteria for surrogate country selection.

The selection of the surrogate values was based on the quality and contemporaneity of the data. Where possible, we attempted to value material inputs on the basis of tax-exclusive domestic prices (*see* Comment 17). Where we were not able to rely on domestic prices, we used import prices to value factors. As appropriate, we adjusted input prices to make them delivered prices. Where import values were used, we added an amount for surrogate freight attributable to the lesser of either the distance from the source to the factory or the nearest port to the factory (*see* Comment 18). For those values not contemporaneous with the POR, we adjusted for inflation using wholesale price indices published in the International Monetary Fund's *International Financial Statistics*. For a complete analysis of surrogate values, see the January 14, 1998, Calculation Memorandum (Calculation Memorandum). We note changes to surrogate valuation since the preliminary results as follows:

To value ferrosilicon, we used a simple average of prices applicable during the POR from *Metal Bulletin*, and the *Iron and Steel Newsletter* (*see* Comment 6).

To value calcinate dolomite and fluorite powder, we have used prices from *Monthly Statistics of the Foreign Trade of India* (*Monthly Statistics*) (*see* Comments 8 and 9, respectively).

To value barium chloride, we used prices from *United Nations Import Statistics* (*see* Comment 10).

To value electricity, we used the August 1996 rate in *Business World* (*see* Comment 12).

To value truck freight rates, we used the average rate contained in the Indian periodical *The Times of India*.

To value factory overhead, SG&A, and profit, we used the financial report of Southern Magnesium and Chemicals Ltd. (SMCL) because this company is a producer of the subject merchandise and the data from the report is contemporaneous to the POR (*see* Comment 2).

We have considered the line item labeled "stores and spares consumed" to include the reducing vessel and have treated the reducing vessel as part of factory overhead because the reducing vessel is not a direct material consumed in the production process. Although the SMCL financial report may have treated the reducing vessel as a direct material and included the reducing vessel as part of line item "raw materials consumed," we have, in calculating the surrogate overhead percentage, reduced SMCL's cost of materials consumed and increased overhead by the amount attributable to the reducing vessel costs (*see* Comment 1). We have not included in the surrogate overhead and SG&A calculations the excise duty amount listed in SMCL's financial report (*see Brake Rotors* at 9164). We based our factory overhead calculation on the cost of goods manufactured rather than on the cost of goods sold. We also included interest and/or financial expenses in the SG&A calculation. In addition, we only reduced interest and financial expenses by amounts for interest income if the Indian financial report noted that the income was short-term in nature. Where the financial report did not distinguish short-term interest income as a line item within total "other income," we used the relative ratio of interest income to total other income as reported for the Indian metals and chemicals industry in the *Reserve Bank of India Bulletin* (*RBI Bulletin*). For a further discussion of other adjustments made, see January 14, 1998, Calculation Memorandum).

Interested Party Comments

We gave interested parties an opportunity to comment on the preliminary results. We received comments and rebuttal comments from the petitioner and Taiyuan.

Comment 1: Treatment of the Reducing Vessel. The petitioner claims that evidence on the record demonstrates that the reducing vessel is not part of factory overhead and that the Department must treat and value the reducing vessel as a direct material regardless of which public information it uses to calculate a value for factory overhead. The petitioner also refers to a U.S. Bureau of Mines (BOM) study of the silicothermic process of magnesium production which treats the reducing vessel as a direct material cost and not part of factory overhead. If the Department decides to use the financial report of SMCL (an Indian producer) to value factory overhead, the petitioner argues, then it should also take into consideration the fact that the data in the financial report demonstrate that the vessel is treated as a direct material rather than as part of stores and spares. The petitioner points out that even though Indian accounting standards state that a material can be considered part of factory overhead if it assists the manufacturing process but does not enter physically into the composition of the finished product, this is not necessarily the case with reducing vessels. Alternatively, the petitioner argues that if the Department decides to use data from the *RBI Bulletin*, then it should take into consideration the fact that public information on the record demonstrates that the cost of the reducing vessel is not captured in a calculated factory overhead rate using data from the *RBI Bulletin*, because the cost of the vessel is neither indirect nor minor. The petitioner claims that if the Department uses the *RBI Bulletin* to calculate factory overhead, then the Department needs to make an adjustment to the factory overhead rate to account for the cost of the reducing vessel.

Taiyuan contends that the reducing vessel is not a raw material which is part of the direct cost of production. Rather, Taiyuan maintains that the reducing vessel is a reusable piece of equipment that does not physically enter into the finished product, and that

VOL 63 ISS 13 JA 21 1998 UMI

Indian general accounting principles treat such items as part of overhead costs. Therefore, Taiyuan maintains that the Department should continue to consider the reducing vessel as part of factory overhead.

DOC Position: We agree with Taiyuan. The reducing vessel is not incorporated into the finished product. Rather, it is equipment necessary for producing the subject merchandise which eventually needs to be replaced after continuous use. Although we conclude that SMCL treated the reducing vessel as a direct material in its 1995–96 financial report, we do not find that the reducing vessel should be considered a direct material rather than an indirect material for purposes of antidumping law. To the extent possible, we have adjusted the direct material amount reflected in SMCL's financial report by removing from the cost of direct materials and adding to factory overhead an amount for the reducing vessel based on data contained in SMCL's 1994–95 financial report. We have treated the reducing vessel cost as part of factory overhead and have used the SMCL 1995–96 financial report to calculate a factory overhead percentage (*see* Comment 2 for further discussion).

Comment 2: Surrogate Values for Factory Overhead, SG&A and Profit. The petitioner claims that the Department must use the financial statement of SMCL rather than the *RBI Bulletin* to value factory overhead, SG&A and profit because the Indian producer uses the silicothermic process employed by Taiyuan's supplier and therefore consumes the reducing vessel in producing magnesium. In addition, the petitioner claims that the data contained in SMCL's financial statement are more specific to magnesium production and more contemporaneous to the period of review (POR) than the data in the *RBI Bulletin*.

Taiyuan argues that the Department should use the data on the chemicals and metals industry from the *RBI Bulletin* to value factory overhead, SG&A and profit because the Department has used these data in numerous NME cases and because it has a high degree of reliability given that it contains data compiled from many companies. Taiyuan argues that the Department should not rely on the SMCL financial report to calculate these surrogate percentages because that financial report is not publicly available published information. Taiyuan also alleges that the SMCL financial report is not in accordance with Indian generally accepted accounting principles (GAAP) because SMCL may have considered the reducing vessel as part of direct materials and Indian GAAP require that materials which assist in the manufacturing process, but which do not enter physically into the finished product, are not to be considered as direct materials. Finally, Taiyuan argues that the SMCL financial report is unusable because information in the report indicates that SMCL was unable to produce and sell product during periods of high demand, undertook major capital improvement projects and maintained an abnormally high level of raw material stocks, all of which may have distorted its factory overhead, SG&A and profit ratios.

DOS Position: We agree with the petitioner. In numerous NME cases, we have expressed a preference for using the "most product-specific information possible from the surrogate market" (*see, e.g., Brake Rotors* at 9168). We find that SMCL's 1996 financial report is for an Indian producer of the subject merchandise and more specific than the industry-wide data for metals production contained in the 1992–93 RBI Bulletin. Moreover, we find that the 1996 SMCL financial report contains data which is more contemporaneous to the POR than data contained in the 1992–93 RBI Bulletin. In addition, we find that the SMCL financial report is publicly available information within the meaning of 19 CFR 351.301. As for Taiyuan's argument that SMCL's financial report is not in accordance with Indian GAAP, we find that the financial report has been audited by an Indian accounting firm and that even though SMCL may have treated the reducing vessel as a direct material in its financial report, this designation does not necessarily indicate that the financial report is not in accordance with Indian GAAP. With regard to the argument that SMCL's financial report is not usable because of possible production, capital investment and inventory irregularities, we note that there is no evidence in the financial report which indicates that these factors were abnormal for Indian producers in general. In addition, we find that Taiyuan has not provided any evidence which indicates that the data contained in the 1996 SMCL financial report is not reasonably representative of the production and selling experience of other producers of the subject merchandise in India during the time period in question.

Comment 3: Calculation of SG&A. Taiyuan contends that the Department should deduct from SG&A certain selling expenses (*i.e.*, royalty, selling commission, and advertisement) normally deducted from EP and CEP and also an amount reflected in the *RBI Bulletin* for "other expenses" and then take the remainder and divide it by the sum of total SG&A and COM to derive the SG&A percentage. Taiyuan cites to the Department's *Antidumping Manual* which states that SG&A should be expressed as a percentage of the cost of goods sold.

The petitioner contends that the Department should not deduct the royalty, selling commissions, or advertisement expenses from SG&A because it has made no such deductions to EP and because it cannot make a circumstance-of-sale (COS) adjustment based on the data on the record. Moreover, the petitioner maintains that the Department should not deduct "other expenses" from SG&A because there is no evidence that this expense category includes expenses already reported separately in the response (*i.e.*, packing costs). Finally, the petitioner states it is the Department's established practice to include only the COM in the denominator of the SG&A ratio.

DOC Position: We agree in part with the petitioner. We have not made a COS adjustment to NV. In NME proceedings, the Department does not generally adjust NV for COS differences given (a) the imprecise information for distinguishing between direct and indirect selling expenses in the surrogate SG&A source (*i.e.*, SMCL's financial report); and (b) the absence of non-NME information about what direct selling expenses are included in EP (except where CEP is used) (*see Final Determination of Sales at Less Than Fair Value: Bicycles from the People's Republic of China*, 61 FR 19026, 19031 (April 30, 1996) (*Bicycles*)). As for accounting for expenses already reported separately in the response (*i.e.*, packing expenses), we note that SMCL's financial report does not provide a separate line item for packing expenses. Since there is no information in the financial report which indicates that SMCL incurs packing expenses, we have not removed any packing expenses from the SG&A calculation. Regarding the calculation of the SG&A percentage, we have used the cost of goods manufactured, not the cost of goods sold, in the denominator of the SG&A ratio consistent with our current practice, which is not reflected in the *Antidumping Manual* (*see Brake Rotors* at 9164).

Comment 4: Material Consumption Figures. The petitioner argues that the Department should not have subtracted the monthly values reported as negative from the total amount of material consumed because it is impossible that Taiyuan's supplier consumed negative amounts of inputs in any months in which it produced magnesium ingots. Instead, the petitioner argues that the Department should require Taiyuan to provide additional information on its supplier's actual consumption figures for the inputs and months for which the supplier provided negative values. Alternatively, the petitioner argues that the Department should not reduce the quantities of the factors of production consumed by the amount of the reported negative consumption figures.

Taiyuan contends that if the Department recognizes adjustments to increase material usage, then the Department should also recognize adjustments which decrease material usage.

DOC Position: We agree with the respondent. The negative numbers do not reflect negative consumption amounts. Rather, the negative numbers noted in the inventory records are corrections to Taiyuan's supplier's records to reflect actual usage. The verification report specified all necessary corrections to reported data, and the correct information has been used for the final results.

Comment 5: Reseller SG&A Expenses and Profit. The petitioner argues that in calculating CV and/or EP, the Department failed to account for expenses Taiyuan incurred in reselling its product to the United States market. The petitioner contends that the Department should have included in CV both surrogate producer SG&A expenses and profit (noted in SMCL's financial statement) plus an amount of reseller SG&A expenses and profit (noted in the *RBI Bulletin*). Alternatively, the petitioner argues that the Department should reduce EP by the amount of reseller SG&A expenses and profit in accordance with 19 U.S.C. 1677a(c)(2)(A) and also adjust EP for reseller SG&A expenses and profit as a COS adjustment in accordance with 19 U.S.C. 1677b(a)(6)(C)(iii).

Taiyuan states that if the Department decides to include in CV an additional amount for the reseller's SG&A and profit, then the Department must make a corresponding level of trade adjustment to account for the different marketing level represented by such costs. However, Taiyuan states that the Department should not add these additional amounts to CV based on applicable costs to be included in the CV to establish NV.

DOC Position: We disagree with the petitioner. In cases involving NMEs, we do not use exporter expenses and profit in our analysis. Instead, we obtain ratios for expenses and profit from a surrogate country, which in this case is India, and include in NV amounts based on the surrogate ratios. We consider those selling expenses and profit to approximate the selling expenses incurred and profit realized by both Taiyuan and Taiyuan's supplier of the subject merchandise. Therefore, we have accounted for the expenses incurred and profit realized by Taiyuan in reselling the subject merchandise to the U.S. market. As for subtracting an amount for these expenses and profit from export price or making a COS adjustment we have no basis to conclude that such adjustments are warranted or feasible (*see* Comment 3 for further discussion).

Comment 6: Surrogate Value for Ferrosilicon. Taiyuan argues that the publication the Department used to value ferrosilicon in the preliminary results (*i.e., Metal Bulletin*) does not provide sufficient details on or reliable information for domestic values. Instead, Taiyuan claims that the Department should use a ferrosilicon import value submitted on November 13, 1997, from the publication *Iron and Steel Newsletter* (*Iron and Steel*). According to respondent, this information is more specific and reliable.

The petitioner contends that the Department should not derive an import value from data in *Iron and Steel* because the value (1) Is either based on imports from NME countries (*i.e.*, Russia) or from countries that are not ferrosilicon producers (*i.e.*, Germany, the Netherlands); and (2) does not most closely correspond to the actual input consumed by Taiyuan. In addition, the petitioner contends that the import data on ferrosilicon contained in *Iron and Steel* are not representative of the price paid by purchasers in India nor are these import values most contemporaneous with the POR. Furthermore, the petitioner argues that the Department should not use price data from a 1995–96 Indian producer financial statement submitted on November 20, 1997, because the price is aberrationally low when compared with the data from *Monthly Statistics* and *Metal Bulletin*. Therefore, the petitioner maintains that the Department should continue to use data from *Metal Bulletin* to value ferrosilicon.

DOC Position: We disagree in part with the petitioner. We have used a simple average POR value for all grades of ferrosilicon from two publications (*i.e., Metal Bulletin* and *Iron and Steel*). We find the July 1996 value of ferrosilicon in *Metal Bulletin* is no more representative or contemporaneous to the POR than is the July and August 1996 values of ferrosilicon in *Iron and Steel*. Therefore, we have used both values in the average price calculation. However, we have not removed an amount for excise or sales taxes from the domestic ferrosilicon value listed in *Metal Bulletin* because the publication does not indicate that the price is inclusive of these taxes. We have not included the values or quantities of ferrosilicon exported to India by countries listed in *Iron and Steel* which the Department has determined are NMEs (*i.e.*, Russia, Kazakhstan). We have included the values and quantities of ferrosilicon from countries listed in *Iron and Steel* that are market economies but which the petitioner claims are not known to be producers of ferrosilicon because these countries are the exporters of record and are market economies that are determining the price of ferrosilicon that they sell to the Indian market. We have no evidence on the record which indicates that the ferrosilicon exported from these countries originates in NMEs.

Comment 7: Surrogate Value for Dolomite. Taiyuan argues that the Department should not continue to use the April 1995–March 1996 value from a 1995–96 financial report of a single company (*i.e.*, Indian Ferroalloy) to value dolomite because that price is unreliable and because there is no information in the financial report which indicates the type of dolomite referenced in that report. Instead, Taiyuan contends that the Department should use an indexed and averaged import value for three grades of dolomite from the Indian government publication *1994 Index Numbers of Wholesale Prices in India* (*Index Numbers*). According to respondent, the data have been updated in this publication and are more contemporaneous to the POR than the data from a single company.

The petitioner contends that the Department should continue to use the 1995–96 dolomite value from Indian Ferroalloy's financial report because the report provides a more contemporaneous value that is specific to the grade of dolomite used in magnesium production.

DOC Position: We agree with the petitioner. We have used the April 1995–March 1996 value from Indian Ferroalloy's financial report because it is more representative and more contemporaneous to the POR than the data contained in *Index Numbers*. We also have not used the data in *Index Numbers* because, although the Indian government publication appears to provide POR values for dolomite, there is no explanation how the product-specific indices were determined or why 1994 prices were selected for

VOL 63 ISS 13 JA 21 1998 UMI

indexation. We have not removed an amount for excise or sales taxes from the domestic dolomite value listed in Indian Ferroalloy's financial report because the financial report does not indicate that the price is inclusive of these taxes.

Comment 8: Surrogate Value for Calcinated Dolomite (i.e., Calcinate). Taiyuan argues that it is the Department's policy to use, to the extent possible, statistics from a single country when developing the values for the factors of production. According to respondent, the Department used import statistics from Indonesia to value calcinated dolomite in the preliminary results. Taiyuan claims that because India is the primary surrogate country in this case, the Department should use the April–July 1996 Indian import value for calcinated dolomite from *Monthly Statistics* which Taiyuan furnished in its November 13, 1997, submission.

DOC Position: We agree with Taiyuan. We have used the April–July 1996 import value from *Monthly Statistics* to value calcinated dolomite.

Comment 9: Surrogate Value for Fluorite Powder. Taiyuan argues that the April 1995–March 1996 value from *Monthly Statistics* the Department used in the preliminary results to value fluorite powder provides unreliable information during the POR. Taiyuan claims that the Department should use the April–July 1996 fluorite value import value from *Monthly Statistics* contained in its November 13, 1997, submission. The respondent argues that the data from this publication are more contemporaneous to the POR than the data used in the preliminary results.

DOC Position: We agree with Taiyuan. We have used the April-July 1996 import value from *Monthly Statistics* to value fluorite powder because it is more contemporaneous to the POI than is the April 1995-March 1996 import value.

Comment 10: Surrogate Value for Barium Chloride. The petitioner contends that the Department should use the January-December 1996 Indian import value from *United Nations Import Statistics* instead of the Indonesian import value used in the preliminary results. The petitioner maintains that even though the Indian import value includes imports from the United States while the U.S. export data does not show exports of barium chloride to India, the export data of one country may not correspond to the import data of another for any number of reasons, including shipment of goods through intermediate countries. The petitioner also argues that if the Department continues to use the Indonesian import data to value barium chloride, the Department should not derive a hypothetical volume and value of U.S. imports into Indonesia and remove those amounts from the Indonesian import data since the Indonesian import data is not separately broken out by country of origin and because there is no necessary correlation between two different countries' import and export data.

Taiyuan argues that the Department should use the Indonesian import data rather than the Indian import data to value barium chloride because the Indian import data contains imports from the United States while U.S. export data does not show exports of barium chloride to India. Taiyuan also maintains that the U.S. quantity and value data contained in the Indonesian import data is aberrational and that the Department should therefore remove the U.S. data from Indonesian import data by taking the volume and value of imports of barium chloride from all countries reported in the Indonesian import data and subtracting the volume and value of exports of barium chloride to Indonesia reflected in U.S. export data.

DOC Position: We agree with the petitioner. Since India is the primary surrogate country in this case, we have used the Indian import prices to value barium chloride. We have used the January-December 1996 Indian import price from *United Nations Import Statistics* to value barium chloride because the data in *United Nations Import Statistics* for this material is more contemporaneous to the POR than the Indian import prices contained in *Monthly Statistics*. We do not agree that the Indian import data are necessarily in error because they do not correlate with U.S. export data. The lack of correlation between two different countries' import and export data could result from various factors such as the reporting of intermediate destinations on export declarations. Therefore, we have no basis to conclude that the Indian data are erroneous.

Comment 11: Surrogate Value for Coal. Taiyuan argues that the April 1995-March 1996 import value from *Monthly Statistics* the Department used in the preliminary results is unreliable. Instead, Taiyuan claims that the Department should use an indexed and averaged import value for coal from the *Index Numbers*. As asserted by the respondent, the data are current to the POR and thus need no index calculation.

The petitioner maintains that the Department should not use the prices from *Index Numbers* because those prices are domestic prices for coal produced in India, which are subject to government control. In addition, the petitioner asserts that the prices from this publication predate the POR by more than two years and are for a range of coal grades, none of which are used by Taiyuan. If the Department decides to use a domestic Indian coal price, then the petitioner contends that the Department should calculate an average price from *Index Numbers* using only the "heat-intensive" grades of coal listed in the publication.

DOC Position: We disagree with Taiyuan. Taiyuan has offered no reason for finding that the April 1995-March 1996 coal import price from *Monthly Statistics* is unreliable. We have not used the coal prices from *Index Numbers* because, although that Indian government publication appears to provide POR values for coal, there is no explanation for how the product-specific indices were determined or why 1994 prices were selected for indexation.

Comment 12: Surrogate Value for Electricity. Taiyuan argues that the Department should not use the August 1996 price in *Business World* to value electricity because this publication is not one normally considered by the Department in previous NME cases. Taiyuan maintains that the Department should use instead a 1995 value from the publication *Confederation of India Industrial Handbook* ("*Industrial Handbook*"), which has been used in previous NME cases, because the publication provides electricity rates applicable for rural areas in India. Taiyuan argues that since its producer is located in a rural area in the PRC, the rural electricity rates contained in *Industrial Handbook* would more accurately reflect the electricity costs incurred by the PRC producer.

The petitioner contends that the Department should not use the rates in *Industrial Handbook* to value electricity because the rates it contains are not contemporaneous with the POR. In addition, the petitioner argues that in previous NME cases the Department has not adjusted a surrogate value to account for the fact that a production facility is located in a particular type of region within a country and should not do so in this case. Moreover, the petitioner contends that the data in *Industrial Handbook* identify different rates for rural and urban customers for only two Indian states, and that for the other states, the publication only provides one set of rates without making any distinction between urban and rural areas.

DOC Position: We agree with the petitioner. We have used the August 1996 industrial electricity rate contained in *Business World* because it is more contemporaneous to the POR than the 1995 industrial electricity rate contained in *Industrial Handbook*. We do not agree with Taiyuan that we should use the rural electricity rate in *Industrial Handbook* because Taiyuan's supplier is located in a rural area in the PRC. The *1995 Industrial Handbook* lists differentiated rural industrial rates for only one Indian state. This indicates that in general rural electricity rates are not different than urban electricity rates in India. Therefore, we find that the cited rural rates from *Industrial Handbook* would not be representative of rural rates for India as a whole.

Comment 13: Inclusion/Exclusion of Provident Fund and Employees' Welfare Expenses in COM. Taiyuan contends that the labor portion of the NV calculation already includes provident fund and employees' welfare expense contributions. Therefore, when calculating COM, Taiyuan maintains that including these expenses in the overhead would result in double-counting.

The petitioner maintains that the Department's new regression-based wage rate methodology uses wage rates from the *Yearbook of Labor Statistics* (*Labor Statistics*) published by the International Labor Office (ILO) and that these rates are based on cash payments received by employees. The petitioner contends that since provident fund payments and employee welfare expenses are not cash payments to employees, Taiyuan is incorrect that these costs are included in the surrogate value for labor. Therefore, the petitioner maintains that the Department should include these expenses in the factory overhead rate calculation.

DOC Position: We agree with Taiyuan. The regression-based wage rate we have used to value labor in this case is based on wage rates contained in *Labor Statistics*. Information contained in Labor Statistics states that the Indian wage rate is a comprehensive wage rate which also includes employers' social security expenditures and welfare services. Therefore, consistent with Department practice, we have not included provident fund payments and employee welfare expenses in the numerator of the factory overhead rate calculation. *See Final Determination for Sales at Less Than Fair Value: Polyvinyl Alcohol from the People's Republic of China* 61 FR 14057, 14061 (March 29, 1996) (Comment 5).

Comment 14: Adjustment of the Surrogate Value for No. 2 Flux. Taiyuan states that the Department made a clerical error in its preliminary results when it did not multiply the flux no. 2 surrogate value by the percentage purity of the input used by Taiyuan's suppliers as specified in the preliminary results calculation memorandum, in effect assuming the value to be for 100 percent pure flux.

The petitioner maintains that the value the Department calculated for no. 2 flux incorporates the percentage factor.

DOC Position: We agree with the petitioner. We have rechecked our calculation and find that our calculation is not in error.

Comment 15: Inclusion of Transportation Fee in Electricity Rate. Taiyuan claims that in the preliminary results the Department incorrectly included a transportation fee in its surrogate value calculation for electricity. Therefore, Taiyuan maintains that the Department should exclude the transportation fee from its electricity value calculation.

DOC Position: We agree with Taiyuan and have removed the transportation fee from the electrical surrogate value calculation.

Comment 16: Packing Cost Calculation. Taiyuan claims that in the preliminary results the Department incorrectly determined the packing labor cost by calculating a cost based on labor hours rather than on labor minutes as reported in the response. Therefore, Taiyuan maintains that the Department should recalculate the packing labor cost using the reported labor minute factor.

DOC Position: We agree with Taiyuan and have calculated a labor cost based on the labor minutes reported in Taiyuan's response.

Comment 17: Deduction of Taxes from Surrogate Values Assigned to Raw Materials. Taiyuan contends that in any case where the Department uses financial statements of Indian producers to establish surrogate values for raw material inputs, the Department should follow the normal practice used in *Brake Rotors* to calculate a tax-exclusive value (*see Brake Rotors* at 9163). To ensure that surrogate values are exclusive of all taxes, Taiyuan states that the excise duty amount between 15 and 20 percent plus a minimum of 4 percent for sales taxes should be deducted from any domestic purchase prices.

Petitioner contends that although in prior NME cases the Department has adjusted for taxes only where the quoted price was specifically identified as being inclusive of excise and/or sales taxes, in this review, Taiyuan has not identified a single surrogate value that is specifically identified as being inclusive of taxes.

DOC Position: We agree in part with Taiyuan. Consistent with Department practice, we have removed, where applicable, an amount for excise taxes (*i.e.*, 15 percent since 1995 based on information contained in the record) and an amount for sales taxes (*i.e.*, 4 percent) from the domestic Indian values we are using in our calculations. Only one of the Indian publications we used for domestic values (*i.e.*, sulfuric acid from *Chemical Weekly*) noted that the price was inclusive of excise and sales taxes. Therefore, we only removed tax amounts from prices we obtained from *Chemical Weekly*. Our decision in this case is consistent with the Department's decision in *Brake Rotors* where we removed taxes from prices for certain steel products obtained from an Indian government steel publication (*i.e., Statistics for Iron and Steel*) because data in the publication indicated that taxes were included in the prices.

Comment 18: Use of Import Surrogate Values Net of Any Additional Amount for Domestic Inland Freight. Taiyuan argues that if the Department uses Indian import statistics for surrogate values of raw material inputs, it cannot add a constructed freight charge. Taiyuan cites *Sigma Corp.* v. *United States* (*Sigma*), 117 F.3d 1401 (CAFC July 7, 1997) in which Taiyuan claims the Court held that using such a methodology was beyond the limits of permissible approximation. *Sigma* at 15.

Petitioner argues that the Department properly calculated inland freight for raw materials in the preliminary results. Petitioner contends that Taiyuan misread the *Sigma* ruling. Petitioner states that, in *Sigma*, the Court did not determine that no additional amount for inland freight could be included in CV. According to petitioner, *Sigma*'s ruling requires only that, when the surrogate value for an input is based on a CIF import value, any additional amount for freight for that input may not exceed the calculated freight costs of shipping the material from respondents' seaports in the PRC to their factories.

DOC Position: We agree in part with the petitioner. Although the holding in *Sigma* permits, rather than dictates, the methodology referenced by the petitioner, it also does not dictate the outcome urged by Taiyuan. Instead, it leaves to the discretion of the Department the determination of a freight component which is not excessive. We do not find that the import values contained in Indian publications include all of the freight cost associated with transporting the imported input to the factory. Therefore, in accordance with *Sigma* decision, we

VOL 63 ISS 13 JA 21 1998 UMI

have included a freight amount equal to the lesser of: (1) The calculated freight cost of shipping material from the PRC port Taiyuan uses to export finished goods to its PRC factory or (2) the cost of shipping material from the domestic supplier to the factory. *See Final Determination of Sales at Less Than Fair Value: Collated Roofing Nails From the People's Republic of China*, 62 FR 51410,51413 (October 1, 1997).

Currency Conversion

We made currency conversions pursuant to section 773A(a) of the Act and 19 CFR 353.60 based on the rates certified by the Federal Reserve Bank.

Final Results of the Review

As a result of our comparison of EP and NV, we determine that the following weighted-average margin exists for the period May 1, 1996, through October 31, 1996:

Manufacturer/producer/exporter	Percent margin
Taiyuan Heavy Machinery Import and Export Corporation	69.53

The Customs Service shall assess antidumping duties on all appropriate entries. Individual differences between export price and normal value may vary from the percentage stated above. We have calculated an importer-specific duty assessment rate based on the ratio of the total amount of AD duties calculated for the examined sales made during the POR to the total value of subject merchandise entered during the POR. This rate will be assessed uniformly on all entries of that particular importer made during the POR. The Department will issue appraisement instructions concerning the respondent directly to the U.S. Customs Service.

Furthermore, the following deposit rates shall be required for merchandise, entered, or withdrawn from warehouse, for consumption on or after the publication date of these final results of administrative review, as provided for by section 751(a)(1) of the Tariff Act: (1) The cash deposit rate for Taiyuan will be the rate indicated above; (2) for previously reviewed or investigated companies not listed above that have a separate rate, the cash deposit rate will continue to be the company-specific rate published for the most recent period; (3) for all remaining PRC exporters, the cash deposit rate will be 108.26 percent, the PRC-wide rate established in the LTFV investigation; and (4) for non-PRC exporters, the cash deposit rate will be the rate applicable to the PRC supplier of that exporter.

These deposit requirements shall remain in effect until publication of the final results of the next administrative review.

This notice serves as the final reminder to importers of their responsibility under 19 CFR 353.26 to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during the review period. Failure to compiy with this requirement could result in the Secretary's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

This notice also serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 353.34(d). Timely written notification or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of the APO is a sanctionable violation.

This new shipper administrative review and notice are in accordance with section 751(a)(2)(B) of the Act (19 U.S.C. 1675(a)(2)(B)) and 19 CFR 353.28(c).

Dated: January 14, 1998.

Robert S. LaRussa,

Assistant Secretary for Import Administration.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[I.D. 011396C]

North Pacific Fishery Management Council; Public Meetings

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meetings.

SUMMARY: The North Pacific Fishery Management Council (Council) and its advisory committees will hold public meetings in Anchorage, AK.

DATES: The meetings will be held the week of February 2, 1998. See **SUPPLEMENTARY INFORMATION** for specific dates and times of the meetings.

ADDRESSES: All meetings will be held at the Anchorage Hilton Hotel, 500 W. 3rd Avenue, Anchorage, AK. All meetings are open to the public with the exception of a Council executive session tentatively scheduled for noon on Thursday, February 5, to discuss personnel, international issues, or litigation, as necessary.

Council address: North Pacific Fishery Management Council, 605 W. 4th Ave., Suite 306, Anchorage, AK 99501–2252.

FOR FURTHER INFORMATION CONTACT: Council staff, telephone: 907–271–2809.

SUPPLEMENTARY INFORMATION:

1. The Scientific and Statistical Committee (SSC) will meet beginning at 8:00 a.m. on Monday, February 2, continuing through Wednesday, February 4.

2. The Advisory Panel (AP) will begin meeting at 8:00 a.m. on Monday, February 2, and continue through Thursday, February 5.

3. The Council will meet in joint session with the Alaska Board of Fisheries on Tuesday, February 3, 1998, beginning at 8:30 a.m.

4. NMFS will hold a workshop on preliminary essential fish habit reports to gather public comments on Thursday, February 5, at 7:00 p.m.

5. The Council's regular plenary session will begin at 8:00 a.m. on Wednesday, February 4, and continue through Sunday, February 8. If necessary to complete the agenda, the Council may continue meeting on Monday, February 9.

Other workgroup or committee meetings may be held during the week. Notices of these meetings will be posted at the hotel.

The agenda for the Council's joint meeting with the Alaska Board of Fisheries will include the following:

1. Under halibut management, the Council and Board will discuss the following subjects:

a. Status report on Alaska Department of Fish and Game charterboat logbook;

b. Status report on Council's halibut charterboat guideline harvest level and management measures used off Oregon and Washington for recreations fisheries; and

c. Review and approve draft protocol on development of local area fishery management plans;

2. Groundfish issues for discussion are:

a. State waters Pacific cod fisheries;

b. Approval of letter to industry encouraging resolution of gear conflicts within industry; and

c. Ways to improve exchange of proposals.

3. Crab issues to be discussed are:

a. Status report on development of crab stock assessment document and overfishing definitions; and

b. Extension of overfishing and rebuilding considerations to species outside fishery management plans.

4. Deferral of scallop management to State of Alaska and discussion of limited entry considerations for the scallop fishery.

5. Report on Steller sea lion research.

6. Reports on bycatch estimation.

7. Discuss need to continue requirement for salmon bycatch retention until counted by an observer.

The agenda for the Council's plenary session will include the following issues. The Council may take appropriate action on any of the issues identified.

1. A report from NMFS on the current status of the fisheries off Alaska, and a report from the International Pacific Halibut Commission on 1998 halibut quotas.

2. Final action on a third-party arrangement (joint project agreement) for observer procurement services.

3. Preliminary review of analysis for the allocation of pollock between inshore and offshore fisheries; direct staff on further development of alternatives.

4. Preliminary review of an amendment to the fishery management plans to incorporate essential fish habitat information as required by the Magnuson Act; direction to staff.

5. Final action on research priorities.

6. Review the local area management plan for Sitka Sound halibut, and discuss area management plans in general; determine how to proceed; direction to staff.

7. Under the Council's license limitation program for groundfish and crab, the following items will be discussed:

a. Crab buyback program: status report and discussion;

b. Discussion and direction to staff on potential amendments to the program;

c. Discussion of multi-species community development quota regulations with regard to vessel exemptions; direction to staff; and

d. Discussion and direction to staff on extension of the current moratorium on entry to the groundfish and crab fisheries off Alaska.

8. Status report on Amendment 3 to the Scallop Fishery Management Plan, and discussion of future limited entry program; direction to staff.

9. Groundfish amendments scheduled for action are as follows:

a. Final action on a regulatory amendment to revise Gulf of Alaska (GOA) trimester pollock allocations;

b. Final action on an amendment for stand-down and/or preregistration requirements in the Western and Central GOA;

c. Initial review of options to streamline the setting of total allowable catches; directions to staff to release for public review and/or revise;

d. Final action on an amendment to allocate shortraker/rougheye quota to fixed gear in the Bering Sea/Aleutian Islands;

e. Initial review of an amendment to revise boundaries for Eastern GOA regulatory area; and

f. Discussion and direction to staff on possible bycatch amendments.

9. Other groundfish issues scheduled for discussion are: a. Trip limits in the Western and Central GOA; direction to staff;

b. Salmon bycatch retention issues; direction to staff;

c. Catch and bycatch measurement; direction to staff; and

d. Vessel bycatch accounts; direction to staff.

Although other issues not contained in this agenda may come before this Council for discussion, in accordance with the Magnuson-Stevens Fishery Conservation and Management Act, those issues may not be the subject of formal Council action during the meeting. Council action will be restricted to those issues specifically identified in the agenda listed in this notice.

Special Accommodations

These meetings are physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Helen Allen, 907–271–2809, at least 5 working days prior to the meeting date.

Dated: January 14, 1998.

Bruce C. Morehead,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

[FR Doc. 98–1342 Filed 1-15-98; 1:31 pm]

BILLING CODE 3510–22–F

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[I.D. 011398B]

Marine Mammals; Scientific Research Permit (PHF# 369–1440)

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Receipt of application.

SUMMARY: Notice is hereby given that Dr. Bruce Mate, Hatfield Marine Science Center, Oregon State University, 2030 South Marine Science Drive, Newport, OR 97365–5296, has applied in due form for a permit to take humpback (Megaptera novaeangliae), blue, (Balaenoptera musculus), gray (Escrichtius robustus), northern right (Eubalaena glacialis), bowhead (Balaena mysticetus), fin (Balaenoptera physalus), and sperm whales (Physeter macrocephalus) for purposes of scientific research.

DATES: Written or telefaxed comments must be received on or before February 20, 1998.

ADDRESSES: The application and related documents are available for review upon written request or by appointment.

Written comments or requests for a public hearing on this application should be mailed to the Chief, Permits and Documentation Division, F/PR1, Office of Protected Resources, NMFS, 1315 East-West Highway, Room 13822, Silver Spring, MD 20910. Those individuals requesting a hearing should set forth the specific reasons why a hearing on this particular request would be appropriate.

Comments may also be submitted by facsimile at (301) 713–0376, provided the facsimile is confirmed by hard copy submitted by mail and postmarked no later than the closing date of the comment period. Please note that comments will not be accepted by email or other electronic media.

Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of this application to the Marine Mammal Commission and its Committee of Scientific Advisors.

SUPPLEMENTARY INFORMATION: The subject permit is requested under the authority of the Marine Mammal Protection Act of 1972, as amended (MMPA; 16 U.S.C. 1361 et seq.), the regulations governing the taking and importing of marine mammals (50 CFR part 216) and the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 et seq.), the regulations governing the taking, importing, and exporting of endangered fish and wildlife (50 CFR 222.23).

The applicant seeks authorization to tag and collect a skin sample from 100 each of various large whale species in the North Pacific, North Atlantic, and Gulf of Mexico over a five-year period. Approximately 1,000 additional whales of each species may be harassed during these activities. In addition, the applicant wishes to conduct non-invasive, opportunistic research on various pinniped and cetacean species.

The application and related documents are available for review

VOL 63 ISS 13 JA 21 1998 UMI

upon written request or by appointment in the following offices:

Permits and Documentation Division, Office of Protected Resources, NMFS, 1315 East-West Highway, Room 13130, Silver Spring, MD 20910 (301/713–2289);

Regional Administrator, Northwest Region, National Marine Fisheries Service, NOAA, 7600 Sand Point Way, NE, BIN C15700, Bldg. 1, Seattle, WA 98115–0700;

Regional Administrator, Southwest Region, National Marine Fisheries Service, NOAA, 501 West Ocean Blvd., Suite 4200, Long Beach, CA 90802–4213;

Regional Administrator, Alaska Region, National Marine Fisheries Service, NOAA, P.O. Box 21668, Juneau, AK 99802–1668;

Regional Administrator, Northeast Region, National Marine Fisheries Service, NOAA, One Blackburn Drive, Gloucester, MA 01930–2298; and

Regional Administrator, Southeast Region, National Marine Fisheries Service, NOAA, 9721 Executive Center Drive, North, St. Petersburg, FL 33702–2432.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Dated: January 14, 1998.

Ann D. Terbush,

Chief, Permits and Documentation Division, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510–22–P

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Amendment of Quota and Visa Requirements for Discharge Printed Fabric Produced or Manufactured in Egypt

January 14, 1998.

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner of Customs amending quota and visa requirements.

EFFECTIVE DATE: January 22, 1998.

FOR FURTHER INFORMATION CONTACT: Helen L. LeGrande, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, (202) 482–4212.

SUPPLEMENTARY INFORMATION:

Authority: Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1862, as amended.

In exchange of notes dated December 3, 1997 and December 29, 1997, the Governments of the United States and Egypt agreed that discharge printed fabric classified in Harmonized Tariff Schedule (HTS) numbers 5208.52.3035, 5208.52.4035, 5209.51.6032 (Category 313), 5209.51.6015 (Category 314), 5208.52.4055 (Category 315), 5208.59.2085 (Category 317), 5208.59.2015, 5209.59.0015 and 5211.59.0015 (Category 326) which is produced or manufactured in Egypt and imported on or after January 1, 1998 will no longer be subject to visa requirements and will not be subject to 1998 limits. The new designation for Categories 313, 314, 315, 317, 317 and 326 will be part-category 313–O, 314–O, 315–O, 317–O, and 326–O, respectively. The 1998 quota levels established for Categories 313, 314, 315, 317 and 326 remain the same for the newly established part-categories.

Also effective on January 22, 1998, products in Categories 313, 314, 315, 317 and 326, produced or manufactured in Egypt and exported from Egypt on or after January 1, 1998 must be accompanied by a 313–O, 314–O, 315–O, 317–O and 326–O part-category visa. There will be a grace period from January 1, 1998 through January 31, 1998 during which products exported from Egypt in Categories 313, 314, 315, 317 and 326 may be accompanied by the whole or new part-category visa. A visa will not be required for discharge printed fabric in Categories 313, 314, 315, 317 and 326 beginning on January 1, 1998, regardless of the date of export.

In the letter published below, the Chairman of CITA directs the Commissioner of Customs to amend the export quota and visa requirements.

A description of the textile and apparel categories in terms of HTS numbers is available in the CORRELATION: Textile and Apparel Categories with the Harmonized Tariff Schedule of the United States (see **Federal Register** notice 62 FR 66057, published on December 17, 1997). Also see 52 FR 48857 published on December 28, 1987; 55 FR 49936, published on December 3, 1990; and 62 FR 67829, published on December 30, 1997.

D. Michael Hutchinson,

Acting Chairman, Committee for the Implementation of Textile Agreements.

Committee for the Implementation of Textile Agreements

January 14, 1998.

Commissioner of Customs,

Department of the Treasury, Washington, DC 20229.

Dear Commissioner: This directive amends, but does not cancel, the directive issued to you on December 22, 1997, by the Chairman, Committee for the Implementation of Textile Agreements. That directive concerns imports of certain cotton, wool and man-made fiber textile products, produced or manufactured in Egypt and exported during the twelve-month period which began on January 1, 1998 and extends through December 31, 1998.

Effective on January 22, 1998, discharge printed fabric classified in Harmonized Tariff Schedule (HTS) numbers 5208.52.3035, 5208.52.4035, 5209.51.6032 (Category 313), 5209.51.6015 (Category 314), 5208.52.4055 (Category 315), 5208.59.2085 (Category 317), 5208.59.2015, 5209.59.0015 and 5211.59.0015 (Category 326) which is produced or manufactured in Egypt and imported on or after January 1, 1998 will no longer be subject to visa requirements and will not be subject to 1998 limits, pursuant to exchange of notes dated December 3, 1997 and December 29, 1997 between the governments of the United States and Egypt. The new designation for Categories 313, 314, 315, 317 and 326 will be Categories 313–O[1], 314–O[2], 315–O[3], 317–O[4] and 326–O[5], respectively.

The 1998 quota levels established for Categories 313, 314, 315, 317 and 326 remain the same for the newly established part-Categories 313–O, 314–O, 315–O, 317–O and 326–O.

Also effective on January 22, 1998, you are directed to amend further the directive dated December 21, 1987 to require a part-category visa for Categories 313–O, 314–O, 315–O, 317–O and 326–O, produced or manufactured in Egypt and exported on or after January 1, 1998. There will be a grace period from January 1, 1998 through January 31, 1998 during which products exported from Egypt in Categories 313, 314, 315, 317 and 326 may be accompanied by the whole or new part-category visa. A visa will not be required for discharge printed fabric in Categories 313, 314, 315, 317 and 326 beginning January 1, 1998, regardless of the date of export.

Shipments entered or withdrawn from warehouse according to this directive which are not accompanied by an appropriate export visa shall be denied entry and a new visa must be obtained.

The Committee for the Implementation of Textile Agreements has determined that these actions fall within the foreign affairs exception to the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,

D. Michael Hutchinson,

Acting Chairman, Committee for the Implementation of Textile Agreements.

CORPORATION FOR NATIONAL AND COMMUNITY SERVICE

Proposed Collection: Comment Request

ACTION: Notice.

SUMMARY: The Corporation for National and Community Service (CNCS) , as part of its continuing effort to reduce paperwork and respondent burden, conducts a preclearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA95) (44 U.S.C. 3508(c)(2)(A)). This program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirement on respondents can be properly assessed. Currently, the Corporation for National and Community Service is soliciting comments concerning its proposed revision of the National Service Senior Corps (NSSC) Project Progress Report (PPR).

Copies of the information collection request can be obtained by contacting the office listed below in the **ADDRESSES** section of this notice.

DATES: Written comments must be submitted to the office listed in the **ADDRESSES** section on or before March 15, 1998.

The Corporation for National and Community Service is particularly interested in comments which:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Corporation, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.

ADDRESSES: Send comments to Pat Kim, National Service Senior Corps, Program Officer, Corporation for National and Community Service, 1201 New York Ave., N.W., Washington, D.C., 20525.

FOR FURTHER INFORMATION CONTACT: Pat Kim, (202) 606–5000, ext. 245.

SUPPLEMENTARY INFORMATION:

I. Background

The Project Progress Report (PPR) was designed to assure that National Service Senior Corps (NSSC) grantees address and fulfill legislated program purposes, meet agency program management and grant requirements, and assess progress toward work plan objectives agreed-upon in the granting of the award. Information is used by agency project managers to determine that projects are achieving goals and objectives, identify technical assistance needed to correct deficiencies, manage budget variances and resource issues arising in grants, track trends requiring changes in program policies and procedures, and establish priorities for project monitoring activities. Established NSSC grantees submit PPRs twice annually to their agency project manager. First-year projects, new components, demonstrations, and projects experiencing problems or with substantial project revisions report quarterly, as identified in the Notice of Grant Award agreed to and signed by the sponsor/grantee.

II. Current Action

The Corporation for National and Community Service seeks to revise the current PPR in order to reflect or mirror changes made in the revised National Senior Service Corps Grant Application which received OMB approval in mid-December 1997. All NSSC grantees with a start date of July 1, 1998 will be required to use the new Grant Application. We anticipate making available to all NSSC grantees, an OMB approved revised PPR by July of 1998.

The revised PPR will be used by NSSC grantees to report progress toward accomplishing work plan goals and objectives, achieving Government Performance and Results Act (GPRA) goals, meeting challenges encountered, describing significant activities, and requesting technical assistance.

Information gathered from PPRs will allow agency project managers to determine that projects are achieving goals and objectives outlined in the Grant Application, compile GPRA data, assess and monitor programmatic challenges and significant activities, identify technical assistance needs, and assure compliance with legislative requirements, policies, procedures, and grant conditions.

Type of Review: 60-Days Review and Comment.

Agency: Corporation for National and Community Service.

Title: Project Progress Report.

OMB Number: 3045–0033.

Agency Number: CNCS Form 1020 (9/96).

Affected Public: Sponsors of National Senior Service Corps Grants.

Total Respondents: 1245.

Frequency: Semi-annual.

Average Time Per Response: 15.9 hours.

Estimated Total Burden Hours: 19,795 hours.

Total Burden Cost (capital/startup): 0.

Total Burden Cost (operating/maintenance): 0.

Comments submitted in response to this notice will be summarized and/or included in the request for Office of Management and Budget approval of the information collection request; they will also become a matter of public record.

BILLING CODE 6050–28–P

DEPARTMENT OF DEFENSE

Office of the Secretary

Submission for OMB Review Comment Request

ACTION: Notice.

The Department of Defense has submitted to OMB for clearance, the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Title, Associated form, and OMB number: Defense Federal Acquisition Regulation Supplement (DFARS) Part 230, Cost Accounting Standards, and DD Form 1861, Contract Facilities Capital Cost of Money; DD Form 1861; OMB Number 0704–0267.

Type of Request: Revision.

Number of Respondents: 25,609.

Responses Per Respondent: 1.6 (approximately).

Annual Responses: 42,058.

Average Burden Per Response: 10 hours.

Annual Burden Hours: 420,580.

Needs and Uses: It is Department of Defense policy to encourage contractor investment in facilities, which may lead, under DoD contracts, to increased productivity and reduced costs through the use of modern manufacturing technology. To motivate aggressive capital investment, DoD rewards contractors by recognizing contract facilities capital cost of money (CFCCM) and facilities capital employed in establishing the price of certain negotiated defense contracts, when such contracts are priced on the basis of cost analysis. DD Form 1861, Contract Facilities Capital Cost of Money, is used to compute these two elements of price. The contracting officer may require information from the contractor to complete this form. The CFCCM amount is used to help establish a price objective in negotiated contracts. The facilities capital employed amount is carried forward to DD Form 1547, Record of Weighted Guidelines Method Application, for the purpose of developing profit objectives on defense contracts when the Weighted Guidelines method is used. DFARS 230.7004–2, DD Form 1861, indicates that: (1) Completion of the DD Form 1861 requires information not included on the Form CASB–CMF; and (2) the contracting officer could request information through a solicitation provision.

Affected Public: Business or Other For-Profit; Not-For-Profit Institutions.

Frequency: On occasion.

Respondent's Obligation: Required to obtain or retain benefits.

OMB Desk Officer: Mr. Peter N. Weiss.

Written comments and recommendations on the proposed information collection should be sent to Mr. Weiss at the Office of Management and Budget, Desk Officer for DoD, Room 10236, New Executive Office Building, Washington, DC 20503.

DOD Clearance Officer: Mr. Robert Cushing.

Written requests for copies of the information collection proposal should be sent to Mr. Cushing, WHS/DIOR, 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202–4302.

Dated: January 15, 1998.

Patricia L. Toppings,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

Office of the Secretary

Meeting of the Historical Records Declassification Advisory Panel

AGENCY: Department of Defense, Historical Advisory Committee.

ACTION: Notice.

SUMMARY: Notice is hereby given of the upcoming meeting of the Historical Records Declassification Advisory Panel. The purpose of this meeting is to discuss recommendations to the Department of Defense on topical areas of interest that, from a historical perspective, would be of the greatest benefit if declassified. The OSD Historian will chair this meeting.

DATE: Friday, February 6, 1998.

TIME: The HRDAP morning session will be closed to the public from 9:00 a.m. until 12:00 p.m. due to the necessity to hear classified and sensitive reports in accordance with 5 U.S.C., Sec 552©(1) (1982). The afternoon session will be open to the public from 1:00 p.m. to 3:30 p.m.

ADDRESS: The National Archives Building, Room 105, 7th and Pennsylvania Avenue, NW., Washington, DC 20408.

FOR FURTHER INFORMATION CONTACT: Cynthia Kloss, Room 3C281, Office of the Deputy Assistant Secretary of Defense (Intelligence and Security), Office of the Assistant Secretary of Defense (Command, Control, Communications and Intelligence), 6000 Defense Pentagon, Washington, DC 20301–6000, telephone (703) 695–2289/2686.

Dated: January 15, 1998.

Patricia L. Toppings,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 98–1408 Filed 1–20–98; 8:45 am]

BILLING CODE 5000–04–M

DEPARTMENT OF EDUCATION

Submission for OMB Review; Comment Request

AGENCY: Department of Education.

ACTION: Submission for OMB review; comment request.

SUMMARY: The Deputy Chief Information Officer, Office of the Chief Information Officer, invites comments on the submission for OMB review as required by the Paperwork Reduction Act of 1995.

DATES: Interested persons are invited to submit comments on or before February 20, 1998.

ADDRESSES: Written comments should be addressed to the Office of Information and Regulatory Affairs, Attention: Dan Chenok, Desk Officer, Department of Education, Office of Management and Budget, 725 17th Street, NW., Room 10235, New Executive Office Building, Washington, DC 20503. Requests for copies of the proposed information collection requests should be addressed to Patrick J. Sherrill, Department of Education, 600 Independence Avenue, S.W., Room 5624, Regional Office Building 3, Washington, DC 20202–4651.

FOR FURTHER INFORMATION CONTACT: Patrick J. Sherrill (202) 708–8196. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339 between 8 a.m. and 8 p.m., Eastern time, Monday through Friday.

SUPPLEMENTARY INFORMATION: Section 3506 of the Paperwork Reduction Act of 1995 (44 U. S. C. Chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations. The Deputy Chief Information Officer, Office of the Chief Information Officer, publishes this notice containing proposed information collection requests prior to submission of these requests to OMB. Each proposed information collection, grouped by office, contains the following: (1) Type of review requested, e.g., new, revision, extension, existing or reinstatement; (2) Title; (3) Summary of the collection; (4) Description of the need for, and proposed use of, the information; (5) Respondents and frequency of collection; and (6) Reporting and/or Recordkeeping burden. OMB invites public comment at the address specified above. Copies of the requests are available from Patrick J. Sherrill at the address specified above.

Dated: January 15, 1998.

Gloria Parker,

Deputy Chief Information Officer, Office of the Chief Information Officer.

Office of Postsecondary Education

Type of Review: Revision.

Title: Fiscal Operations Report and Application to Participate in Federal Perkins Loan, Federal Supplemental Educational Opportunity Grant, and Federal Work-Study Program.

Frequency: Annually.

Affected Public: Business or other for-profit; Not-for-profit institutions; State, local or Tribal Gov't; SEAs or LEAs.

Annual Reporting and Recordkeeping Hour Burden:

Responses: 4,800.

Burden Hours: 80,586.

Abstract: This application data will be used to compute the amount of funds needed by each institution during the 1999–2000 Award Year. The Fiscal Operations Report data will be used to assess program effectiveness, account for funds expended during the 1997–98 Award Year, and as part of the institutional funding process.

Office of Educational Research and Improvement

Type of Review: New.

Title: 1998 National Assessment of Educational Progress(NAEP), Writing Special Study.

Frequency: One Time.

Affected Public: Individuals or households.

Reporting Burden and Recordkeeping:

Responses: 6,200.

Burden Hours: 2,200.

Abstract: The 1998 NAEP writing special study is designed to bolster the understanding of study NAEP writing achievement with information on student's best writing assignments, and the writing process. In addition, the study will collect information about teachers' emphasis on writing curriculum and instructional approaches. The study will be conducted with a sample of 6000 (4th and 8th grade) students and 200 teachers. The study will use a structured protocol to obtain more detailed and valid information about classroom instructional practices than a standard background questionnaire. Students will be asked to select three examples of their best writing and to fill out a brief questionnaire describing the samples of writing that they submit.

[FR Doc. 98–1391 Filed 1–20–98; 8:45 am]

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Notice of Intent To Prepare an Environmental Impact Statement for the Production of Tritium in a Commercial Light Water Reactor

AGENCY: Department of Energy.

ACTION: Notice of intent.

SUMMARY: The Department of Energy (DOE) announces its intent to prepare an Environmental Impact Statement (EIS) for the production of tritium using one or more commercial light water reactors (CLWR), pursuant to the National Environmental Policy Act (NEPA) of 1969, as amended (42 USC 4321 *et seq.*) and the DOE Regulations Implementing NEPA (10 CFR Part 1021). Under the CLWR Program, tritium production could occur in one of two manners: (1) purchase of CLWR irradiation services; or (2) purchase of a CLWR. Prior to preparation of the CLWR EIS, DOE initiated a procurement process to evaluate the feasibility of various CLWR alternatives, and the alternatives described in this notice have been derived from that procurement process. The CLWR EIS will evaluate the environmental impacts associated with tritium production for all reasonable alternatives identified through the procurement process.

DATES: Comments on the proposed scope of the CLWR EIS are invited from the public. To ensure consideration in the preparation of the EIS, comments must be postmarked by March 20, 1998. Late comments will be considered to the extent practicable. Public scoping meetings to discuss issues and receive oral comments on the scope of the EIS will be held in the vicinity of sites that may be affected by the proposed action. The public scoping meetings will provide the public with an opportunity to present comments, ask questions, and discuss concerns with DOE officials regarding CLWR activities. An interactive format will be used. The location, date, and time for these public scoping meetings is as follows:

Northeast Alabama Community College, 135 Alabama Highway 35 West, February 24, 1998, 7:00 p.m.-10:00 p.m., Rainsville, AL

Rhea County High School, February 26, 1998, 7:00 p.m.-10:00 p.m., Evensville, TN.

The Tennessee Valley Authority has been designated as a cooperating agency for this EIS. Any other agency that desires to be designated as a cooperating agency should contact the CLWR Program Office at the address listed below by March 20, 1998.

ADDRESSES: General questions concerning the CLWR Project can be asked by calling the toll-free telephone number at 1–800–332–0801, or by writing to: Stephen M. Sohinki, Director, CLWR Project Office, U.S. Department of Energy, P.O. Box 44539, Washington, DC 20026–4539.

As an alternative, comments can also be submitted by fax to: 1–800–631–0612; or electronically to the CLWR Web Site: http://www.dp.doe.gov/dp-62. Please mark envelopes, faxes, and E-mail: "CLWR EIS Comments."

FOR FURTHER INFORMATION CONTACT: For general information on the DOE NEPA process, please contact: Ms. Carol M. Borgstrom, Director, Office of NEPA Policy and Assistance (EH–42), U.S. Department of Energy, 1000 Independence Avenue, S.W., Washington, D.C. 20585, 202–586–4600; or telephone 800–472–2756 to leave a message.

SUPPLEMENTARY INFORMATION: All of the nuclear weapons currently in the United States' stockpile must contain tritium, a radioactive isotope of hydrogen, to function as designed. Tritium decays at a rate of 5.5 percent per year, giving it a half-life of 12.3 years. Because of this decay, the tritium contained in the nuclear weapons must be periodically replenished. Tritium is not a fissile material and cannot be used alone to construct a nuclear weapon. Tritium also has commercial uses such as watch dials, exit signs, and medical research.

Tritium is so rare in nature that useful quantities must be man-made. The United States stopped producing new tritium in 1988 when the last government-owned nuclear materials production reactor at the Savannah River Site (SRS) was shut down. Currently, there is no capability to

VOL 63 ISS 13 JA 21 1998 UMI

produce the required amounts of tritium within the Nuclear Weapons Complex.

Previously, the Department evaluated the programmatic need for a new tritium source in a Programmatic Environmental Impact Statement (PEIS) for Tritium Supply and Recycling (DOE/EIS–0161, October 1995). Based on the findings in that PEIS and other technical, cost, and schedule evaluations, the Department issued a Record of Decision (ROD) on December 5, 1995 (60 FR 63877). In the ROD, the Department announced a decision to pursue a dual-track approach on the two most promising tritium supply alternatives: (1) To initiate purchase of an existing commercial reactor (operating or partially complete) or irradiation services with an option to purchase the reactor for conversion to a defense facility; and (2) to design, build, and test critical components of an accelerator system for tritium production (SRS was selected as the location for an accelerator, should one be built). The Department will select one of these approaches by the end of 1998 to serve as the primary source of tritium. The other alternative, if feasible, would continue to be developed as a backup tritium source.

In recent years, international arms control agreements have caused the nuclear weapons stockpile to be reduced in size. This, in turn, has allowed DOE to recycle the tritium removed from dismantled weapons for use in supporting the remaining stockpile. However, due to the decay of tritium, the current inventory of tritium will not meet the national security needs that are projected for the future. The most recent Presidential direction, which is contained in the 1996 Nuclear Weapons Stockpile Plan and an accompanying Presidential Decision Directive, mandates that new tritium be available by 2005 if a CLWR is the selected option for tritium production. If the accelerator is the selected option for tritium production, the Presidential direction mandates that new tritium be available by 2007.

The Department's strategy for compliance with NEPA has been to make decisions on programmatic alternatives in the ROD for the Tritium Supply and Recycling PEIS (now completed), followed by site-specific analyses to implement the programmatic decisions. The decisions made in the December 5, 1995, Tritium Supply and Recycling ROD have resulted in the Department's preparation of the following NEPA documents:

1. An EIS for the Selection of One or More Commercial Light Water Reactors for Tritium Production (the subject of this Notice of Intent);

2. An EIS for the Construction and Operation of an Accelerator for the Production of Tritium at the Savannah River Site (Draft EIS issued in December 1997);

3. An Environmental Assessment for the Consolidation of Tritium Recycling Facilities at the Savannah River Site (currently under preparation);

4. An EIS for the Construction and Operation of a Tritium Extraction Facility at the Savannah River Site (Notice of Intent issued September 5, 1996 (61 FR 46790);

5. An Environmental Assessment for the Lead Test Assembly Irradiation and Analysis (completed in July 1997).

CLWR Production of Tritium

The production of tritium in a CLWR is technically straightforward. As discussed in the Tritium Supply and Recycling PEIS, most existing pressurized water reactors utilize twelve-foot long rods containing an isotope of boron in ceramic form that is inserted in their fuel elements to absorb excess neutrons produced by the uranium fuel in the fission process. These rods are sometimes called burnable absorber rods. DOE's tritium program has developed another type of burnable absorber rod in which neutrons are absorbed by a lithium aluminate ceramic rather than the boron ceramic. These rods would be placed in the same locations in the reactor core as the standard burnable absorber rods. There is no fissile material (uranium or plutonium) in the DOE burnable absorber rods.

While the two types of rods function in a very similar manner to absorb excess neutrons in the reactor core, there is one notable difference: when neutrons strike the lithium aluminate ceramic material in the DOE burnable absorber rod, tritium is produced. This tritium is then captured almost instantaneously in a solid zirconium material in the rod, called a "getter." Thus, there is virtually no free tritium in the rod. In fact, the solid material that captures the tritium as it is produced in the rod is so effective that the rod will have to be heated to temperatures in excess of 1800 degrees Fahrenheit in the extraction process to recover the tritium for eventual use in the nuclear weapons stockpile. Depending upon tritium needs, as many as 1000–3000 tritium-producing burnable absorber rods could be placed in each of one or more CLWRs for irradiation.

Relationship of the CLWR EIS and the CLWR Procurement Process

Prior to preparation of the CLWR EIS, DOE initiated a procurement process to evaluate the feasibility of various CLWR alternatives. DOE anticipated that it would enter into a contract/agreement with the owner/operator of one or more commercial reactors for the purpose of producing tritium. Such a contract/agreement could result in DOE purchasing CLWR irradiation services and/or purchasing a CLWR. A partially completed reactor could be utilized for tritium production if the owner/operator were to first complete construction of the reactor.

In June 1997, DOE requested proposals for producing tritium using existing and partially completed reactors. The proposals received from the Tennessee Valley Authority (TVA) in September were the only proposals that were determined to be responsive to the requirements in the procurement request. Consequently, the TVA proposals were the only proposals that were determined to be in the competitive range. The alternatives listed below, which were identified through the procurement process, currently constitute the reasonable alternatives that will be evaluated in the CLWR EIS. Through the procurement process, DOE may enter into an agreement with the TVA, contingent upon completion of the NEPA process, for the production of tritium required to support the nuclear weapons stockpile. However, before completion of the EIS and its associated Record of Decision, the Department and TVA will take appropriate actions, e.g., studies and analyses, related to the potential submission of licensing documents to the Nuclear Regulatory Commission (NRC). Only those actions that are determined to be allowable interim actions would be permitted prior to the completion of the NEPA process. The NRC must issue regulatory approval for the use of tritium production rods in its licensed reactors.

Proposed Action and Alternatives

The CLWR EIS will evaluate the environmental impacts associated with producing tritium at one or more of the following reactor plants:

Bellefonte Nuclear Plant Units #1 and/or #2 (Hollywood, Alabama)
Watts Bar Nuclear Plant Unit #1 (Spring City, Tennessee)
Sequoyah Nuclear Plant Units #1 and/or #2 (Soddy-Daisy, Tennessee)

All of these plants are owned and operated by the Tennessee Valley Authority.

As required by the Council on Environmental Quality regulations, the CLWR EIS will also evaluate the No Action alternative. Under this alternative, the stockpile demand for tritium would have to be met by other means, such as constructing and operating an accelerator at the Savannah River Site.

Identification of Environmental and Other Issues

The Department has identified the following issues for analysis in the EIS. Additional issues may be identified as a result of the scoping process.

1. Public and Worker Safety, Health Risk Assessment: Radiological and nonradiological impacts, including projected effects on workers and the public from construction, operation and accident conditions associated with tritium production.

2. Impacts from releases to air, water, and soil associated with tritium production.

3. Impacts to plants, animals, and habitats, including threatened or endangered species and their habitats associated with tritium production.

4. The consumption of natural resources and energy associated with tritium production.

5. Socioeconomic impacts to affected communities from construction and operation associated with tritium production.

6. Environmental justice: Disproportionately high and adverse human health or environmental effects on minority and low-income populations associated with tritium production.

7. Impacts to cultural resources such as historic, archaeological, scientific, or culturally important sites associated with tritium production.

8. Impacts associated with transportation of nuclear materials.

9. Status of compliance with all applicable Federal, state, and local statutes and regulations; required Federal and state environmental consultations and notifications; and DOE Orders on waste management, waste minimization, and environmental protection.

10. Cumulative impacts from the proposed action and other past, present, and reasonably foreseeable actions at the alternative sites.

11. Potential irreversible and irretrievable commitments of resources associated with tritium production.

12. Pollution prevention and waste management practices, including characterization, storage, treatment and disposal of wastes associated with tritium production.

Public Scoping Process

To assist in defining the appropriate scope of the EIS and to identify significant environmental issues to be addressed, DOE will conduct public scoping meetings at the locations, dates, and times described above under DATES. DOE will begin each scoping meeting with an overview of the CLWR program. Following the initial presentation, DOE will answer questions and accept comments. Copies of handouts from the meetings will be available to those unable to attend, by contacting the DOE CLWR project described above under **ADDRESSES**.

Issued in Washington, D.C., this 15th day of January 1998.

Peter N. Brush,

Acting Assistant Secretary, Environment, Safety and Health.

DEPARTMENT OF ENERGY

Office of Fossil Energy

[FE Docket Nos. 97–104–NG et al.]

TPC Corporation, et al.; Orders Granting and Transferring Blanket Authorizations To Import and/or Export Natural Gas

AGENCY: Office of Fossil Energy, DOE.

ACTION: Notice of orders.

SUMMARY: The Office of Fossil Energy of the Department of Energy gives notice that it has issued Orders granting and transferring various natural gas import and export authorizations. These Orders are summarized in the attached appendix.

These Orders are available for inspection and copying in the Office of Natural Gas & Petroleum Import and Export Activities, Docket Room, 3F–056, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, (202) 586–9478. The Docket Room is open between the hours of 8:00 a.m. and 4:30 p.m., Monday through Friday, except Federal holidays.

Issued in Washington, D.C., on January 14, 1998.

John W. Glynn,

Manager, Natural Gas Regulation, Office of Natural Gas & Petroleum Import and Export Activities, Office of Fossil Energy.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Information Collection Submitted for Review and Request for Comments (FERC–523)

January 14, 1998.

AGENCY: Federal Energy Regulatory Commission.

ACTION: Notice of submission for review by the Office of Management and Budget (OMB) and request for comments.

SUMMARY: The Federal Energy Regulatory Commission (Commission) has submitted the energy information collection listed in this notice to Office of Management and Budget (OMB) for review under provisions of Section 3507 of the Paperwork Reduction Act of 1995 (Pub. L. No. 104–13). Any interested person may file comments on the collection of information directly with OMB and should address a copy of those comments to the Commission as explained below. The Commission received no comments in response to an earlier **Federal Register** notice of September 15, 1997 (62 FR 48265) and made a notation in its submission to OMB.

DATES: Comments regarding this collection of information are best assured of having their full effect if received within 30 days of this notification.

ADDRESSES: Address comments to Office of Management and Budget, Office of Information and Regulatory Affairs, Attention: Federal Energy Regulatory Commission, Desk Officer, 726 Jackson Place, NW., Washington, DC 20503. A copy of the comments should also be sent to Federal Energy Regulatory Commission, Division of Information to Federal Energy Regulatory Commission, Division of Information Services, Attention: Mr. Michael Miller, 888 First Street, NE., Washington, DC 20426.

FOR FURTHER INFORMATION CONTACT: Michael Miller may be reached by telephone at (202) 208–1415, by fax at (202) 273–0873, and by e-mail at michael.miller@ferc.fed.us.

SUPPLEMENTARY INFORMATION:

Description

The energy information collection submitted to OMB for review contains:

1. *Collection of Information:* FERC–523 "Application for Authorization of the Issuance of Securities or the Assumption of Liabilities."

2. *Sponsor:* Federal Energy Regulatory Commission.

3. *Control No.:* OMB No. 1902–0043. The Commission is now requesting that OMB approve a three-year extension of the current expiration date, with no changes to the existing collection. There is no change to the reporting burden. These are mandatory collection requirements.

4. *Necessity of Collection of Information:* Submission of the information is necessary to enable the Commission to carry out its responsibilities in implementing the provisions of the Federal Power Act (FPA). The information reported under Commission identifier FERC–523 is filed in accordance with Sections 19, 20, and 204, (FPA). Under the FPA a public utility or licensee must obtain Commission authorization for the issuance of securities or the assumption of liabilities. The information is used by the Commission to make a determination as to whether to accept and/or reject for granting authorization to public utilities or licensees to issue securities or assume an obligation or liability.

5. *Respondent Description:* The respondent universe currently comprises on average, 60 applicants for an application for authorization of the issuance of securities or the assumption of liabilities.

6. *Estimated Burden:* 6,600 total burden hours, 60 respondents, 1 response annually, 110 hours per response (average).

7. *Estimated Cost Burden to Respondents:* 6,600 hours ÷ 2,088 hours per year × $110,000 per year = $378,928.

(Statutory Authority: Sections 19, 20, and 204 of the Federal Power Act (FPA), 16 U.S.C. Sections 812 *et seq.*)

Linwood A. Watson, Jr.,

Acting Secretary.

Green Mountain Power Corporation; Notice of Filing

January 14, 1998.

Take notice that on September 2, 1997, Green Mountain Power Corporation tendered for filing its refund report in the above-referenced docket.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 18 CFR 385.214). All such motions or protests should be filed on or before January 26, 1998. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

[Docket No. EG98–12–000]

Millennium Power Partners, L.P.; Notice of Filing

January 14, 1998.

On January 8, 1998, Millennium Power Partners, L.P. (Millennium), a Delaware limited partnership with its principal place of business of 7500 Old Georgetown Road, Bethesda, Maryland 20814, filed with the Federal Energy Regulatory Commission an Amendment to the Application for Determination of Exempt Wholesale Generator Status pursuant to Part 365 of the Commission's regulations.

Millennium states that it will be engaged directly and exclusively in owning or operating, or both owning and operating a 360 MW natural gas-fired combined cycle power plant in the Town of Charlton, Massachusetts (the "Facility"), and sell electric energy exclusively at wholesale. All capacity and energy from the plant will be sold exclusively at wholesale.

Copies of the filing were served upon the Securities and Exchange Commission and the Massachusetts Department of Public Utilities.

Any person desiring to be heard concerning the Amendment to the application for exempt wholesale generator status should file a motion to intervene or comments with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, in accordance with Sections 385.211 and 385,214 of the Commission's Rules of Practice and Procedure. The Commission will limit its consideration of comments to those that concern the adequacy or accuracy of the application. All such motions and comments should be filed on or before January 23, 1998. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Nevada Power Company; Notice of Filing

January 14, 1998.

Take notice that on December 29, 1997, Nevada Power Company (Nevada Power) tendered for filing, an amendment to its compliance filing in Docket No. ER96–447–001. Nevada Power inadvertently filed the incorrect rate schedule in that docket. The purpose of Nevada Power's compliance filing is to submit the correct rate schedule Nevada Power requests a waiver of the 60 day notice requirement and requests that the revised tariff sheets be effective as of the date of the filing.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 18 CFR 385.214). All such motions or protests should be filed on or before January 27, 1998. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP98–174–000]

Williams Natural Gas Company; Notice of Request Under Blanket Authorization

January 14, 1998.

Take notice that on January 8, 1998, Williams Natural Gas Company (Williams), P.O. Box 3288, Tulsa, Oklahoma 74101, filed in Docket No. CP98–174–000 a request pursuant to Sections 157.205 and 157.212 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205 and 157.212) for approval to replace the Kansas Gas & Electric Brock meter setting and to reinstall the existing Brock meter setting at the Catt regulator site, both in Bourbon County, Kansas, under Williams' blanket certificate issued in Docket No. CP82–479–000, pursuant to Section 7 of the Natural Gas Act (NGA), all as more fully set forth in the request which is on file with the Commission and open to public inspection.

Williams states that the volumes of natural gas at the Catt site are currently measured by KG&E and that the installation of the Brock meter setting will eliminate Williams' dependence on KG&E for measurement at the site. Williams asserts that the projected volume of natural gas delivery at the new Brock setting is expected to increase over the next few years, but the delivery volumes at the Catt site will remain unchanged. Williams further asserts that this change is not prohibited by an existing tariff and that Williams has sufficient capacity to accomplish the deliveries specified without detriment or disadvantage to Williams' other customers. Williams indicates that the total project cost is estimated to be $124,125, which will be paid from available funds.

Any person or the Commission's Staff may, within 45 days of the issuance of the instant notice by the Commission, file pursuant to Rule 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.214), a motion to intervene and pursuant to Section 157.205 of the regulations under the Natural Gas Act (18 CFR 157.205), a protest to the request. If no protest is filed within the time allowed therefor, the proposed activities shall be deemed to be authorized effective the day after the time allowed for filing a protest. If a protest is filed and not withdrawn 30 days after the time allowed for filing a protest, the instant request shall be treated as an application for authorization pursuant to Section 7 of the Natural Gas Act.

Linwood A. Watson, Jr.,

Acting Secretary.

BILLING CODE 6717–01–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. DR98–24–000, et al.]

Florida Power & Light Company, et al.; Electric Rate and Corporate Regulation Filings

January 13, 1998.

Take notice that the following filings have been made with the Commission:

1. Florida Power & Light Company

[Docket No. DR98–24–000]

Take notice that on December 24, 1997, Florida Power & Light Company, filed a request for approval of changes in depreciation rates made on or after April 19, 1994 and prior to December 22, 1997, for accounting purposes only pursuant to Section 302 of the Federal Power Act. The proposed changes were approved for retail purposes by the Florida Public Service Commission.

Comment date: February 12, 1998, in accordance with Standard Paragraph E at the end of this notice.

2. Monongahela Power Company

[Docket No. DR98–38–000]

Take notice that on December 30, 1997, Allegheny Power, filed on behalf of Monongahela Power Company, an application for approval of depreciation rates pursuant to Section 302 of the Federal Power Act. The proposed depreciation rates are for accounting purposes only. Allegheny Power states that the proposed new depreciation rates of Monongahela Power Company were approved for retail purposes by the Public Service Commission of West Virginia effective as of November 1, 1994 and the Public Utility Commission of Ohio effective as of October 20, 1995. Allegheny Power requests that the Commission allow the proposed depreciation rates to become effective on the same dates also.

Comment date: February 6, 1998, in accordance with Standard Paragraph E at the end of this notice.

3. Mississippi Power Company

[Docket No. DR98–39–000]

Take notice that on December 31, 1997, Mississippi Power Company filed a request for approval of changes in depreciation rates, for accounting purposes only, pursuant to Section 302 of the Federal Power Act. The proposed changes were approved for retail purposes by the Mississippi Public Service Commission and became effective as of January 1, 1996. Mississippi Power Company requests that the Commission allow the proposed depreciation rates to become effective as of January 1, 1996 also.

Comment date: February 13, 1998, in accordance with Standard Paragraph E at the end of this notice.

4. Portland General Electric Company

[Docket No. DR98–40–000]

Take notice that on December 31, 1997, Portland General Electric Company filed a request for approval of changes in depreciation rates, for accounting purposes only, pursuant to Section 302 of the Federal Power Act. The proposed changes were approved for retail purposes by the Oregon Public Utilities Commission and became effective as of April 1, 1995. Portland General Electric Company requests that the Commission allow the proposed depreciation rates to become effective as of April 1, 1995 also.

Comment date: February 6, 1998, in accordance with Standard Paragraph E at the end of this notice.

5. Southern California Edison Company

[Docket No. DR98–41–000]

Take notice that on December 31, 1997, Southern California Edison filed a request for approval, for accounting purposes only, of changes in depreciation rates made on or after April 19, 1994 and prior to May 23, 1997, pursuant to Section 302 of the Federal Power Act. The proposed changes were approved for retail purposes by the California Public Utilities Commission.

Comment date: February 6, 1998, in accordance with Standard Paragraph E at the end of this notice.

6. Potomac Edison Company

[Docket No. DR98–42–000]

Take notice that on January 2, 1998 Allegheny Power, filed on behalf of Potomac Edison Company, an Application for approval of depreciation rates, for accounting purposes only, pursuant to Section 302 of the Federal Power Act. Allegheny Power states that the proposed Potomac Edison Company new depreciation rates were approved for retail purposes by the Maryland Public Service Commission as of June 1, 1995, the Virginia State Corporation Commission as of July 1, 1995 and the Public Service Commission of West Virginia as of November 1, 1994. Allegheny Power requests that the Commission allow the proposed depreciation rates to become effective on the same dates also.

Comment date: February 6, 1998, in accordance with Standard Paragraph E at the end of this notice.

7. Otter Tail Power Company

[Docket No. DR98–43–000]

Take notice that on January 2, 1998, Otter Tail Power Company, filed a request for approval of changes in depreciation rates made on or after April 19,1994 and prior to May 22, 1997, for accounting purposes only pursuant to Section 302 of the Federal Power Act. The proposed changes were approved for retail purposes by the Minnesota Public Utilities Commission, the North Dakota Public Service Commission and the South Dakota Public Service Commission.

Comment date: February 6, 1998, in accordance with Standard Paragraph E at the end of this notice.

8. Kansas City Power & Light Company

[Docket No. DR98–44–000]

Take notice that on January 6, 1998, Kansas City Power & Light Company, filed a request for approval of depreciation rates for accounting purposes only pursuant to Section 302 of the Federal Power Act. The proposed rates were approved for retail purposes by the Missouri Public Service Commission effective July 9, 1996. Kansas City Power & Light Company requests that the Commission allow the proposed depreciation rates to become effective as of July 9, 1996 also.

Comment date: February 6, 1998, in accordance with Standard Paragraph E at the end of this notice.

9. PP&L, Inc.

[Docket No. ER98–1101–000]

Take Notice that on December 16, 1997, PP&L, Inc. (formerly known as Pennsylvania Power & Light Company) ("PP&L"), filed a Service Agreement dated December 2, 1997 with QST Energy Trading, Inc. (QST) under PP&L's FERC Electric Tariff, Original Volume No. 5. The Service Agreement adds QST as an eligible customer under the Tariff.

PP&L requests an effective date of February 14, 1998 for the Service Agreement.

PP&L states that copies of this filing have been supplied to QST and to the Pennsylvania Public Utility Commission.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

10. Florida Power & Light Company

[Docket No. ER98–1102–000]

On December 16, 1997, Florida Power & Light Company filed Service Agreements with Aquila Power Corporation, Constellation Power Source Inc., Entergy Power Marketing Corp., Illinois Power Company, NESI Power Marketing, Inc. and Williams Energy Services Company for service pursuant to Tariff No. 1 for Sales of Power and Energy by Florida Power & Light. FPL requests that the Service Agreement be made effective on November 24, 1997.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

11. Illinois Power Company

[Docket No. ER98–1104–000]

Take notice that on December 16, 1997, Illinois Power Company (Illinois Power), 500 South 27th Street, Decatur, Illinois 62526, tendered for filing a Power Sales Tariff, Service Agreement under which Griffin Energy Marketing, L.L.C. will take service under Illinois Power Company's Power Sales Tariff. The agreements are based on the Form of Service Agreement in Illinois Power's tariff.

Illinois Power has requested an effective date of December 10, 1997.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

12. Indianapolis Power & Light Company

[Docket No. ER98–1105–000]

Take notice that on December 17, 1997, Indianapolis Power & Light Company (IPL), tendered for filing an amendment to the interconnection agreement between IPL and PSI Energy, a public utility subsidiary of Cinergy.

Copies of this filing were sent to the Indiana Utility Regulatory Commission and Cinergy.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

13. New England Power Company et al.

[Docket No. ER98–1106–000]

Take notice that on December 17, 1997, New England Power Company and the other New England electric utilities that are subject to the Commission's jurisdiction which are parties to the Agreement with Respect to Use of Quebec Interconnection dated as of December 1, 1981, as amended and restated as of September 1, 1985 (the Filing Parties) filed a Second Amended And Restated Agreement With Respect To Use Of Quebec Interconnection (Second Restated Use Agreement) and a related agreement entitled, Agreement With Respect To Second Amendment And Restatement Of Agreement With Respect To Use Of Quebec Interconnection (Second Amended Agreement), both dated as of November 19, 1997.

The Filing Parties request an effective date of December 12, 1997 for certain specified sections of the Second Restated Use Agreement and an effective date for the remaining sections of the Second Restated Use Agreement on the Second Effective Date, as defined in the Restated NEPOOL Agreement. The Filing Parties state that acceptance of the specified sections of the Second Restated Use Agreement as of December 12, 1997 will permit all participants and indirect participants in the Interconnection to immediately make greater and more flexible use of the Interconnection. Copies of this filing were sent to all participants and indirect participants in the Interconnection, the

VOL 63 ISS 13 JA 21 1998 UMI

New England Public Utility Commissioners and the New England Governors.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

14. Northern States Power Company (Minnesota Company)

[Docket No. ER98–1107–000]

Take notice that on December 17, 1997, Northern States Power Company (Minnesota) (NSP), tendered for filing a Non-Firm Point-to-Point Transmission Service Agreement and a Short-Term Firm Transmission Service Agreement between NSP and Griffin Energy Marketing, L.L.C.

NSP requests that the Commission accept both the agreements effective December 5, 1997, and requests waiver of the Commission's notice requirements in order for the agreements to be accepted for filing on the date requested.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

15. Portland General Electric Company

[Docket No. ER98–1108–000]

Take notice that on December 17, 1997, Portland General Electric Company (PGE), tendered for filing a report on refunds issued to customers as ordered by the Commission in Docket No. ER96–333–000.

Copies of this filing were served upon entities noted in the filing letter.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

16. PP&L, Inc.

[Docket No. ER98–1110–000]

Take notice that on December 17, 1997, PP&L, Inc. (formerly known as Pennsylvania Power & Light Company) (PP&L), filed a Service Agreement dated December 2, 1997, with Enron Power Marketing, Inc. (Enron), under PP&L's FERC Electric Tariff, Original Volume No. 5. The Service Agreement adds Enron as an eligible customer under the Tariff.

PP&L requests an effective date of December 17, 1997, for the Service Agreement.

PP&L states that copies of this filing have been supplied to Enron and to the Pennsylvania Public Utility Commission.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

17. PP&L, Inc.

[Docket No. ER98–1111–000]

Take notice that on December 17, 1997, PP&L, Inc. (formerly known as Pennsylvania Power & Light Company) (PP&L), filed a Service Agreement dated December 2, 1997, with Horizon Energy Company (HEC), under PP&L's FERC Electric Tariff, Original Volume No. 5. The Service Agreement adds HEC as an eligible customer under the Tariff.

PP&L requests an effective date of December 17, 1997, for the Service Agreement.

PP&L states that copies of this filing have been supplied to HEC and to the Pennsylvania Public Utility Commission.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

18. Kansas City Power & Light Company

[Docket No. ER98–1112–000]

Take notice that on December 17, 1997, Kansas City Power & Light Company (KCPL), tendered for filing a Service Agreement dated November 25, 1997, between KCPL and Western Resources, Inc. KCPL proposes an effective date of November 26, 1997, and requests a waiver of the Commission's notice requirement to allow the requested effective date. This Agreement provides for the rates and charges for Short-term Firm Transmission Service.

In its filing, KCPL states that the rates included in the above-mentioned Service Agreement are KCPL's rates and charges in the compliance filing to FERC Order No. 888–A in Docket No. OA97–636–000.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

19. Kansas City Power & Light Co.

[Docket No. ER98–1113–000]

Take notice that on December 17, 1997, Kansas City Power & Light Company (KCPL), tendered for filing a Service Agreement dated November 21, 1997, between KCPL and Williams Energy Services Company. KCPL proposes an effective date of December 5, 1997, and requests a waiver of the Commission's notice requirement to allow the requested effective date. This Agreement provides for the rates and charges for Short-term Firm Transmission Service.

In its filing, KCPL states that the rates included in the above-mentioned Service Agreement are KCPL's rates and charges in the compliance filing to FERC Order No. 888–A in Docket No. OA97–636–000.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

20. PP&L, Inc.

[Docket No. ER98–1114–000]

Take notice that on December 17, 1997, PP&L, Inc. (formerly known as Pennsylvania Power & Light Company) (PP&L), filed a Service Agreement dated December 2, 1997, with AYP Energy, Inc. (AYP), under PP&L's FERC Electric Tariff, Original Volume No. 5. The Service Agreement adds AYP as an eligible customer under the Tariff.

PP&L requests an effective date of December 17, 1997, for the Service Agreement.

PP&L states that copies of this filing have been supplied to AYP and to the Pennsylvania Public Utility Commission.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

21. PP&L, Inc.

[Docket No. ER98–1115–000]

Take notice that on December 17, 1997, PP&L, Inc. (formerly known as Pennsylvania Power & Light Company) (PP&L), filed a Service Agreement dated December 12, 1997 with Energis Resources (Energis), under PP&L's FERC Electric Tariff, Original Volume No. 5. The Service Agreement adds Energis as an eligible customer under the Tariff.

PP&L requests an effective date of December 17, 1997, for the Service Agreement.

PP&L states that copies of this filing have been supplied to Energis and to the Pennsylvania Public Utility Commission.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

22. Oklahoma Gas and Electric Company

[Docket No. ER98–1116–000]

Take notice that on December 17, 1997, Oklahoma Gas and Electric Company (OG&E), tendered for filing service agreements for parties to take service under its open access tariff.

Copies of this filing have been served on the affected parties, the Oklahoma Corporation Commission and the Arkansas Public Service Commission.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

23. Tampa Electric Company

[Docket No. ER98–1118–000]

Take notice that on December 17, 1997, Tampa Electric Company (Tampa Electric), tendered for filing service agreements with Virginia Electric and Power Company (VEPCO), and Enron Power Marketing, Inc. (Enron), for firm and non-firm point-to-point transmission service, and a service agreement with Tampa Electric as wholesale power merchant for non-firm point-to-point transmission service, under Tampa Electric's open access transmission tariff.

Tampa Electric proposes an effective date of December 1, 1997, for the service agreements, and therefore requests waiver of the Commission's notice requirement.

Copies of the filing have been served on VEPCO, Enron, Tampa Electric as wholesale power merchant, and the Florida Public Service Commission.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

24. Energetix, Inc.

[Docket No. ER98–1120–000]

Take notice that on December 16, 1997, Energetix, Inc. (Energetix) filed a Notice of Succession with the Federal Energy Regulatory Commission (FERC or the Commission) indicating that the name of ROXDEL has been changed to Energetix effective December 8, 1997. In accordance with § 35.16 and 131.51 of the Commission's Regulations, 18 CFR 35.16 and 131.51, Energetix adopted and ratified all applicable rate schedules filed with the FERC by ROXDEL.

Copies of this filing were served upon all parties in Docket No. ER97–3556, ROXDEL's customers, and the New York State Public Service Commission.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

25. San Diego Gas & Electric Company

[Docket No. ER98–1122–000]

Take notice that on December 17, 1997, San Diego Gas & Electric Company (SDG&E), tendered for filing a Notice of Cancellation of Service Agreement. The Service Agreement is between SDG&E and SDG&E's Energy Trading for Firm Point-to-Point Transmission Service under SDG&E's Open Access Transmission Tariff (Tariff).

SDG&E requests that this cancellation become effective January 1, 1998.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

26. Entergy Services, Inc.

[Docket No. ER98–1123–000]

Take notice that on December 17, 1997, Entergy Services, Inc. (Entergy Services), on behalf of Entergy Arkansas, Inc., Entergy Gulf States, Inc., Entergy Louisiana, Inc., Entergy Mississippi, Inc., and Entergy New Orleans, Inc. (collectively, the Entergy Operating Companies), tendered for filing a Non-Firm Point-To-Point Transmission Service Agreement between Entergy Services, as agent for the Entergy Operating Companies, and Engage Energy US, L.P.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

27. Entergy Services, Inc.

[Docket No. ER98–1124–000]

Take notice that on December 17, 1997, Entergy Services, Inc. (Entergy Services), on behalf of Entergy Arkansas, Inc., Entergy Gulf States, Inc., Entergy Louisiana, Inc., Entergy Mississippi, Inc., and Entergy New Orleans, Inc. (collectively, the Entergy Operating Companies), tendered for filing a Non-Firm Point-To-Point Transmission Service Agreement between Entergy Services, as agent for the Entergy Operating Companies, and Engage Energy US, L.P.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

28. Northern States Power Company (Minnesota Company)

[Docket No. ER98–1126–000]

Take notice that on December 17, 1997, Northern States Power Company (NSP), tendered Amendment No. 1, to the Municipal Interconnection and Interchange Agreement between NSP and the City of Sioux Falls, SD. NSP requests an effective date of January 1, 1998.

A copy of the filing was served upon each of the parties named in the Service List.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

29. El Segundo Power, LLC

[Docket No. ER98–1127–000]

Take notice that on December 17, 1997, El Segundo Power, LLC, tendered for filing pursuant to section 205, 18 CFR 385.205, a petition for waivers and blanket approvals under various regulations of the Commission and for an order accepting its FERC Electric Rate Schedule No. 1, to be effective January 1, 1998.

El Segundo Power, LLC intends to sell electric power at wholesale. In transactions where El Segundo Power, LLC sells electric energy it proposes to make such sales on rates, terms, and conditions to be mutually agreed to with the purchasing party. Rate Schedule No. 1, provides for the sale of energy and capacity at agreed prices.

Comment date: January 27, 1998, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraph

E. Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 18 CFR 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

David P. Boergers,

Acting Secretary.

[Docket No. DR98–26–000, et al.]

Jersey Central Power & Light Company, et al.; Electric Rate and Corporate Regulation Filings

January 14, 1998.

Take notice that the following filings have been made with the Commission:

1. Jersey Central Power & Light Company

[Docket No. DR98–26–000]

Take notice that on December 29, 1997, Jersey Central Power & Light Company, filed a request for approval of changes in depreciation rates made on or after April 19, 1994 and prior to December 22, 1997, for accounting purposes only pursuant to Section 302 of the Federal Power Act. The proposed changes were approved for retail purposes by the New Jersey Board of Public Utilities.

VOL 63 ISS 13 JA 21 1998 UMI

Comment date: February 13, 1998, in accordance with Standard Paragraph E at the end of this notice.

2. Metropolitan Edison Company

[Docket No. DR98–27–000]

Take notice that on December 29, 1997, Metropolitan Edison Company, filed a request for approval of changes in depreciation rates made on or after April 19, 1994 and prior to December 22, 1997, for accounting purposes only pursuant to Section 302 of the Federal Power Act. The proposed changes were approved for retail purposes by the Pennsylvania Public Utility Commission.

Comment date: February 13, 1998, in accordance with Standard Paragraph E at the end of this notice.

3. Pennsylvania Electric Company

[Docket No. DR98–29–000]

Take notice that on December 29, 1997, Pennsylvania Electric Company, filed a request for approval of changes in depreciation rates made on or after April 19, 1994 and prior to December 22, 1997, for accounting purposes only pursuant to Section 302 of the Federal Power Act. The proposed changes were approved for retail purposes by the Pennsylvania Public Utility Commission.

Comment date: February 13, 1998, in accordance with Standard Paragraph E at the end of this notice.

4. Wisconsin Power & Light Company

[Docket No. DR98–30–000]

Take notice that on December 29, 1997, Wisconsin Power & Light Company, filed a request for approval of changes in depreciation rates made on or after April 19, 1994 and prior to December 19, 1997, for accounting purposes only pursuant to Section 302 of the Federal Power Act. The proposed changes were approved for retail purposes by the Public Service Commission of Wisconsin.

Comment date: February 13, 1998, in accordance with Standard Paragraph E at the end of this notice.

5. MidAmerican Energy Company

[Docket No. ER97–4466–001]

Take notice that on December 12, 1997, MidAmerican Energy Company tendered for filing its compliance filing in the above-referenced docket.

Comment date: January 28, 1998, in accordance with Standard Paragraph E at the end of this notice.

6. Wisconsin Electric Power Company

[Docket No. ER98–1177–000]

Take notice that Wisconsin Electric Power Company (Wisconsin Electric) on December 24, 1997, tendered for filing an electric service agreement under its Coordination Sales Tariff (FERC Electric Tariff, Original Volume No. 2). Wisconsin Electric respectfully requests an effective date January 2, 1998. Wisconsin Electric is authorized to state that Tenaska Power Services Company joins in the requested effective date.

Copies of the filing have been served on Tenaska Power Services Company, the Michigan Public Service Commission, and the Public Service Commission of Wisconsin.

Comment date: January 28, 1998, in accordance with Standard Paragraph E at the end of this notice.

7. Southern California Edison Company

[Docket No. ER98–1261–000]

Take notice that on December 31, 1997, Southern California Edison Company (Edison) tendered for filing a Surcharge to the Transmission Access Charges for retail customers.

Copies of this filing were served upon the Public Utilities Commission of the State of California and all interested parties.

Comment date: January 30, 1998, in accordance with Standard Paragraph E at the end of this notice.

8. California Independent System Corporation

[Docket No. ER98–1309–000]

Take notice that on December 30, 1997, the California Independent System Corporation (ISO), tendered for filing a Participating Generator Agreement executed by the ISO and Texaco Exploration and Production Inc., for approval by the Commission.

The ISO states that this filing has been served on all parties listed on the official service list in the above referenced dockets, including the California Public Service Commission.

Comment date: January 30, 1998, in accordance with Standard Paragraph E at the end of this notice.

9. California Independent System Corporation

[Docket No. ER98–1310–000]

On December 30, 1997, the California Independent System Corporation (ISO), tendered for filing a Participating Generator Agreement executed by the ISO and El Segundo Power, LLC for approval by the Commission.

The ISO states that this filing has been served on all parties listed on the official service list in the above referenced dockets, including the California Public Service Commission.

Comment date: January 30, 1998, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraph

E. Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, D.C. 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 18 CFR 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Alliance Pipeline L.P.; Notice of Public Meetings on the Draft Environmental Impact Statement for the Proposed Alliance Pipeline Project

January 14, 1998.

The Office of Pipeline Regulation's environmental staff will conduct public meetings to receive comments on the Alliance Pipeline Project Draft Environmental Impact Statement (EIS). All of the meetings will begin promptly at 7:00 p.m. The dates and locations of the meetings are:

- Monday, February 2, 1998: Valley City High School Cafeteria, 460 Central Avenue West, Valley City, ND, (701) 845–0483.
- Tuesday, February 3, 1998: Kennedy School Auditorium, 824 Seventh Street, Willmar, MN, (320) 231–8490.
- Wednesday, February 4, 1998: New Hampton Community Center, 112 East Spring Street, New Hampton, IA, (515) 394–5464.
- Thursday, February 5, 1998: Mendota Civic Center, 1901 Tom Merwin Drive, Mendota, IL, (815) 539–3411.

Interested groups and individuals are encouraged to attend and present oral comments on the environmental impact described in the draft EIS. Transcripts of the meetings will be prepared. For further information, contact Paul McKee in the Commission's Office of External Affairs, at (202) 208–1088.

Federal Energy Regulatory Commission

[Docket No. CP98–131–000 and CP98–133–000]

Vector Pipeline L.P.; Notice of Intent To Prepare an Environmental Impact Statement for the Proposed Vector Pipeline Project and Request for Comments on Environmental Issues, and Notice of Public Scoping Meetings and Site Visit

January 14, 1998.

The staff of the Federal Energy Regulatory Commission (FERC or Commission) will prepare an environmental impact statement (EIS) that will discuss the environmental impacts of the construction and operation of the facilities proposed in the Vector Pipeline Project.[1] This EIS will be used by the Commission in its decision-making process to determine whether the project is in the public convenience and necessity.

Additionally, with this notice we are asking a number of Federal Agencies (see appendix 2) with jurisdiction and/or special expertise with respect to environmental issues to cooperate with us in the preparation of the EIS. These agencies may choose to participate once they have evaluated the proposal relative to their agencies' responsibilities.[2]

Summary of the Proposed Project

Vector Pipeline L.P. (Vector) proposes to build new natural gas pipeline and compression facilities to transport 1.0 billion cubic feet per day of natural gas from Joliet, Illinois to St. Clair, Michigan. Accessing natural gas supplies from the Chicago area, the Vector Pipeline Project would deliver gas volumes within Michigan and to Vector Pipeline Limited Partnership (Vector Canada) at the U.S./Canada border facility.

Vector requests Commission authorization, in Docket No. CP98–133–000, to construct, lease, and operate the following facilities:

- Construct 265.9 miles of 42-inch diameter pipeline in Illinois, Indiana, and Michigan extending from Joliet, Illinois in Will County to Oakland County, Michigan (Segment 1). About 33 miles would be in Illinois, 67.7 miles would be in Indiana, and 165.2 miles would be in Michigan;
- Lease of 58.8 miles of an existing 36-inch-diameter pipeline in Michigan from Oakland County to St. Clair County (Segment 2);
- Construct 3.7 miles of 42-inch-diameter pipeline in St. Clair County, Michigan terminating at the border of the United States (U.S.) and Canada near St. Clair, Michigan (Segment 3);
- Construct five new meter/regulating stations including two in Will County, Illinois, one in Livingston County, Michigan, one in Oakland County, Michigan, and one in St. Clair County, Michigan;
- Construct two compressor stations each with 30,000 horsepower of compression in LaPorte County, Indiana, and Oakland County, Michigan; and
- Construct associated pipeline facilities, including 21 new mainline valves, 3 pig launchers, 2 pig receivers, and permanent access roads.

The general location of Vector's proposed project facilities is shown in appendix 1. If you are interested in obtaining procedural information, please write to the Secretary of the Commission.

In addition, Vector requests in Docket No. CP98–131–000 a Presidential Permit to construct, operate, and maintain facilities at the International Border between the U.S. and Canada near St. Clair, Michigan. Vector's pipeline would terminate at the point of interconnection with the Canadian facilities of Vector Canada.

Land Requirements for Construction

The Vector Pipeline Project would include 58.8 miles of leased existing pipeline. Vector would construct about 253.4 miles (94 percent) of the new pipeline parallel to various existing utility rights-of-way. Only 15.1 miles (6 percent) of the route would be constructed on newly created right-of-way that does not parallel existing rights-of-way. Where possible, Vector's right-of-way would overlap the existing rights-of-way as much as 50 feet during construction to minimize impacts. Vector's pipeline would deviate from the existing rights-of-way in selected locations to avoid impact on homes and existing utility structures (meter stations, etc.). The pipeline would also deviate from the existing rights-of-way in selected locations to improve waterbody crossings and for other environmental or engineering reasons.

Construction of the Vector Pipeline Project would affect a total of about 3,581.9 acres of land including extra workspace and aboveground facilities. Of this total, about 3,268.1 acres would be disturbed by the construction rights-of-way, 270.9 acres would be disturbed by extra workspace, and 42.9 acres would be disturbed by the aboveground facilities and access roads. All these acreage figures are subject to change.

Vector would generally use a right-of-way width of 100 feet for construction. The Vector Pipeline Project would also require extra temporary work areas for waterbody, highway, and railroad crossing; for additional topsoil storage; and for pipe storage and equipment yards. Following construction and restoration of the right-of-way and temporary work spaces, Vector would retain a 30- to 50-foot-wide permanent pipeline right-of-way depending on whether the pipeline is adjacent to other utilities or on new right-of-way. Total land requirements for the permanent right-of-way would be about 1,185.4 acres. The project would also require an additional 22.1 acres for the operation of the new aboveground facilities and 0.9 acres for the operation of permanent access roads. Vector would restore the remaining 2,373.5 acres of land affected by construction of the project and allow these areas to revert to their former use.

The EIS Process

The National Environmental Policy Act (NEPA) requires the Commission to take into account the environmental impacts that could result from an action whenever it considers the issuance of a Certificate of Public Convenience and Necessity. NEPA also requires us to discover and address concerns the public may have about proposals. We call this "scoping." The main goal of the scoping process is to focus the analysis in the EIS on the important environmental issues. By this Notice of Intent, the Commission requests public comments on the scope of the issues it will address in the EIS. All comments received are considered during the preparation of the EIS. State and local government representatives are encouraged to notify their constituents

[1] Vector Pipeline L.P.'s applications in Docket Nos. CP98–131–000 and CP98–133–000 were filed with the Commission under Section 3 of the Natural Gas Act and part 153 of the Commission's regulations and under Section 7 of the Natural Gas Act and Part 157 of the Commission's regulations, respectively.

[2] The appendices referenced in this notice are not being printed in the **Federal Register**. Copies are available from the Commission's Public Reference and Files Maintenance Branch, 888 First Street, NE, Room 2A, Washington DC 20426, or call (202) 208–1371. Copies of the appendices were sent to all those receiving this notice in the mail.

of this proposed action and encourage them to comment on their areas of concern.

Currently Identified Environmental Issues

The EIS will discuss impacts that could occur as a result of the construction and operation of the proposed project. We have already identified a number of issues that we think deserve attention based on a preliminary review of the proposed facilities and the environmental information provided by Vector. These issues are listed below. This is a preliminary list of issues and may be changed based on your comments and our analysis.

- **Soils**

—Temporary and permanent impacts on prime farmland soils.
—Mixing of topsoil and subsoil during construction.
—Compaction of soil by heavy equipment.
—Impacts on drain tiles and irrigation systems.
—Erosion control and right-of-way restoration.

- **Water Resource**

—Effect of construction on areas with shallow groundwater.
—Effect of construction on crossings of 92 perennial waterbodies, including 13 coldwater fisheries.
—Crossing of eight rivers 100 feet wide or greater.
—Crossing three rivers on the Nationwide Rivers Inventory List, including an international waterbody.
—Effect of construction in waterbodies with contaminated sediments.
—Potential for erosion and sediment transport to the waterbodies.
—Effect of construction on groundwater and surface water supplies.
—Impact on wetland hydrology.

- **Biological Resources**

—Short- and long-term effects of right-of-way clearing and maintenance on wetlands, forests, riparian areas, and vegetation communities of special concern.
—Effect on wildlife and fisheries habitats.
—Impact on federally endangered species such as the Indiana bat and on federally threatened species such as the northern copperbelly watersnake.

- **Cultural Resources**

—Effect on historic and prehistoric sites.
—Native American concerns.

- **Socioeconomics**

—Effect of the construction workforce on demands for services in surrounding areas.
—Impact on property values.

- **Land Use**

—Impact on crop production.
—Impact on residential areas.
—Effect on public lands and special use areas including waterbodies on the Nationwide Rivers Inventory, a national scenic trail, a state game area, a state recreation area, a forest preserve district, a county park, city/township private parks, church property, a golf course, a county airport, campgrounds, and racetracks.
—Impact on future land uses and consistency with local land use plans and zoning.
—Visual effect of the aboveground facilities on surrounding areas.

- **Air Quality and Noise**

—Effect on local air quality and noise environment as a result of construction.
—Effect on local air quality and noise environment as a result of operation of the compressor stations.

- **Pipeline Reliability and Safety**
- **Cumulative Impact**

—Identify other projects which have been or may be proposed in the same region and similar time frames.
—Identify potential upstream and downstream facilities.

We will also evaluate possible alternatives to the proposed project or portions of the project, and make recommendations on how to lessen or avoid impacts on the various resource areas.

Our independent analysis of the issues will be in the Draft EIS which will be mailed to Federal, state, and local agencies, public interest groups, affected landowners and other interested individuals, newspapers, libraries, and the Commission's official service list for this proceeding. A 45-day comment period will be allotted for review of the Draft EIS. We will consider all comments on the Draft EIS and revise the document, as necessary, before issuing a Final EIS. The Final EIS will include our response to each comment received on the Draft EIS and will be used by the Commission in its decision-making process to determine whether to approve the project.

Public Participation and Scoping Meetings

You can make a difference by sending a letter addressing your specific comments or concerns about the project. You should focus on the potential environmental effects of the proposal, alternatives to the proposal (including alternative routes), and measures to avoid or lessen environmental impact. The more specific your comments, the more useful they will be. Please follow the instructions below to ensure that your comments are received and properly recorded:

- Send two copies to: David P. Boergers, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street, N.E., Room 1A, Washington, D.C. 20426.
- Label one copy of the comments for the attention of the Environmental Review and Compliance Branch, PR–11.1;
- Reference Docket Nos. CP98–131–000 and CP98–133–000; and
- Mail your comments so that they will be received in Washington, D.C. on or before February 20, 1998.

In addition to or in lieu of sending written comments, we invite you to attend the public scoping meetings the FERC will conduct in the project area. The locations and times for these meetings are listed below.

Schedule of Public Scoping Meetings for the Vector Pipeline Project Environmental Impact Statement

February 9, 1998
7:00 pm—Crown Point, Indiana, Marion Education Center, St. Anthony's Hospital, 1201 S. Main Street, (219) 757–6398
February 10, 1998
7:00 pm—Three Rivers, Michigan, Three Rivers Community Center, 103 S. Douglas Avenue, (616) 278–8193
February 11, 1998
7:00 pm—Leslie, Michigan, Leslie High School Auditorium, 4141 Hull Road, (517) 589–8277
February 12, 1998
7:00 pm—Port Huron, Michigan, St. Claire Community College, 323 Erie Street, (810) 984–3881

The public meetings are designed to provide you with more detailed information and another opportunity to offer your comments on the proposed project. Vector representatives will be present at the scoping meetings to describe their proposal. Interested groups and individuals are encouraged to attend the meetings and to present comments on the environmental issues they believe should be addressed in the Draft EIS. A transcript of each meeting will be made so that your comments will be accurately recorded.

On the dates of the meetings, we will also be conducting limited site visits to the project area. Anyone interested in participating in the site visit may contact the Commission's Office of External Affairs identified at the end of this notice for more details and must provide their own transportation.

Becoming an Intervenor

In addition to involvement in the EIS scoping process, you may want to become an official party to the proceeding or become an "intervenor." Among other things, intervenors have the right to receive copies of case-related Commission documents and filings by other intervenors. Likewise, each intervenor must provide copies of its filings to all other parties. If you want to become an intervenor you must file a motion to intervene according to Rule 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.214) (see appendix 3).

The date for filing of timely motions to intervene in this proceeding has passed. Therefore, parties now seeking to file late interventions must show good cause, as required by section 385.214(b)(3), why this time limitation should be waived. Environmental issues have been viewed as good cause for late intervention. You do not need intervenor status to have your environmental comments considered.

Environmental Mailing List

This notice is being sent to individuals, organizations, and government entities interested in and/or potentially affected by the proposed project. It is also being sent to all identified potential right-of-way grantors. As details of the project become established, representatives of Vector may also separately contact landowners, communities, and public agencies concerning project matters, including acquisition of permits and rights-of-way.

All commentors will be retained on our mailing list. If you do not want to send comments at this time but still want to keep informed and receive copies of the Draft and Final EIS, you must return the Information Request (appendix 4). If you do not send comments or return the Information Request, you will be taken off the mailing list.

Additional information about the proposed project is available from Paul McKee in the Commission's Office of External Affairs at (202) 208–1088.

Linwood A. Watson, Jr.,

Acting Secretary.

BILLING CODE 6717–01–M

ENVIRONMENTAL PROTECTION AGENCY

[OPPTS–42203B; FRL–5766–7]

Enforceable Consent Agreement Development for Diethanolamine; Solicitation of Interested Parties and Notice of Public Meeting

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA is soliciting interested parties who want to monitor or participate in negotiations on an enforceable consent agreement (ECA) concerning the use of pharmacokinetics (PK) studies and mechanistic data to help meet testing requirements for diethanolamine (CAS No. 111–42–2) in the proposed hazardous air pollutants (HAPs) test rule. In addition, EPA invites all interested parties to attend a public meeting to initiate negotiations on the ECA for diethanolamine.

DATES: EPA must receive written notification requesting designation as an interested party for diethanolamine on or before February 11, 1998. Those persons who identify themselves as interested parties for diethanolamine may submit written comments to EPA on the PK proposal for this chemical, on EPA's preliminary technical analysis, and on other materials in the docket for the proposed HAPs test rule, that relate to the ECA process for this chemical by February 11, 1998.

The public meeting is scheduled from 9:00 a.m. to 5:00 p.m. on February 24, 1998.

ADDRESSES: Each comment must bear the docket control number OPPTS–42203B. All comments should be sent in triplicate to: OPPT Document Control Officer (7407), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 401 M St., SW., Rm. G–099, East Tower, Washington, DC 20460.

EPA will address these comments at the public meeting.

Comments and data may also be submitted electronically to: oppt.ncic@epamail.epa.gov. following the instructions under Unit VI. of this document. No Confidential Business Information (CBI) should be submitted through e-mail.

All comments which contain information claimed as CBI must be clearly marked as such. Three sanitized copies of any comments containing information claimed as CBI must also be submitted and will be placed in the public record for this document. Persons submitting information on any portion of which they believe is entitled to treatment as CBI by EPA must assert a business confidentiality claim in accordance with 40 CFR 2.203(b) for each such portion. This claim must be made at the time that the information is submitted to EPA. If a submitter does not assert a confidentiality claim at the time of submission, EPA will make the information available to the public without further notice to the submitter.

The public meeting will be held at EPA Headquarters, 401 M St., SW., Washington, DC in the EPA Conference Center, North Conference Area in Room 1.

FOR FURTHER INFORMATION CONTACT: *For additional information*: Susan B. Hazen, Director, Environmental Assistance Division (7408), Rm. ET–543B, Office of Pollution Prevention and Toxics, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460; telephone: (202) 554–1404, TDD: (202) 554–0551; e-mail address: TSCA-Hotline@epamail.epa.gov.

For technical information: Richard W. Leukroth, Jr., Project Manager, Chemical Control Division (7405), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460; telephone: (202) 260–0321; fax: (202) 260–8850; e-mail address: leukroth.rich@epamail.epa.gov.

SUPPLEMENTARY INFORMATION:

I. Electronic Availability

Internet: Electronic copies of this document and various support documents are available from the EPA Home Page at the **Federal Register**—Environmental Documents entry for this document under "Laws and Regulations" (http://www.epa.gov/fedrgstr/EPA-TOX/1998/).

II. Background

EPA proposed health effects testing under section 4(a) of the Toxic Substances Control Act (TSCA) on June 26, 1996, for a number of HAPs chemicals (61 FR 33178) (FRL–4869–1). As indicated in the proposed HAPs test rule, EPA would use the data obtained from testing to implement several provisions of section 112 of the Clean Air Act (CAA), including the determination of residual risk, the estimation of the risks associated with accidental releases of chemicals, and determinations whether substances should be removed from the CAA section 112(b)(1) list of hazardous air pollutants (delisting). The data also would be used by other Federal agencies (e.g. Agency for Toxic Substances and Disease Registry (ATSDR), National

VOL
63
ISS
13
JA
21
1998
UMI

Institute of Occupational Safety and Health (NIOSH), Occupational Safety and Health Administration (OSHA), and Consumer Product Safety Commission (CPSC)) in assessing chemical risks and in taking appropriate actions within their programs.

In the proposed HAPs test rule, EPA invited the submission of proposals for pharmacokinetics (PK) studies for the HAPs chemicals, which could provide the basis for negotiation of ECAs. These PK studies would be used to inform EPA about the use of route-to-route extrapolation of toxicity data from routes other than inhalation to predict the effects of inhalation exposure, as an alternative to testing proposed under the HAPs test rule. EPA received a PK proposal for diethanolamine from the Chemical Manufacturers Association, Alkanolamines Panel (CMA Alkanolamines Panel) on November 25, 1996. Based on the PK proposal received for diethanolamine, the Agency developed a preliminary technical analysis. A copy of this preliminary technical analysis was sent to the CMA Alkanolamines Panel on November 21, 1997. The CMA Alkanolamines Panel reviewed EPA's analysis and notified EPA on December 31, 1997, that it has a continued interest in pursuing the ECA process. A copy of the PK proposal, the EPA preliminary technical analysis and related references, and correspondence is contained in the public record for this ECA process. These materials will be used during discussions at the negotiating meeting. EPA has decided to proceed with the ECA process for diethanolamine and is providing public notice that the Agency is hereby initiating the procedures for ECA negotiations for the HAP chemical, diethanolamine. The procedures for ECA negotiations are described at 40 CFR 790.22(b).

EPA does not intend to publish additional **Federal Register** documents to solicit interested parties and announce public meetings to initiate ECA proceedings for other HAPs chemicals for which PK proposals were submitted in response to the June 26, 1996 EPA invitation to submit PK proposals. In a letter dated December 4, 1997, the Chlorobenzene Producers Association did not express a continued interest to enter into ECA proceedings for the HAPs chemical 1,2,4-trichlorobenzene. In the December 24, 1997 amendment to the HAPs rulemaking (62 FR 67466) (FRL–5742–2), EPA invited the submission of proposals for ECAs on all the HAPs chemicals for which ECA proposals have not been received (62 FR 67474). If the Agency receives such alternative testing proposals and decides to proceed with ECA proceedings for these proposals, it will publish, as appropriate, additional **Federal Register** documents soliciting persons to notify the Agency in writing of their interest in participating in or monitoring negotiations for the development of ECAs for the development of alternative testing to meet HAPs rule testing requirements.

With the publication of this document EPA has published a total of seven solicitations of interested parties and announcements of public meetings for ECAs on HAPs chemicals. EPA does not intend to publish additional **Federal Register** documents to solicit interested parties and announce public meetings to initiate ECA proceedings for other HAPs chemicals for which PK proposals were submitted in response to the EPA invitation to submit PK proposals that was contained in the original HAPs proposal, dated June 26, 1996 (61 FR 33178). In a letter to EPA dated December 4, 1997, the Chlorobenzene Producers Association did not express a continued interest in entering into ECA proceedings for the HAPs chemical 1,2,4-trichlorobenzene.

In the December 24, 1997, amendment to the proposed HAPs rule (62 FR 67466), EPA invited the submission of proposals for ECAs on all the HAPs chemicals for which ECA proposals have not been received. If the Agency receives such alternative testing proposals and decides to proceed with ECA proceedings for these proposals, it will publish, as appropriate, additional **Federal Register** documents soliciting persons to notify the Agency in writing of their interest in participating in or monitoring negotiations for the development of ECAs for the development of alternative testing to meet HAPs rule testing requirements.

Negotiations on developing an ECA for the HAP chemical, diethanolamine, will focus on the use of PK studies and mechanistic data to help meet testing requirements for diethanolamine. In addition, discussion will include the adequacy of the available data base to be used for extrapolation to obtain the data needs identified for diethanolamine in the proposed HAPs test rule, as amended. The objective of the ECA process is to conclude an ECA that will set in place an industry-sponsored testing program that will adequately address EPA's data needs for diethanolamine.

III. Identification of Interested Parties

EPA is soliciting interested parties to monitor or participate in testing negotiations on an ECA for diethanolamine. The CMA Alkanolamines Panel, the submitter of the PK proposal for diethanolamine, and the member companies of the CMA Alkanolamines Panel are already considered interested parties and do not need to respond to this document. Additionally, any persons who respond to this document on or before February 11, 1998 will be given the status of interested parties. Interested parties must respond in writing to the address specified in the "ADDRESSES" at the beginning of this document. These interested parties will not incur any obligations by being so designated. Negotiations will be conducted in one or more meetings open to the public. The negotiation time schedule for diethanolamine will be established at the first negotiation meeting and will not exceed a period of 4 months from the initial meeting. If an ECA is not established in principle within this timeframe and EPA does not choose to extend the negotiation time period, negotiations will be terminated and testing will be required under the final HAPs test rule. If the testing from the ECA does not meet the Agency's needs, EPA reserves the right to enter into rulemaking.

IV. Public Participation in Negotiations

Under EPA regulations, the Agency is required to provide the public with an opportunity to comment on and participate in the development of ECAs. The procedural rule for ECAs (40 CFR part 790) contains provisions to ensure that the views of interested parties are taken into account during the ECA process.

Individuals and groups who respond to this document will have the status of interested parties. All negotiating meetings for the development of this ECA for diethanolamine will be open to the public and minutes of each meeting will be prepared by EPA and placed in the public docket for this ECA process. The Agency will advise interested parties of meeting dates and make available meeting minutes, testing proposals, background documents, and other materials exchanged at or prepared for negotiating meetings. Where tentative agreement is reached on an acceptable testing program, a draft ECA will be made available for comment by interested parties and, if necessary, EPA will hold a public meeting to discuss any comments that have been received and determine whether revisions to the ECA are appropriate. EPA will not reimburse costs incurred by non-EPA participants in this ECA negotiation process.

ECAs will only be concluded where an agreement can be obtained which is satisfactory to the Agency, manufacturers or processors who are potential test sponsors, and other interested parties, concerning the need for and scope of testing. In the absence of an ECA, EPA reserves the right to proceed with rulemaking.

A. The Agency will not enter into an ECA if either:

1. EPA and affected manufacturers or processors cannot reach an agreement on the provisions of the ECA; or

2. The draft ECA is considered inadequate by other interested parties who have submitted timely written objections to the draft ECA.

B. EPA may reject these objections if the Agency concludes either that:

1. They are not made in good faith;

2. They are untimely;

3. They are not related to the adequacy of the proposed testing program or other features of the agreement that may affect EPA's ability to fulfill the goals and purposes of TSCA; or

4. They are not accompanied by a specific explanation of the grounds on which the draft agreement is considered objectionable.

EPA will prepare an explanation of the basis for each ECA. The explanatory document will summarize the agreement (including the required testing), explain the objectives of the testing, and outline the chemical's use and exposure characteristics. The document, which will also announce the availability of the ECA, will be published in the **Federal Register**.

V. Proposal of Export Notification Requirements for Diethanolamine

EPA intends to publish a proposed rule in an upcoming **Federal Register** document to require export notification by all persons who export or intend to export diethanolamine under TSCA section 12(b) upon the successful conclusion of an ECA for diethanolamine.

VI. Public Record and Electronic Submissions

As described above, diethanolamine is listed as a chemical that would be subject to testing requirements under the proposed HAPs test rule, as amended. This ECA negotiation process and the proposed rule, as amended, are separate and parallel activities. The official record for this ECA action, including the public version, has been established under docket control number OPPTS–42203B (including comments and data submitted electronically as described below). The official record for this document also includes all material and submissions filed under docket control number OPPTS–42187A, the record for the proposed HAPs test rule, as amended, and all materials and submissions filed under docket control number OPPTS–42187B, the record for the receipt of alternative testing proposals for developing ECAs for HAPs chemicals.

The official record for this document, including the public version, which does not include any information claimed as CBI, has been established for this document under docket control number OPPTS–42203B. The public version of this record is available for inspection from 12 noon to 4 p.m., Monday through Friday, excluding legal holidays. The public record is located in the TSCA Nonconfidential Information Center, Rm. NE B–607, 401 M St., SW., Washington, DC 20460.

Electronic comments can be sent directly to EPA at:
oppt.ncic@epamail.epa.gov.

Electronic comments must be submitted as an ASCII file avoiding the use of special characters and any form of encryption. Comments and data will also be accepted on disks in WordPerfect 5.1/6.1 or ASCII file format. All comments and data in electronic form must be identified by the docket control number OPPTS–42203B. Electronic comments on this document may be filed online at many Federal Depository Libraries.

The record contains the following information:

A. **Federal Register** notices/EPA documents pertaining to this notice consisting of:

1. "Proposed Test Rule for Hazardous Air Pollutants; Proposed Rule" (61 FR 33178, June 26, 1996).

2. "Amended Proposed Test Rule for Hazardous Air Pollutants; Extension of Comment Period" (62 FR 67476, December 24, 1997).

B. PK proposal materials consisting of:

1. Chemical Manufacturers Association, Alkanolamine Panel, 'Proposal for Pharmacokinetics Studies of Diethanolamine" (November 25, 1996).

2. U.S. EPA, "Preliminary EPA Technical Analysis of Proposed Industry Pharmacokinetics (PK) Strategy for Diethanolamine" and cover letter (November 21, 1997).

List of Subjects

Environmental protection, Chemicals, Hazardous substances, Reporting and recordkeeping requirements.

Dated: January 13, 1998.

Wardner G. Penberthy,

Acting Director, Chemical Control Division, Office of Pollution Prevention and Toxics.

ENVIRONMENTAL PROTECTION AGENCY

[OPPTS–42202B; FRL–5766–6]

Enforceable Consent Agreement Development for Ethylene Glycol; Solicitation of Interested Parties and Notice of Public Meeting

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA is soliciting interested parties who want to monitor or participate in negotiations on an enforceable consent agreement (ECA) concerning the use of pharmacokinetics (PK) studies and mechanistic data to help meet testing requirements for ethylene glycol (CAS No. 107–21–1) in the proposed hazardous air pollutants (HAPs) test rule. In addition, EPA invites all interested parties to attend a public meeting to initiate negotiations on the ECA for ethylene glycol.

DATES: EPA must receive written notification requesting designation as an interested party for ethylene glycol on or before February 11, 1998. Those persons who identify themselves as interested parties for ethylene glycol may submit written comments to EPA on the PK proposal for this chemical, on EPA's preliminary technical analysis, and on other materials in the docket for the proposed HAPs test rule, that relate to the ECA process for this chemical by February 11, 1998.

The public meeting is scheduled from 9:00 a.m. to 1:00 p.m. on February 23, 1998.

ADDRESSES: Each comment must bear the docket control number, OPPTS–42202B. All comments should be sent in triplicate to: OPPT Document Control Officer (7407), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 401 M St., SW., Rm. G–099, East Tower, Washington, DC 20460.

EPA will address these comments at the public meeting.

Comments and data may also be submitted electronically to: oppt.ncic@epamail.epa.gov. following the instructions under Unit VI. of this document. No Confidential Business Information (CBI) should be submitted through e-mail.

All comments which contain information claimed as CBI must be clearly marked as such. Three sanitized copies of any comments containing information claimed as CBI must also be submitted and will be placed in the public record for this document. Persons submitting information on any portion of which they believe is entitled to treatment as CBI by EPA must assert a business confidentiality claim in accordance with 40 CFR 2.203(b) for each such portion. This claim must be made at the time that the information is submitted to EPA. If a submitter does not assert a confidentiality claim at the time of submission, EPA will make the information available to the public without further notice to the submitter.

The public meeting will be held at EPA Headquarters, 401 M St., SW., Washington, DC in the EPA Conference Center, North Conference Area in Room 1.

Leukroth, Jr., Project Manager, Chemical Control Division (7405), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460; telephone: (202) 260–0321; fax: (202) 260–8850; e-mail address: leukroth.rich@epamail.epa.gov.

SUPPLEMENTARY INFORMATION:

I. Electronic Availability

Internet: Electronic copies of this document and various support documents are available from the EPA Home Page at the **Federal Register**—Environmental Documents entry for this document under "Laws and Regulations" (http://www.epa.gov/fedrgstr/EPA-TOX/1998/).

II. Background

EPA proposed health effects testing under section 4(a) of the Toxic Substances Control Act (TSCA) on June 26, 1996, for a number of HAPs chemicals (61 FR 33178) (FRL–4869–1). As indicated in the proposed HAPs test rule, EPA would use the data obtained from testing to implement several provisions of section 112 of the Clean Air Act (CAA), including the determination of residual risk, the estimation of the risks associated with accidental releases of chemicals, and determinations whether substances should be removed from the CAA section 112(b)(1) list of hazardous air pollutants (delisting). The data also would be used by other Federal agencies (e.g. Agency for Toxic Substances and Disease Registry (ATSDR), National Institute of Occupational Safety and Health (NIOSH), Occupational Safety and Health Administration (OSHA), and Consumer Product Safety Commission (CPSC)) in assessing chemical risks and in taking appropriate actions within their programs.

In the proposed HAPs test rule, EPA invited the submission of proposals for pharmacokinetics (PK) studies for the HAPs chemicals, which could provide the basis for negotiation of ECAs. These PK studies would be used to inform EPA about the use of route-to-route extrapolation of toxicity data from routes other than inhalation to predict the effects of inhalation exposure, as an alternative to testing proposed under the HAPs test rule. EPA received a PK proposal for ethylene glycol from the Chemical Manufacturers Association, Ethylene Glycol Panel (CMA EG Panel) on November 5, 1996. Based on the PK proposal received for ethylene glycol, the Agency developed a preliminary technical analysis. A copy of this preliminary technical analysis was sent to the CMA EG Panel on August 26, 1997. The CMA EG Panel reviewed EPA's analysis and notified EPA on October 6, 1997 that it has a continued interest in pursuing the ECA process. A copy of the PK proposal, the EPA preliminary technical analysis and related references, and correspondence is contained in the public record for this ECA process. These materials will be used during discussions at the negotiating meeting. EPA has decided to proceed with the ECA process for ethylene glycol and is providing public notice that the Agency is hereby initiating the procedures for ECA negotiations for the HAP chemical, ethylene glycol. The procedures for ECA negotiations are described at 40 CFR 790.22(b). EPA intends to publish, as appropriate, additional **Federal Register** documents to solicit interested parties and announce public meetings for other HAPs chemicals for which PK proposals were submitted.

The proposed HAPs test rule, as amended on December 24, 1997 (62 FR 67466) (FRL-5742-2), and the ECA negotiations on chemicals included in the proposed rule are separate and parallel activities. While the Agency's objective of obtaining data could be accomplished by either activity, EPA recognizes that the final testing program performed by industry may differ depending on whether it is accomplished under the final HAPs test rule or via the ECA process. During the course of ECA negotiations, additional information may be brought forward that could cause the Agency to re-evaluate the nature of the testing requirements as stated in the proposed HAPs test rule, as amended. This could result in the development of an ECA that would fulfill the Agency's data needs in ways not stated in the proposed HAPs test rule, as amended. It is therefore essential for all interested parties to recognize these differences at the outset and respond accordingly within the framework of these two separate and parallel activities. Comments on the proposed HAPs test rule, as amended, must be submitted under docket control number, OPPTS–42187A, as described in the proposed HAPs test rule published on June 26, 1996, as amended on December 24, 1997, and will be addressed by EPA via the rulemaking process, which is separate and distinct from the ECA process. Participation in the ECA process is described in Units II. through IV. of this document.

Negotiations on developing an ECA for the HAP chemical, ethylene glycol, will focus on the use of PK studies and mechanistic data to help meet testing requirements for ethylene glycol. In addition, discussion will include the adequacy of the available data base to be used for extrapolation to obtain the data needs identified for ethylene glycol in the proposed HAPs test rule, as amended. The objective of the ECA process is to conclude an ECA that will set in place an industry-sponsored testing program that will adequately address EPA's data needs for ethylene glycol.

III. Identification of Interested Parties

EPA is soliciting interested parties to monitor or participate in testing negotiations on an ECA for ethylene glycol. The CMA EG Panel, the submitter of the PK proposal for ethylene glycol, and the member companies of the CMA EG Panel are already considered interested parties and do not need to respond to this document. Additionally, any persons who respond to this document on or before February 11, 1998 will be given the status of interested parties. Interested parties must respond in writing to the address specified in the "ADDRESSES" at the beginning of this document. These interested parties will not incur any obligations by being so designated. Negotiations will be conducted in one or more meetings

open to the public. The negotiation time schedule for ethylene glycol will be established at the first negotiation meeting and will not exceed a period of 4 months from the initial meeting. If an ECA is not established in principle within this timeframe and EPA does not choose to extend the negotiation time period, negotiations will be terminated and testing will be required under the final HAPs test rule. If the testing from the ECA does not meet the Agency's needs, EPA reserves the right to enter into rulemaking.

IV. Public Participation in Negotiations

Under EPA regulations, the Agency is required to provide the public with an opportunity to comment on and participate in the development of ECAs. The procedural rule for ECAs (40 CFR part 790) contains provisions to ensure that the views of interested parties are taken into account during the ECA process.

Individuals and groups who respond to this document will have the status of interested parties. All negotiating meetings for the development of this ECA for ethylene glycol will be open to the public and minutes of each meeting will be prepared by EPA and placed in the public docket for this ECA process. The Agency will advise interested parties of meeting dates and make available meeting minutes, testing proposals, background documents, and other materials exchanged at or prepared for negotiating meetings. Where tentative agreement is reached on an acceptable testing program, a draft ECA will be made available for comment by interested parties and, if necessary, EPA will hold a public meeting to discuss any comments that have been received and determine whether revisions to the ECA are appropriate. EPA will not reimburse costs incurred by non-EPA participants in this ECA negotiation process.

ECAs will only be concluded where an agreement can be obtained which is satisfactory to the Agency, manufacturers or processors who are potential test sponsors, and other interested parties, concerning the need for and scope of testing. In the absence of an ECA, EPA reserves the right to proceed with rulemaking.

A. The Agency will not enter into an ECA if either:

1. EPA and affected manufacturers or processors cannot reach an agreement on the provisions of the ECA; or

2. The draft ECA is considered inadequate by other interested parties who have submitted timely written objections to the draft ECA.

B. EPA may reject these objections if the Agency concludes either that:

1. They are not made in good faith;

2. They are untimely;

3. They are not related to the adequacy of the proposed testing program or other features of the agreement that may affect EPA's ability to fulfill the goals and purposes of TSCA; or

4. They are not accompanied by a specific explanation of the grounds on which the draft agreement is considered objectionable.

EPA will prepare an explanation of the basis for each ECA. The explanatory document will summarize the agreement (including the required testing), explain the objectives of the testing, and outline the chemical's use and exposure characteristics. The document, which will also announce the availability of the ECA, will be published in the **Federal Register**.

V. Proposal of Export Notification Requirements for Ethylene glycol

EPA intends to publish a proposed rule in an upcoming **Federal Register** document to require export notification by all persons who export or intend to export ethylene glycol under TSCA section 12(b) upon the successful conclusion of an ECA for ethylene glycol.

VI. Public Record and Electronic Submissions

As described above, ethylene glycol is listed as a chemical that would be subject to testing requirements under the proposed HAPs test rule, as amended. This ECA negotiation process and the proposed rule, as amended, are separate and parallel activities. The official record for this ECA action, including the public version, has been established under docket control number OPPTS–42202B (including comments and data submitted electronically as described below). The official record for this document also includes all material and submissions filed under docket control number OPPTS–42187A, the record for the proposed HAPs test rule, as amended, and all materials and submissions filed under docket control number OPPTS–42187B, the record for the receipt of alternative testing proposals for developing ECAs for HAPs chemicals.

The official record for this document, including the public version, which does not include any information claimed as CBI, has been established for this document under docket control number OPPTS–42202B. The public version of this record is available for inspection from 12 noon to 4 p.m., Monday through Friday, excluding legal holidays. The public record is located in the TSCA Nonconfidential Information Center, Rm. NE B–607, 401 M St., SW., Washington, DC 20460.

Electronic comments can be sent directly to EPA at:
oppt.ncic@epamail.epa.gov.

Electronic comments must be submitted as an ASCII file avoiding the use of special characters and any form of encryption. Comments and data will also be accepted on disks in WordPerfect 5.1/6.1 or ASCII file format. All comments and data in electronic form must be identified by the docket control number OPPTS–42202B. Electronic comments on this document may be filed online at many Federal Depository Libraries.

The record contains the following information:

A. **Federal Register** notices/EPA documents pertaining to this notice consisting of:

1. "Proposed Test Rule for Hazardous Air Pollutants; Proposed Rule" (61 FR 33178; June 26, 1996).

2. "Amended Proposed Test Rule for Hazardous Air Pollutants; Extension of Comment Period" (62 FR 67466; December 24, 1997).

B. PK proposal materials consisting of:

1. Chemical Manufacturers Association, Ethylene Glycol Panel, "Proposal for Pharmacokinetic Studies of Ethylene Glycol" (November 5, 1996).

2. U.S. EPA, "Preliminary EPA Technical Analysis of Proposed Industry Pharmacokinetics (PK) Strategy for Ethylene Glycol" and cover letter (August 26, 1997).

FEDERAL COMMUNICATIONS COMMISSION

Notice of Public Information Collection(s) Submitted to OMB for Review and Approval

January 13, 1998.

SUMMARY: The Federal Communications Commission, as part of its continuing effort to reduce paperwork burden

VOL 63 ISS 13 JA 21 1998 UMI

invites the general public and other Federal agencies to take this opportunity to comment on the following information collection(s), as required by the Paperwork Reduction Act of 1995, Public Law 104–13. An agency may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act (PRA) that does not display a valid control number. Comments are requested concerning: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimate; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology.

DATES: Written comments should be submitted on or before February 20, 1998. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all comments to Judy Boley, Federal Communications Commission, Room 234, 1919 M St., NW, Washington, DC 20554 or via internet to: jboley@fcc.gov.

FOR FURTHER INFORMATION CONTACT: For additional information or copies of the information collection(s), contact Judy Boley at 202–418–0214 or via internet at: jboley@fcc.gov.

SUPPLEMENTARY INFORMATION:

OMB Control No.: 3060–0635.

Title: Amateur Vanity Call Sign Request.

Form No.: FCC 610–V.

Type of Review: Revision of a currently approved collection.

Respondents: Individuals or households.

Number of Respondents: 80,000.

Estimated Time Per Response: .33 hour.

Frequency of Response: On occasion reporting requirement.

Cost to Respondents: $4,000,000.

Total Annual Burden: 26,400 hours.

Needs and Uses: The FCC Form 610–V is used to apply for a vanity (special) call sign in lieu of a systematically issued call sign. This information collection has been revised to eliminate the need for attaching a photocopy of the applicant's current operator/primary station license document, and to add space on the form for the applicant to provide an Internet or e-mail address. The fee information, such as payment type code, quantity and fee due is being deleted from the application because a Fee Remittance Advice (FCC Form 159) is now required to be submitted along with any payment due to the FCC. The respondent costs have been modified due to an adjustment in the regulatory fee structure for Amateur vanity call signs. The Commission will not be collecting the Taxpayer Identification Number (TIN) on the form as previously indicated in the **Federal Register** notice. TIN is also collected on the FCC Form 159 which is required by any payment to the FCC.

The information collected in the application is used by FCC staff to determine eligibility for radio station authorization and to issue a radio station/operator license. Data is also used by Compliance personnel in conjunction with field engineers for enforcement and interference resolution purposes.

FEDERAL COMMUNICATIONS COMMISSION

[Report No. 2247]

Petitions for Reconsideration and Clarification of Action in Rulemaking Proceedings

January 13, 1998.

Petitions for reconsideration and clarification have been filed in the Commission's rulemaking proceedings listed in this Public Notice and published pursuant to 47 CFR Section 1.429(e). The full text of these documents are available for viewing and copying in Room 239, 1919 M Street, N.W., Washington, D.C. or may be purchased from the Commission's copy contractor, ITS, Inc. (202) 857–3800. Oppositions to these petitions must be filed by February 5, 1998. See Section 1.4(b)(1) of the Commission's rule (47 CFR 1.4(b)(1)). Replies to an opposition must be filed by February 17, 1998.

Subject: Rulemaking to Amend Parts 1, 2, 21, and 25 of the Commission's Rules to Redesignate the 27.5–29.5 GHz Frequency Band, to Reallocate the 29.5–30.0 GHz Frequency Band, to Establish Rules and Policies for Local Multipoint Distribution Service and for Fixed Satellite Services (CC Docket No. 92–297).

Number of Petitions Filed: 3.

Subject: Amendment of Part 15 of the Commission's Rules to permit operation of biomedical telemetry devices on VHF TV channels 7–13 and on UHF TV channels 14–46 (ET Docket No. 95–177).

Number of Petitions Filed: 2

Subject: Access Charge Reform (CC Docket No. 96–262) Price Cap Performance Review for Local Exchange Carriers (CC Docket No. 94–1) Transport Rate Structure (CC Docket No. 91–213).

Number of Petitions Filed: 1.

Subject: Amendment of Section 73.202(b), Table of Allotments, FM Broadcast Stations. (Florence and Killen, Alabama and Lawrenceburg, Tennessee).

Number of Petitions Filed: 1.

Subject: Amendment of Section 73.202(b), Table of Assignments, FM Broadcast Stations, (Genoa, Mt. Morris, and Oregon, Illinois).

Number of Petitions Filed: 1.

FEDERAL DEPOSIT INSURANCE CORPORATION

Determination of Insufficiency of Assets to Satisfy All Claims of Certain Financial Institution in Receivership

AGENCY: Federal Deposit Insurance Corporation.

ACTION: Notice.

SUMMARY: The Federal Deposit Insurance Corporation (FDIC), as receiver for the financial institution specified in **SUPPLEMENTARY INFORMATION**, has determined that the proceeds which can be realized from the liquidation of the assets of the below listed receivership estate are insufficient to wholly satisfy the priority claims of depositors against the receivership estates. Therefore, upon satisfaction of secured claims, depositor claims and claims which have priority over depositors under applicable law, no amount will remain or will be recovered sufficient to allow a dividend, distribution or payment to any creditor of lessor priority, including but not limited to, claims of general creditors. Any such claims are hereby determined to be worthless.

FOR FURTHER INFORMATION CONTACT: Thomas Bolt, Counsel, Legal Division, FDIC, 550 17th Street, N.W., Room H–11048, Washington, D.C. 20429. Telephone: (202) 736–0168.

FEDERAL HOUSING FINANCE BOARD

[No. 98–N–2]

Submission for OMB Review; Comment Request

AGENCY: Federal Housing Finance Board.

ACTION: Notice.

SUMMARY: In accordance with the requirements of the Paperwork Reduction Act of 1995, the Federal Housing Finance Board (Finance Board) hereby gives notice that it has submitted the information collection entitled "Personal Certification and Disclosure Forms" to the Office of Management and Budget (OMB) for review and approval of a three-year extension of the OMB control number, which is due to expire on January 31, 1998.

DATES: Interested persons may submit comments on or before February 20, 1998.

ADDRESSES: Submit comments to the Office of Information and Regulatory Affairs of OMB, Attention: Desk Officer for the Federal Housing Finance Board, Washington, D.C. 20503. Address requests for copies of the information collection and supporting documentation to Elaine L. Baker, Secretary to the Board, 202/408–2837, Federal Housing Finance Board, 1777 F Street, N.W., Washington, D.C. 20006.

FOR FURTHER INFORMATION CONTACT: Patricia L. Sweeney, Program Analyst, Compliance Assistance Division, Office of Policy, 202/408–2872, or Janice A. Kaye, Attorney-Advisor, Office of General Counsel, 202/408–2505, Federal Housing Finance Board, 1777 F Street, N.W., Washington, D.C. 20006.

SUPPLEMENTARY INFORMATION:

A. Need For and Use of Information Collection

Section 7 of the Federal Home Loan Bank Act (Bank Act) and part 932 of the Finance Board's regulations establish eligibility and reporting requirements and the procedures for electing and appointing Federal Home Loan Bank (FHLBank) directors. *See* 12 U.S.C. 1427; 12 CFR part 932. The information collection contained in the elective and appointive FHLBank director personal certification and disclosure forms and §§ 932.18 and 932.21 of the Finance Board's regulations, is necessary to enable the Finance Board to determine whether prospective and incumbent elective and appointive FHLBank directors satisfy the statutory and regulatory eligibility and reporting requirements. *See* Finance Board forms E–1, E–2, A–1, and A–2; 12 CFR 932.18 (appointive directors), 932.21 (elective directors). Accordingly, Finance Board staff uses the information collection to determine whether respondents meet the statutory and regulatory eligibility requirements. The information collection requires each respondent to complete and submit to the Finance Board for review a personal certification and disclosure form prior to election or appointment and, once elected or appointed, annually during the term of service. Incumbent directors also have a continuing obligation promptly to notify the Finance Board of any known or suspected ineligibility. *See* 12 CFR 932.18(f)(2); 932.21(g)(2).

The OMB number for the information collection is 3069–0002. The OMB clearance for the information collection expires on January 31, 1998.

B. Burden Estimate

The Finance Board estimates the total annual average number of respondents at 286, with one response per respondent. The estimate for the average hours per response is 1.3 hours. The estimate for the total annual hour burden is 376 hours (286 respondents × 1 response/respondent × approximately 1.3 hours). The estimated annualized cost to respondents of the information collection is $35,175.00.

C. Comment Request

In accordance with the requirements of 5 CFR 1320.8(d), the Finance Board published a request for public comments regarding this information collection in the **Federal Register** on November 6, 1997. *See* 62 FR 60093 (Nov. 6, 1997). The 60-day comment period closed on January 5, 1998. The Finance Board received no public comments. Written comments are requested on: (1) Whether the collection of information is necessary for the proper performance of the functions of the Finance Board, including whether the information has practical utility; (2) the accuracy of the Finance Board's estimates of the burdens of the collection of information; (3) ways to enhance the quality, utility, and clarity of the information collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Comments may be submitted to OMB in writing at the address listed above.

By the Federal Housing Finance Board.

Dated: January 12, 1998.

William W. Ginsberg,

Managing Director.

BILLING CODE 6725–01–U

FEDERAL MARITIME COMMISSION

[Docket No. 97–18]

APL/MOL/OOCL/HMM Reciprocal Slot Exchange Agreement (Agreement No. 203/011588) and APL/MOL/HMM Reciprocal Slot Exchange Agreement, Agreement No. 203–011596; Order to Show Cause and Motion To Dismiss Denied

Introduction

The APL/MOL/OOCL/HMM Reciprocal Slot Exchange Agreement, Agreement No. 203–011588 ("the Four Party Agreement") is an agreement for the reciprocal chartering of space aboard vessels operated in the U.S. foreign trades by agreement members.[1] The Four Party Agreement became effective on October 17, 1997. Agreement No. 203–011596, the APL/MOL/HMM Reciprocal Slot Exchange Agreement ("the New Agreement"), is a space charter agreement which is intended to replace the Four Party Agreement.[2]

Under section 10(c)(6) of the Shipping Act of 1984 ("1984 Act"), 46 U.S.C. app. 1709(c)(6), it is unlawful for any conference or group of two or more common carriers to:

[1] The Agreement members are Hyundai Merchant Marine, Ltd. ("Hyundai" or "HMM"), American President Lines, Ltd. ("APL"), Mitsui O.S.K. Line, Ltd. ("MOL"), and Orient Overseas Container Line, Inc. ("OOCL").

[2] The members of the agreement are Hyundai, APL and MOL. Although the New Agreement is intended to replace the Four Party Agreement, the latter will remain in effect until canceled by the parties according to its terms, to permit an orderly transition in the parties' operations.

VOL 63 ISS 13 JA 21 1998 UMI

Allocate shippers among specific carriers that are parties to the agreement or prohibit a carrier that is a party to the agreement from soliciting cargo from a particular shipper, except as otherwise required by the law of the United States or the importing or exporting country * * *.

The New Agreement contains terms, also present in the Four Party Agreement, by which carriage of cargo subject to U.S. cargo preference laws is restricted to the U.S.-flag carrier participant, APL. In its Order to Show Cause served on October 17, 1997, Docket No. 97–18, 62 FR 55260 (October 23, 1997), 27 S.R.R. 1304 (1997) ("Show Cause Order"), the Commission stated that the Four Party Agreement appeared on its face to present a violation of section 10(c)(6). For reasons similar to those stated in the Show Cause Order, it appears that the New Agreement on its face also presents a violation of section 10(c)(6). Therefore, pursuant to section 11 of the 1984 Act, the parties to the New Agreement are ordered to show cause why the New Agreement should not be found to be in violation of the 1984 Act and should not be disapproved, canceled or modified accordingly.

APL filed a Motion to Dismiss Docket No. 97–18, on the grounds, *inter alia*, that "changed circumstances" have mooted this proceeding, and requested, in the event that the Commission determined not to dismiss the proceeding, that the time for filing Respondents' opening submissions, then due on December 2, 1997, be extended to 30 days after the Court of Appeals takes final action in *Sea-Land Service, Inc.* v. *FMC*, D.C. Circuit No. 97–1083.[3] Motion of APL to Dismiss the Proceeding ("Motion") at 1.[4] The Commission's Bureau of Enforcement ("BOE") filed a reply to the Motion. OOCL filed a Response to the Order to Show Cause. We address both the New Agreement and the Motion and Response in this Order.

Background

This proceeding was instituted pursuant to sections 10(c)(6) and 11, 46 U.S.C. app. 1710, to determine whether the Four Party Agreement should be found to be in violation of the 1984 Act, and be disapproved, canceled or modified accordingly. Citing the Commission's holding in *MSC*, the Commission ordered the parties to the Four Party Agreement to show cause why the Agreement should not be found to violate section 10(c)(6) inasmuch as Article 5.1 of the Four Party Agreement appears to effectively allocate U.S. government shippers of cargo via agreement members, subject to U.S. cargo preference laws, to APL, the sole U.S. carrier member of the Agreement.[5]

A. The New Agreement

The New Agreement was filed with the Commission on November 18, 1997, pursuant to section 5 of the 1984 Act, 46 U.S.C. app. section 1704,[6] and became effective on January 2, 1998.[7] The New Agreement authorizes the parties to charter space on each other's vessels on a reciprocal basis in the trades between ports and points in the U.S. served via U.S. Pacific Coast ports and ports and points in the Far East. The Agreement provides for the reciprocal sale, exchange or use of up to an annualized average of 6,000 TEUs of space per week by Hyundai on vessels operated by APL and MOL, and for use by APL and MOL of 7,000 TEUs of space per week on Hyundai vessels operating in the trade. The parties may also agree on feeder operations, sailing schedules, service frequency, port calls, addition or withdrawal of capacity, and the number, type and size of vessels they will use in the trade. No party may charter or sub-charter space aboard another party's vessel to a third-party carrier without the consent of the party operating the vessel.

Article 5.1 of the New Agreement, "Limited Grant," provides:

> Nor shall anything in this Agreement be construed as granting a right on the part of any party to carry aboard the vessel of any other party any cargoes subject to cargo preference laws of the country of registry of such other party's vessel or the country of citizenship of its owner.[8]

Article 5.1 further provides:

> If the (preceding) sentence * * * shall be determined to violate U.S. law with respect to U.S. preference cargoes by a court or agency of competent jurisdiction and any stay upon the order of such court or agency giving effect to such determination arising by reason of an appeal of such order shall have ceased to be effective, then the [preceding] sentence * * * shall be deemed severed with respect to U.S. preference cargoes,* * *.[9]

B. APL's Motion to Dismiss Docket No. 97–18

1. The Motion

APL repeatedly points out that the Show Cause Order "focused" on the second sentence of Article 5.1 of the Four Party Agreement, *i.e.*, the language quoted above at note 6. Motion at 2, 4. APL describes various "intervening events" which purportedly render the Order to Show Cause moot. APL states that, with respect to APL's participation, the Four Party Agreement has never been implemented and will never be implemented because APL intends to withdraw from that Agreement upon effectiveness of the New Agreement. APL also indicates that, in connection with the acquisition of APL by Neptune Orient Lines and the transfer of APL's ODS Agreements and Maritime Security Program ("MSP") contracts with MarAd to an independent vessel-operating company bareboat chartering the vessels, MarAd withdrew the letter of March 11, 1997 from the MarAd Secretary to APL Vice President Michael Murphy, granting APL a waiver under section 804(b) of the Merchant Marine Act, 1936 ("1936 Act"), 46 U.S.C. app. 1222(b), for APL's use of foreign-flag capacity.[10] Motion at 4–5. In addition, APL suggests that, as a consequence of the joint Department of Defense ("DOD")-MarAd Voluntary Intermodal Sealift Agreement ("VISA") program, "DOD *itself* now reserves its peacetime cargoes to U.S.-flag vessel operators that are participants in VISA, thus by regulation mandating the same result as the reservation provisions in the commercial agreements * * *." Motion at 5. Finally, APL submits that it would be appropriate to await the possibly "definitive guidance" of the D.C. Circuit on the issues raised in *MSC*, which "are relevant to the Show Cause order." *Id.* at 6.

APL's request that the proceeding be dismissed focuss on the parties' intention, stated by APL, that the agreement which was the subject of the Show Cause Order will be supplanted by the New Agreement and the narrow scope of the Commission's focus in that order, *i.e.*, the second sentence of Article 5.1, "which will then have no possible future significance." *Id.* at 7. APL recognizes, however, that the New Agreement retains the more general cargo reservation language, but contends that this provision was not identified as a basis of potential violation of section 10(c)(6) in the Show Cause Order. Thus, says APL,

> *if* the Commission should consider this provision to raise section 10(c)(6) issues that require Commission consideration, the appropriate context in which to evaluate those issues—which are necessarily broader than and different from those identified in the Commission's October 22, 1997 Order—would be with respect to an agreement in which that provision has continued effect.

Id. In the event the Commission elects not to dismiss the proceeding, or to institute a new proceeding relating to the New Agreements, APL requests that the time for filing of Respondents' opening submissions be extended to a date 30 days after final court action in *MSC*.

2. BOE's Reply to the Motion

BOE opposes the Motion on the ground that the issues in Docket No. 97–18 are not moot, and the proceeding should not be dismissed, until APL actually withdraws from the Four Party Agreement. BOE does not, however, oppose APL's request that the time for Respondents' initial filing be extended until 30 days after final action by the D.C. Circuit in *MSC*. Although BOE noted that the New Agreement was being considered by the staff, it did not further comment on the validity of the substantive representations of fact or law in the Motion.

C. OOCL's Response to Order to Show Cause

OOCL filed a Response to the Order to Show Cause, stating that it has given notice on December 1, 1997 of its intention to withdraw from the APAC Agreement and "hence will no longer be a party to (the Four Party) Agreement * * *." Response To Order To Show Cause ("Response") at 1. In its Response, OOCL moves that it be dismissed as a party to this proceeding. In the alternative, OOCL adopts the position of APL that the proceeding should be dismissed, or, in the alternative, if the proceeding is directed to a new agreement, that the time for Respondents' opening submissions be extended to 30 days after issuance of the D.C. Circuit's mandate in *MSC*.

OOCL suggests that the Commission take administrative notice of the filing of a successor agreement to the Four Party Agreement, of which OOCL is not a member. OOCL also joins in APL's representations that subsequent events have rendered the current proceeding moot.

D. The Maritime Administrator's Letter

It is not the FMC's role to decide on the validity of a MarAd order. *MSC*, 27 S.R.R. at 888. In initiating this proceeding, we noted that the Commission did not undertake to review the actions of the Maritime Administrator under his statutory authority, but to determine whether an agreement filed pursuant to the 1984 Act required action by MarAd under a statute which authorizes that agency to command carrier obedience to orders cognizable as "law of the United States," and whether it had so required the action specifically taken by the parties in this instance. We also directed the Commission's Secretary to invite the Acting Administrator to participate *amicus curiae* in this proceeding, which the Secretary did by letter of October 24, 1997.

The Acting Administrator advised the Commission on December 16, 1997, that APL ceased to be a party to an ODS contract as of November 12, 1997, and therefore is no longer subject to section 804 or the waiver and conditions imposed in MarAd's March 11, 1997 letter. The Acting Administrator further advised the Commission that, notwithstanding APL's request that MarAd impose a similar condition on APL's new charter arrangements, MarAd

> Did not * * * consider whether such a condition should be imposed under the various statutes MarAd administers as a result of an October 19, 1993 opinion by the Office of Legal Counsel (OLC) of the Department of Justice. That opinion * * * concluded that even though conditions contained in charter orders approved by MarAd impose legal obligations on the chartering parties, those obligations are not "otherwise required by law" for purposes of the second prong of section 10(c)(6), and that MarAd lacks authority to impose such conditions since, in OLC's view, they would violate the first prong of section 10(c)(6). The OLC opinion remains the unified position of the United States. Given this, MarAd does not believe that it should participate at this time as an *amicus* in the pending FMC proceeding.

Finally, the Acting Administrator, noting the filing of the New Agreement and APL's announced intention to withdraw from the Four Party Agreement, suggested that questions relating to the lawfulness of the Four Party Agreement are now moot and that, in the event the FMC decides nevertheless to continue the proceeding, the matter should be held in abeyance pending the decision of the D.C. Circuit on review of *MSC*.

Discussion

A. The New Agreement

The language of Article 5.1 of the New Agreement does not contain the language in the Four Party Agreement which was specifically cited by the Commission in its Show Cause Order. However, it does contain the following more general language which is also in the Four Party Agreement:

> Nor shall anything in this Agreement be construed as granting a right on the part of any party to carry aboard the vessel of any other party any cargoes subject to cargo preference laws of the country of registry of such other party's vessel or the country of citizenship of its owner.

While this language does not refer specifically to U.S.-government agency shippers, its general reference to "cargo preference laws" would certainly include those U.S. cargo preference laws which by their terms effectively allocate the Department of Defense, the Department of Agriculture, and other U.S. government departments and agencies to U.S.-flag vessels for all or a major portion of their shipments. Thus it would have the same effect as the more specific language of the Four Party

---

[3] That case is consolidated with *Military Sealift Command and United States* v. *FMC*, No. 97–1084 and *American President Lines* v. *FMC*, No. 97–1085 which are, like No. 97–1083, petitions for review of the Commission's order in *Military Sealift Command* v. *Sea-Land Service, Inc.*, F.M.C. , 27 S.R.R. 874 (1996) ("*MSC*").

[4] The procedural schedule in Docket No. 97–18 was postponed by the Secretary on December 1, 1997 until further Commission notice or action on the Motion.

[5] In *MSC*, the Commission determined that a provision whose effect appears to be identical to that of Article 5.1 of the Four Party Agreement and Article 5.1 of the New Agreement constituted an allocation of shippers prohibited under section 10(c)(6). Upon complaint filed by the Military Sealift Command, Department of the Navy ("MSC"), a shipper of U.S. preference cargo, the Commission determined that the provision constituted an allocation of shippers prohibited by the first clause of section 10(c)(6). However, the Commission further determined that the provision was not unlawful because it was required by an order of the Maritime Administration, Department of Transportation ("MarAd") which constituted "law of the United States" within the meaning of the "except" clause of section 10(c)(6).

[6] Section 5 provides, in relevant part, that "(a) true copy of every agreement (with respect to activities subject to the Act as described in section 4) * * * shall be filed with the Commission * * *." Notice of the filing of the Agreement was published in the **Federal Register** on December 2, 1997, 62 FR 63716 (December 2, 1997).

[7] Section 6(c), 46 U.S.C. app. section 1705, provides, *inter alia*, that "(u)nless rejected by the Commission * * *, agreements . . . shall become effective * * * on the 45th day after filing, or on the 30th day after notice of the filing is published in the Federal Register, whichever day is later * * *."

[8] The language quoted above is also used in Article 5.1 of the Four Party Agreement, "Limited Grant," but it is preceded there by the provision that: (n)othing in this Agreement shall be construed as granting a right on the part of any other party to carry aboard the vessels of American President Lines, Ltd. cargoes shipped from or to the U.S. Department of Defense or Agriculture, or any subsidiary agencies thereof, or any other agency of the U.S. Government whose shipments are subject to cargo preference laws of the United States to the extent requiring and reserved for transportation aboard U.S.-flag vessels.

[9] The similar provision for severance of the cargo preference provision upon a final finding of unlawfulness in the Four Party Agreement is more limited.

[10] MarAd's waiver, for the remaining term of APL's ODS contract through December 1997 and for the full term of each of APL's nine operating agreements under the Maritime Security Program ("MSP"), included as "condition D" that:

> No space on APL's U.S.-flag vessels that are subject to space sharing agreements with any foreign operator shall be utilized for the carriage of cargo reserved for U.S.-flag vessels under any statute, resolution or regulation unless such cargo is carried pursuant to bills of lading or contracts of carriage issued to, or entered into with, the shipper of such cargo by or for a citizen of the United States.

Thus, MarAd was alleged to have required the provision of the Agreement allocating U.S. preference cargo to APL.

VOL 63 ISS 13 JA 21 1998 UMI

Agreement: U.S. government entities which ship cargo via agreement members are allocated to APL.

As we noted in our Show Cause Order concerning the Four Party Agreement, the New Agreement presents issues similar to those decided by the Commission in *MSC*.[11] The VSAs involved in *MSC* required the approval of the Secretary of Transportation for the charter or transfer of a U.S.-flag vessel to a non-citizen under section 9 of the Shipping Act, 1916 ("1916 Act"), 46 U.S.C. app. 808, subject to the broad power to prescribe conditions—violations of which are crimes punishable by fines, imprisonment and vessel forfeiture—given the Secretary in section 41.[12] MarAd's approval of the charters of the U.S.-flag vessels and vessel space to foreign-flag carrier members of the VSAs were conditioned on the exclusion of the foreign-flag participants from use of the vessels to carry U.S. preference cargo.[13] The Commission specifically found that the conditional charter orders issued by MarAd pursuant to sections 9 and 41 of the 1916 Act had the force and effect of law because they were compulsory and the statute provided criminal penalties for noncompliance. *MSC*, 27 S.R.R. at 889.

The Commission's inquiry in *MSC* included the threshold conclusion that MarAd action under the 1916 Act was a prerequisite for the existence of the agreement at issue: the U.S.-flag vessels could not be chartered to the foreign carrier agreement parties without approval. *Id.* at 876. Here, as we noted in the Show Cause Order with respect to the Four Party Agreement, no similar nexus between the New Agreement and the statutory authority of the Maritime Administrator is evident. This case apparently does not involve the 1916 Act authority exercised by MarAd with respect to the space charter agreements at issue in MSC.

Until the November 12, 1997 consummation of its acquisition by Neptune Orient Line ("NOL"), APL operated U.S.-flag vessels under operating-differential subsidy contracts with MarAd pursuant to Title VI and sections 801 and 804 of the 1936 Act, 46 U.S.C. app. 1171 *et seq.* and 1211 and 1222.[14] MarAd's March 11, 1997 letter granted APL's request for a waiver under section 804(b) of 1936 Act for APL to own, operate or charter up to 18 foreign-flag vessels in line haul service between U.S. and foreign ports for the remaining term of APL's Operating Differential Subsidy Agreement ("ODSA"), Contract MA/MSB–417, through December 31, 1997 and for the full term of each of APL's nine operating agreements under the MSP, Contract Nos. MA/MSP–1 through MA/MSP–9, subject to the conditions imposed.[15] During FMC review of the Four Party Agreement, APL suggested that the March 11, 1997 MarAd letter should be considered "law of the United States" within the meaning of the "except clause" of section 10(c)(6). This argument was dealt with a length in the Show Cause Order. 62 FR 55262–55263, 27 S.R.R. 1306–1308.[16]

Moreover, as MarAd noted in promulgating its final regulations for the MSP, "[u]nlike the operating differential subsidy * * * program, the MSP has few restrictions on vessels operating in the U.S.-foreign commerce * * *." 62 FR 37733 (July 15, 1997). Under the provisions of the 1936 Act, as amended by the Maritime Security Act of 1996, no recourse to the Maritime Administration appears to be required for APL's participation in the Four Party Agreement or the New Agreement.[17]

MarAd's withdrawal of the March 11, 1997 section 804 waiver, which occurred after issuance of our Show Cause Order, would suggest that this argument no longer may be said to apply to APL's operations under the Four Party Agreement or the New Agreement. No colorable argument that the effective allocation of U.S. government shippers of cargo subject to the U.S. cargo preference laws by

[11] The vessel sharing agreements ("VSAs") involved in *MSC* provided for the use of twelve U.S.-flag vessels owned by a U.S. carrier to be operated on behalf of all of the parties to the agreements, and to replace all U.S.-flag and foreign-flag vessels previously operated by the parties in the covered trade. By chartering space on a U.S.-flag vessel, the foreign carriers gained eligibility to submit bids for military and other government preference cargoes reserved to U.S.-flag vessels. However, the foreign carriers agreed that they would not use any vessels or space chartered from the U.S. carrier for carriage of government preference cargo.

[12] Section 9(c) provides that, with certain exceptions not relevant here, "a person may not, without the approval of the Secretary of Transportation—

(1) sell, mortgage, lease, charter, deliver, or in any manner transfer, or agree to sell, mortgage, lease, charter, deliver, or in any manner transfer, to a person not a citizen of the United States, any interest in or control of a documented vessel * * * owned by a citizen of the United States * * *."

46 U.S.C. app. 808(c). The Secretary has delegated to the Maritime Administrator authority to carry out sections 9 and 41 of the 1916 Act. 49 CFR 166(a).

[13] MarAd acted under section 9 on each individual charter of a U.S.-flag vessel and incorporated conditions requiring restriction of U.S. preference cargo to the U.S.-flag carrier member of the agreements in each of the "charter orders" approving the arrangement, as required by section 41. MarAd has apparently dispensed with individualized approvals of charters of U.S.-flag vessels like those at issue in *MSC*. *See* 46 CFR 221.13(a)(1) (except as limited by provisions not relevant here, MarAd "hereby grants the approval required by [section 9(c) of the 1916 Act] for the * * * Charter * * * to a Noncitizen of an interest in or control of a Documented Vessel owned by a Citizen of the United States * * *.").

[14] Section 603, 46 U.S.C. app. 1173(a), provides that, upon approval of an application for ODS under section 601, the Secretary of Transportation may enter into a contract with the applicant "subject to such reasonable terms and conditions * * * as the Secretary * * * shall require to effectuate the purposes and policy * * *" of the Act. Section 804(a) provides that it is "unlawful for any contractor receiving an operating-differential subsidy under title VI * * * to own, charter, * * * or operate any foreign-flag vessel which competes with any American-flag service" on a route deemed essential by the Secretary, except as provided in section 804(b). Section 804(b), 46 U.S.C. app. 1222(b), authorizes the Secretary to waive the prohibition for a specific period of time "(u)nder special circumstances and for good cause shown * * *." The March 11, 1997 MarAd letter states that the Administrator has found "special circumstances" and "good cause" for granting the waiver and that the waiver granted "is subject to the * * * conditions and will terminate in the event any of the conditions are not fulfilled * * *."

[15] The Agreement parties do not represent that APL sought MarAd approval pursuant to section 9 for use of its U.S.-flag vessels in operations under the Agreement. The March 11, 1997 MarAd letter grants authority to APL only under section 804(b) of the 1936 Act, and does not refer to sections 9 and 41 of the 1916 Act of MarAd authority under those provisions.

[16] In any event, as we noted in the Show Cause Order, the Military Security Act of 1996, Pub. L. 104–239, 110 Stat. 3118, substantially amended the 1936 Act, creating the Military Security Fleet Program, 46 U.S.C. app. 1187, *et seq.* It is a condition for including any vessel in the Fleet that the owner or operator of the vessel enter into an operating agreement governed by the section's provisions with the Secretary of Transportation, which will be one-year, renewable contracts. Subsection (c) provides that "[a] contractor of a vessel included in an operating agreement under this part may operate the vessel in the foreign commerce of the United States without restriction, and shall not be subject to any requirement under" certain sections of the 1936 Act dealing with record keeping, equitable distribution of contracts among U.S. ports, and discrimination. 46 U.S.C. app. 1187a(c). Section 804 was substantially amended as well: a new subsection 804(f) provides that nothing in section 804(a) will preclude a contractor receiving ODS or MSP assistance from "entering into time or space charter or other cooperative agreements with respect to foreign-flag vessels * * *." 46 U.S.C. app. 1221(f)(5). The new section 804(f) was made effective as to carriers with existing ODS contracts on the date on which such a contractor entered into an MSP contract with MarAd. 46 U.S.C.A. app. 1222, Historical and Statutory Notes. APL entered into operating agreements with MarAd for nine vessels for January 21, 1997.

[17] It thus does not appear to be necessary for a U.S.-flag carrier with an MSP operating agreement to seek a waiver under section 804(b) in order to participate in a space charter or vessel sharing agreement. Nevertheless, on January 17, 1997, APL filed a request with MarAd for a waiver under section 804(b) of the 1936 Act for operation of up to 18 foreign-flag vessels. Notice of its filing was published January 29, 1997. 62 FR 4377 (January 29, 1997). The March 11, 1997 MarAd letter granted APL's request. The waiver provides that APL may "own, operate or charter" up to 18 foreign-flag vessels.

Article 5.1 of the New Agreement is "required by the law of the United States" as a result of the March 11, 1997 MarAd letter or other MarAd action under the 1936 Act appears to exist.

In discussion with the staff concerning Article 5.1 of the New Agreement, and in its Motion, however, APL advanced the view that the allocation issue was essentially moot as a result of various actions of MarAd and DOD, including significant policy changes by DOD relating particularly to the VISA program. Thus, in the Motion and in discussions concerning the New Agreement, APL has argued that the effect of the VISA program is to authorize or require the allocation provision of the New Agreement. As it noted in *MSC*, the Commission must, "[u]nder ordinary circumstances, * * * consider the text and any relevant analyses of the proffered law [said to create an exception to the prohibition of section 10(c)(6)], and render a conclusion as to whether the law commanded the actions that otherwise might fall within section 10(c)(6)'s prohibition clause." *MSC*, 27 S.R.R. at 888.

MarAd administers the VISA program under authority of section 708 of the Defense Production Act of 1950, as amended, 50 U.S.C. app. 2158. The VISA program provides for agreements entered into between MarAd and the operators of U.S.-flag vessels and establishes a "prioritized order for utilization of commercial sealift capacity to meet DOD peacetime and contingency requirements * * *." 62 FR 6840 (February 13, 1997). The program emphasizes use of U.S.-flag vessel capacity operated by VISA participants or available to VISA participants under VSAs for the carriage of DOD peacetime cargo and assures the availability of U.S.-flag capacity for DOD contingency use. Although the program establishes priorities under which DOD will call upon the operators of U.S-flag vessels to provide capacity, by awarding contracts and booking cargo, neither the MarAd rules for the VISA program itself nor any DOD policy or contract provision thus far called to our attention appears to reserve aggregate DOD peacetime cargo to VISA participants. No prohibition against the use of the vessel capacity of a VISA participant made available to a non-U.S. carrier member of a VSA for carriage of DOD cargo is contained in the regulations promulgated by MarAd. Moreover, those regulations and the VISA program itself relate only to cargo shipped by DOD. Other U.S. government departments and agencies, which are also subject to the U.S. cargo preference laws, are unaffected by the VISA program. These shippers would be allocated to APL by the terms of Article 5.1 of the New Agreement. No requirement for the exclusion of agreement parties other than APL from bidding on DOD or other government-shipped cargo arises from the VISA regulations or other U.S. law, or the DOD contracts under VISA.

The parties apparently recognize that the allocation issues raised by the New Agreement would most appropriately be addressed in a formal proceeding: both APL's Motion and OOCL's Response suggest such a course of action. In view of the possibility that Agreement No. 203–011596 may be merely an interim measure to see the parties through the restructuring of their various alliances, and may be replaced by yet another version of the parties' space sharing arrangement, we find it most appropriate to address these issues in the context of the existing proceeding, Docket No. 97–18, rather than to initiate a new proceeding.

Therefore, the parties to the New Agreement are ordered to show cause why it does not violate section 10(c)(6) for the same reasons which prompted us to institute a proceeding against the Four Party Agreement: A *prima facie* case appears to exist that the provision is unlawful and is not otherwise required by the law of the United States. The parties to the New Agreement are ordered to show cause why Article 5.1 of the New Agreement should not be disapproved, canceled or modified, as part of this proceeding.

B. The Motion and Response

We agree with BOE that dismissal of the Show Cause proceeding with respect to the Four Party Agreement is premature. Termination of this proceeding with respect to the Four Party Agreement may be proper when and if the Four Party Agreement itself is terminated. However, it does not appear at this time that either APL's or OOCL's cessation of operations under the Four Party Agreement will occur simultaneously with the effectiveness of the New Agreement. We may act to modify the proceeding at any time it appears appropriate, with or without further request of the parties.

APL's further suggestion that the Commission delay action on this issue until 30 days after the D.C. Circuit has acted in *MSC* is without merit. This would effectively stay the Commission's determination that the allocation of preference cargo in an agreement permitting the charter of space on U.S.-flag vessels by foreign lines constitutes a violation of section 10(c)(6). The Commission's determination of this legal issue remains in effect, no stay having been entered by the Commission or any court of competent jurisdiction.[18] As we noted in *MSC*, an order by an administrative agency is presumed to be valid until such time as it is overturned by a court of competent jurisdiction. *See, e.g., Citizens to Preserve Overton Park, Inc.* versus *Volpe*, 401 U.S. 402, 415–16 (1971); *Motor Vehicle Manufacturers Association of the United States, Inc.* versus *Ruckelshaus*, 719 F.2d 1159, 1164 (D.C. Cir. 1983).

Accordingly, the appeal of the *MSC* decision provides no basis to permit the effectiveness, without investigation, of allocation language based on U.S. cargo preference laws having the same or similar effects to that found in *MSC* to constitute a violation of section 10(c)(6). Therefore, the Motion is denied with respect to delay of the filing of initial submissions until 30 days after issuance of the decision in *MSC* by the D.C. Circuit. A new procedural schedule for the conduct of this proceeding is established below.

As a result of MarAd's withdrawal of the March 11, 1997 section 804 waiver, no question remains as to whether that letter constitutes "law of the United States," within the meaning of section 10(c)(6), requiring the cargo preference reservation in either of the Agreements. It would therefore appear that no basis exists as a matter of law or of fact at this time for dismissal of the existing proceeding with respect to the Four Party Agreement.

Now therefore, it is ordered, that pursuant to section 11 of the Shipping Act of 1984, American President Lines, Ltd., Mitsui O.S.K. Line, Ltd., and Hyundai Merchant Marine, Ltd. show cause why they should not be found to have violated section 10(c)(6) of the Shipping Act of 1984 by prohibiting specific carriers that are parties to the APL/MOL/HMM Reciprocal Slot Exchange Agreement, Agreement No. 203–011596, from soliciting cargo from a particular shipper or shippers;

It is further ordered, that American President Lines, Ltd., Mitsui O.S.K. Line, Ltd., and Hyundai Merchant Marine, Ltd. show cause why an order should not be issued disapproving, canceling or modifying the APL/MOL/HMM Reciprocal Slot Exchange Agreement, Agreement No. 203–011596;

It is further ordered, that the Motion to Dismiss Docket No. 97–18 of American President Lines, Ltd. is denied;

[18] No stay was requested or suggested as necessary by any party in the context of the *MSC* proceeding.

VOL 63 ISS 13 JA 21 1998 UMI

It is further ordered, that the Motion of Orient Overseas Container Lines, Inc. to be dismissed as a party to Docket No. 97–18 is denied;

It is further ordered, that any person having an interest and desiring to intervene in this proceeding in connection with the APL/MOL/HMM Reciprocal Slot Exchange Agreement, Agreement No. 203–011596, shall file a petition for leave to intervene in accordance with Rule 72 of the Commission's rules of practice and procedure, 46 CFR 502.72. Such petition shall be accompanied by the petitioner's memorandum of law and affidavits of fact, if any, and shall be filed no later than the day fixed below;

It is further ordered, that affidavits of fact and memoranda of law addressing issues with respect to both the Four Party Agreement and the New Agreement shall be filed by Respondents and any intervenors in support of Respondents no later than February 20, 1998;

It is further ordered, that reply affidavits and memoranda of law addressing issues with respect to both the Four Party Agreement and the New Agreement shall be filed by the Bureau of Enforcement and any intervenors in opposition to Respondent no later than March 20, 1998;

It is further ordered, that rebuttal affidavits and memoranda of law addressing issues with respect to both the Four Party Agreement and the New Agreement shall be filed by Respondents and intervenors in support no later than April 3, 1998;

It is further ordered, that, should any party believe that an oral argument is required, that party must submit a request specifying the reasons therefore and why argument by memorandum is inadequate to present the party's case. Any request for oral argument shall be filed no later than April 3, 1998;

It is further ordered, that notice of this Order to Show Cause be published in the **Federal Register**, and that a copy thereof be served upon Respondents;

It is further ordered, that all documents submitted by any party of record in this proceeding shall be filed in accordance with Rule 118 of the Commission's rules of practice and procedure, 46 CFR 502.118, as well as being mailed directly to all parties of record;

Finally, it is ordered, that pursuant to the terms of Rule 61 of the Commission's rules of practice and procedure, 46 CFR 502.61, the Order to Show Cause served October 17, 1997 in this proceeding is amended to require that the final decision of the Commission in this proceeding shall be issued by July 3, 1998.

By the Commission.

Joseph C. Polking,

Secretary.

BILLING CODE 6730–01–M

FEDERAL RESERVE SYSTEM

Agency Information Collection Activities: Submission to OMB Under Delegated Authority

Background

Notice is hereby given of the final approval of proposed information collections by the Board of Governors of the Federal Reserve System (Board) under OMB delegated authority, as per 5 CFR 1320.16 (OMB Regulations on Controlling Paperwork Burdens on the Public). The Federal Reserve may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised, or implemented on or after October 1, 1995, unless it displays a currently valid OMB control number.

FOR FURTHER INFORMATION CONTACT:

Chief, Financial Reports Section--Mary M. McLaughlin--Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, DC 20551 (202-452-3829).

OMB Desk Officer--Alexander T. Hunt--Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 3208, Washington, DC 20503 (202-395-7860).

Final approval under OMB delegated authority of the extension for three years, with revision, of the following report:

1. Report title: Government Securities Dealers Reports
Agency form number: FR 2004A, FR 2004B, FR 2004C, FR 2004SI, FR 2004WI
OMB Control number: 7100-0003
Frequency: weekly and on occasion
Reporters: primary dealers in U.S. government securities
Annual reporting hours: 11,817
Estimated average hours per response: 1.0 (FR 2004A, B, C, SI); 0.25 (FR 2004WI)
Number of respondents: 39
Small businesses are not affected.

General description of report: This information collection is voluntary (12. U.S.C. 248(a)(2), 353-359, and 461) and is given confidential treatment (5 U.S.C. 552 (b)(4)).

Abstract: This group of reports is used to collect data on positions, transactions, and financing activity in the government securities market from primary dealers in U.S. government securities. The Federal Reserve uses the data to monitor the condition of the U.S. government securities market in its surveillance of the market and to assist the U.S. Department of the Treasury.

The revisions are effective beginning with the January 28, 1998, report date. On the FR 2004A and FR 2004B a line has been added to report position and transaction volumes with respect to Treasury Inflation-Index Securities. On the FR 2004A and FR 2004B four lines have been added to provide greater detail regarding the dealers' federal agency securities positions and transaction volumes. On the FR 2004C, two columns of matched-book financing transactions have been deleted. The revisions, on a net basis, have no effect on the current annual reporting burden.

The Board of Governors received one comment, from The Bond Market Association, which strongly endorsed the revisions.

Final approval under OMB delegated authority of the extension for three years, without revision, of the following reports:

1. Report title: Domestic Branch Notification
Agency form number: FR 4001
OMB control number: 7100-0097
Frequency: on occasion
Reporters: state member banks
Annual reporting hours: 201
Estimated average hours per response: 30 minutes for expedited notifications; 1 hour for nonexpedited notifications
Number of respondents: 316 expedited, 43 nonexpedited
Small businesses are affected.

General description of report: This information collection is mandatory (12 U.S.C. 321) and is not given confidential treatment.

Abstract: The Federal Reserve System requires a state member bank to file a notification whenever it proposes to establish a domestic branch. There is no formal reporting form; banks notify the Federal Reserve by letter prior to making the proposed investment. The Federal Reserve uses the information to fulfill its statutory obligation to obtain public comment on such proposals before acting on them, and to otherwise supervise state member banks.

2. Report title: Investment in Bank Premises Notification
Agency form number: FR 4014
OMB control number: 7100-0139
Frequency: on occasion
Reporters: state member banks
Annual reporting hours: 8
Estimated average hours per response: 30 minutes

Number of respondents: 15
Small businesses are affected.

General description of report: This information collection is mandatory (12 U.S.C. 371d) and is not given confidential treatment.

Abstract: The Federal Reserve System requires a state member bank to file a notification whenever it proposes to make an investment in bank premises that results in its total bank premises investment exceeding its capital stock and surplus or, if the bank is well capitalized and in good condition, exceeding 150 percent of its capital stock and surplus. There is no formal reporting form; banks notify the Federal Reserve by letter prior to making the proposed investment. The Federal Reserve uses the information to fulfill its statutory obligation to supervise state member banks.

3. Report title: Reports Related to Securities of State Member Banks as Required by Regulation H
Agency form number: N/A
OMB control number: 7100-0091
Frequency: on occasion
Reporters: state member banks
Annual reporting hours: 2,146
Estimated average hours per response: 5.11 hours
Number of respondents: 30
Small businesses are not affected.

General description of report: This information collection is mandatory (15 U.S.C. 78l(i)) and is not given confidential treatment.

Abstract: The Federal Reserve's Regulation H requires certain state member banks to submit information related to their securities to the Board of Governors of the Federal Reserve System on the same forms that bank holding companies and nonbank entities use to submit similar information to the Securities and Exchange Commission. The information is used primarily for public disclosure and is available to the public upon request.

Final approval under OMB delegated authority for the elimination of certain requested information, without extension, from the following reports:

1. Report title: Weekly Report of Assets and Liabilities for Large Banks
Agency form number: FR 2416
OMB control number: 7100-0075
Frequency: weekly
Reporters: U.S. commercial banks
Annual reporting hours: The change is estimated to reduce the annual reporting burden from 46,592 hours to 44,928 hours.
Estimated average hours per response: The change is estimated to reduce the burden per response from 7 hours to 6.75 hours.
Number of respondents: 128
Small businesses are not affected.

General description of report: This information collection is voluntary (12 U.S.C. §§ 225(a) and 248(a)(2)) and is given confidential treatment (5 U.S.C. § 552(b)(4) and (8)).

Abstract: The Board has eliminated two items from the FR 2416, the large domestic bank series of the three voluntary weekly condition/bank credit reports. The FR 2416 is a detailed balance sheet report that is collected as of each Wednesday from a sample of about 128 large U.S.-chartered commercial banks. All three reports, together with data from other sources, are used to construct weekly estimates of bank credit, sources and uses of bank funds, and a balance sheet for the banking system as a whole. These estimates also are used in constructing the bank credit component of the domestic non-financial debt aggregate monitored by the Federal Open Market Committee.

The Board has eliminated two items, "Commercial paper outstanding issued by related institutions of the reporting bank, issued through commercial paper brokers and dealers" (Memorandum item 7.a) and "Commercial paper outstanding issued by related institutions of the reporting bank, issued directly" (Memorandum item 7.b). The information collected in these two items is now obtained by the Federal Reserve from another source, eliminating the need to maintain them on the FR 2416. The revisions are effective immediately.

2. Report title: Consolidated Financial Statements for Bank Holding Companies
Agency form numbers: FR Y-9C, FR Y-9LP, FR Y-9SP, FR Y-9CS
OMB control number: 7100-0128
Frequency: quarterly and semi-annual
Reporters: bank holding companies
Annual reporting hours: The change to the FR Y-9C is estimated to reduce the total annual reporting burden for these reports from 262,818 hours to 261,361.
Estimated average hours per response: ranges from 5 to 1,250 hours
Number of respondents: 7,430
Small businesses are affected.

General description of report: The information collection is mandatory (12 U.S.C. 1844(b) and (c) and 12 CFR 225.5(b)). Confidential treatment is not routinely given to the data in these reports. However, confidential treatment for the reporting information, in whole or in part, can be requested in accordance with the instructions to the form. Data reported on the FR Y-9C, Schedule HC-H, Column A, requiring information on "assets past due 30 through 89 days and still accruing" and memoranda item 2 are confidential pursuant to Section (b)(8) of the Freedom of Information Act 5 U.S.C. 552(b)(8).

Abstract: The Board eliminated the reporting requirements of Schedule HC-J on the Consolidated Financial Statements for Bank Holding Companies (FR Y-9C) effective for the fourth quarter of 1997. The FR Y-9C consists of standardized financial statements similar to the commercial bank Report of Condition and Income (FFIEC 031-034; OMB No. 7100-0036). The FR Y-9C consolidated financial statements are currently filed by top-tier bank holding companies with total consolidated assets of $150 million or more and by lower-tier bank holding companies that have total consolidated assets of $1 billion or more. In addition, all multibank bank holding companies with debt outstanding to the general public or engaged in certain nonbank activities, regardless of size, must file the FR Y-9C.

On August 27, 1997, the Board announced in the **Federal Register**[1] modifications to the prudential limits or firewalls that currently apply to bank holding companies engaged in securities underwriting and dealing activities through section 20 subsidiaries; the modifications are effective October 31, 1997. The Board announced that as one of its modifications to the firewalls, it was eliminating the required capital deductions that related to the section 20 subsidiary in determining capital adequacy. The Board stated that "the capital deductions (and resulting deconsolidation for regulatory capital purposes) are inconsistent with generally accepted accounting principles (GAAP) and have therefore created confusion and imposed costs by requiring bank holding companies to prepare financial statements on two bases." Therefore, the Board has granted prompt reporting relief to bank holding companies with section 20 subsidiaries by eliminating Schedule HC-J from the FR Y-9C effective with the December 31, 1997, reporting date.

Board of Governors of the Federal Reserve System, January 15, 1998.

William W. Wiles,

Secretary of the Board.

VOL 63 ISS 13 JA 21 1998 UMI

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of Banks or Bank Holding Companies

The notificants listed below have applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. The notices also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than February 4, 1998.

A. Federal Reserve Bank of Atlanta (Lois Berthaume, Vice President) 104 Marietta Street, N.W., Atlanta, Georgia 30303-2713:

1. Michael W. Lowe, Jasper, Georgia; to acquire additional voting shares of Crescent Banking Company, Jasper, Georgia, and thereby indirectly acquire voting shares of Crescent Bank & Trust Company, Jasper, Georgia.

Board of Governors of the Federal Reserve System, January 15, 1998.

Jennifer J. Johnson,

Deputy Secretary of the Board.

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR Part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The application also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act. Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than February 13, 1998.

A. Federal Reserve Bank of Richmond (A. Linwood Gill III, Assistant Vice President) 701 East Byrd Street, Richmond, Virginia 23261-4528:

1. First National Corporation, Orangeburg, South Carolina; to acquire 100 percent of the voting shares of Florence County National Bank (in organization), Florence, South Carolina.

2. Mercantile Bankshares Corporation, Baltimore, Maryland; to acquire 100 percent of the voting shares of Marshall National Bank and Trust Company, Marshall, Virginia.

B. Federal Reserve Bank of Atlanta (Lois Berthaume, Vice President) 104 Marietta Street, N.W., Atlanta, Georgia 30303-2713:

1. Lincoln Interim Corporation, Lincolnton, Georgia; to become a bank holding company by acquiring 62 percent of the voting shares of Lincoln Bancshares, Inc., Lincolnton, Georgia, and thereby indirectly acquire Farmers State Bank, Lincolnton, Georgia.

Board of Governors of the Federal Reserve System, January 15, 1998.

Jennifer J. Johnson,

Deputy Secretary of the Board.

FEDERAL RESERVE SYSTEM

Notice of Proposals to Engage in Permissible Nonbanking Activities or to Acquire Companies that are Engaged in Permissible Nonbanking Activities

The companies listed in this notice have given notice under section 4 of the Bank Holding Company Act (12 U.S.C. 1843) (BHC Act) and Regulation Y, (12 CFR Part 225) to engage *de novo*, or to acquire or control voting securities or assets of a company that engages either directly or through a subsidiary or other company, in a nonbanking activity that is listed in § 225.28 of Regulation Y (12 CFR 225.28) or that the Board has determined by Order to be closely related to banking and permissible for bank holding companies. Unless otherwise noted, these activities will be conducted throughout the United States.

Each notice is available for inspection at the Federal Reserve Bank indicated. The notice also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether the proposal complies with the standards of section 4 of the BHC Act.

Unless otherwise noted, comments regarding the applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than February 4, 1998.

A. Federal Reserve Bank of Cleveland (Jeffery Hirsch, Banking Supervisor) 1455 East Sixth Street, Cleveland, Ohio 44101-2566:

1. National City Corporation, Cleveland, Ohio; to acquire Fort Wayne National Life Insurance Company, Phoenix, Arizona, and thereby engage in credit life and disability insurance activities, pursuant to § 225.28(b)(11) of the Board's Regulation Y.

Board of Governors of the Federal Reserve System, January 15, 1998.

Jennifer J. Johnson,

Deputy Secretary of the Board.

FEDERAL TRADE COMMISSION

Granting of Request for Early Termination of the Waiting Period Under the Premerger Notification Rules

Section 7A of the Clayton Act, 15 U.S.C. 18a, as added by Title II of the Hart-Scott-Rodino Antitrust Improvements Act of 1976, requires persons contemplating certain mergers or acquisitions to give the Federal Trade Commission and the Assistant Attorney General advance notice and to wait designated periods before consummation of such plans. Section 7A(b)(2) of the Act permits the agencies, in individual cases, to terminate this waiting period prior to its expiration and requires that notice of this action be published in the **Federal Register**.

The following transactions were granted early termination of the waiting period provided by law and the premerger notification rules. The grants were made by the Federal Trade Commission and the Assistant Attorney General for the Antitrust Division of the Department of Justice. Neither agency intends to take any action with respect to these proposed acquisitions during the applicable waiting period.

FEDERAL TRADE COMMISSION

Granting of Request for Early Termination of The Waiting Period Under the Premerger Notification Rules

Section 7A of the Clayton Act, 15 U.S.C. 18a, as added by Title II of the Hart-Scott-Rodino Antitrust Improvements Act of 1976, requires persons contemplating certain mergers or acquisitions to give the Federal Trade Commission and the Assistant Attorney General advance notice and to wait designated periods before consummation of such plans. Section 7A(b)(2) of the Act permits the agencies, in individual cases, to terminate this waiting period prior to its expiration and requires that notice of this action be published in the **Federal Register**.

The following transactions were granted early termination of the waiting period provided by law and the premerger notification rules. The grants were made by the Federal Trade Commission and the Assistant Attorney General for the Antitrust Division of the Department of Justice. Neither agency intends to take any action with respect to these proposed acquisitions during the applicable waiting period.

FEDERAL TRADE COMMISSION

[File No. 942–3278]

Howard S. Berg; Analysis to Aid Public Comment

AGENCY: Federal Trade Commission.

ACTION: Proposed Consent Agreement.

SUMMARY: The consent agreement in this matter settles alleged violations of federal law prohibiting unfair or deceptive acts or practices or unfair methods of competition. The attached Analysis to Aid Public Comment describes both the allegations in the draft complaint that accompanies the consent agreement and the terms of the consent order—embodied in the consent agreement—that would settle these allegations.

DATES: Comments must be received on or before March 23, 1998.

ADDRESSES: Comments should be directed to: FTC/Office of the Secretary, Room 159, 6th St. and Pa. Ave., N.W., Washington, D.C. 20580

FOR FURTHER INFORMATION CONTACT: C. Steven Baker or Russell W. Damtoft, Federal Trade Commission, Chicago Regional Office, 55 East Monroe St., Suite 1860, Chicago, IL. 60603. (312) 353–8156.

SUPPLEMENTARY INFORMATION: Pursuant to Section 6(f) of the Federal Trade Commission Act, 38 Stat. 721, 15 U.S.C. 46 and Section 2.34 of the Commission's Rules of Practice (16 CFR 2.34), notice is hereby given that the above-captioned consent agreement containing a consent order to cease and desist, having been filed with and accepted, subject to final approval, by the Commission, has been placed on the public record for a period of sixty (60) days. The following Analysis to Aid Public Comment describes the terms of the consent agreement, and the allegations in the complaint. An electronic copy of the full text of the consent agreement package can be obtained from the FTC Home Page (for January 13, 1998), on the World Wide Web, at "http://www.ftc.gov/os/actions/htm." A paper copy can be obtained from the FTC Public Reference Room, Room H–130, Sixth Street and Pennsylvania Avenue, N.W., Washington, D.C. 20580, either in person or by calling (202) 326–3627. Public comment is invited. Such comments or views will be considered by the Commission and will be available for inspection and copying at its principal office in accordance with Section 4.9(b)(6)(ii) of the Commission's Rules of Practice (16 CFR 4.9(b)(6)(ii)).

Analysis of Proposed Consent Order To Aid Public Comment

The Federal Trade Commission has accepted an agreement, subject to final approval, to a proposed consent order from respondent Howard S. Berg.

The proposed consent order has been placed on the public record for sixty (60) days for reception of comments by interested persons. Comments received during this period will become part of the public record. After sixty (60) days, the Commission will again review the agreement and the comments received and will decide whether it should withdraw from the agreement and take other appropriate action or make final the agreement's proposed order.

This matter concerns an efficacy claim made regarding Howard Berg's Mega Reading promoted by respondent. The Commission's complaint charges that respondent, in concert with Tru-Vantage International, L.L.C. and Kevin Trudeau, made a false and unsubstantiated claim that Howard Berg's Mega Reading is successful in teaching anyone, including adults, children and disabled individuals, to significantly increase their reading speed while substantially comprehending and retaining the material.

The proposed consent order contains provisions designed to remedy the violations charged and to prevent this respondent from engaging in similar acts and practices in the future. The proposed order extends to any product or program purported to significantly increase one's reading speed.

Part I of the proposed consent order prohibits the respondent from representing that Howard Berg's Mega Reading, or any substantially similar product, is successful in teaching anyone, including adults, children and disabled individuals, to increase their reading speed above 800 words per minute while substantially comprehending and retaining the material. Part II of the proposed order prohibits the respondent from representing the performance, benefits, or efficacy of any product or program purported to significantly increase one's reading speed, unless the representation is substantiated.

The remaining parts of the proposed consent order require the respondent to maintain promotional and substantiation materials related to the claims covered by the order, to notify the Commission of any changes in his employment, and to file one or more compliance reports.

The purpose of this analysis is to facilitate public comment on the proposed consent order. It is not intended to constitute an official interpretation of the agreement and

Roger J. Callahan; Analysis To Aid Public Comment

AGENCY: Federal Trade Commission.

ACTION: Proposed consent agreement.

SUMMARY: The consent agreement in this matter settles alleged violations of federal law prohibiting unfair or deceptive acts or practices or unfair methods of competition. The attached Analysis to Aid Public Comment describes both the allegations in the draft complaint that accompanies the consent agreement and the terms of the consent order—embodied in the consent agreement—that would settle these allegations.

DATES: Comments must be received on or before March 23, 1998.

ADDRESSES: Comments should be directed to: FTC/Office of the Secretary, Room 159, 6th St. and Pa. Ave., N.W., Washington, D.C. 20580.

FOR FURTHER INFORMATION CONTACT: C. Steven Baker or Russell W. Damtoft, Federal Trade Commission, Chicago Regional Office, 55 East Monroe St., Suite 1860, Chicago, IL 60603, (312) 353–8156.

SUPPLEMENTARY INFORMATION: Pursuant to section 6(f) of the Federal Trade Commission Act, 38 Stat. 721, 15 U.S.C. 46 and Section 2.34 of the Commission's Rules of Practice (16 CFR 2.34), notice is hereby given that the above-captioned consent agreement containing a consent order to cease and desist, having been filed with and accepted, subject to final approval, by the Commission, has been placed on the public record for a period of sixty (60) days. The following Analysis to Aid Public Comment describes the terms of the consent agreement, and the allegations in the complaint. An electronic copy of the full text of the consent agreement package can be obtained from the FTC Home Page (for January 13, 1998), on the World Wide Web, at "http://www.ftc.gov/os/actions/htm." A paper copy can be obtained from the FTC Public Reference Room, Room H–130, Sixth Street and Pennsylvania Avenue, N.W., Washington, D.C. 20580, either in person or by calling (202) 326–3627. Public comment is invited. Such comments or views will be considered by the Commission and will be available for inspection and copying at its principal office in accordance with Section 4.9(b)(6)(ii) of the Commission's Rules of Practice (16 CFR 4.9(b)(6)(ii)).

Analysis of Proposed Consent Order To Aid Public Comment

The Federal Trade Commission has accepted an agreement, subject to final approval, to a proposed consent order from respondent Roger J. Callahan.

The proposed consent order has been placed on the public record for sixty (60) days for reception of comments by interested persons. Comments received during this period will become part of the public record. After sixty (60) days, the Commission will again review the agreement and the comments received and will decide whether it should withdraw from the agreement and take other appropriate action or make final the agreement's proposed order.

This matter concerns efficacy claims made regarding Dr. Callahan's Addiction Breaking System promoted by respondent. The Commission's complaint charges that respondent, in concert with Mega Systems, Inc., made false and unsubstantiated claims that Dr. Callahan's Addiction Breaking System (1) Reduces an individual's compulsive desire to eat, leading to significant weight loss, (2) reduces an individual's compulsive desire to eat, leading to significant weight loss without the need to diet or exercise, and (3) cures addictions and compulsions, including but not limited to, smoking, eating, and using alcohol or heroin.

The proposed consent order contains provisions designed to remedy the violations charged and to prevent the respondent from engaging in similar acts and practices in the future. The proposed order extends to any weight loss product or program or any product or program purported to treat addictions or compulsions.

Part I of the proposed consent order prohibits the respondent from representing that Dr. Callahan's Addiction Breaking System, or any substantially similar product or program purported to treat addictions or compulsions, (1) reduces an individual's compulsive desire to eat, leading to significant weight loss, (2) reduces an individual's compulsive desire to eat, leading to significant weight loss without the need to diet or exercise, or (3) cures addictions and compulsions, including but not limited to, smoking, eating, and using alcohol or heroin. Part II of the proposed order prohibits the respondent from representing the performance, benefits, or efficacy of any weight loss product or program or any product or program purported to treat addictions or compulsions, unless the representation is substantiated. Part III of the proposed order requires the respondent to pay fifty thousand dollars into a redress fund.

The remaining parts of the proposed consent order require the respondent to maintain promotional and substantiation materials related to the claims covered by the order, to notify the Commission of any changes in his employment, and to file one or more compliance reports.

The purpose of this analysis is to facilitate public comment on the proposed consent order. It is not intended to constitute an official interpretation of the agreement and proposed order or to modify in any way their terms.

Donald S. Clark,

Secretary.

Jeanie Eller; Analysis To Aid Public Comment

AGENCY: Federal Trade Commission.

ACTION: Proposed Consent Agreement.

SUMMARY: The consent agreement in this matter settles alleged violations of federal law prohibiting unfair or deceptive acts or practices or unfair methods of competition. The attached Analysis to Aid Public Comment describes both the allegations in the draft complaint that accompanies the consent agreement and the terms of the consent order—embodied in the consent agreement—that would settle these allegations.

DATES: Comments must be received on or before March 23, 1998.

ADDRESSES: Comments should be directed to: FTC/Office of the Secretary, Room 159, 6th St. and Pa. Ave., NW., Washington, DC 20580.

FOR FURTHER INFORMATION CONTACT: C. Steven Baker or Russell W. Damtoft, Federal Trade Commission, Chicago Regional Office, 55 East Monroe St., Suite 1860, Chicago, IL 60603. (312) 353–8156.

SUPPLEMENTARY INFORMATION: Pursuant to Section 6(f) of the Federal Trade Commission Act, 38 Stat. 721, 15 U.S.C. 46 and Section 2.34 of the Commission's Rules of Practice (16 CFR 2.34), notice is hereby given that the above-captioned consent agreement containing a consent order to cease and desist, having been filed with and accepted, subject to final approval, by the Commission, has been placed on the public record for a period of sixty (60) days. The following Analysis to Aid Public Comment describes the terms of the consent agreement, and the allegations in the complaint. An electronic copy of the full text of the consent agreement package can be obtained from the FTC Home Page (for January 13, 1998), on the World Wide Web, at "http://www.ftc.gov/os/actions/htm." A paper copy can be obtained from the FTC Public Reference Room, Room H–130, Sixth Street and Pennsylvania Avenue, NW., Washington, DC 20580, either in person or by calling (202) 326–3627. Public comment is invited. Such comments or views will be considered by the Commission and will be available for inspection and copying at its principal office in accordance with Section 4.9(b)(6)(ii) of the Commission's Rules of Practice (16 CFR 4.9(b)(6)(ii)).

Analysis of Proposed Consent Order To Aid Public Comment

The Federal Trade Commission has accepted an agreement, subject to final approval, to a proposed consent order from respondent Jeanie Eller.

The proposed consent order has been placed on the public record for sixty (60) days for reception of comments by interested persons. Comments received during this period will become part of the public record. After sixty (60) days, the Commission will again review the agreement and the comments received and will decide whether it should withdraw from the agreement and take other appropriate action or make final the agreement's proposed order.

This matter concerns success claims made regarding Jeanie Eller's Action Reading, a home-study phonetics program, promoted by respondent. The Commission's complaint charges that respondent, in concert with Mega Systems, Inc., made unsubstantiated claims that Jeanie Eller's Action Reading is successful in teaching reading 100% of the time. In fact, the complaint alleges, Jeanie Eller's Action Reading is not successful in teaching reading 100% of the time.

The proposed consent order contains provisions designed to remedy the violations charged and to prevent the respondent from engaging in similar acts and practices in the future. The proposed order extends to Jeanie Eller Action Reading or any other product or program that provides instruction in any aspect of reading.

Part I of the proposed consent order prohibits the respondent from representing the extent to which individuals who use such product will learn to read or the success rate of individuals who use such product, unless the representation is substantiated.

The remaining parts of the proposed consent order require the respondent to maintain promotional and substantiation materials related to the claims covered by the order, to notify the Commission of any changes in her employment, and to file one or more compliance reports.

The purpose of this analysis is to facilitate public comment on the proposed consent order. It is not intended to constitute an official interpretation of the agreement and proposed order or to modify in any way their terms.

Donald S. Clark,

Secretary.

Analysis of Proposed Consent Order To Aid Public Comment

The Federal Trade Commission has accepted an agreement, subject to final approval, to a proposed consent order from respondents Mega Systems International, Inc. and Jeffrey Salberg.

The proposed consent order has been placed on the public record for sixty (60) days for reception of comments by interested persons. Comments received during this period will become part of the public record. After sixty (60) days, the Commission will again review the agreement and the comments received and will decide whether it should withdraw from the agreement and take other appropriate action or make final the agreement's proposed order.

This matter concerns advertisements, including but not limited to infomercials, for five Mega Systems International products: Eden's Secret Nature's Purifying Product, Sable Hair Farming System, Kevin Trudeau's Mega Memory System, Dr. Callahan's Addiction Breaking System, and Jeanie Eller's Action Reading. This matter also concerns the deceptive format of the infomercials.

The Commission's complaint charges that respondents made false and unsubstantiated claims that Eden's Secret Nature's Purifying Product (1) causes significant weight loss, (2) will prevent or cure illnesses, including but not limited to fatigue, headaches, depression, arthritis, insomnia, immune suppression, and premenstrual syndrome, (3) will cleanse the body of

VOL 63 ISS 13 JA 21 1998 UMI

harmful toxins, and (4) will purify the body's blood supply.

The Commission's complaint also charges that respondents made false and unsubstantiated claims that Sable Hair Farming System (1) will stop, prevent, cure, relieve, reverse or reduce hair loss, (2) will promote the growth of hair where hair has already been lost, and (3) is superior to Rogaine and Minoxidil in stopping, preventing, curing, relieving, reversing or reducing hair loss. In addition, the Commission's complaint charges that respondents made the false claim that scientific studies demonstrate that Sable Hair Farming System is effective in stopping hair loss and promoting hair growth.

The Commission's complaint also charges that respondents made the false and unsubstantiated claim that Kevin Trudeau's Mega Memory System will enable users to achieve a photographic memory, and the unsubstantiated claim that Kevin Trudeau's Mega Memory System is effective in causing adults or children with learning disabilities or attention deficit disorder to substantially improve their memory. In addition, the Commission's complaint charges that respondents made false claims that (1) scientific studies of Kevin Trudeau's Mega Memory System on seventh-grade students demonstrate that Kevin Trudeau's Mega Memory System will substantially improve their academic performance and grades, (2) scientific studies of Kevin Trudeau's Mega Memory System on blind children demonstrate that Kevin Trudeau's Mega Memory System will improve their recall ability to a level of 95% to 98%, (3) scientific studies of Kevin Trudeau's Mega Memory System on children with IQ's of fifty to sixty demonstrate that Kevin Trudeau's Mega Memory System will improve their recall ability to a level of almost 100%, and (4) scientific studies of Kevin Trudeau's Mega Memory System on children with attention deficit disorder demonstrate that Kevin Trudeau's Mega Memory System will substantially improve their memory.

The Commission's complaint also charges that respondents made false and unsubstantiated claims that Dr. Callahan's Addiction Breaking System (1) reduces an individual's compulsive desire to eat, leading to significant weight loss, (2) reduces an individual's compulsive desire to eat, leading to significant weight loss without the need to diet or exercise, and (3) cures addictions and compulsions, including but not limited to, smoking, eating, and using alcohol or heroin. In addition, the Commission's complaint charges that respondents made the false claim that testimonials with regard to consumers' use of Dr. Callahan's Addiction Breaking System reflect the typical or ordinary experience of members of the public who use the product.

The Commission's complaint also charges that respondents made unsubstantiated claims that Jeanie Eller's Action Reading is successful in teaching reading 100% of the time. Finally, the Commission's complaint charges that respondents deceptively represented that their infomercials were independent television programs and not paid commercial advertising.

The proposed consent order contains provisions designed to remedy the violations charged and to prevent the respondent from engaging in similar acts and practices in the future. The proposed consent order prohibits the respondents from representing that Eden's Secret Nature's Purifying Product, or any substantially similar product, (1) causes significant weight loss, (2) prevents or cures illnesses, including but not limited to fatigue, headaches, depression, arthritis, insomnia, immune suppression, and premenstrual syndrome, (3) will cleanse the body of harmful toxins, or (4) will purify the body's blood supply.

The proposed consent order also prohibits the respondents from representing that Sable Hair Farming System, or any substantially similar product, (1) will stop, prevent, cure, relieve, reverse or reduce hair loss, (2) will promote the growth of hair where hair has already been lost, or (3) is superior to Rogaine and Minoxidil in stopping, preventing, curing, relieving, reversing or reducing hair loss. In addition, the proposed consent order prohibits respondents from advertising, packaging, labeling, promoting, offering for sale, selling, or distributing any product that is represented as promoting hair growth or preventing hair loss, unless the product is the subject of an approved new drug application for such purpose under the Federal Food, Drug, and Cosmetic Act, 21 U.S.C. 301 *et seq.*

The proposed consent order also prohibits the respondents from representing that Kevin Trudeau's Mega Memory System, or any substantially similar product, will enable users to achieve a photographic memory. In addition, the proposed consent order prohibits the respondents from representing that Kevin Trudeau's Mega Memory System, or any substantially similar product, is effective in causing adults or children with learning disabilities or attention deficit disorder to substantially improve their memory, unless, at the time the representation is made, respondents possess and rely upon competent and reliable evidence, which when appropriate must be competent and reliable scientific evidence, that substantiates the representation.

The proposed consent order also prohibits the respondents from representing that Dr. Callahan's Addiction Breaking System, or any substantially similar product or program, (1) reduces an individual's compulsive desire to eat, leading to significant weight loss, (2) reduces an individual's compulsive desire to eat, leading to significant weight loss without the need to diet or exercise, or (3) cures addictions and compulsions, including but not limited to, smoking, eating, and using alcohol or heroin.

The proposed consent order also prohibits the respondents from representing with respect to Jeanie Eller's Action Reading, or any other product or program that provides instruction in any aspect of reading, the extent to which individuals who use such product will learn to read or the success rate of individuals who use such product, unless the representation is substantiated.

The proposed consent order also prohibits the respondents from (1) misrepresenting the existence, contents, validity, results, conclusions or interpretations of any test, study or research, (2) representing the benefits, performance or efficacy of any product or program, unless the representation is substantiated, and (3) representing that the experience represented by any user testimonial or endorsement of any product or program represents the typical or ordinary experience of the members of the public, unless the representation is substantiated or clearly and prominently qualified.

In addition, the proposed consent order prohibits the respondents from creating, producing, selling or disseminating (1) any advertisement that misrepresents that it is not a paid advertisement, (2) any television commercial or other video advertisement fifteen minutes in length or longer that does not clearly and prominently disclose within the first thirty seconds and immediately before each presentation of ordering instructions that the program is a paid advertisement for the product or service, and (3) any radio commercial or other radio advertisement five minutes in length or longer that does not broadcast clearly an audibly within the first thirty seconds and immediately before each presentation of ordering instructions or periodically through the program, but no more than approximately ten minutes apart that the program is a paid advertisement for the product or service.

The proposed consent order also requires respondents to pay the Federal Trade Commission $500,000. The funds paid by the respondents shall, in the discretion of the Federal Trade Commission, be used to provide direct redress to consumers. If the Federal Trade Commission determines that consumer redress is impracticable or otherwise unwarranted, any funds not so used shall be paid to the United States Treasury.

The remaining parts of the proposed consent order require the respondents (1) to maintain promotional and substantiation materials related to the claims covered by the order, (2) to deliver a copy of the order to all current and future principals, officers, directors, and managers, and deliver a summary of the order to all current and future employees, agents, and representatives having responsibilities with respect to the subject matter of this order, (3) to notify the Commission of any changes in the structure of the proposed corporate respondent, (4) to notify the Commission of any changes in employment of the individual respondent, and (5) to file one or more compliance reports.

The purpose of this analysis is to facilitate public comment on the proposed consent order. It is not intended to constitute an official interpretation of the agreement and proposed order or to modify in any way their terms.

Donald S. Clark,

Secretary.

FEDERAL TRADE COMMISSION

[File No. 942–3278]

Tru-Vantage International, L.L.C.; Analysis to Aid Public Comment

AGENCY: Federal Trade Commission.

ACTION: Proposed Consent Agreement.

SUMMARY: The consent agreement in this matter settles alleged violations of federal law prohibiting unfair or deceptive acts or practices or unfair methods of competition. The attached Analysis to Aid Public Comment describes both the allegations in the draft complaint that accompanies the consent agreement and the terms of the consent order—embodied in the consent agreement—that would settle these allegations.

DATES: Comments must be received on or before March 23, 1998.

ADDRESSES: Comments should be directed to: FTC/Office of the Secretary, Room 159, 6th St. and Pa. Ave., NW., Washington, DC 20580.

FOR FURTHER INFORMATION CONTACT: C. Steven Baker or Russell W. Damtoft, Federal Trade Commission, Chicago Regional Office, 55 East Monroe St., Suite 1860, Chicago, IL 60603. (312) 353–8156.

SUPPLEMENTARY INFORMATION: Pursuant to Section 6(f) of the Federal Trade Commission Act, 38 Stat. 721, 15 U.S.C. 46 and Section 2.34 of the Commission's Rules of Practice (16 CFR 2.34), notice is hereby given that the above-captioned consent agreement containing a consent order to cease and desist, having been filed with and accepted, subject to final approval, by the Commission, has been placed on the public record for a period of sixty (60) days. The following Analysis to Aid Public Comment describes the terms of the consent agreement, and the allegations in the complaint. An electronic copy of the full text of the consent agreement package can be obtained from the FTC Home Page (for January 13, 1998), on the World Wide Web, at "http://www.ftc.gov/os/actions/htm." A paper copy can be obtained from the FTC Public Reference Room, Room H–130, Sixth Street and Pennsylvania Avenue, NW., Washington, DC 20580, either in person or by calling (202) 326–3627. Public comment is invited. Such comments or views will be considered by the Commission and will be available for inspection and copying at its principal office in accordance with Section 4.9(b)(6)(ii) of the Commission's Rules of Practice (16 CFR 4.9(b)(6)(ii)).

Analysis of Proposed Consent Order to Aid Public Comment

The Federal Trade Commission has accepted an agreement, subject to final approval, to a proposed consent order from respondent Tru-Vantage International, L.L.C.

The proposed consent order has been placed on the public record for sixty (60) days for reception of comments by interested persons. Comments received during this period will become part of the public record. After sixty (60) days, the Commission will again review the agreement and the comments received and will decide whether it should withdraw from the agreement and take other appropriate action or make final the agreement's proposed order.

This matter concerns an efficacy claim made regarding Howard Berg's Mega Reading promoted by respondent. The Commission's complaint charges that respondent, in concert with Howard S. Berg and Kevin Trudeau, made a false and unsubstantiated claim that Howard Berg's Mega Reading is successful in teaching anyone, including adults, children and disabled individuals, to significantly increase their reading speed while substantially comprehending and retaining the material.

The proposed consent order contains provisions designed to remedy the violations charged and to prevent the respondent from engaging in similar acts and practices in the future. The proposed order extends to any product or program purported to significantly increase one's reading speed.

Part I of the proposed consent order prohibits the respondent from representing that Howard Berg's Mega Reading, or any substantially similar product, is successful in teaching anyone, including adults, children and disabled individuals, to increase their reading speed above 800 words per minute while substantially comprehending and retaining the material. Part II of the proposed order prohibits the respondent from representing the performance, benefits, or efficacy of any product or program purported to significantly increase one's reading speed, unless the representation is substantiated.

The remaining parts of the proposed consent order require the respondent to maintain promotional and substantiation materials related to the claims covered by the order, to provide a copy of the order to designated parties having responsibilities with respect to the subject matter of this order, to notify the Commission of any changes in the company structure, and to file one or more compliance reports.

The purpose of this analysis is to facilitate public comment on the proposed consent order. It is not intended to constitute an official interpretation of the agreement and proposed order or to modify in any way their terms.

Donald S. Clark,

Secretary.

GENERAL SERVICES ADMINISTRATION

Proposed Collection; Comment Request Entitled Nondiscrimination in Federal Financial Assistance Programs

AGENCY: Office of Equal Employment Opportunity, GSA.

VOL 63 ISS 13 JA 21 1998 UMI

ACTION: Notice of request for public comments regarding an extension to an existing OMB clearance (3090–0228).

SUMMARY: The GSA hereby gives notice under the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), that it is requesting the Office of Management and Budget (OMB) to reinstate information collection, 3090–0228, "Nondiscrimination in Federal Financial Assistance Programs." This information is needed to ensure that recipients of Federal financial assistance distribute Federal surplus property in a nondiscriminatory manner. A request for public comments was published at 62 FR 59713 on November 4, 1997. No comments were received.

DATES: February 20, 1998.

ADDRESSES: Send comments to Edward Springer, GSA Desk Officer, Room 3235, NEOB, Washington, DC 20503, and to Marjorie Ashby, General Services Administration (MVP), 18th & F Streets, NW, Washington, DC 20405.

Annual Reporting Burden

Respondents: 55;
Annual responses: 1;
Average hours per response: 16;
Burden hours: 16,200.

FOR FURTHER INFORMATION CONTACT: William Conley, Office of Equal Employment Opportunity, (202) 501–0767.

Copy of Proposal

A copy of this proposal may be obtained from the GSA Acquisition Policy Division (MVP), Room 4011, GSA Building, 18th & F Streets NW, Washington, DC 20405, or by telephoning (202) 501–3822, or by faxing your request to (202) 501–3341.

Dated: January 12, 1998.

BILLING CODE 6820–61–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Notice of a Meeting of the National Bioethics Advisory Commission (NBAC)

SUMMARY: Pursuant to Section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. Appendix 2), notice is given of a meeting of the National Bioethics Advisory Commission. The Commission will continue addressing (1) The protection of the rights and welfare of human subjects in research including research subjects with decisional impairments and (2) issues in tissue storage as they relate to genetic information. The meeting is open to the public and opportunities for statements by the public will be provided.

Dates/times	Location
February 5, 1998, 1:00 a.m.–5:00 p.m.; February 6, 1998, 8:00 a.m.–5:00 p.m.	OMNI Los Angeles Hotel & Center, 930 Wilshire Boulevard, Los Angeles, CA 90017.

SUPPLEMENTARY INFORMATION: The President established the National Bioethics Advisory Commission (NBAC) on October 3, 1995 by Executive Order 12975 as amended. The mission of the NBAC is to advise and make recommendations to the National Science and Technology Council, its Chair, the President and other entities on bioethical issues arising from the research on human biology and behavior, and from the applications of that research.

Public Participation

The meeting is open to the public with attendance limited by the availability of space.

Members of the public who wish to present oral statements should contact Ms. Patricia Norris by telephone, fax machine, or mail as shown below prior to the meeting as soon as possible. The Chair will reserve time for presentations by persons requesting to speak. The order of speakers will be assigned on a first come, first serve basis. Individuals unable to make oral presentations are encouraged to mail or fax their comments to the NBAC staff office at least five business days prior to the meeting for distribution to the Commission and inclusion in the public record. Persons needing special assistance, such as sign language interpretation or other special accommodations, should contact NBAC staff at the address or telephone number listed below as soon as possible.

FOR FURTHER INFORMATION CONTACT: Ms. Patricia Norris, National Bioethics Advisory Commission, 6100 Executive Boulevard, Suite 5B01, Rockville, Maryland 20892–7508, telephone 301–402–4242, fax number 301–480–6900.

Henrietta D. Hyatt-Knorr,

Deputy Executive Director, National Bioethics Advisory Commission.

[INFO–98–09]

Proposed Data Collections Submitted for Public Comment and Recommendations

In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 for opportunity for public comment on proposed data collection projects, the Centers for Disease Control and Prevention (CDC) and the Agency for Toxic Substances and Disease Registry (ATSDR) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the data collection plans and instruments, call the CDC/ATSDR Reports Clearance Officer on (404) 639–7090.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques for other forms of information technology. Send comments to Wilma Johnson, CDC/ATSDR Reports Clearance Officer, 1600 Clifton Road, MS–D24, Atlanta, GA 30333. Written comments should be received within 60 days of this notice.

Proposed Projects

1. *Surveillance of Hazardous Substances Emergency Event*—(0923–0008)—Extension—The Agency for Toxic Substances and Disease Registry (ATSDR) is mandated pursuant to the 1980 Comprehensive Environmental Response Compensation and Liability Act (CERCLA), and its 1986 Amendments, The Superfund Amendments and Reauthorization Act (SARA), to prevent or mitigate adverse human health effects and diminished quality of life resulting from the exposure to hazardous substances into the environment. The primary purpose of this activity, which ATSDR has supported since 1992, is to develop, implement, and maintain a state-based surveillance system for hazardous substances emergency events which can be used to: (1) Describe the distribution of the hazardous substance releases; (2) describe the public health consequences (morbidity, mortality, and evacuations) associated with the events; (3) identify risk factors associated with the public health consequences; and (4) propose strategies to reduce future public health consequences. The study population will consist of all hazardous substance nonpermitted acute releases within the 13 states (Alabama, Colorado, Iowa, Minnesota, Mississippi, Missouri, New York, North Carolina, Oregon, Rhode Island, Texas, Washington, Wisconsin) participating in the surveillance system.

Until this system was developed and implemented, there was no national public health-based surveillance system to coordinate the collation, analysis, and distribution of health data to public health practitioners. It was necessary to establish this national surveillance system which describes the impact of hazardous substances emergencies on the health of the population of the United States. The data collection form will be completed by the state health department HSEES coordinator using information provided by a variety of sources including environmental protection agencies, police, firefighters, emergency response personnel; or researched by the HSEES coordinator including census data, material safety data sheets, and chemical handbooks. There is no cost to respondents.

We are requesting a 3-year extension.

Respondents	Number of respondents	Number of responses/respondent	Avg burden/response (in hrs)	Total burden (in hrs)
State coordinator	13 states	332	1	4,316

2. *Long Term Health Effects of Methyl Parathion in Children*—a Follow-Up Study—New—The Agency for Toxic Substances and Disease Registry (ATSDR) is mandated pursuant to the 1980 Comprehensive Environmental Response Compensation and Liability Act (CERCLA), and its 1986 Amendments, The Superfund

VOL 63 ISS 13 JA 21 1998 UMI

Amendments and Reauthorization Act (SARA), to prevent or mitigate adverse human health effects and diminished quality of life resulting from the exposure to hazardous substances into the environment. Children were exposed to Methyl Parathion (MP) via illegal indoor residential spraying of MP for pest control in nine states. All of these sprayed areas have been designated as CERCLA sites and placed on the National Priorities List (NPL) for conducting remedial actions. The MP sites consist of contaminated residences and businesses spread over several counties and states, intermingled with other building structures that were never sprayed with MP, making targeted remedial actions more challenging.

This study of children exposed to MP and children not exposed, but matched on age, sex, and race will provide critical public health information for the gap in data regarding the effects of lower dose, sub-acute exposure on neurobehavioral and respiratory development. The study population will consist of children under 6 years of age at the time of exposure (exposed group), whose residences in Ohio and Mississippi were illegally sprayed with MP since 1994, and matched with unexposed children (unexposed group). No data exist regarding low dose, sub-acute exposure to MP in children. The goal of this study is to examine the association between lower dose, sub-acute MP exposure in children, specifically from indoor spraying, and the risk of adversely affecting normal neurobehavioral and respiratory development.

The questionnaire will be administered in person by trained interviewers to the mothers (fathers or other guardians, if the mother is not available) of the exposed and unexposed children. The Pediatric Environmental Neurobehavioral Test Battery (PENTB) will be administered by personnel trained in the neurobehavioral assessment of children at annual intervals for the three study years. Other than the time to participate, there will be no cost to respondents.

Respondent questionnaire	Number of respondents	Number of responses/respondent	Avg burden/response (in hrs)	Total annual burden (in hrs)
Parent/Child (general)	537	1	1	537
(PENTB)	537	1	1.25	671
Total				1,208

Dated: January 14, 1998.

Wilma G. Johnson,

Acting Associate Director for Policy Planning And Evaluation, Centers for Disease Control and Prevention (CDC).

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[Announcement 817]

National Institute for Occupational Safety and Health; Childhood Agricultural Safety and Health Research; Notice of Availability of Funds for Fiscal Year 1998

Introduction

The Centers for Disease Control and Prevention (CDC) announces that applications are being accepted for research on childhood agricultural safety and health. Projects are sought to conduct research on risk factors for agricultural injuries associated with child development, social and economic consequences associated with youth workers, and the design and/or evaluation of strategies to prevent childhood agricultural injuries. Findings from these projects are intended to advance the scientific base of knowledge needed to maximize the safety and health of children exposed to agricultural production hazards.

CDC is committed to achieving the health promotion and disease prevention objectives of "Healthy People 2000," a national activity to reduce morbidity and mortality and improve the quality of life. This announcement is related to the priority areas of "Occupational Safety and Health" and "Unintentional Injuries." (For ordering a copy of "Healthy People 2000," see the section **Where to Obtain Additional Information.**)

Authority

This program is authorized under the Public Health Service Act, as amended, Section 301(a) (42 U.S.C. 241(a)), and the Occupational Safety and Health Act of 1970, Section 20(a) (29 U.S.C. 669(a)). The applicable program regulation is 42 CFR Part 52.

Eligible Applicants

Eligible applicants include non-profit and for-profit organizations, universities, colleges, research institutions, and other public and private organizations, including State and local governments, and small, minority and/or woman-owned businesses.

Note: Pub. L. 104–65, dated December 19, 1995, states that an organization described in section 501(c)(4) of the IRS Code of 1986, which engages in lobbying activities, shall not be eligible for the receipt of Federal funds constituting an award, a grant, contract, loan, or any other form.

Smoke-Free Workplace

CDC strongly encourages all grant recipients to provide a smoke-free workplace and promote the non-use of all tobacco products, and Pub. L. 103–227, the Pro-Children Act of 1994, prohibits smoking in certain facilities that receive Federal funds in which education, library, day care, health care, and early childhood development services are provided to children.

Availability of Funds

About $1,000,000 is available in fiscal year (FY) 1998 to fund approximately 5–6 project grants in three priority research areas: (1) Risk factors for agricultural injuries associated with child development (1–2 awards); (2) social and economic consequences associated with youth workers (2–3 awards); and, (3) the design and/or evaluation of strategies to prevent childhood agricultural injuries (2–3 awards). Awards are anticipated to range from $150,000 to $200,000 in total costs (direct and indirect) per year.

The amount of funding available may vary and is subject to change. Awards are expected to begin on or about September 1, 1998. Awards will be made for a 12-month budget period within a project period not to exceed 3 years. Continuation awards within the project period will be made on the basis of satisfactory progress and availability of funds.

Use of Funds

Restrictions on Lobbying

Applicants should be aware of restrictions on the use of HHS funds for lobbying of Federal or State legislative bodies. Under the provisions of 31 U.S.C. Section 1352 (which has been in effect since December 23, 1989), recipients (and their subtier contractors) are prohibited from using appropriated Federal funds (other than profits from a Federal contract) for lobbying Congress or any Federal agency in connection with the award of a particular contract, grant, cooperative agreement, or loan. This includes grants/cooperative agreements that, in whole or in part, involve conferences for which Federal funds cannot be used directly or indirectly to encourage participants to lobby or to instruct participants on how to lobby.

In addition, the current HHS Appropriations Act expressly prohibits the use of 1998 appropriated funds for indirect or "grass roots" lobbying efforts that are designed to support or defeat legislation pending before State legislatures. Section 503 of the law provides as follows:

(a) No part of any appropriation contained in this Act shall be used, other than for normal and recognized executive-legislative relationships, for publicity or propaganda purposes, for the preparation, distribution, or use of any kit, pamphlet, booklet, publication, radio, television, or video presentation designed to support or defeat legislation pending before the Congress, or any State legislature, except in presentation to the Congress or any State legislature itself.

(b) No part of any appropriation contained in this Act shall be used to pay the salary or expenses of any grant or contract recipient, or agent acting for such recipient, related to any activity designed to influence legislation or appropriations pending before the Congress or any State legislature.

Background

Agricultural production, which consistently ranks among the industries with the highest rates of work-related injuries and deaths in the United States, is unique with respect to children and adolescents. Compared to nonagricultural industries, coverage and protections of Federal child labor laws are limited, work by youth under 14 years of age is common, and childhood exposures to work hazards are not confined to working youths. Research is needed to facilitate the appropriate prioritization of efforts to prevent childhood injuries and illnesses associated with agricultural production, and expand the knowledge base for the development and implementation of effective and appropriate intervention strategies.

Federal child labor laws are organized by agricultural and nonagricultural work. Whereas the minimum age for employment in nonagricultural industries is 14 years, there are provisions which allow for agricultural employment of children as young as 10 years of age. Although work declared hazardous by the Secretary of Labor is prohibited for youths less than 18 years of age in nonagricultural industries, in agriculture, it is prohibited for youths less than 16 years of age, and only then for youths formally employed off the family farm. Federal child labor regulations contain a statutory exemption which permits the children of farmers to perform any job at any age on a family farm.

Data on employment of youths less than 15 years of age are not routinely collected or reported. Children less than 15 years of age are known to work, especially in agriculture. In 1996, an estimated 261,000 youths 16–19 years of age were employed in agriculture, accounting for 4 percent of working youths in this age group. It is reported that 81 percent of these agricultural youth workers were wage and salary workers, 11 percent were self-employed, and 7 percent were unpaid family workers. The Bureau of Labor Statistics (BLS) reports 114 agricultural work-related deaths of youths 16–19 years of age for the years 1992–1996, accounting for a disproportionate 15 percent of work-related deaths among this age group during this period. Further, BLS reports 87 agricultural work-related deaths of youth less than 16 years of age during this period, a group for which employment data are not available.

An estimated 2,100 injuries serious enough to require time away from work occurred among working youth 14–19 years of age on farms with at least 11 employees in 1994. Estimates of serious injuries on farms with fewer than 11 employees are not available. A couple of studies have suggested that among youth, work-related injuries in agriculture tend to be more serious than injuries in other industries. Farm machinery, stored grain, power lines, manure pits, ponds, and livestock are among injury hazards in agricultural workplaces.

Children and adolescents may be exposed to agricultural production hazards not only through work activities, but by virtue of living on a farm or ranch, accompanying their parents to work, or visiting farms or ranches. In 1991, an estimated 1.3 million youth less than 20 years of age resided on farms or ranches. Another 800,000 children lived in households of hired farm workers. Data from 1991 through 1993 suggested that 100 children and adolescents die annually from farm injuries, with about 45 percent of the deaths occurring among youth less than 10 years of age. Recent data suggest that about 100,000 children suffer a nonfatal injury associated with agricultural production each year. The monetary and social costs of these injuries are unknown, but they are needed to form and evaluate prevention efforts.

In April 1996, the National Committee for Childhood Agricultural Injury Prevention (NCCAIP) published a National Action Plan toward maximizing the safety and health of all children and adolescents who may be exposed to agricultural hazards. This National Action Plan, which includes 13 objectives and 43 recommended action steps, was based on input from 42 members representing the public and private sector. The National Action Plan calls for funding of research and safety programs by the Federal government, foundations, agribusiness, and other private-sector groups.

Congress allocated FY 1997 and FY 1998 funds to NIOSH to facilitate the implementation of this National Action Plan. This announcement and expected awards are one component in the process of NIOSH implementation of the National Action Plan. This announcement extends, with slight modifications, the research areas in announcement (RFA #725) published in FY 1997.

Research studies which result from this announcement are intended to advance the following objectives in the proposed National Action Plan: establish guidelines for children's and adolescents' work in the industry of agriculture; conduct research on costs, risk factors, and consequences associated with children and adolescents who participate in agricultural work; use systematic evaluation to ensure that educational materials and methods targeted toward childhood agricultural safety and health have demonstrated positive results; influence adult behaviors which affect protection of children and adolescents through the use of incentives and adoption of voluntary safety guidelines; and, provide a protective and supportive environment for children exposed as bystanders to agricultural hazards.

Purpose

NIOSH seeks to maximize the safety and health of children and adolescents exposed to agricultural production

hazards by expanding the knowledge base regarding risk factors for agricultural injuries associated with child development, social and economic consequences associated with youth workers, and the design and/or evaluation of strategies to prevent childhood agricultural injuries. Research may address children directly involved in work tasks and/or other children exposed to agricultural production hazards. The funded research projects should cover a variety of types of agricultural production in different geographical regions (e.g., tomato harvesting in California, blueberry picking in Maine, and cotton harvesting in the South).

Programmatic Interest

The focus of these grants should facilitate progress in maximizing the safety and health of children and adolescents exposed to agricultural hazards. The rationale for the significance of the research and application to the prioritization, development, or implementation of intervention efforts must be developed in the proposal. Proposals are being accepted which focus on one of three research areas: risk factors for agricultural injuries associated with child development, social and economic consequences associated with youth workers, and the design and/or evaluation of strategies to prevent childhood agricultural injuries. Proposals should identify the focus or foci of the research program: risk factors, consequences, and/or interventions; types and geographical distribution of agricultural production which will be addressed, and size and characteristics of child and adolescent populations which can potentially be impacted by research findings.

1. Risk Factors for Agricultural Injuries Associated with Child Development

The intended focus of this research is on non-modifiable risk factors for childhood agricultural injury which are associated with child development. This research is needed to guide the development of age- and developmentally-appropriate guidelines for work and protection of non-working children. Potential research areas follow for illustrative purposes only, and should not be considered boundaries for proposed research questions. Youths who are still maturing may not meet the anthropometric and strength requirements of various agricultural machines, tools, personal protective equipment, and work tasks. Physical maturation and growth may result in unique susceptibilities to physical and chemical work exposures. Cognitive requirements of tasks and safe negotiation of agricultural hazards may exceed cognitive capabilities of children and adolescents. Feelings of invulnerability, lack of perception of risk, and a desire to demonstrate competence and independence may contribute to childhood exposures to agricultural hazards. Fatigue resulting from balancing demands of school and work, the need for intensive work during harvest periods, and inadequate sleep may contribute to injury. Both laboratory- and field-based research are appropriate for this priority area of research.

2. Social and Economic Consequences Associated With Youth Workers

Data on social and economic consequences of injury and disease outcomes are needed to understand the magnitude and scope of the injury problem to allow the appropriate prioritization of prevention efforts. Data on positive as well as negative outcomes of youth's involvement in agriculture are needed to develop a balanced response to protecting children. Examples of research efforts which are appropriate under this priority area include, but are not limited to: studies to estimate the societal and economic costs and consequences associated with childhood agricultural injury; assessments of short-and long-term disability from injuries; assessment of short- and long-term psychosocial outcomes related to children's and adolescents' participation in different types of agricultural work; physical assessments of children and adolescents who have been exposed to agricultural hazards such as agricultural chemicals, organic dusts, toxic gases, nitrates, volatile organic compounds, oils and solvents; and, studies of the impact of noise, vibration, cumulative trauma, and other work-induced health hazards on children and adolescents participating in agricultural work.

3. Design and/or Evaluation of Strategies to Prevent Childhood Agricultural Injuries

Strategies for preventing childhood agricultural injuries include control technology to minimize or remove hazards, regulations which mandate safe working conditions or prohibit particularly dangerous activities by youth, and educational efforts to raise awareness of hazards and change behavior. There are numerous research and prevention activities aimed at increasing awareness of hazards and changing behavior among children and adolescents. The intent of this request for applications is to facilitate research to design and/or evaluate prevention programs which do not rely solely on educating children and adolescents about hazards. Examples of research efforts which are appropriate under this priority area include, but are not limited to: evaluation of mechanisms, such as monetary incentives, to influence positive safety behaviors of farm and ranch owners and operators, parents, caregivers, and manufacturers; planning, implementation, and evaluation of structural and machinery design options to provide a protective environment for children at the farm work site; design, implementation and evaluation of community-based programs, such as community-provided daycare during harvest periods, to enhance the safety and well-being of children who may be exposed as bystanders to agricultural hazards; and, studies to determine the relative effectiveness of education, engineering, voluntary incentives, and mandatory standards on childhood agricultural injury reduction.

The research needs identified in this announcement are consistent with the National Occupational Research Agenda (NORA) developed by NIOSH and partners in the public and private sectors to provide a framework to guide occupational safety and health research in the next decade towards topics which are most pressing and most likely to yield gains to the worker and the nation. The agenda identifies 21 research priorities. Research priorities with specific relevance to this announcement are: traumatic injuries; special populations at risk; control technology and personal protective equipment; intervention effectiveness research; and social and economic consequences of workplace illness and injury. The NORA document is available through the NIOSH Home Page; http://www.cdc.gov/niosh/nora.html.

Potential applicants with questions concerning the acceptability of their proposed work are strongly encouraged to contact the technical information contact listed in this announcement in the section **Where to Obtain Additional Information**.

Reporting Requirements

Progress reports are required annually as part of the continuation application (75 days prior to the start of the next budget period). The annual progress reports must contain information on accomplishments during the previous budget period and plans for each remaining year of the project. Financial status reports (FSR) are required no later than 90 days after the end of the budget period.

The final performance and financial status reports are required 90 days after the end of the project period. The final performance report should include, at a minimum, a statement of original objectives, a summary of research methodology, a summary of positive and negative findings, and a list of publications resulting from the project. Research papers, project reports, or theses are acceptable items to include in the final report. The final report should stand alone rather than citing the original application. Three copies of reprints of publications prepared under the grant should accompany the report.

Evaluation Criteria

Upon receipt, applications will be reviewed by CDC for completeness and responsiveness. Applications determined to be incomplete or unresponsive to this announcement will be returned to the applicant without further consideration. If the proposed project involves organizations or persons other than those affiliated with the applicant organization, letters of support and/or cooperation must be included.

Applications that are complete and responsive to the announcement will be reviewed by an initial review group and will be determined to be competitive or non-competitive, based on the review criteria relative to other applications received. Applications determined to be non-competitive will be withdrawn from further consideration and the principal investigator/program director and the official signing for the applicant organization will be promptly notified. Applications judged to be competitive will be discussed and assigned a priority score. Following initial review for scientific merit, the applications will receive a secondary review for programmatic importance.

Review criteria for scientific merit are as follows:

1. Technical significance and originality of proposed project.
2. Appropriateness and adequacy of the study design and methodology proposed to carry out the project.
3. Qualifications and research experience of the Principal Investigator and staff, particularly but not exclusively in the area of the proposed project.
4. Availability of resources necessary to perform the project.
5. Documentation of cooperation from collaborators in the project, where applicable.
6. Adequacy of plans to include both sexes and minorities and their subgroups as appropriate for the scientific goals of the project. (Plans for the recruitment and retention of subjects will also be evaluated.)
7. Appropriateness of budget and period of support.
8. Human Subjects—Procedures adequate for the protection of human subjects must be documented. Recommendations on the adequacy of protections include: (1) Protections appear adequate and there are no comments to make or concerns to raise, (2) protections appear adequate, but there are comments regarding the protocol, (3) protections appear inadequate and the Initial Review Group has concerns related to human subjects, or (4) disapproval of the application is recommended because the research risks are sufficiently serious and protection against the risks are inadequate as to make the entire application unacceptable.

Review criteria for programmatic importance are as follows:

1. Magnitude of the problem in terms of numbers of youth workers affected.
2. Severity of the injury or disease in the youth population.
3. Usefulness to applied-technical knowledge in the identification, evaluation, or control of occupational safety and health hazards in agriculture on a national or regional basis.

The following will be considered in making funding decisions:

1. Merit of the proposed project as determined by the initial peer review.
2. Programmatic importance of the project as determined by secondary review.
3. Availability of funds.
4. Program balance among priority areas of this announcement.

Executive Order 12372 Review

Applications are not subject to the review requirements of Executive Order 12372.

Public Health System Reporting Requirement

This program is not subject to the Public Health System Reporting Requirements.

Catalog of Federal Domestic Assistance Number

The Catalog of Federal Domestic Assistance number is 93.262.

Other Requirements

Human Subjects

The applicant must comply with the Department of Health and Human Services Regulations, 45 CFR part 46, regarding the protection of human subjects. Assurances must be provided to demonstrate that the project will be subject to initial and continuing review by an appropriate institutional review committee. The applicant will be responsible for providing assurance in accordance with the appropriate guidelines and form provided in the application kit.

Women and Racial and Ethnic Minorities

It is the policy of the CDC to ensure that women and racial and ethnic groups will be included in CDC-supported research projects involving human subjects, whenever feasible and appropriate. Racial and ethnic groups are those defined in OMB Directive No. 15 and include American Indian or Alaska Native, Asian, Black or African American, Native Hawaiian or other Pacific Islander, and Hispanic or Latino. Applicants shall ensure that women and racial and ethnic minority populations are appropriately represented in applications for research involving human subjects. Where clear and compelling rationale exist that inclusion is not feasible, this situation must be explained as part of the application. In conducting the review of applications for scientific merit, review groups will evaluate proposed plans for inclusion of minorities and both sexes as part of the scientific assessment and assigned score. This policy does not apply to research studies when the investigator cannot control the race, ethnicity and/or sex of subjects. Further guidance to this policy is contained in the **Federal Register**, Vol. 60, No. 179, Friday, September 15, 1995, pages 47947–47951.

Application Submission and Deadlines

A. Preapplication Letter of Intent

Although not a prerequisite of application, a non-binding letter of intent-to-apply is requested from potential applicants. The letter should be submitted to the Grants Management Officer (whose address is reflected in section B, "Applications"). It should be postmarked no later than March 3, 1998. The letter should identify the announcement number, name of principal investigator, and specify the priority area to be addressed by the proposed project. The letter of intent does not influence review or funding decisions, but it will enable CDC to plan the review more efficiently, and will ensure that each applicant receives timely and relevant information prior to application submission.

VOL
63
ISS

JA
21
1998
UMI

B. Applications

Applicants should use Form PHS–398 (OMB Number 0925–0001) and adhere to the ERRATA Instruction Sheet for Form PHS–398 contained in the Grant Application Kit. Please submit an original and five copies on or before April 16, 1998 to: Ron Van Duyne, Grants Management Officer, ATTN: Joanne Wojcik, Grants Management Branch, Procurement and Grants Office, Centers for Disease Control and Prevention (CDC), 255 East Paces Ferry Road, NE., Room 300, MS E–13, Atlanta, GA 30305.

C. Deadlines

1. Applications shall be considered as meeting a deadline if they are either:

a. Received at the above address on or before the deadline date, or

b. Sent on or before the deadline date to the above address, and received in time for the review process.

Applicants should request a legibly dated U.S. Postal Service postmark or obtain a legibly dated receipt from a commercial carrier or the U.S. Postal Service. Private metered postmarks shall not be accepted as proof of timely mailings.

2. Applications which do not meet the criteria above are considered late applications and will be returned to the applicant.

Where to Obtain Additional Information

To receive additional written information call 1–888–GRANTS4. You will be asked your name, address, and telephone number and will need to refer to Announcement 817. You will receive a complete program description, information on application procedures, and application forms. In addition, this announcement is also available through the CDC Home Page on the Internet. The address for the CDC Home Page is (http://www.cdc.gov).

If you have questions after reviewing the contents of all the documents, business management information may be obtained from Joanne Wojcik, Grants Management Specialist, Grants Management Branch, Procurement and Grants Office, Centers for Disease Control and Prevention (CDC), 255 East Paces Ferry Road, NE., MS E–13, Atlanta, GA 30305, telephone (404) 842–6535; fax: (404) 842–6513; Internet: jcw6@cdc.gov.

Programmatic technical assistance may be obtained from Roy M. Fleming, Sc.D., Director Research Grants Program, National Institute for Occupational Safety and Health, Centers for Disease Control and Prevention (CDC), 1600 Clifton Road, NE., Building 1, Room 3053, MS–D30, Atlanta, GA 30333, telephone 404–639–3343; fax 404–639–4616; internet: rmf2@cdc.gov.

Please refer to announcement number 817 when requesting information and submitting an application.

This and other CDC Announcements can be found on the CDC homepage (http://www.cdc.gov) under the "Funding" section, as well as on the NIOSH homepage (http://www.cdc.gov/niosh/homepage.html) under "Funding Opportunities/Extramural Programs." For your convenience, you may be able to retrieve a copy of the PHS Form 398 from (http://www.nih.gov/grants/funding/phs398/phs398.html). CDC will not send application kits by facsimile or express mail.

Potential applicants may obtain a copy of "Healthy People 2000" (Full Report, Stock No. 017–001–00474–0) or "Healthy People 2000" (Summary Report, Stock No. 017–001–00473–1) through the Superintendent of Documents, Government Printing Office, Washington, DC 20402–9325, telephone (202) 512–1800.

BILLING CODE 4163–19–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[Program Announcement 98019]

Fiscal Year 1998 Pfiesteria-Related Illness Surveillance and Prevention

Introduction

The Centers for Disease Control and Prevention (CDC) announces the availability of fiscal year (FY) 1998 funds for cooperative agreements for Pfiesteria-Related Illness Surveillance and Prevention. These cooperative agreements are intended to strengthen and provide interstate uniformity for surveillance programs, epidemiologic and laboratory investigations, prevention and control activities, and identification of exposed cohorts at the State and local levels.

CDC is committed to achieving the health promotion and disease prevention objectives of Healthy People 2000, a national activity to reduce morbidity and mortality and improve the quality of life. This announcement is related to the priority area of Environmental Health. (For ordering a copy of Healthy People 2000, see the section **Where to Obtain Additional Information**.)

Authority

This program is authorized under section 301(a) and 317 of the Public Health Service Act, (42 U.S.C. 241(a) and 247b), as amended.

Smoke-Free Workplace

CDC strongly encourages all grant recipients to provide a smoke-free workplace and to promote the non-use of all tobacco products, and Public Law 103–227, the Pro-Children Act of 1994, prohibits smoking in certain facilities that receive Federal funds and in which education, library, day care, health care, and early childhood development services are provided to children.

Restrictions on Lobbying

Applicants should be aware of restrictions on the use of HHS funds for lobbying of Federal or State legislative bodies. Under the provisions of 31 U.S.C. Section 1352 (which has been in effect since December 23, 1989), recipients (and their subtier contractors) are prohibited from using appropriated Federal funds (other than profits from a Federal contract) for lobbying Congress or any Federal agency in connection with the award of a particular contract, grant, cooperative agreement, or loan. This includes grants/cooperative agreements that, in whole or in part, involve conferences for which Federal funds cannot be used directly or indirectly to encourage participants to lobby or to instruct participants on how to lobby.

In addition, the current HHS Appropriations Act expressly prohibits the use of appropriated funds for indirect or grass roots lobbying efforts that are designed to support or defeat legislation pending before State legislatures.

Section 503 of the law provides as follows:

(a) No part of any appropriation contained in this Act shall be used, other than for normal and recognized executive-legislative relationships, for publicity or propaganda purposes, for the preparation, distribution, or use of any kit, pamphlet, booklet, publication, radio, television, or video presentation designed to support or defeat legislation pending before the Congress or any State legislature, except in presentation to the Congress or any State legislature itself.

(b) No part of any appropriation contained in this Act shall be used to pay the salary or expenses of any grant or contract recipient, or agent acting for such recipient, related to any activity designed to influence legislation or appropriations pending before the Congress or any State legislature.

Eligible Applicant

Applicants will be limited to the official State public health departments of States having confirmed (i.e., cases meeting the CDC set of exposure criteria and clinical signs and symptoms for Pfiesteria) or suspected cases of Pfiesteria-related illness that are being investigated by State health departments, or those States with coastal waters that have been infected by Pfiesteria or Pfiesteria-like organisms.

The CDC set of exposure criteria and clinical signs and symptoms for Pfiesteria are defined as: Exposure to estuarine water characterized by one of the following: (1) Fish with lesions consistent with *Pfiesteria piscicida* or morphologically related organisms (MRO) toxicity (20 percent of at least 50 fish of one species having lesions); (2) a fish kill with fish having lesions consistent with Pfiesteria or MRO toxicity; or (3) a fish kill involving fish without lesions, in the presence of Pfiesteria or MRO, without an alternative reason for the fish kill. The clinical features include the following signs and symptoms: (1) Memory loss, (2) confusion, (3) acute skin burning (upon direct contact with water), or (4) three or more of the following: a. headaches; b. skin rash; c. eye irritation; d. upper respiratory irritation; e. muscle cramps; f. nausea/vomiting/diarrhea/abdominal cramps.

Availability of Funds

Up to $3.5 million will be available in FY 1998 to fund up to 8 awards. Awards for the initial budget period will be based upon the extent of the problem and are expected to range from approximately $150,000 to $450,000. The awards will be made on or about March 15, 1998, for a 12-month budget period and a project period of up to 5 years. Funding estimates may vary and are subject to change.

Continuation awards within the project period will be made on the basis of satisfactory progress and the availability of funds.

Purpose

The purpose of the Pfiesteria-related Surveillance and Prevention Program is to assist State/local public health departments with: (1) Surveillance activities for adverse human health outcomes and exposure to infected waters; (2) epidemiologic studies including objective review of human health outcomes; (3) laboratory investigations; and (4) prevention and control activities.

Program Requirements

Cooperative Activities

In conducting activities to achieve the purpose of this program, the recipient shall be responsible for conducting activities under A. (Recipient Activities), and CDC will be responsible for conducting activities under B. (CDC Activities).

A. Recipient Activities

The following activities should be planned and conducted in collaboration and coordination with CDC by State/local health departments, and, where appropriate, in consultation with:

—Appropriate State and local professional associations;
—Health care providers and institutions serving, diagnosing, or providing treatment and care for persons having Pfiesteria-related symptoms, including laboratories conducting testing;
—Community groups and organizations.
—Universities and health research agencies.

Specific surveillance and prevention activities should:

1. Identify individuals with high risk of exposure to Pfiesteria-infected waters.

2. Conduct investigation of all cases of Pfiesteria-related illnesses meeting the CDC set of exposure conditions and clinical signs and symptoms to determine risk factors for illness and to provide clinical materials for laboratory confirmation.

3. Develop and conduct surveillance activities to identify potential sources of exposure to Pfiesteria or Pfiesteria-like organisms, and provide samples to CDC for additional laboratory analysis.

4. Assess clinical data on persons with Pfiesteria-related illnesses to assist in guiding the development of treatment strategies.

5. Develop and implement appropriate prevention strategies and develop information materials for use by health professionals and the public to aid in prevention and control of Pfiesteria-related illness.

B. CDC Activities

1. Provide consultation and scientific and technical assistance and training, in planning, implementing, and evaluating Pfiesteria exposure cohort studies, surveillance, epidemiologic research, laboratory and prevention activities.

2. Assist in developing a format for reporting surveillance data including case report forms, database, and assistance in establishing and maintaining the reporting system.

3. Bank and conduct laboratory analysis of biological specimens.

4. Participate with States to finalize mutually agreed upon standardized study protocols and, where appropriate, data collection instruments for the projects/studies.

5. Coordinate clinical evaluations and studies to assure comparability of data and therapeutic protocols.

6. Provide or assist in preparing standard data collection forms, questionnaires, etc., as needed in surveillance activities and special epidemiologic investigations.

7. Assist in the evaluation of the overall effectiveness of program operations, including the impact of surveillance data on the development of public policy, and on targeting and evaluating prevention activities.

8. Participate in the analysis of information and data gathered from program activities and facilitate the transfer of information and technology among all States and communities.

Technical Reporting Requirements

An original and two copies of a semiannual progress report must be submitted 30 days after the end of each semiannual period. Final financial and performance reports are due no later than 90 days after the end of the project period. All reports will be submitted to the Grants Management Branch, Procurement and Grants Office, CDC.

VOL 63 ISS 13 JA 21 1998 UMI

Application Content

Applications must be developed in accordance with PHS Form 5161–1 (OMB Number 0937–0189), information contained in the program announcement and the instructions and format provided below.

1. Abstract

A one-page, single spaced, typed abstract must be submitted with the application. The heading should include the title of the grant program, project title, organization name and address, project director and telephone number. The abstract should briefly summarize the program for which funds are requested, the activities to be undertaken, and the applicants's organization and composition. The abstract should follow application forms and precede the Program Narrative.

2. Program Narrative

The Program Narrative should specifically address all items in the **Program Requirements** section of this announcement. The applicant should provide a description of the planned first year activities, and briefly describe future year objectives and activities. The criteria listed in the **Evaluation Criteria** section will serve as the basis for evaluating the application; therefore, the narrative of the application should address the following.

a. Applicant's understanding of the problem.

b. Applicant's ability to carry out the project.

c. Technical and program personnel capability.

d. Women, Racial and Ethnic Minorities. A description of the proposed plan for the inclusion of both sexes and racial and ethnic minority populations for appropriate representation.

e. Budget justification.

f. Human Subjects review: The project involves research on human subjects, and therefore, the applicant must describe and demonstrate that the project has been subject to initial review by an appropriate institutional review committee, and that continuing review will occur. The applicant will be responsible for providing assurance in accordance with the appropriate guidelines and Human Subjects Assurance form provided in the application kit.

The Program Narrative section should not exceed 40 double-spaced pages excluding attachments (e.g., resumes, appendices, etc.). Do not include a detailed budget or detailed budget justification as part of the Program Narrative.

An original application and two copies should be submitted. The original and each copy of the application must be submitted unstapled and unbound. All material must be typewritten, double-spaced, with un-reduced type on 8½" by 11" paper, with at least 1" margins, headers and footers, and printed on one side only.

All graphics, maps, overlays, etc., should be in black and white and meet the above criteria.

Omissions or incomplete information may affect the rating of the application.

Evaluation Criteria

Each application will be reviewed and evaluated individually according to the following criteria:

A. Understanding of the Problem—25 Points

Extent to which the applicant understands the purpose and requirements of the program. This includes the extent of the applicant's identification and description of the problem, the realistic presentation of objectives to establish effective surveillance system and prevention programs, and evaluation criteria established to assess surveillance, epidemiologic research, and prevention activities.

B. Ability to Carry Out the Project—25 Points

Degree to which the applicant provides evidence of ability to carry out the proposed project and the extent to which the applicant documents demonstrated capability to achieve the objectives of the proposed program. This may include plans, approaches, and methods to be used in conducting and evaluating surveillance, epidemiologic research, and prevention programs, and may include collaborating with universities or other health research agencies.

C. Technical Approach—20 Points

Degree to which proposed objectives are clearly stated, realistic, measurable, time-phased, and related to the stated purpose of this project. Also, the adequacy of the proposed surveillance, epidemiologic research, and prevention plans to achieve the objectives. The degree to which the applicant has met the CDC Policy requirements regarding the inclusion of women, ethnic, and racial groups in the proposed project. This includes: (a) The proposed plan for the inclusion of both sexes and racial and ethnic minority populations for appropriate representation; (b) The proposed justification when representation is limited or absent; (c) A statement as to whether the design of the study is adequate to measure differences when warranted; and (d) A statement as to whether the plans for recruitment and outreach for study participants include the process of establishing partnerships with communities and recognition of mutual benefits will be documented.

D. Personnel—20 Points

Extent to which professional personnel involved in this project are qualified, including evidence of experience similar to this project.

E. Plans for Administration—10 Points

Adequacy of plans for administering the project.

F. Funding Requirements—(Not Weighted)

Itemized budget for conducting the project, along with justification, is provided and is reasonable.

G. Human Subjects—(Not Weighted)

The extent to which the applicant complies with the Department of Health and Human Services Regulations (45 CFR part 46) regarding the protection of human subjects.

Executive Order 12372

Applications are subject to the Intergovernmental Review of Federal Programs as governed by Executive Order (E.O.) 12372.

E.O. 12372 sets up a system for State and local government review of proposed Federal assistance applications. Applicants should contact their State Single Point of Contact (SPOC) as early as possible to alert them to the application and receive any necessary instructions on the State process. Since the proposed project will serve more than one State, the applicant is advised to contact the SPOC of each affected State. A current list of SPOCs is included in the application kit. If SPOCs have any State process recommendations on the application submitted to CDC, they should forward them to Ron Van Duyne, Grants Management Officer, Grants Management Branch, Procurement and Grants Office, Centers for Disease Control and Prevention (CDC), 255 East Paces Ferry Road, NE., Room 321, Mailstop E–13, Atlanta, Georgia 30305, no later than 60 days after the receipt date of the application.

The granting agency does not guarantee to "accommodate or explain" State process recommendations it receives after that date.

Public Health System Reporting Requirements

This program is not subject to the Public Health System Reporting Requirements.

Catalog of Federal Domestic Assistance Number

The Catalog of Federal Domestic Assistance number for this program is 93.283.

Other Requirements

Paperwork Reduction Act

Projects that involve the collection of information from 10 or more individuals and funded by the cooperative agreement will be subject to review and approval by the Office of Management and Budget (OMB) under the Paperwork Reduction Act.

Human Subjects

The applicant must comply with the Department of Health and Human Services Regulations, 45 CFR part 46, regarding the protection of human subjects. Assurances must be provided to demonstrate that the project will be subject to initial and continuing review by an appropriate institutional review committee. The applicant will be responsible for providing assurance in accordance with the appropriate guidelines and forms provided in the application kit.

Women, Racial and Ethnic Minorities

It is the policy of the CDC to ensure that individuals of both sexes and the various racial and ethnic groups will be included in CDC-supported research projects involving human subjects, whenever feasible and appropriate. Racial and ethnic groups are those defined in OMB Directive No. 15 and include American Indian or Alaska Native, Asian, Black or African American, Hispanic or Latino, and Native Hawaiian or other Pacific Islander. Applicants shall ensure that women, racial and ethnic minority populations are appropriately represented in applications for research involving human subjects. Where clear and compelling rationale exists that inclusion is inappropriate or not reasonable, this situation must be explained as part of the application. This policy does not apply to research studies when the investigator cannot control the race, ethnicity and/or sex of subjects. Further guidance to this policy is contained in the **Federal Register**, Vol. 60, No. 179, Friday, September 15, 1995, pages 47947–47951 (a copy is included in the application kit).

Application Submission and Deadline

The original and two copies of the application, PHS Form 5161–1 (OMB Number 0937–0189), must be submitted to Ron Van Duyne, Grants Management Officer, Attention: Patrick A. Smith, Grants Management Specialist, Grants Management Branch, Procurement and Grants Office, Centers for Disease Control and Prevention (CDC), 255 East Paces Ferry Road, NE., Mailstop E–13, Room 321, Atlanta, Georgia 30305, on or before February 23, 1998.

1. *Deadline:* Applications shall be considered as meeting the deadline if they are either:

a. Received on or before the deadline date; or

b. Sent on or before the deadline date and received in time for submission to the objective review group. (Applicants should request a legibly dated U.S. Postal Service postmark or obtain a legibly dated receipt from a commercial carrier or U.S. Postal Service. Private metered postmarks shall not be acceptable proof of timely mailing.)

2. *Late Applications:* Applications which do not meet the criteria in 1.a. or 1.b. above are considered late applications. Late applications shall not be considered in the current competition for funding and will be returned to the applicant.

Where To Obtain Additional Information

To receive additional written information call 1–888–GRANTS4. You will be asked to leave your name, address, and telephone number and will need to refer to NCEH Announcement 98019. You will receive a complete program description, information on application procedures, and application forms. CDC will not send application kits by facsimile or express mail.

Please refer to announcement number 98019 when requesting information and submitting an application.

If you have questions after reviewing the contents of all the documents, business management technical assistance may be obtained from Patrick Smith, Grants Management Specialist, Grants Management Branch, Procurement and Grants Office, Centers for Disease Control and Prevention (CDC), 255 East Paces Ferry Road, NE., Mailstop E–13, Atlanta, Georgia 30305, telephone (404) 842–6803, Internet: phs3@cdc.gov.

Programmatic technical assistance may be obtained from Lawrence E. Posey, Health Studies Branch, Division of Environmental Health, National Center for Environmental Health, Centers for Disease Control and Prevention (CDC), 1600 Clifton Road, NE., Mailstop F–46, Atlanta, Georgia 30333, telephone (770) 488–7350, Internet: lep1@cdc.gov.

Potential applicants may obtain a copy of "Healthy People 2000" (Full Report; Stock No. 017–001–00474–0) or "Healthy People 2000" (Summary Report; Stock No. 017–001–00473–1) referenced in the INTRODUCTION may be obtained through the Superintendent of Documents, Government Printing Office, Washington, DC 20402–9325, telephone (202) 512–1800.

This and other CDC announcements are available through the CDC homepage on the Internet. The address for the CDC homepage is: http://www.cdc.gov.

Dated: January 14, 1998.

Joseph R. Carter,

Acting Associate Director for Management and Operations, Centers for Disease Control and Prevention (CDC).

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. 97N–0531]

Agency Information Collection Activities; Submission for OMB Review; Comment Request

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that the proposed collection of information listed below has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995 (the PRA).

DATES: Submit written comments on the collection of information by February 20, 1998.

ADDRESSES: Submit written comments on the collection of information to the Office of Information and Regulatory Affairs, OMB, New Executive Office Bldg., 725 17th St. NW., rm. 10235, Washington, DC 20503, Attn: Desk Officer for FDA.

FOR FURTHER INFORMATION CONTACT: Margaret R. Schlosburg, Office of Information Resources Management (HFA–250), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–827–1223.

SUPPLEMENTARY INFORMATION: In compliance with section 3507 of the PRA (44 U.S.C. 3507), FDA has submitted the following proposed

VOL 63 ISS 13 JA 21 1998 UMI

collection of information to OMB for review and clearance.

Exemptions and Variances from the Performance Standard for Electrode Lead Wires and Patient Cables

FDA regulations in part 898 (21 CFR part 898) mandate a performance standard for electrode lead wires and patient cables. The purpose of the performance standard is to prevent electrocution from the use of unprotected electrode lead wires and patient cables with medical devices. To provide maximum flexibility in situations where the electrical accidents can be prevented in other ways, § 898.14 provides that any person subject to the performance standard may submit a petition under 21 CFR 10.30 requesting an exemption or variance from the standard. The petition must demonstrate why compliance with the standard is unnecessary or unfeasible and what alternate means will be used to protect the public health. FDA will use this information to determine whether granting an exemption is in the best interests of the public health. Allowing for exemptions and variances will provide for flexibility while assuring public health protection. Section 898.14 is stayed pending OMB clearance. FDA will announce the effective date of § 898.14 in the **Federal Register**. Anticipated respondents to this collection of information are medical device manufacturers and distributors, and health care facilities.

TABLE 1.—ESTIMATED ANNUAL REPORTING BURDEN[1]

21 CFR Section	No. of Respondents	Annual Frequency per Response	Total Annual Responses	Hours per Response	Total Hours
10.30	50	1	50	10	500

[1] There are no capital costs or operating maintenance costs associated with this collection of information.

Dated: January 8, 1998.

William K. Hubbard,

Associate Commissioner for Policy Coordination.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. 98N–0015]

Medical Devices; Exemptions From Premarket Notification; Class II Devices

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is publishing a list of class II (special controls) devices, subject to certain limitations, that are now exempt from the premarket notification requirements under the Food and Drug Administration Modernization Act of 1997 (the FDAMA). FDA believes that these exemptions will relieve manufacturers from the need to submit premarket notification submissions for these devices and will enable FDA to redirect the resources that would be spent on reviewing such submissions to more significant public health issues. FDA is taking this action in order to meet a requirement of the FDAMA.

DATES: Effective January 21, 1998. Comments on this notice should be submitted within 90 days of publication. The agency will review any comments submitted within the 90-day comment period and will consider whether the list of class II devices that are exempt from the premarket notification requirements should be modified.

ADDRESSES: Submit written comments on this notice to the Dockets Management Branch (HFA–305), Food and Drug Administration, 12420 Parklawn Dr., rm. 1–23, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Heather S. Rosecrans, Center for Devices and Radiological Health (HFZ–404), Food and Drug Administration, 9200 Corporate Blvd., Rockville, MD 20850, 301–594–1190.

SUPPLEMENTARY INFORMATION:

I. Statutory Background

Under section 513 of the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 360c), FDA must classify devices into one of three regulatory classes: Class I, class II, or class III. FDA classification of a device is determined by the amount of regulation necessary to provide a reasonable assurance of safety and effectiveness. Under the Medical Device Amendments of 1976 (the 1976 amendments (Pub. L. 94–295)), as amended by the the Safe Medical Devices Act of 1990 (the SMDA (Pub. L. 101–629)), devices are to be classified into class I (general controls) if there is information showing that the general controls of the act are sufficient to assure safety and effectiveness; into class II (special controls), if general controls, by themselves, are insufficient to provide reasonable assurance of safety and effectiveness, but there is sufficient information to establish special controls to provide such assurance; and into class III (premarket approval), if there is insufficient information to support classifying a device into class I or class II and the device is a life-sustaining or life-supporting device or is for a use which is of substantial importance in preventing impairment of human health, or presents a potential unreasonable risk of illness or injury.

Most generic types of devices that were on the market before the date of the 1976 amendments (May 28, 1976) (generally referred to as preamendments devices) have been classified by FDA under the procedures set forth in section 513(c) and (d) of the act through the issuance of classification regulations into one of these three regulatory classes. Devices introduced into interstate commerce for the first time on or after May 28, 1976 (generally referred to as postamendments devices) are classified through the premarket notification process under section 510(k) of the act (21 U.S.C. 360(k)). Section 510(k) of the act and the implementing regulations, 21 CFR part 807, require persons who intend to market a new device to submit a premarket notification report containing information that allows FDA to determine whether the new device is "substantially equivalent" within the meaning of section 513(I) of the act to a legally marketed device that does not require premarket approval. Unless exempted from premarket notification requirements, persons may not market a new device, under section 510(k), unless they receive a substantial equivalence order from FDA or an order reclassifying the device into class I or class II (section 513(I) of the act).

On November 21, 1997, the President signed into law the FDAMA. Section

206 of the FDAMA, in part, added a new section 510(m) to the act. Section 510(m)(1) of the act requires FDA, within 60 days after enactment of the FDAMA, to publish in the **Federal Register** a list of each type of class II device that does not require a report under section 510(k) of the act (generally referred to as a premarket notification or "510(k)") to provide reasonable assurance of safety and effectiveness. Section 510(m) of the act further provides that a 510(k) will no longer be required for these devices upon the date of publication of the list in the **Federal Register**.

Section 510(m)(2) of the act provides that, 1 day after date of publication of the list under section 510(m)(1), FDA may exempt a device on its own initiative or upon petition of an interested person, if FDA determines that a 510(k) is not necessary to provide reasonable assurance of the safety and effectiveness of the device. This section requires FDA to publish in the **Federal Register** a notice of intent to exempt a device, or of the petition, and to provide a 30-day comment period. Within 120 days of publication of this document, FDA must publish in the **Federal Register** its final determination. If FDA fails to respond to a petition under this section within 180 days of receiving it, the petition shall be deemed granted.

II. Criteria for Exemption

In considering whether to exempt class II devices from premarket notification, FDA focused on whether premarket notification for the type of device is necessary to provide reasonable assurance of safety and effectiveness of the device. FDA considered the following factors: (1) The device does not have a significant history of false or misleading claims or of risks associated with inherent characteristics of the device, such as device design or materials (when making these determinations, FDA has considered the risks associated with false or misleading claims, and the frequency, persistence, cause or seriousness of the inherent risks of the device); (2) characteristics of the device necessary for its safe and effective performance are well established; (3) changes in the device that could affect safety and effectiveness will either: (a) Be readily detectable by users by visual examination or other means such as routine testing, before causing harm, e.g., testing of a clinical laboratory reagent with positive and negative controls; or (b) not materially increase the risk of injury, incorrect diagnosis, or ineffective treatment; and (4) any changes to the device would not be likely to result in a change in the device's classification.

FDA also considered that even when exempting devices, these devices would still be subject to the limitations on exemptions, as described in section III of this document.

III. Limitations on Exemptions

The exemption from the requirement of premarket notification for a generic type of device listed in this document applies only to those devices that have existing or reasonably foreseeable characteristics of commercially distributed devices within that generic type, or, in the case of in vitro diagnostic devices, for which a misdiagnosis, as a result of using the device, would not be associated with high morbidity or mortality. Accordingly, a class II device listed in this document is not exempt if such device: (1) Has an intended use that is different from the intended use of a legally marketed device in that generic type; e.g., the device is intended for a different medical purpose, or the device is intended for lay use instead of use by health care professionals; or (2) operates using a different fundamental scientific technology than that used by a legally marketed device in that generic type; e.g., a surgical instrument cuts tissue with a laser beam rather than with a sharpened metal blade, or an in vitro diagnostic device detects or identifies infectious agents by using a deoxyribonucleic acid (DNA) probe or nucleic acid hybridization or amplification technology rather than culture or immunoassay technology; or (3) is an in-vitro device: That is intended for use in the diagnosis, monitoring or screening of neoplastic diseases with the exception of immunohistochemical devices; is intended for use in screening or diagnosis of familial and acquired genetic disorders, including inborn errors of metabolism; is intended for measuring an analyte which serves as a surrogate marker for screening, diagnosis, or monitoring life threatening diseases such as acquired immune deficiency syndrome (AIDS), chronic or active hepatitis, tuberculosis, or myocardial infarction, or to monitor therapy; is intended to assess the risk of cardiovascular diseases; is intended for use in diabetes management; is intended to identify or infer the identity of a microorganism directly from clinical material; is intended for detection of antibodies to microorganisms other than immunoglobulin G (IgG) and IgG assays when the results are not qualitative, or are used to determine immunity, or the assay is intended for use in matrices other than serum or plasma; uses noninvasive testing; is intended for near-patient testing (point of care).

Class II devices incorporating such changes or modifications are not exempt from premarket notification because FDA has determined that premarket notification is necessary to assure the safety and effectiveness of the device.

In addition to the general limitation on exemptions that applies to all class II devices that are described previously, FDA may limit the exemption from premarket notification requirements to certain devices within a generic class. For example, FDA, in section IV of this document, is listing the exemption of the biofeedback device, but limits the exemption to prescription battery powered devices that are indicated for relaxation training and muscle reeducation. All other biofeedback devices are still subject to premarket notification requirements because FDA determined that premarket notification was necessary to provide a reasonable assurance of safety and effectiveness for these devices.

FDA advises, additionally, that an exemption from the requirement of premarket notification does not mean that the device is exempt from any other statutory or regulatory requirements, unless such exemption is explicitly provided by order or regulation. Indeed, FDA's determination that premarket notification was unnecessary to provide a reasonable assurance of safety and effectiveness for devices listed in this document is based, in part, on the assurance of safety and effectiveness that other regulatory controls, such as current good manufacturing practice requirements, provide.

Persons with pending 510(k) submissions for devices that are exempted in this document, subject to the limitations on exemptions, should withdraw their submissions.

IV. List of Class II Devices Exempted

FDA is identifying the following devices as class II devices that, as of the date of publication of this document, are exempt from the requirement to submit a premarket notification under section 510(k) of the act, subject to limitations on exemptions in this document:

TABLE 1.—EXEMPTED CLASS II DEVICES

21 CFR Sections	Name of Devices
862.1440	Lactate dehydrogenase test system
862.1635	Total protein test system
864.6100	Bleeding time device
864.6400	Hematocrit measuring device
864.9160	Blood group substances of nonhuman origin for in vitro diagnostic use
864.9550	Lectins and protectins
864.9575	Environmental chamber for storage of platelet concentrate
864.9600	Potentiating media for in vitro diagnostic use
864.9700	Blood storage refrigerator and blood storage freezer
866.3060	Blastomyces dermatitidis serological reagents
866.3085	Brucella spp. serological reagents
866.3135	Coccidioides immitis serological reagents
866.3165	Cryptococcus neoformans serological reagents
866.3220	Entamoeba histolytica serological reagents
866.3280	Francisella tularensis serological reagents
866.3300	Haemophilus spp. serological reagents
866.3320	Histoplasma capsulatum serological reagents
866.3350	Leptospira spp. serological reagents
866.3415	Pseudomonas spp. serological reagents
866.3460	Rabiesvirus immunofluorescent reagents
866.3550	Salmonella spp. serological reagents
866.3660	Shigella spp. serological reagents
866.3930	Vibrio cholerae serological reagents
866.5040	Albumin immunological test system
866.5210	Ceruloplasmin immunological test system
866.5320	Properdin factor B immunological test system
866.5380	Free secretory component immunological test system
866.5460	Haptoglobin immunological test system
866.5470	Hemoglobin immunological test system
866.5490	Hemopexin immunological test system
876.1620	Urodynamics measurement system
876.1800	Urinev flow or volume measuring system
876.2040	Enuresis alarm
876.4370	Gastroenterlogy-urology evacuator
876.4650	Water jet renal stone dislodger system
876.4680	Uretal stone dislodger
876.4890(b)(1)	Urological table and accessories
876.5250(b)(1)	Urine collector and accessories
880.2200	Liquid crystal forehead temperature strip
880.2920	Clinical mercury thermometer
880.5100	AC-powered adjustable hospital bed
880.5140	Pediatric hospital bed
880.5475	Jet lavage
880.5500	AC-powered patient lift
880.5550	Alternating pressure air flotation mattress
880.6740	Vacuum-powered body fluid suction apparatus
880.6775	Powered patient transfer device
880.6910	Wheeled stretcher
882.5050	Biofeedback device[1]
886.3100	Ophthalmic tantalum clip
886.3130	Ophthalmic conformer
886.3800	Scleral shell
890.1925	Isokinetic testing and evaluation system
890.3500	External assembled lower limb prosthesis
890.3710	Powered communication system
890.3725	Powered environmental control system
890.5160	Air-fluidized bed
890.5170	Powered flotation therapy bed
890.5225	Powered patient rotation bed
890.5720	Water circulating hot or cold pack
890.5740	Powered heating pad
892.1980	Radiologic table

[1] Exemption is limited to prescription battery powered devices that are indicated for relaxation training and muscle reeducation and prescription use.

V. Additional Exemptions

Under section 510(m)(2) of the act, as described previously, interested persons may request that FDA exempt any class II device from the premarket notification requirements. The request should identify the generic type of device by the CFR section number (e.g., 21 CFR 884.1234) and state clearly why the submitter believes the factors described in section II of this document apply, and that premarket notification requirements are not necessary to provide reasonable assurance of the safety and effectiveness of the device. By February 19, 1998, FDA will provide guidance on how to request such an exemption.

Dated: January 15, 1998.

William B. Schultz,

Deputy Commissioner for Policy.

Food and Drug Administration

Immunology Devices Panel of the Medical Devices Advisory Committee; Notice of Meeting

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

This notice announces a forthcoming meeting of a public advisory committee of the Food and Drug Administration (FDA). At least one portion of the meeting will be closed to the public.

Name of Committee: Immunology Devices Panel of the Medical Devices Advisory Committee.

General Function of the Committee: To provide advice and recommendations to the agency on FDA regulatory issues.

Date and Time: The meeting will be held on February 2, 1998, 9:30 a.m. to 6:30 p.m.

Location: Parklawn Bldg., conference rooms D & E, 5600 Fishers Lane, Rockville, MD.

Contact Person: Peter E. Maxim, Center for Devices and Radiological Health (HFZ–440), Food and Drug Administration, 2098 Gaither Rd., Rockville, MD 20850, 301–594–1293, or FDA Advisory Committee Information Line, 1–800–741–8138 (301–443–0572 in the Washington, DC area), code 12516. Please call the Information Line for up-to-date information on this meeting.

Agenda: The committee will discuss proposed prescription home use labeling for a unitized bladder cancer tumor marker assay used to aid in the detection of bladder cancer recurrence. Also, the committee will discuss, make recommendations, and vote on a premarket approval application for a free PSA (prostate-specific antigen) assay. The assay is intended to be used in men over the age of 50 with a negative digital rectal examination and a total serum PSA measurement of 4.0 to 10.0 nanograms/milliliter. The free PSA/total PSA ratio aids in the differentiation between benign and malignant prostate disease.

Procedure: On February 2, 1998, from 10 a.m. to 6:30 p.m., the meeting is open to the public. Interested persons may present data, information, or views, orally or in writing, on issues pending before the committee. Written submissions may be made to the contact person by January 29, 1998. Oral presentations from the public will be scheduled between approximately 1 p.m. and 2 p.m. Time allotted for each presentation may be limited. Those desiring to make formal oral presentations should notify the contact person before January 29, 1998, and submit a brief statement of the general nature of the evidence or arguments they wish to present, the names and addresses of proposed participants, and an indication of the approximate time requested to make their presentation.

Closed Committee Deliberations: On February 2, 1998, from 9:30 a.m. to 10 a.m., the meeting will be closed to permit discussion and review of trade secret and/or confidential information (5 U.S.C. 552b(c)(4)). FDA staff will present to the committee confidential information regarding present or future issues.

FDA regrets that it was unable to publish this notice 15 days prior to the February 2, 1998, Immunology Devices Panel of the Medical Devices Advisory Committee meeting. Because the agency believes there is some urgency to bring this issue to public discussion and qualified members of the Immunology Devices Panel of the Medical Devices Advisory Committee were available at this time, the Commissioner concluded that it was in the public interest to hold this meeting even if there was not sufficient time for the customary 15-day public notice.

Notice of this meeting is given under the Federal Advisory Committee Act (5 U.S.C. app. 2).

Dated: January 15, 1998.

Michael A. Friedman,

Deputy Commissioner for Operations.

Draft "Guidance for Industry: For the Submission of Chemistry, Manufacturing and Controls and Establishment Description Information for Human Plasma-Derived Biological Products or Animal Plasma or Serum-Derived Products;" Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of the draft guidance document entitled "Guidance for Industry: For the Submission of Chemistry, Manufacturing and Controls and Establishment Description Information for Human Plasma-Derived Biological Products or Animal Plasma or Serum-Derived Products." The draft guidance document is intended to assist applicants in the preparation of the content and format of the chemistry, manufacturing, and controls (CMC) section and the establishment description section of a biologics license application (BLA), revised Form FDA 356h for human plasma-derived biological products, animal plasma, or serum-derived products. This action is part of FDA's continuing effort to achieve the objectives of the President's "Reinventing Government" initiatives and FDA Modernization Act of 1997, and is intended to reduce unnecessary burdens for industry without diminishing public health protection.

DATES: Written comments may be submitted at any time, however, comments should be submitted by April 21, 1998, to ensure their adequate consideration in preparation of the final document.

ADDRESSES: Submit written requests for single copies of the draft guidance entitled "Guidance for Industry: For the Submission of Chemistry, Manufacturing and Controls and Establishment Description Information for Human Plasma-Derived Biological Products or Animal Plasma or Serum-Derived Products" to the Office of Communication, Training, and Manufacturers Assistance (HFM–40), Center for Biologics Evaluation and Research, Food and Drug Administration, 1401 Rockville Pike, Rockville, MD 20852–1448. Send one self-addressed adhesive label to assist that office in processing your requests.

VOL 63 ISS 13 JA 21 1998 UMI

The document may also be obtained by mail by calling the CBER Voice Information System at 1–800–835–4709 or 301–827–1800, or by FAX by calling the FAX Information System at 1–888–CBER–FAX or 301–827–3844. Submit written comments on the document to the Dockets Management Branch (HFA–305), Food and Drug Administration, 12420 Parklawn Dr., fm. 1–23, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Valerie A. Butler, Center for Biologics Evaluation and Research (HFM–17), Food and Drug Administration, 1401 Rockville Pike, Rockville, MD 20852–1448, 301–827–6210.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance document entitled "Guidance for Industry: For the Submission of Chemistry, Manufacturing and Controls and Establishment Description Information for Human Plasma-Derived Biological Products or Animal Plasma or Serum-Derived Products." The draft guidance provides general information for the CMC and establishment description section of the BLA, Form FDA 356h for human plasma-derived biological products, animal plasma, or serum-derived products.

In the **Federal Register** of July 8, 1997 (62 FR 36558), FDA announced the availability of a new harmonized Form FDA 356h entitled "Application to Market a New Drug, Biologic, or an Antibiotic for Human Use." The new harmonized form is intended to be used by applicants for all drug and biological products. The new harmonized form when fully implemented will allow biological product manufacturers to submit a single application, the BLA, instead of two separate license application submissions, a product license application (PLA) and an establishment license application (ELA).

The draft guidance document represents the agency's current thinking on content and format of the CMC, and establishment description information section of a license application for human plasma-derived biological products, animal plasma, or serum-derived products. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the requirements of the applicable statute, regulations, or both. As with other guidance documents, FDA does not intend this document to be all inclusive and cautions that not all information may be applicable to all situations. The document is intended to provide information and does not set forth requirements.

II. Comments

The draft guidance document is being distributed for comment purposes only and is not intended for implementation at this time. Interested persons may submit written comments to the Dockets Management Branch (address above) regarding the draft guidance document. Written comments may be submitted at any time, however, comments should be submitted by April 21, 1998, to ensure their adequate consideration in preparation of the final document. Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments and requests for copies should be identified with the docket number found in the brackets in the heading of this document. A copy of the draft guidance document and received comments are available for public examination in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

III. Electronic Access

Persons with access to the Internet may obtain the draft guidance document by using the World Wide Web (WWW). For WWW access connect to CBER at "http://www.fda.gov/cber/guidelines.htm."

Received comments will be considered in determining whether further revision of the draft guidance document is warranted.

Dated: January 13, 1998.

William K. Hubbard,

Associate Commissioner for Policy Coordination.

[Docket No. 97D–0261]

Frequently Asked Questions About the New FDA Tobacco Regulations: Draft Guidance; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration is announcing the availability of a new section to the draft guidance entitled "Frequently Asked Questions About the New FDA Tobacco Regulations." The draft guidance addresses the questions most frequently asked by retailers, consumers and others about the age and photo identification requirements of the final rule restricting the sale of cigarettes and smokeless tobacco to protect children and adolescents. The new section on enforcement procedures addresses questions raised by retailers and others concerning the amount of penalties that FDA intends to seek for third and subsequent violations of the age and identification requirements.

DATES: Submit written comments on the draft guidance by April 21, 1998.

ADDRESSES: The draft guidance entitled "Frequently Asked Questions About the New FDA Tobacco Regulations," and the amendment are available on the Internet at http://www.fda.gov/, or a paper copy may be ordered free of charge by calling 1–888–FDA–4KIDS.

Submit written comments on the draft guidance to the Dockets Management Branch (HFA–305), Food and Drug Administration, 12420 Parklawn Dr., rm. 1–23, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Mary M. Lyda, Office of Policy (HF–11), Food and Drug Administration, 5600 Fishers Lane, rm. 14–101, Rockville, MD 20857, 301–827–3360.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of August 28, 1996 (61 FR 44396), FDA issued a final rule to restrict the sale and distribution of cigarettes and smokeless tobacco in order to protect children and adolescents (21CFR part 897). The final rule covers three general classes of nicotine-containing tobacco products: Cigarettes, loose cigarette tobacco, and smokeless tobacco. The final rule applies to manufacturers, distributors, retailers and importers who make, distribute, sell, and import such products.

Since February 28, 1997, the final rule has prohibited retailers from selling cigarettes, loose cigarette tobacco or smokeless tobacco to persons under the age of 18, and has required retailers to verify the age of customers under the age of 27 by checking an identification (ID) card which contains the bearer's photograph and birth date.

The draft guidance answers questions most frequently asked by retailers, consumers, and others concerning these requirements and the agency's enforcement plans. To ensure that retailers are complying with the requirements, FDA has commissioned State officials to conduct compliance checks, during which adolescents, accompanied by State officials, attempt to purchase cigarettes or smokeless tobacco from retailers. The guidance states that for a first violation of the age and identification requirements, FDA will issue a letter notifying the retailer that it was out of compliance and informing the retailer that FDA will schedule a followup compliance check. The guidance explains that the second time a retailer is out of compliance FDA will seek civil money penalties in the amount of $250.00.

The new section that FDA is making available addresses questions concerning the amount of penalties that FDA intends to seek for third and subsequent violations of the age and photo ID provisions of the regulation. FDA intends to seek $1,500.00 for a third violation, $5,000.00 for a fourth violation, and $10,000.00 for a fifth violation. The new section provides more information concerning the civil money penalty process under which a retailer may pay the penalty or request a hearing to contest it. Because some of the answers contained in the new section represent FDA's current interpretation of new regulatory requirements, the additions constitute guidance. Therefore, FDA is publishing the new section in draft and is soliciting public comment. FDA will review received comments and, if appropriate, revise the document in response to comments.

The draft guidance does not create or confer any rights for or on any person and does not operate to bind FDA or the public.

Interested persons may, on or before April 21, 1998, submit written comments regarding this draft guidance to the Dockets Management Branch, address above. Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. The draft guidance and received comments may be seen in the office above between 9 a.m. and 4 p.m., Monday through Friday.

Dated: January 12, 1998.

William B. Schultz,

Deputy Commissioner for Policy.

National Institutes of Health

Center for Scientific Review; Notice of Closed Meetings

Pursuant to Section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. Appendix 2), notice is hereby given of the following Center for Scientific Review Special Emphasis Panel (SEP) meetings:

Purpose/Agenda: To review Small Business Innovation Research.
Name of SEP: Biological and Physiological Sciences.
Date: February 23, 1998.
Time: 2 p.m.
Place: NIH, Rockledge 2, Room 4212, Telephone Conference.
Contact Person: Dr. Nabeeh Mourad, Scientific Review Administrator, 6701 Rockledge Drive, Room 4212, Bethesda, MD 20892, (301) 435–1222.

Name of SEP: Biological and Physiological Sciences.
Date: March 2–3, 1993.
Time: 8 a.m.
Place: Bethesda Marriott Hotel, Bethesda, MD.
Contact Person: Dr. Nabeeh Mourad, Scientific Review Administrator, 6701 Rockledge Drive, Room 4212, Bethesda, MD 20892, (301) 435–1222.

The meetings will be closed in accordance with the provisions set forth in secs. 552b(c)(4) and 552b(c)(6), Title 5, U.S.C. Applications and/or proposals and the discussions could reveal confidential trade secrets or commercial property such as patentable material and personal information concerning individuals associated with the applications and/or proposals, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

(Catalog of Federal Domestic Assistance Program Nos. 93.306, 93.333, 93.337, 93.393–93.396, 93.837–93.844, 93.846–93.878, 93.892, 93.893, National Institutes of Health, HHS)

Dated: January 14, 1998.

LaVerne Y. Stringfield,

Committee Management Officer, NIH.

Notice of Meeting of the National Advisory Council for Human Genome Research

Pursuant to Pub. L. 92–463, notice is hereby given of the meeting of the National Advisory Council for Human Genome Research, National Human Genome Research Institute, February 12–13, 1998, Holiday Inn, 5520 Wisconsin Avenue, Chevy Chase, MD.

This meeting will be open to the public on Thursday, February 12, 8:30 a.m. to approximately 3 p.m., to discuss administrative details or other issues relating to committee activities. Attendance by the public will be limited to space available.

In accordance with the provisions set forth in secs. 552b(c)(4) and 552b(c)(6), Title 5, U.S.C. and sec. 10(d) of Pub. L. 92–463, the meeting will be closed to the public on February 12, from 3 p.m. to recess, and on February 13, from 8:30 a.m. to adjournment, for the review, discussion and evaluation of individual grant applications. The applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Dr. Elke Jordan, Deputy Director, National Human Genome Research Institute, National Institutes of Health, Building 31, Room 4B09, Bethesda, MD 20892, (301) 496–0844, will furnish the meeting agenda, rosters of Committee members and consultants, and substantive program information upon request.

Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should contact Ms. Jane Ades, (301) 594–0654, two weeks in advance of the meeting.

(Catalogue of Federal Domestic Assistance Program No. 93.172, Human Genome Research)

Dated: January 14, 1998.

LaVerne Y. Stringfield,

Committee Management Officer, NIH.

National Institute of Neurological Disorders and Stroke; Division of Extramural Activities; Notice of Closed Meeting

Pursuant to Section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. Appendix 2), notice is hereby given of the following meeting:

Name of Committee: National Institute of Neurological Disorders and Stroke Special Emphasis Panel.
Date: February 25, 1998.
Time: 8 a.m.
Place: Georgetown Holiday Inn, 2101 Wisconsin Avenue, NW, Washington, DC 20007.
Contact Person: Dr. Paul Sheehy, Scientific Review Administrator, NINDS, National Institutes of Health, 7550 Wisconsin Avenue, Room 9C10, Bethesda, MD 20892, (301) 496–9223.
Purpose/Agenda: To review and evaluate one grant application.
The meeting will be closed in accordance with the provisions set forth in secs. 552b(c)(4) and 552b(c)(6), Title 5, U.S.C. Applications and/or proposals and the discussions could reveal confidential trade secrets or commercial property such as patentable material and personal information concerning individuals associated with the applications and/or proposals, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

National Institute of General Medical Sciences; Notice of Meeting of the National Advisory General Medical Sciences Council

Pursuant to Pub. L. 92–463, notice is hereby given of the meeting of the National Advisory General Medical Sciences Council, National Institute of General Medical Sciences, National Institutes of Health, on January 29–30, 1998, Natcher Building 45, Conference Rooms E1 and E2, Bethesda, MD.
This meeting will be open to the public from 11 a.m. to 6 p.m. on January 29, for the discussion of program policies and issues, opening remarks, report of the Director, NIGMS, and other business of Council. Attendance by the public will be limited to space available.
In accordance with provisions set forth in secs. 552b(c)(4) and 552b(c)(6), Title 5, U.S.C. and sec. 10(d) of Pub. L. 92–463, the meeting will be closed to the public on January 29, from 8:30 a.m. to 11 a.m., and also closed on January 30 (8:30 a.m. to adjournment) for the review, discussion, and evaluation of individual grant applications. Applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the applications, disclosure of which would constitute a clearly unwarranted invasion of personal privacy.
Mrs. Ann Dieffenbach, Public Information Officer, National Institute of General Medical Sciences, National Institutes of Health, Natcher Building, Room 3AS–43H, Bethesda, MD 20892, telephone: 301–496–7301, FAX 301–402–0224, will provide a summary of the meeting, and a roster of Council members. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should contact Mrs. Dieffenbach in advance of the meeting. Dr. W. Sue Shafer, Executive Secretary, NAGMS Council, National Institutes of Health, Natcher Building, Room 2AN–32C, Bethesda, MD 20892, telephone: 301–594–4499 will provide substantive program information upon request.
This notice is being published less than 15 days prior to the above meeting due to the urgent need to meet timing limitations imposed by the review and funding cycle.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–4263–N–71]

Submission for OMB Review: Comment Request

AGENCY: Office of Administration, HUD.
ACTION: Notice.

SUMMARY: The proposed information collection requirement described below has been submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

DATES: Comments due date: February 20, 1998.
ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments must be received within thirty (30) days from the date of this Notice. Comments should refer to the proposal by name and/or OMB approval number and should be sent to: Joseph F. Lackey, Jr., OMB Desk Officer, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503.
FOR FURTHER INFORMATION CONTACT: Wayne Eddins, Reports Management Officer, Department of Housing and Urban Development, 451 7th Street, Southwest, Washington, DC 20410, telephone (202) 708–1305. This is not a toll-free number. Copies of the proposed forms and other available documents submitted to OMB may be obtained from Mr. Eddins.
SUPPLEMENTARY INFORMATION: The Department has submitted the proposal for the collection of information, as described below, to OMB for review, as required by the Paperwork Reduction Act (44 U.S.C. Chapter 35).
The Notice lists the following information: (1) the title of the information collection proposal; (2) the office of the agency to collect the information; (3) the OMB approval number, if applicable; (4) the description of the need for the information and its proposed use; (5) the agency form number, if applicable; (6) what members of the public will be affected by the proposal; (7) how frequently information submissions will be required; (8) an estimate of the total number of hours needed to prepare the information submission including number of respondents, frequency of response, and hours of response; (9) whether the proposal is new, an extension, reinstatement, or revision of an information collection requirement; and (10) the names and telephone numbers of an agency official familiar with the proposal and of the OMB Desk Officer for the Department.
Authority: Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. 35, as amended.
Dated: January 8, 1998.
David S. Cristy,
Director, Information Resources Management Policy and Management Division.

Notice of Submission of Proposed Information Collection to OMB

Proposal: Conveyance (Acquisition) and Disposition Information Collections contained in Handbook 4310.5 entitled "Property Disposition Handbook, One-to-Four Family Properties".
Office: Housing.
OMB Approval Number: 2502–0306.
Description of the Need for the Information and Its Proposed Use: These information collections are needed to determine the condition of the property upon conveyance, to determine the results of the repair contracts, and to monitor the contractor's performance in maintaining the properties. The sales contracts will be used as binding contracts between the purchaser and HUD. Respondents are potential contractors, contractors who work for HUD, and potential and actual purchasers of HUD-owned properties.
Form Number: HUD–9516A, 9519, 9519A, 9544, 9548, 9548A, 9548B, 9548C, and 9733.
Respondents: Business or Other For-Profit, Individuals or Households, Not-For-Profit, Institutions, State, Local, or Tribal Government, and the Federal Government.
Frequency of Submission: On Occasion.
Reporting Burden:

	Number of respondents	x	Frequency of response	x	Hours per response	=	Burden hours
Information Collections	46,550		Varies		.50		248,570

Total Estimated Burden Hours: 248,570.
Status: Revision.
Contact: Rose Donnelly/Art Orton, HUD, (202) 708–4767, Joseph F. Lackey, Jr., OMB, (202) 395–7316.
Dated: January 8, 1998.

BILLING CODE 4210–01–M

DEPARTMENT OF THE INTERIOR

Office of the Secretary

Notice of Deadline for Submitting Completed Applications to Begin Participation in the Tribal Self-Governance Program in Fiscal Year 1999 or Calendar Year 1999

AGENCY: Office of Self-Governance, Office of the Secretary, Interior.
ACTION: Notice of application deadline.

SUMMARY: In this notice, the Office of Self-Governance (OSG) establishes a March 2, 1998, deadline for tribes/consortia to submit completed applications to begin participation in the tribal self-governance program in fiscal year 1999 or calendar year 1999.
DATES: Completed application packages must be received by the Director, Office of Self-Governance by March 2, 1998.
ADDRESSES: Application packages for inclusion in the applicant pool should be sent to the Director, Office of Self-Governance, U.S. Department of the Interior, Mail Stop 2542, 1849 C Street, NW., Washington, DC 20240.
FOR FURTHER INFORMATION CONTACT: Dr. Kenneth D. Reinfeld, U.S. Department of the Interior, Office of Self-Governance, 1849 C Street, NW., Mail Stop 2548, Washington, DC 20240, 202–219–0240.
SUPPLEMENTARY INFORMATION: Under the Tribal Self-Governance Act of 1994 (Pub. L. 103–413), as amended by the Fiscal Year 1997 Omnibus Appropriations Bill (Pub. L. 104–208) the Director, Office of Self-Governance may select up to 50 additional participating tribes/consortia per year for the tribal self-governance program, and negotiate and enter into an annual written funding agreement with each participating tribe. The Act mandates that the Secretary submit copies of the funding agreements at least 90 days before the proposed effective date to the appropriate committees of the Congress and to each tribe that is served by the Bureau of Indian Affairs (BIA) agency that is serving the tribe that is a party to the funding agreement. Initial negotiations with a tribe/consortium located in an area and/or agency which has not previously been involved with self-governance negotiations, will take approximately two months from start to finish. Agreements for an October 1 to September 30 fiscal year need to be signed and submitted by July 1. Agreements for a January 1 to December 31 fiscal year need to be signed and submitted by October 1.

Background

On February 15, 1995, an interim rule was published in the **Federal Register**

VOL 63 ISS 13 JA 21 1998 UMI

announcing the criteria for tribes to be included in an applicant pool and the establishment of the selection process for tribes/consortia to negotiate agreements pursuant to the Tribal Self-Governance Act of 1994. This interim rule was added to Title 25 of the Code of Federal Regulations at Part 1001 of Chapter VI. While it may be changed by later rulemaking, the Act stipulates that the lack of promulgated regulations will not limit its effect. It should be noted that a proposed rulemaking has been negotiated between tribal and Federal members of a self-governance negotiated rulemaking committee and is currently in the process of being prepared for publication in the **Federal Register** for review and comment.

Purpose of Notice

The interim rules established at 25 CFR parts 1001.1 to 1001.5 will be used to govern the application and selection process for tribes/consortia to begin their participation in the tribal self-governance program in fiscal year 1999 and calendar year 1999. Applicants should be guided by the requirements in 25 CFR parts 1001.1 to 1001.5 in preparing their applications. Copies of the interim rules published in the **Federal Register** on February 15, 1995, may be obtained from the information contact person identified in this notice.

Tribes/consortia wishing to be considered for participation in the tribal self-governance program in fiscal year 1999 or calendar year 1999 must respond to this notice, except for those which are (1) currently involved with negotiations with the Department; (2) one of the 64 tribal entities with signed agreements; or (3) one of the tribal entities already included in the applicant pool as of the date of this notice.

The Director's decision on the actual number of tribes that will enter negotiations will be made at a later date. Tribes already in the applicant pool will retain their existing ranking with tribes entering the applicant pool under these rules receiving a lower ranking. Being in the applicant pool will not guarantee that a tribe will actually be provided the opportunity to negotiate in any given year. However, it does mean that a tribe will not be passed over by a tribe with a lower ranking in the applicant pool or by a tribe not in the applicant pool, with the exception of a tribe already in the negotiation process.

For example, if the Department determines that five tribes will be afforded the opportunity to negotiate self-governance agreements for fiscal year 1999 and calendar year 1999, the five tribes with highest rankings would be notified and negotiations would be scheduled. The tribe ranked sixth on the list would then have the highest ranking to negotiate a self-governance agreement for 2000 or might enter negotiations for 1999 if one of the first five tribes discontinued negotiations. In such a case, the tribe that discontinued negotiations would remain in the applicant pool with its original ranking and would be the first to be selected in 1999 for negotiating agreements commencing in 2000.

Dated: January 14, 1998.

William A. Sinclair,

Director, Office of Self-Governance.

[FR Doc. 98–1283 Filed 1–20–98; 8:45 am]

BILLING CODE 4310–02–M

DEPARTMENT OF THE INTERIOR

Office of the Secretary

Tribal Self-Governance Notice of Availability of Self-Governance Negotiation/Planning Grants

AGENCY: Office of Self-Governance, Office of the Secretary, Interior.

ACTION: Notice of grants availability.

SUMMARY: In this notice, the Office of Self-Governance (OSG) announces the availability of fiscal year 1998 negotiation grants (up to 15 grants of no more than $40,000 each) and advance planning grants (up to 5 grants of no more than $40,000 each). The timeframes for application and selection vary with the type of grant and are specified in this announcement.

DATES: Applications must be submitted in accordance with the table below:

Type of grant	Deadline for submitting application
Negotiation	Mar. 31, 1998.
Advance planning	May 1, 1998.

ADDRESSES: Completed applications for grants should be sent to the Director, Office of Self-Governance, U.S. Department of the Interior, Mail Stop 2542, 1849 C Street, NW, Washington, DC 20240.

FOR FURTHER INFORMATION CONTACT: Dr. Kenneth D. Reinfeld, U.S. Department of the Interior, Office of Self-Governance, 1849 C Street, NW, Mail Stop 2542, Washington, DC 20240, 202–219–0240.

SUPPLEMENTARY INFORMATION: The tribal self-governance program is designed to promote self-determination by allowing tribes to assume more control through negotiated annual funding agreements of programs operated by the Department of the Interior. The Tribal Self-Governance Act of 1994 (Pub. L. 103–413) allows for negotiations to be conducted for programs operated by BIA and for programs operated by other bureaus and offices within the Department that are otherwise available to Indians or when there is a historical, cultural, or geographic connection to an Indian tribe.

The purpose of this notice is to announce the availability of planning and negotiation grants in accordance with the self-governance interim rule published in the **Federal Register** on April 23, 1996. The interim rules were established at 25 CFR 1001.7 to 1001.9 and will be used to govern the application and selection process for tribes/consortia to receive fiscal year 1998 negotiation and planning grants as specified in this notice. Applicants should be guided by the requirements in 25 CFR 1001.7 to 1001.9 in preparing their applications. Copies of the interim rules published in the **Federal Register** on April 23, 1996, may be obtained from the information contact person identified in this notice.

Subject to the discretion of the Director, Office of Self-Governance, the following types of grants are available to tribes/consortia in 1998 with the deadlines as stated below:

(1) *Negotiation Grants:* Up to 15 grants of no more than $40,000 may be made available. Grants to tribes/consortia already receiving advance planning grants shall be limited to $20,000. As announced in today's **Federal Register**, the closing date for submitting completed applications to begin participation in tribal self-governance in fiscal year 1999 or calendar year 1999 is March 2, 1998. Applications requesting to be included in the applicant pool to begin participation in tribal self-governance may be submitted at any time. Tribes/consortia selected from the applicant pool to begin participation in tribal self-governance in fiscal year 1999 or calendar year 1999, may be eligible to receive a negotiation grant. Each selected tribe/consortium will be notified by March 16, 1998, and must submit a written application for a negotiation grant, no later than March 31, 1998, indicating its intention to negotiate an annual funding agreement with any bureau within DOI for 1999.

(2) *Advance Planning Grants:* Up to five grants of no more than $40,000 may be made available. The closing date for submitting applications to receive a grant to plan for future participation in the tribal self-governance program is May 1, 1998. No later than June 1, 1998, each applicant will be notified by letter from the Director, Office of Self-Governance whether it has been selected to receive an advance planning grant.

In order to provide sufficient time for tribes/consortia to effectively use the planning and negotiation grants, the following target dates have been established for the awarding of grants.

(1) *Negotiation Grants:* Since agreements for the 1998 fiscal year need to be signed and submitted by July 1, 1998, to allow sufficient time to prepare for negotiations, new participating tribes will be selected and awarded negotiation grants by May 1, 1998.

(2) *Advance Planning Grants:* In order to avoid delays in planning activity and future participation in tribal self-governance, advance planning grants will be awarded to tribes/consortia by July 1, 1998.

Submitting Applications

(1) Applications must be submitted in accordance with the interim rule published in the **Federal Register** on April 23, 1996, and by the deadlines identified in this announcement.

(2) Applications may be mailed or hand-delivered.

(3) Applications which are mailed must be postmarked no later than the date given in this notice for the particular type of grant being applied for.

Dated: January 14, 1998.

William A. Sinclair,

Director, Office of Self-Governance.

BILLING CODE 4310–02–M

DEPARTMENT OF THE INTERIOR

Office of the Secretary

Alaska Land Managers Forum

AGENCY: Office of the Secretary.

ACTION: Notice of meeting.

SUMMARY: This notice is published in accordance with section 10(a)(2) of the Federal Advisory Committee Act (FACA), 5 U.S.C. App. (1988) and 41 CFR 101–6.1015(b). The Department of the Interior hereby gives notice of a public meeting of the Alaska Land Managers Forum to be held from 8:30 a.m. to noon on Wednesday, January 28, 1998. The meeting will take place in Conference Room 114, 1689 C Street, Anchorage, Alaska. This meeting will be held to receive and discuss work group reports on recreation and tourism. The agenda will also include several briefing items.

FOR FURTHER INFORMATION CONTACT: Ronald B. McCoy at (907) 271–5485 or Sally Rue at (907) 465–4084.

BILLING CODE 4310–RP–P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

Availability of an Environmental Assessment, Finding of No Significant Impact, and Receipt of an Application for an Incidental Take Permit by International Paper Company for Timber Management Practices on its Lands in Texas, Arkansas, Louisiana, Mississippi, Alabama, Georgia, South Carolina, and North Carolina

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice.

SUMMARY: International Paper Company (Applicant) seeks an incidental take permit (ITP) from the Fish and Wildlife Service (Service) pursuant to Section 10(a)(1)(B) of the Endangered Species Act of 1973 (16 U.S.C. 1531 *et seq.*), as amended (Act). The permit would apply to all of the applicant's land holdings in Texas, Arkansas, Louisiana, Mississippi, Alabama, Georgia, South Carolina, and North Carolina that contain the federally endangered red-cockaded woodpecker (RCW) (*Picoides borealis*). The applicant has a total of 18 known active clusters in Alabama (2), Georgia (2), South Carolina (9), and Louisiana (5). The applicant wants to eventually transfer its baseline responsibility of 18 RCW clusters to its Southlands Experimental Forest (SEF) in Bainbridge, Georgia where there are currently two active RCW clusters. This ITP would authorize take of the existing 16 RCW groups in Alabama, South Carolina, and Louisiana incidental to timber management activities, plus any clusters in excess of the baseline at SEF.

The Service also announces the availability of an environmental assessment (EA) and Habitat Conservation Plan/Application for Incidental Taking (HCP). Copies of the EA and/or HCP may be obtained by making a request to the Regional Office (see **ADDRESSES**). Requests must be in writing to be processed. This notice also advises the public that the Service has made a preliminary determination that issuing the ITP is not a major Federal action significantly affecting the quality of the human environment within the meaning of Section 102(2)(C) of the National Environmental Policy Act of 1969 (NEPA), as amended. The Finding of No Significant Impact (FONSI) is based on information contained in the EA and HCP. The final determination will be made no sooner than 30 days from the date of this notice. This notice is provided pursuant to Section 10 of the Act and NEPA regulations (40 CFR 1506.6). The Service specifically requests comment on the appropriateness of the "No Surprises" assurances should the Service determine that an ITP will be granted and based upon the submitted HCP. Although not explicitly stated in the HCP, the Service has, since August 1994, announced its intention to honor a "No Surprises" Policy for applicants seeking ITPs. Copies of the Service's "No Surprises" Policy may be obtained by making a written request to the Regional Office (see **ADDRESSES**). The Service is soliciting public comments and review of the applicability of the "No Surprises" Policy to this application and HCP.

DATES: Written comments on the permit application, EA, and HCP should be sent to the Service's Regional Office (see **ADDRESSES**) and should be received on or before February 20, 1998.

ADDRESSES: Persons wishing to review the application, HCP, and EA may obtain a copy by writing the Service's Southeast Regional Office, Atlanta, Georgia. Documents will also be available for public inspection by appointment during normal business hours at the Regional Office, 1875 Century Boulevard, Suite 200, Atlanta, Georgia 30345 (Attn: Endangered Species Permits), or Field Supervisor, U.S. Fish and Wildlife Service, Brunswick Field Office, 4270 Norwich Street, Brunswick, Georgia 31520. Written data or comments concerning the application, EA, or HCP should be submitted to the Regional Office. Requests for the documentation must be in writing to be processed. Comments must be submitted in writing to be processed. Please reference permit number PRT–833203 in such comments, or in requests of the documents discussed herein.

FOR FURTHER INFORMATION CONTACT: Mr. Rick G. Gooch, Regional Permit Coordinator, (see **ADDRESSES** above), telephone: 404/679–7110; or Mr. Robert Brooks, Fish and Wildlife Biologist, Brunswick Field Office, (see **ADDRESSES** above), telephone: 912/265–9336.

SUPPLEMENTARY INFORMATION: *Picoides borealis* (or RCW) is a non-migratory species that once was common in the southern Coastal Plain from east Texas to Florida and north to Maryland,

VOL
63
ISS
13
JA
21
1998
UMI

Missouri, and Kentucky. RCWs nest in cavities constructed in living mature (typically > 60 years old) pine trees. The RCW is a cooperative breeder living in groups of one to nine birds with each bird nesting in a cavity; the aggregate of cavity trees is called a cluster. RCWs prefer longleaf pine forests, but it will also utilize loblolly, pond, slash, shortleaf, and even Virginia pines. Without periodic fire to control hardwoods, RCWs will abandon cluster sites. The decline of the RCW has resulted primarily from loss of its mature southern pine habitat from logging and conversion to non-forest and from fire exclusion.

Recovery activities for the RCW are focused on public lands. However, private lands are also important for the RCW in the Service's recovery strategy by: (1) Providing supplement habitat where the federal land base is insufficient to support recovery; (2) establishing and maintaining connection between and within populations on public lands; and/or, (3) providing a supply of juvenile RCWs for translocation into defined recovery populations. Unfortunately, RCWs on private lands have fared poorly because landowners are not inclined to manage their lands for RCW habitat because the bird's presence might impose restrictions on timber harvesting and development. The Service believes the private land RCW clusters that are geographically isolated will eventually cease to exist if private landowners are not encouraged to manage their lands for these birds.

The applicant, International Paper Company, proposes to sustain RCWs on its lands through the creation of a migration bank on its SEF property in Bainbridge, Georgia. This proposed mitigation bank at SEF currently contains 5300 acres of contiguous forests and the applicant proposes to establish and keep 3000 acres of high quality RCW habitat at this site. This would be enough habitat to eventually support about 25–30 RCW groups. Currently there are about 1500 acres of high quality RCW habitat and two RCW groups at SEF. The applicant is proposing translocation, cavity augmentations, and intensive habitat management at the SEF site to increase the RCW population. The applicant currently has 18 known RCW groups on its lands in Louisiana, Alabama, Georgia, and South Carolina, and they will keep their baseline responsibility of 18 RCW groups at the proposed mitigation bank at SEF, with the Service and state concurrence. The Service believes the applicants' extant RCW population will ultimately benefit from this proposed mitigation bank in that a more stable RCW population will be created and the applicant will be better able to intensively manage the RCWs at SEF.

The EA considers the environmental consequences of three alternatives, in addition to the proposed action. The no action alternative may result in loss of habitat and individual groups of *Picoides borealis* due to fragmented habitat, geographic isolation of the groups, and lack of intensive management. The proposed action alternative is issuance of the ITP with mitigation on the applicant's property. To compensate for the proposed taking of RCW groups, the applicant proposes to establish RCW groups on SEF before any taking occurs. The applicant also proposes to sell mitigation credits to third parties seeking incidental take permits for RCW on other private lands should additional groups above baseline be created during the life of the mitigation bank. The third alternative is to issue the ITP and mitigate for the taking of RCW groups on federal, state, or other private lands. The fourth alternative is for the Service to provide financial incentives to the applicant to intensively manage the RCW clusters on their lands.

As stated above, the Service has made a preliminary determination that the issuance of the ITP is not a major Federal action significantly affecting the quality of the human environment within the meaning of Section 102(2)(C) of NEPA. This preliminary information may be revised due to public comment received in response to this notice and is based on information contained in the EA and HCP. An appropriate excerpt from the FONSI reflecting the Service's finding on the application is provided below:

Based on the analysis conducted by the Service, it has been determined that:

1. Issuance of an ITP will not appreciably reduce the likelihood of survival and recovery of the affected species in the wild.
2. This HCP contains provisions which sufficiently minimize and mitigate the impacts to the extent practicable.
3. Issuance of an ITP would not have significant effects on the human environment in the project area.
4. The proposed take is incidental to an otherwise lawful activity.
5. Adequate funding will be provided to implement the measures proposed in the submitted HCP.

The Service will also evaluate whether the issuance of a Section 10(a)(1)(B) ITP complies with Section 7 of the Act by conducting an intra-Service Section 7 consultation. The results of the biological opinion, in combination with the above findings, will be used in the final analysis to determine whether or not to issue the ITP.

Dated: January 13, 1998.

H. Dale Hall,

Deputy Regional Director.

BILLING CODE 4310–55–M

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

Availability of an Environmental Assessment and Receipt of an Application for an Endangered Species Act Incidental Take Permit for the U.S. Borax Project in Kern County, CA

AGENCY: Fish and Wildlife Service.

ACTION: Notice of availability.

SUMMARY: U.S. Borax, Incorporated has applied to the Fish and Wildlife Service for a 50-year incidental take permit pursuant to section 10(a)(1)(B) of the Endangered Species Act of 1973, as amended (Act). In the 1,940-acre project area near the town of Boron, Kern County, California, the Service proposes to issue an incidental take permit and provide assurances to the applicant for the threatened desert tortoise (*Gopherus agassizii*) and the following Federal species of concern: Mojave ground squirrel (*Spermophilus mohavensis*), American badger (*Taxidea taxus*), Le Conte's thrasher (*Toxostoma lecontei*), loggerhead shrike (*Lanius ludovicianus*), burrowing owl (*Athene cunicularia*), desert kit fox (*Vulpes acrotis arsipus*), greenest tiger beetle (*Cicindela tranquebarica viridissima*), Mojave spineflower (*Chorizanthe spinosa*), and sagebrush loeflingia (*Loeflingia squarrosa var. artemisiarum*). The proposed permit would be effective upon issuance for species currently listed under the Act. The permit would become effective for unlisted species included in the permit upon their listing under the Act. This notice opens the comment period on the Environmental Assessment and permit application package, which includes a Habitat Conservation Plan and Implementation Agreement. The Service specifically requests comment on the appropriateness of the "No Surprises" assurances contained in section V.C.1 of the Implementation Agreement. All comments received, including names and addresses, will become part of the administrative record and may be made available to the public.

DATES: Written comments on the Habitat Conservation Plan, Environmental Assessment, and Implementation Agreement should be received on or before February 20, 1998.

ADDRESSES: Comments should be addressed to Diane K. Noda, Field Supervisor, Fish and Wildlife Service, 2493 Portola Road, Suite B, Ventura, California 93003. Written comments may also be sent by facsimile to (805) 644–3958.

FOR FURTHER INFORMATION CONTACT: Kirk Waln, Fish and Wildlife Biologist, at the above address; telephone (805) 644–1766.

SUPPLEMENTARY INFORMATION:

Availability of Documents

Individuals wishing copies of the documents should immediately contact the Service's Ventura Fish and Wildlife Office at the above referenced address, or by telephone at (805) 644–1766. Documents will also be available for public inspection, by appointment, during normal business hours at the above address.

Background Information

U.S. Borax proposes to enlarge its open pit borate mining operation and expand its overburden disposal piles near the town of Boron in Kern County, California. This site is known to support a population of the threatened desert tortoise and may support populations of Mojave ground squirrel, American badger, Le Conte's thrasher, loggerhead shrike, burrowing owl, desert kit fox, greenest tiger beetle, Mojave spineflower, and sagebrush loeflingia, all Federal species of concern.

Federally listed, threatened, and endangered species are protected pursuant to section 9 of the Act against take; that is, no one may harass, harm, pursue, hunt, shoot, wound, kill, trap, capture or collect the species, or attempt to engage in such conduct (16 U.S.C. 1538). The Service, however, may issue permits to take listed animal species if such taking is incidental to, and not the purpose of, otherwise lawful activities. Regulations governing permits for endangered and threatened species are at 50 CFR 17.22 and 17.32. Although no incidental take authorization is required for listed plant species, impacts to these species must be addressed in the intra-Service consultation required pursuant to section 7(a) of the Act.

The Environmental Assessment considers the environmental consequences of four alternatives: the proposed action, no action, use of existing overburden pile areas, and backfilling. The no action alternative was found to be economically infeasible because U.S. Borax would be required to cease operations before the existing borate ore body was fully removed. The use of existing overburden pile areas was found infeasible because it would result in overburden piles approximately 1,200 feet in elevation above the surrounding landscape and be wholly incompatible with the existing landscape. The backfilling alternative was found infeasible because mineable calcium borate ores underlie the sodium borate ores that are the current focus of mining operations. At this time it is not economically feasible to mine calcium borate ores; however, backfilling of the pit would prevent their later use should economic conditions change. The no action, use of existing overburden pile areas, and backfilling alternatives would result in the loss of significantly less habitat than the preferred alternative. However, none of the mitigation measures under the proposed alternative would occur, including protecting and providing a management endowment for approximately 2,274 acres of high quality creosote bush scrub habitat.

The proposed action would result in the loss of 1,525 acres of disturbed creosote bush scrub habitat and 415 acres of land heavily degraded by past mining activities. This action could directly and indirectly affect the species described above. The Service proposes to issue an incidental take permit to the applicant for the incidental take of desert tortoises, and for the incidental take of other covered species should such authorization be necessary (i.e., should unlisted covered species be listed as threatened or endangered in the future, or should take authorization for plants become necessary). In addition, the applicant seeks Federal assurances that no additional land restrictions or financial compensation would be required for species adequately covered by the Habitat Conservation Plan. To accomplish this, all species covered in the Plan would be included in the incidental take permit on the condition that all permit issuance criteria are met and that the provisions of the Plan and Implementation Agreement are executed.

The proposed Federal action would authorize the incidental take of all desert tortoises within the project area. The Service anticipates that all Mojave ground squirrels, American badgers, burrowing owls, Le Conte's thrashers, loggerhead shrikes, greenest tiger beetles, and all individual Mojave spineflowers and sagebrush loeflingias would be removed or displaced from the project area through implementation of this action. Because habitat loss associated with this action would occur in small increments over many years, individual Mojave ground squirrels, American badgers, burrowing owls, Le Conte's thrashers, and loggerhead shrikes may avoid injury or death by moving to appropriate habitats off-site.

To minimize the effects of the proposed project, the proponent would undertake the following measures: An education program would be presented to all personnel working in the project area; preconstruction surveys by qualified biologists would be conducted and listed species removed from harm's way; a berm would be built to prevent desert tortoises from re-entering the area; vehicular traffic would be restricted to designated routes and a 25-mile-per-hour speed limit enforced; trash would be contained; and no firearms or pets would be permitted on site.

To mitigate the effects of the proposed project, the applicant proposes habitat reclamation and compensation. Following completion of mining, the applicant would reclaim the overburden piles through appropriate grading and revegetation. To mitigate for remaining adverse effects, the proponent would protect approximately 2,274 acres of high quality creosote bush scrub habitat and provide a management endowment for that habitat.

This notice is provided pursuant to section 10(c) of the Endangered Species Act and the regulations of the National Environmental Policy Act of 1969 (40 CFR 1506.6). The Service will evaluate the application, associated documents, and comments submitted thereon to determine whether the application meets the requirements of the National Environmental Policy Act and section 10(a)(1)(B) of the Endangered Species Act. If the Service determines that the requirements are met, a permit will be issued for the incidental take of the covered species. The final permit decision will be made no sooner than 30 days from the date of this notice, notwithstanding a temporary moratorium on issuing permits with "No Surprises" assurances.

Dated: January 9, 1998.

Michael J. Spear,

Regional Director, Region 1, Portland, Oregon.

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

Receipt of Petition for Federal Acknowledgment of Existence as an Indian Tribe

AGENCY: Bureau of Indian Affairs.

ACTION: Notice.

This notice is published in the exercise of authority delegated by the Secretary of the Interior to the Assistant Secretary—Indian Affairs by 209 DM 8.

Pursuant to 25 CFR 83.9(a), notice is hereby given that the Gabrielino/Tongva Indians of California Tribal Council, 5450 Slauson Avenue, Suite 151, Culver City, California 90230, has filed a letter of intent to petition for acknowledgment by the Secretary of the Interior that the group exists as an Indian tribe. The petition was received by the Bureau of Indian Affairs (BIA) on August 14, 1997, and was signed by members of the group's governing body.

This is a notice of receipt of a letter of intent to petition and does not constitute notice that the petition is under active consideration. Notice of active consideration will be sent by mail to the petitioner and other interested parties at the appropriate time.

Under Section 83.9(a) of the Federal regulations, interested parties may submit factual and/or legal arguments in support of or in opposition to the group's petition. Any information submitted will be made available on the same basis as other information in the BIA's files. Such submissions will be provided to the petitioner upon receipt by the BIA. The petitioner will be provided an opportunity to respond to such submissions prior to a final determination regarding the petitioner's status.

The petition may be examined, by appointment, in the Department of the Interior, Bureau of Indian Affairs, Branch of Acknowledgment and Research, 1849 C Street, NW, Washington, D.C. 20240. Phone: (202) 208–3592.

Dated: January 12, 1998.

Hilda A. Manuel,

Deputy Commissioner of Indian Affairs.

BILLING CODE 4310–02–P

DEPARTMENT OF THE INTERIOR

National Park Service

Maine Acadian Culture Preservation Commission; Meeting

Notice is hereby given in accordance with the Federal Advisory Committee Act (Pub. L. 92–463) that the Maine Acadian Culture Preservation Commission will meet on Friday, February 6, 1998. The meeting will convene at 7:00 p.m. in the Centre culturel du Mont-Carmet, Lille Village of Grand Isle, Aroostook County, Maine.

The Maine Acadian Culture Preservation Commission was appointed by the Secretary of the Interior pursuant to the Maine Acadian Culture Preservation Act (Pub. L. 101–543). The purpose of the Commission is to advise the National Park Service with respect to:

- The development and implementation of an interpretive program of Acadian culture in the state of Maine.
- The selection of sites for interpretation and preservation by means of cooperative agreements.

The Agenda for this meeting is as follows:

1. Review of October 17 and December 12 summary reports.
2. Speaker: Adrien Berube of the Université de Moncton, Edmundston, New Brunswick, Canada. "Ten Facts About The History of Madawaska Which Should Be Taken With A Grain Of Salt".
3. Report of the National Park Service Project Staff.
4. Opportunity for public comment.
5. Proposed agenda, place, and date of the next Commission Meeting.

The meeting is open to the public. Further information concerning Commission meetings may be obtained from the Superintendent, Acadia National Park. Interested persons may make oral/written presentations to the Commission or file written statements. Such requests should be made at least seven days prior to the meeting to: Superintendent, Acadia National Park, P.O. Box 177, Bar Harbor, ME 04609–0177; telephone (207) 288–5472.

Paul F. Haertel,

Superintendent, Acadia National Park.

BILLING CODE 4310–70–M

DEPARTMENT OF JUSTICE

[EOIR 121; AG Order No. 2139–98]

Executive Office for Immigration Review; Motion To Reopen: Suspension of Deportation and Cancellation of Removal

AGENCY: Department of Justice, Executive Office for Immigration Review.

ACTION: Notice.

SUMMARY: Pursuant to section 203 of the Nicaraguan Adjustment and Central American Relief Act (NACARA), certain aliens who are nationals of Guatemala, El Salvador, and particular former Soviet bloc countries who have final orders of deportation or removal may file a motion to reopen their cases before the Immigration Court or the Board of Immigration Appeals to apply for suspension of deportation or cancellation of removal. NACARA specifies that the Attorney General shall designate a time period in which such motions to reopen may be filed without regard to the statutory and regulatory time and number restrictions on motions to reopen. This notice designates that the time period for filing such motions will be from January 16, 1998, to September 11, 1998.

FOR FURTHER INFORMATION CONTACT: Margaret M. Philbin, General Counsel, Executive Office for Immigration Review, Suite 2400, 5107 Leesburg Pike, Falls Church, Virginia 22041, telephone: (703) 305–0470.

SUPPLEMENTARY INFORMATION:

Background

Section 203 of the Nicaraguan Adjustment and Central American Relief Act (Pub. L. 105–100; 111 Stat. 2160, 2193) (NACARA), signed into law on November 19, 1997, amended section 309 of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (Pub. L. 104–208; 110 Stat. 3009–625) (IIRIRA) to provide special rules regarding applications for suspensions of deportation and cancellation of removal by certain aliens. These aliens include Guatemalan, Salvadoran, and particular former Soviet bloc nationals described in section 309(c)(5)(C)(i) of IIRIRA, as amended by section 203 of NACARA.

In addition, NACARA amended section 309 of IIRIRA to allow aliens with final orders of deportation or removal who have become eligible for cancellation of removal or suspension of deportation as a result of the amendments made by section 203 of NACARA to file one motion to reopen removal or deportation proceedings to apply for such relief, without regard to the time and number limitations on motions to reopen.

NACARA also requires that the Attorney General designate a specific time period for filing motions to reopen for such relief beginning no later than 60 days after the date of enactment of NACARA and extending for a period not to exceed 240 days. *See* section 309(g) of IIRIRA, as amended by section 203(c) of NACARA.

Who Is Eligible To File a Motion To Reopen Under Section 203 of NACARA?

As set forth in section 309(c)(5)(i) of IIRIRA, as amended by section 203 of NACARA, the following people may be eligible to file a motion to reopen to apply for suspension of deportation or cancellation of removal under the special rules of section 203 of NACARA, if they have not been convicted at any time of an aggravated felony:

1. Nationals of El Salvador who:
   a. first entered the United States on or before September 19, 1990;
   b. registered for ABC benefits or Temporary Protected Status (TPS) on or before October 31, 1991; and
   c. were not apprehended after December 19, 1990, at time of entry.
2. Nationals of Guatemala who:
   a. first entered the United States on or before October 1, 1990;
   b. registered for ABC benefits on or before December 31, 1991; and
   c. were not apprehended after December 19, 1990 at time of entry.
3. Nationals of Guatemala or El Salvador who applied for asylum with INS on or before April 1, 1990.
4. Nationals of the Soviet Union, Russia, any republic of the former Soviet Union, Latvia, Estonia, Lithuania, Poland, Czechoslovakia, Romania, Hungary, Bulgaria, Albania, East Germany, Yugoslavia, or any state of the former Yugoslavia who:
   a. entered the United States on or before December 31, 1990;
   b. applied for asylum on or before December 31, 1991; and
   c. at the time of filing were a national of any of the countries listed above.
5. Spouses and children of a person granted suspension of deportation or cancellation of removal who is described under classes 1–4 above.
6. Unmarried sons and daughters of a parent granted suspension of deportation or cancellation of removal who is defined under classes 1–4 above, if the unmarried son or daughter was 21 years or older at the time the parent was granted suspension of deportation or cancellation of removal. The unmarried sons and daughters must have entered the U.S. on or before October 1, 1990.

Procedures for Reopening

The Attorney General has designated the period from January 16, 1998, until September 11, 1998, for eligible aliens to file a motion to reopen pursuant to NACARA. Eligible aliens may file only one such motion. The front page of the motion and any envelope containing the motion should include the notation "Special NACARA Motion." The fee for motions to reopen (currently $110) will be waived for eligible aliens under section 203 of NACARA.

If an alien has previously filed an application for suspension of deportation or cancellation of removal with the Immigration Judge or the Board of Immigration Appeals, he or she must file a copy of that application or a new application with the motion to reopen. If the motion to reopen is granted and the alien has previously filed an application, the alien will not be required to pay a new filing fee for the suspension/cancellation application

If an alien has not previously filed an application for suspension of deportation or cancellation of removal, the alien must submit a new application with the motion to reopen. Nothing in this notice changes the requirements and procedures in 8 CFR 3.31(b), 103.7(b)(1), and 240.11(f) for paying the application fee for suspension/cancellation after a motion to reopen is granted if such an application was not previously filed. If an alien is required to submit a new application form, the alien should submit an Application for Suspension of Deportation (Form EOIR–40), whether he or she is in deportation or removal proceedings.

Grants of Suspension and Cancellation Under NACARA Not Conditional

Section 304(a)(3) of IIRIRA required that grants of suspension/cancellation be subject to a numerical limitation of 4,000 per fiscal year. Section 240A(e)(3) of the Immigration and Nationality Act, as amended by section 204(a) of NACARA, however, provides that applications for suspension of deportation and cancellation of removal granted pursuant to section 203 of NACARA are not subject to that annual limitation. Therefore, notwithstanding the provisions of 8 CFR 240.21, grants of suspension and cancellation pursuant to section 203 of NACARA shall be made without condition.

Dated: January 15, 1998.

Janet Reno,

Attorney General.

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

[Docket Number ICR 98–1]

Agency Information Collection Activities: Proposed Collection; Comment Request; Student Data Form

ACTION: Notice.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a preclearance consultation program to provide the general public and Federal agencies with an

VOL 63 ISS 13 JA 21 1998 UMI

opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA95) [44 U.S.C. 3506(c)(2)(A)]. This program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. Currently, the Occupational Safety and Health Administration is soliciting comments concerning the proposed reinstatement of the information collection request for the Student Data Form which is completed by students attending courses at OSHA's Training Institute. A copy of the proposed information collection request (ICR) can be obtained by contacting the office listed below in the addresses section of this notice.

DATES: Written comments must be submitted to the office listed in the addresses section below on or before March 23, 1998. The Department of Labor is particularly interested in comments which:

- evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- enhance the quality, utility, and clarity of the information to be collected; and
- minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.

ADDRESSES: Comments are to be submitted to the Docket Office, Docket No. ICR 98–1, U.S. Department of Labor, Room N–2625, 200 Constitution Avenue, NW., Washington, DC 20210, telephone number (202) 219–7894. Written comments limited to 10 pages or less in length may also be transmitted by facsimile to (202) 219–5046.

FOR FURTHER INFORMATION CONTACT: Robert O'Brien, Division of Administration and Training Information, OSHA Office of Training and Education, 1555 Times Drive, Des Plaines, IL 60018, telephone (847) 297–4810 (this is not a toll-free number), e-mail to robert.obrien@oti.osha.gov, or send a facsimile message to (847) 297–4874. Copies of the referenced information collection request are available for inspection and copying in the Docket Office and will be mailed to persons who request copies by telephoning Robert O'Brien or Barbara Bielaski at (202) 219–7177, x142. For electronic copies of the Information Collection Request for the Student Data Form, contact OSHA's WebPage on the Internet at http://www.osha.gov under Standards.

SUPPLEMENTARY INFORMATION:

I. Background

The Occupational Safety and Health Administration (OSHA) Training Institute provides basic, intermediate, and advanced training and education in occupational safety and health for Federal and State compliance officers, agency professional and technical support personnel, employers, employees, organizations representing employees and employers, educators who aid in developing curricula and teaching occupational safety and health courses, and representatives of professional safety and health groups.

Students attending OSHA's Training Institute courses complete the one-page form on the first day of class. The information is used in order to know who to contact in the event of an emergency and to obtain the correct student group information for record keeping and reporting needs. The student group information is also used to ensure that OSHA is collecting tuition from all private sector students as required by OMB Circular A–25 and Part 1949 of Title 29, Code of Federal Regulations.

II. Current Actions

OSHA is planning to reinstate this form. Its approval was inadvertently allowed to lapse.

Type of Review: Reinstatement.
Agency: Occupational Safety and Health Administration.
Title: Student Data Form.
OMB Number: Formerly 1218–0172.
Agency Number: OSHA 182.
Affected Public: Individuals.
Total Respondents: 5500.
Frequency: On occasion.
Total Responses: 5500.
Average Time per Response: 5 minutes.
Estimated Total Burden Hours: 463 hours.
Total Burden Cost (operating/maintaining): $7,662.

Comments submitted in response to this comment request will be summarized and/or included in the request for Office of Management and Budget approval of the information collection request; they will also become a matter of public record.

Dated: January 14, 1998.

Zigmas Sadauskas,
Acting Director, Office of Training and Education.

[FR Doc. 98–1328 Filed 1–20–98; 8:45 am]
BILLING CODE 4510–26–M

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

[Docket Number ICR 98–2]

Agency Information Collection Activities: Proposed Collection; Comment Request; Acrylonitrile

ACTION: Notice.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a preclearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA95) [44 U.S.C. 3506(c)(2)(A)]. This program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. Currently the Occupational Safety and Health Administration is soliciting comments concerning the proposed extension of the information collection request for the Acrylonitrile Standard 29 CFR 1910.1045. A copy of the proposed information collection request (ICR) can be obtained by contacting the employee listed below in the addressee section of this notice. The Department of labor is particularly interested in comments which:

- evaluate whether the proposed collection of information for the proper performance of the functions of the agency, including whether the information will have practical utility;
- evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- enhance the quality, utility, and clarity of the information to be collected; and
- minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection technique or other forms of information technology, e.g., permitting electronic submissions of responses.

DATES: Written comments must be submitted by March 23, 1998.

ADDRESSES: Comments are to be submitted to the Docket Office, Docket No. ICR 98–2, U.S. Department of labor, Room N–2625, 200 Constitution Avenue, NW, Washington, DC 20210, telephone number (202) 219–7894. Written comments limited to 10 pages or less in length may also be transmitted by facsimile to (202) 219–5046.

FOR FURTHER INFORMATION CONTACT: Adrian Corsey, Directorate of Health Standards Programs, Occupational Safety and Health Administration, U.S. Department of Labor, Room N3718, telephone (202) 219–7075. Copies of the referenced information collection request are available for inspection and copying in the Docket Office and will be mailed immediately to persons who request copies by telephoning Barbara Bielaski at (202) 219–8076 or Adrian Corsey at (202) 219–7075. For electronic copies of the Information Collection Request on Acrylonitrile, contact OSHA's WebPage on the Internet at http://www.osha.gov/ and click on standards.

SUPPLEMENTARY INFORMATION:

Background

The Acrylonitrile standard and its information collection requirements is to provide protection for employees from the adverse health effects associated with occupational exposure to Acrylonitrile. The Standard requires that employers must establish and maintain a training and compliance program, including exposure monitoring and medical surveillance records. These records are used by employees, physicians, employers and the OSHA to determine the effectiveness of the employers' compliance efforts. Also the standard requires that OSHA have access to various records to ensure that employers are complying with the disclosure provisions of the Acrylonitrile Standard.

Type of Review: Extension.
Agency: Occupational Safety and Health Administration.
Title: Acrylonitrile 29 CFR 1910.1045.
OMB Number: 1218–0126.
Affected Public: Business or other for-profit, Federal government, State and Local governments.
Total Respondents: 26.
Frequency: On occasion.
Total Responses: 25,602.
Average Time per Response: Ranges from 5 minutes to maintain records to 1.5 hours for an employee to have a medical exam.
Estimated Total Burden Hours: 6,621.
Total Annualized capital/startup costs: -0-.
Total initial annual costs (operating/maintaining systems or purchasing services): $311,360.

Comments submitted in response to this notice will be summarized and included in the request for Office of Management and Budget approval of the information collection request. The comments will become a matter of public record.

Dated: January 13, 1998.

Ray Donnelly,
Acting Deputy Director, Directorate of Health Standards Program.

BILLING CODE 4510–26–M

DEPARTMENT OF LABOR

Office of the Assistant Secretary for Veterans' Employment and Training

Homeless Veterans' Reintegration Project Competitive Grants

AGENCY: Office of the Assistant Secretary for Veterans' Employment and Training, Labor.

ACTION: Notice of availability of funds and solicitation for grant applications for Homeless Veterans Reintegration Projects (SGA 98–01).

SUMMARY: This notice contains all of the necessary information and forms needed to apply for grant funding. All applicants for grant funds should read this notice in its entirety. The U.S. Department of Labor, Veterans' Employment and Training Service (VETS) announces a grant competition for Homeless Veterans Reintegration Projects (HVRP) authorized under the Stewart B. McKinney Homeless Assistance Act. Such projects will assist eligible veterans who are homeless by providing employment, training, supportive and transitional housing assistance. Under this solicitation, VETS expects to award up to twenty grants in FY 1998.

This notice describes the background, the application process, description of program activities, evaluation criteria, and reporting requirements for Solicitation of Grant Applications (SGA) 98–01. VETS anticipates that up to $2.25 million will be available for grant awards under this SGA.

The information and forms contained in the Supplementary Information Section of this announcement constitute the official application package for this Solicitation. In order to receive any amendments to this Solicitation which may be subsequently issued, *all applicants must register their name and address with the Procurement Services Center.* Please send this information as soon as possible, Attention: Grant Officer, to the following address: U.S. Department of Labor, Procurement Services Center. Room N–5416, 200 Constitution Avenue, N.W., Washington, D.C. 20210. Please reference SGA 98–01.

DATES: One (1) ink-signed original, complete grant application (plus three (3) copies of the Technical Proposal and three (3) copies of the Cost Proposal shall be submitted to the U.S. Department of Labor, Procurement Services Center, Room N–5416, 200 Constitution Avenue, N.W., Washington, D.C. 20210, not later than 4:45 p.m., Eastern Standard Time, February 23, 1998, or be postmarked by the U.S. Postal Service on or before that date. Hand delivered applications must be received by the Procurement Services Center by that time.

ADDRESSES: Applications shall be mailed to the U.S. Department of Labor, Procurement Services Center, Attention: Lisa Harvey, Reference SGA 98–01, Room N–5416, 200 Constitution Avenue, N.W., Washington, D.C. 20210.

FOR FURTHER INFORMATION CONTACT: Lisa Harvey, U.S. Department of Labor, Procurement Services Center, telephone (202) 219–6445 [not a toll free number].

SUPPLEMENTARY INFORMATION

Homeless Veterans Reintegration Project Solicitation

I. Purpose

The U.S. Department of Labor (DOL), Veterans' Employment and Training Service (VETS) is requesting grant applications for the provision of employment and training services in accordance with Title VII, Subtitle C, Section 738 of the Stewart B. McKinney Homeless Assistance Act (MHAA), 42 U.S.C. 11448. These instructions contain general program information, requirements and forms for application for funds to operate a Homeless Veterans Reintegration Project (HVRP).

II. Background

The Stewart B. McKinney Homeless Assistance Act of 1987, enacted on July 22, 1987, under Title VII, Subtitle C, Section 738 provides that "The Secretary shall conduct, directly or

VOL 63 ISS 13 JA 21 1998 UMI

through grant or contract, such programs as the Secretary determines appropriate to *expedite the reintegration of homeless veterans into the labor force.*" This program was reauthorized under Section 621 of the McKinney Homeless Assistance Amendments Act of 1990 (Public Law 101–645) for an additional three years, i.e., through FY 1993. Under the Homeless Veterans Comprehensive Service Programs Act of 1992 (Public Law 102–590—enacted on November 10, 1992) the Homeless Veterans Reintegration Project was reauthorized through Fiscal Year 1995. However, the program was rescinded in FY 1995. Public Law 104–275, dated October 9, 1996, was amended to reauthorize the program through FY 1998. Public Laws 105–41 and 105–114, enacted in 1997, extend the program through FY 1999.

The Homeless Veterans Reintegration Project was the first nationwide Federal program that focused on placing homeless veterans into jobs. In accordance with the MHAA, the Assistant Secretary for Veterans' Employment and Training (ASVET) is making approximately $2.25 million of the funds available to award grants for HVRPs in selected cities in FY 1998 under this competition. A separate competition for a small number of demonstration grants to operate in rural areas will be announced separately within a short time. Both types of projects, urban and rural, have provided valuable information on approaches that work in the different environments.

III. Application Process

A. Potential Jurisdictions to be Served

Due to the demonstration nature of the Act, the amount of funds available, and the emphasis on establishing or strengthening existing linkage with other recipients of funds under the MHAA, the only potential jurisdictions which will be served through this competition for HVRPs in FY 1998 are the metropolitan areas of the 75 U.S. cities largest in population and the city of San Juan, Puerto Rico. All potential HVRP jurisdictions are listed in Appendix E.

B. Eligible Applicants

Applications for funds will be accepted from State and local public agencies, Private Industry Councils, and nonprofit organizations as follows:

1. Private Industry Councils (PICS) as defined in Title I, Section 102 of the Job Training Partnership Act (JTPA), Public Law 97–300, are eligible applicants, as well as State and local public agencies. "Local public agency" refers to any public agency of a general purpose political subdivision of a State which has the power to levy taxes and spend funds, as well as general corporate and police powers. (This typically refers to cities and counties). A State agency may propose in its application to serve one or more of the potential jurisdictions located in its State. This does not preclude a city or county agency from submitting an application to serve its own jurisdiction.

Applicants are encouraged to utilize, through subgrants, experienced public agencies, private nonprofit organizations, and private businesses which have an understanding of the unemployment and homeless problems of veterans, a familiarity with the area to be served, and the capability to effectively provide the necessary services.

2. Also eligible to apply are nonprofit organizations who have operated an HVRP or similar employment and training program for the homeless or veterans; have proven capacity to manage Federal grants; and have or will provide the necessary linkages with other service providers. Nonprofit organizations will be required to submit with their application recent (within one year) financial audit statements that attest to the financial responsibility of the organization.

Entities described in Section 501(c)4 of the Internal Revenue Code that engage in lobbying activities are not eligible to receive funds under this announcement. The Lobbying Disclosure Act of 1995, Public Law No. 104–65, 109 Stat. 691, prohibits the award of federal funds to these entities if they engage in lobbying activities.

C. Funding Levels

The total amount of funds available for this solicitation is $2.25 million. It is anticipated that up to 20 awards will be made under this solicitation. Awards are expected to range from $100,000 to $125,000 with an average of $112,500. The Federal government reserves the right to negotiate the amounts to be awarded under this competition. *Please be advised that requests exceeding this range by 15% or more will be considered non-responsive.*

D. Period of Performance

The period of performance will be for one year from date of award. It is expected that successful applicants will commence program operations under this solicitation on or before March 31, 1998. Actual start dates will be negotiated with each successful applicant.

E. Second Year Option

As stated in Section II of this Part, the Homeless Veterans Reintegration Project was reauthorized by statute through FY 1998 only. Should there be action by Congress to reauthorize HVRP beyond that time and should funds be appropriated for this purpose, a second year option may be considered. The Government does not, however, guarantee an option year for any awardee.

The grantees' performance during the first period of operations will be taken into consideration as follows:

1. By the end of the third quarter, has the grantee achieved at least 60% of the first year total goals for Federal expenditures, enrollments, and placements?

2. Has the grantee met 85% of goals for Federal expenditures, enrollments and placements for the year if planned activity is NOT evenly distributed in each quarter?

All instructions for modifications and announcement of fund availability will be issued at a later date. Please note that the Government does reserve its right to compete any subsequent funds appropriated for this purpose in lieu of an option year.

F. Late Proposals

The grant application package must be received at the designated place by the date and time specified or it will not be considered. Any application received at the Office of Procurement Services at 4:45 pm EST, February 23, 1998, will not be considered unless it is received before the award is made and:

1. it was sent by registered or certified mail not later than the fifth calendar day before February 23, 1998;

2. it is determined by the Government that the late receipt was due solely to mishandling by the Government after receipt at the U.S. Department of Labor at the address indicated; or

3. it was sent by U.S. Postal Service Express Mail Next Day Service-Post Office to Addressee, not later than 5:00 pm at the place of mailing two (2) working days, excluding weekends and Federal holidays, prior to February 23, 1998.

The only acceptable evidence to establish the date of mailing of a late application sent by registered or certified mail is the U.S. Postal Service postmark on the envelope or wrapper and on the original receipt from the U.S. Postal Service. If the postmark is not legible, an application received after the above closing time and date shall be processed as if mailed late. "Postmark" means a printed, stamped or otherwise placed impression (*not* a postage meter machine impression) that is readily identifiable without further action as having been applied and affixed by an employee of the U.S. Postal Service on the date of mailing. Therefore applicants should request that the postal clerk place a legible hand cancellation "bull's-eye" postmark on both the receipt and the envelope or wrapper.

The only acceptable evidence to establish the date of mailing of a late application sent by U.S. Postal Service Express Mail Next Day Service-Post Office to Addressee is the date entered by the Post Office receiving clerk on the "Express Mail Next Day Service-Post Office to Addressee" label and the postmark on the envelope or wrapper and on the original receipt from the U.S. Postal Service. "Postmark" has the same meaning as defined above. Therefore, applicants should request that the postal clerk place a legible hand cancellation "bull's-eye" postmark on both the receipt and the envelope or wrapper.

The only acceptable evidence to establish the time of receipt at the U.S. Department of Labor is the date/time stamp of the Procurement Services Center on the application wrapper or other documentary evidence or receipt maintained by that office. Applications sent by telegram or facsimile (FAX) will *not* be accepted.

G. Submission of Proposal

A cover letter, and an original and three (3) copies of the proposal shall be submitted. The proposal shall consist of two (2) separate and distinct parts:

Part I—Technical Proposal shall consist of a narrative proposal that demonstrates the applicant's knowledge of the need for this particular grant program, its understanding of the services and activities proposed to alleviate the need and its capabilities to accomplish the expected outcomes of the proposed project design. The technical proposal shall consist of a narrative not to exceed fifteen (15) pages double-spaced, typewritten on one side of the paper only. Charts and exhibits are not counted against the page limit. Applicants should be responsive to the Rating Criteria contained in Section VI and address all of the rating factors noted as thoroughly as possible in the narrative. The following format is strongly recommended:

1. Need for the project: the applicant should identify the geographical area to be served and provide an estimate of the number of homeless veterans and their needs, poverty and unemployment rates in the area, and gaps in the local community infrastructure the project would fulfill in addressing the employment and other barriers of the targeted veterans. Include the outlook for job opportunities in the service area.

2. Approach or strategy to increase employment and job retention: The applicant should describe the specific supportive services and employment and training services to be provided under this grant and the sequence or flow of such services. Participant flow charts may be provided. Include a description of the relationship with other employment and training programs such as disabled Veterans' Outreach Program (DVOP) and the Local Veterans' Employment Representative (LVER) program, and programs under the Job Training Partnership Act. Please include a plan for followup of participants who entered employment at age 30 and 90 days and the capacity to assist the Department of Labor in one-year and/or multi-year followup efforts. (See discussion on results in Section V. D.) Please include the chart of proposed performance goals and planned expenditures listed in Appendix D. Although the form itself is not mandatory, the information called for in Appendix D must be provided by the applicant.

3. Linkages with other providers of employment and training services to the homeless and to veterans: Describe the linkages this program will have with other providers of services to veterans and to the homeless outside of the HVRP grant. List the types of services provided by each. Note the type of agreement in place if applicable.

Linkages with the workforce development system [inclusive of JTPA and State Employment Security Agencies (SESAs)] should be delineated. Describe any linkages with Department of Housing and Urban Development (HUD) and Department of Veterans Affairs resources and programs for the homeless. Indicate how the applicant will coordinate with any "continuum of care" efforts for the homeless among agencies in the community.

4. Organizational capability in providing required program activities: The applicant's relevant current or prior experience in operating employment and training programs should be delineated. Provide information denoting outcomes of past programs in terms of enrollments and placements. Applicants who have operated an HVRP program, or more recent Homeless Veterans Employment and Training (HVET) program should include final or most recent technical performance reports. (This information is subject to verification by the Veterans' Employment and Training Service.) Provide evidence of key staff capability. Non-profit organizations should submit evidence of satisfactory financial management capability including recent financial and/or audit statements.

5. Proposed housing strategy for homeless veterans: Describe how housing resources for homeless veterans may be obtained or accessed. These resources may be from linkages or sources other than the HVRP grant such as HUD, community housing resources, DVA leasing or other programs. The applicant should explain whether HVRP resources will be used and why this is necessary.

Part II—Cost Proposal shall contain the Standard Form (SF) 424, "Application for Federal Assistance," and the Budget Information Sheet in Appendix B. In addition the budget shall include—on a separate page(s)—a detailed cost break-out of each line item on the Budget Information Sheet. Please label this page or pages the "Budget Narrative." Also to be included in this Part is the Assurance and Certification Page, Appendix C. Copies of all required forms with instructions for completion are provided as appendices to this solicitation. The Catalog of Federal Domestic Assistance number for this program is 17.805, which should be entered on the SF 424, Block 10. Please show leveraged resources/matching funds and/or the value of in-kind contributions in Section B of the Budget Information sheet.

Budget Narrative Information. As an attachment to the Budget Information Sheet, the applicant must provide at a minimum, and on separate sheet(s), the following information:

(a) A breakout of all personnel costs by position, title, salary rates and percent of time of each position to be devoted to the proposed project (including subgrantees);

(b) An explanation and breakout of extraordinary fringe benefit rates and associated charges (i.e., rates exceeding 35% of salaries and wages);

(c) An explanation of the purpose and composition of, and method used to derive the costs of each of the following: travel, equipment, supplies, subgrants/contracts and any other costs. The applicant should include costs of any required travel described in this Solicitation. Mileage charges shall not exceed 31 cents per mile;

(d) Description/specification of and justification for equipment purchases, if any. Tangible, non-expendable, personal property having a useful life of more than one year and a unit acquisition cost of $5,000 or more per unit must be specifically identified: and

(e) Identification of all sources of leveraged or matching funds and an

VOL 63 ISS 13 JA 21 1998 UMI

explanation of the derivation of the value of matching/in-kind Services.

IV. Participant Eligibility

To be eligible for participation under HVRP, an individual must be homeless and a veteran defined as follows:

A. The term "homeless or homeless individual" includes persons who lack a fixed, regular, and adequate nighttime residence. It also includes persons whose primary nighttime residence is either a supervised public or private shelter designed to provide temporary living accommodations; an institution that provides a temporary residence for individuals intended to be institutionalized; or a private place not designed for, or ordinarily used as, a regular sleeping accommodation for human beings. [Reference 42 U.S.C. 11302].

B. The term "veteran" means a person who served in the active military, naval, or air service, and who was discharged or released therefrom under conditions other than dishonorable. [Reference 38 USC 101(2)]

V. Project Summary

A. Program Concept and Emphasis

The HVRP grants under Section 738 of the Stewart B. McKinney Homeless Assistance Act are intended to address dual objectives:

Provide services to assist in reintegrating homeless veterans into the labor force; and stimulate the development of effective service delivery systems that will seek to address the complex problems facing homeless veterans. These programs are designed to be flexible in addressing the universal as well as local or regional problems barring homeless veterans from the workforce. The program in FY 1998 will continue to strengthen the provision of comprehensive services through a case management approach, the attainment of housing resources for veterans entering the labor force, and strategies for employment and retention.

B. Required Features

1. The HVRP has since its inception featured an outreach component consisting of veterans who have experienced homelessness. In recent years this requirement was modified to allow the projects to utilize formerly homeless veterans in other positions where there is direct client contact if outreach was not needed extensively, such as counseling, peer coaching, intake and follow up. This requirement applies to projects funded under this solicitation.

2. Projects will be required to show linkages with other programs and services which provide support to homeless veterans. Coordination with the Disabled Veterans' Outreach Program (DVOP) Specialists in the jurisdiction is particularly encouraged.

3. Projects will be "employment focused." That is, they will be directed towards: (a) increasing the employability of homeless veterans through providing for or arranging for the provision of services which will enable them to work; and (b) matching homeless veterans with potential employers.

C. Scope of Program Design

The HVRP project design should provide or arrange for the following services:

—Outreach, intake, assessment, counseling and employment services. Outreach should, to the degree practical, be provided at shelters, day centers, soup kitchens, and other programs for the homeless. Program staff providing outreach services are to be veterans who have experienced homelessness.

Coordination with veterans'; services programs and organizations such as:

—Disabled Veterans'; Outreach Program (DVOP) Specialists and Local Veterans' Employment Representatives (LVERs) in the State Employment Security/Job Service Agencies (SESAs) or in the newly instituted workforce development system's One-Stop Centers, JTPA Title IV, Part C (IV–C) Veterans' Employment Program
—Department of Veterans' Affairs (DVA) services, including its Health Care for Homeless Veterans, Domiciliary and other programs, including those offering transitional housing
—Veteran service organizations such as The American Legion, Disabled American Veterans, and the Veterans of Foreign Wars, Vietnam Veterans of America, and the American Veterans (AMVETS)

Referral to necessary treatment services, rehabilitative services, and counseling including, but not limited to:

—Alcohol and drug
—Medical
—Post Traumatic Stress Disorder
—Mental Health
—Coordinating with MHAA Title VI programs for health care for the homeless

Referral to housing assistance provided by:

—Local shelters
—Federal Emergency Management Administration (FEMA) food and shelter programs
—Transitional housing programs and single room occupancy housing programs funded under MHAA Title IV
—Permanent housing programs for the handicapped homeless funded under MHAA Title IV
—Department of Veterans' Affairs programs that provide for leasing or sale of acquired homes to homeless providers
—Transitional housing leased by HVRP funds (HVRP funds cannot be used to purchase housing)

Employment and training services such as:

—Basic skills instruction
—Basic literacy instruction
—Remedial education activities
—Job search activities
—Job counseling
—Job preparatory training, including résumé writing and interviewing skills
—Subsidized trial employment (Work Experience)
—On-the-Job Training
—Job placement in unsubsidized employment
—Placement followup services
—Services provided under JTPA Program Titles

D. Results-Oriented Model

Based on past experience of grantees working with this target group, a workable program model evolved which is presented for consideration by prospective applicants. No model is mandatory, and the applicant should design a program that is responsive to local needs, but will carry out the objectives of the HVRP to successfully reintegrate homeless veterans into the workforce.

With the advent of implementing the Government Performance and Results Act (GPRA), Congress and the public are looking for results rather than process. While entering employment is a viable out come, it will be necessary to measure results over a longer term to determine the success of programs. The following program discussion emphasizes that followup is an integral program component.

The first phase of activity consists of the level of outreach that is necessary in the community to reach veterans who are homeless. This may also include establishing contact with other agencies that encounter homeless veterans such as shelters, soup kitchens and other facilities. An assessment should be made of the supportive and social rehabilitation needs of the client and referral may take place to services such as drug or alcohol treatment or temporary shelter. When the individual is stabilized, the assessment should focus on the employability of the individual and they are enrolled into the program if they would benefit from pre-employment preparation such as résumé writing, job search workshops, related counseling and case management, and initial entry into the job market through temporary jobs, sheltered work environments, or entry into classroom or on-the-job training. Such services should also be noted in an Employability Development Plan so that successful completion of the plan may be monitored by the staff.

Entry into full-time employment or a specific job training program should follow in keeping with the objective of HVRP to bring the participant closer to self-sufficiency. Transitional housing may assist the participant at this stage or even earlier. Job development is a crucial part of the employability process. Wherever possible, DVOP and LVER staff should be utilized for job development and placement activities for veterans who are ready to enter employment *or* who are in need of intensive case management services. Many of these staff have received training in case management at the National Veterans' Training Institution and have as a priority of focus, assisting those most at a disadvantage in the labor market. VETS urges working hand-in-hand with DVOP/LVER staff to achieve economies of resources.

Followup to determine if the veteran is in the same or similar job at the 30 day period after entering employment is required and important in keeping contact with the veterans and so that assistance in keeping the job may be provided. The 90 day followup is fundamental to assessing the results of the program interventions. Grantees should be careful to budget for this activity so that followup can and will occur for those placed at or near the end of the grant period. Such results will be reported in the final technical performance report.

VETS emphasizes in its Strategic Plan to implement GPRA that suitable outcomes involve careers, not just jobs. Successful results are achieved when the veteran is in the same or similar job after one or more years. Towards that end, VETS solicits the cooperation of successful applicants in retaining participant information pertinent to a longitudinal followup survey, i.e., at least for one year after the grant period ends. Retention of records will be reflected in the Special Provisions at time of award.

E. Related HVRP Program Development Activities

1. Community Awareness Activities

In order to promote linkages between the HVRP program and local service providers (and thereby eliminate gaps or duplication in services and enhance provision of assistance to participants), the grantee must provide project orientation and/or service awareness activities that it determines are the most feasible for the types of providers listed below. Project orientation workshops conducted by HVRP grantees have been an effective means of sharing information and revealing the availability of other services; they are encouraged but not mandatory. Rather, the grantee will have the flexibility to attend service provider meetings, seminars, conferences, to outstation staff, to develop individual service contracts, and to involve other agencies in program planning. This list is not exhaustive. The grantee will be responsible for providing appropriate awareness, information sharing, and orientation activities to the following:

a. *Providers of hands-on services to the homeless,* such as shelter and soup-kitchen operators, to make them fully aware of services available to homeless veterans to make them job-ready and place them in jobs.

b. *Federal, State and local entitlement services* such as the Social Security Administration, Department of Veterans' Affairs (DVA), State Employment Security Agencies (SESAs) and their local Job Service offices, One-Stop Centers (which integrate JTPA, labor exchange and other employment and social services), detoxification facilities, etc., to familiarize them with the nature and needs of homeless veterans.

c. *Civic and private sector groups,* and especially veterans' service organizations, to describe homeless veterans and their needs.

2. Stand Down Support

A "Stand Down" as it relates to homeless veterans is an event held in a locality usually for three days where services are provided to homeless veterans along with shelter, meals, clothing and medical attention. For the most part this type of event is a volunteer effort which is organized within a community and brings service providers such as the DVA, Disabled Veterans Outreach Program Specialists, Local Veterans' Employment Representatives from the State Employment Service Agencies, veteran service organization, military personnel, civic leaders, and a variety of other interested persons and organizations. Many services are provided on site with referrals also made for continued assistance after the event. This can often be the catalyst that enables the homeless veterans to get back into mainstream society. The Department of Labor has supported replication of this event. Many such exercises have been held throughout the nation. In areas where an HVRP is operating, the grantees are encouraged to participate fully and offer their services for any planned Stand Down event. Towards this end, up to $5,000 of the currently requested HVRP MHAA grant funds may be used to supplement the Stand Down effort where funds are not otherwise available and should be reflected in the budget and budget narrative.

VI. Rating Criteria for Award

Applications will be reviewed by a DOL panel using the point scoring system specified below. Applications will be ranked based on the score assigned by the panel after careful evaluation by each panel member. The ranking will be the primary basis to identify approximately 20 applicants as potential grantees. Although the Government reserves the right to award on the basis of the initial proposal submissions, the Government may establish a competitive range, based upon the proposal evaluation, for the purpose of selecting qualified applicants. The panel's conclusions are advisory in nature and not binding on the Grant Officer. The government reserves the right to ask for clarification or hold discussions, but is not obligated to do so. The Government further reserves the right to select applicants out of rank order if such a selection would, in its opinion, result in the most effective and appropriate combination of funding, demonstration models, and geographical service areas. The Grant Officer's determination for award under SGA 98–01 is the final agency action. The submission of the same proposal from any prior year HVRP or HVET competition does not guarantee an award under this Solicitation.

Panel Review Criteria

1. Need for the Project: 15 points. The applicant shall document the extent of need for this project, as demonstrated by: (1) The potential number or concentration of homeless individuals and homeless veterans in the proposed project area relative to other similar areas of jurisdiction; (2) the high rates of poverty and/or unemployment in the proposed project area as determined by the census or other surveys; and (3) the extent of gaps in the local infrastructure

VOL 63 ISS 13 JA 21 1998 UMI

to effectively address the employment barriers which characterize the target population.

2. Overall Strategy to Increase Employment and Retention: 30 points. The application must include a description of the proposed approach to providing comprehensive employment and training services, including job training, job development, placement and post placement follow up services. The supportive services to be provided as part of the strategy of promoting job readiness and job retention should be indicated. The applicant should identify the local human resources and sources of training to be used for participants. A description of the relationship, if any, with other employment and training program such as SESAs (DVOP and LVER Programs), JTPA IV–C, other JTPA programs, and Workforce Development Boards or entities where in place, should be presented. It should be indicated how the activities will be tailored or responsive to the needs of homeless veterans. A participant flow chart may be used to show the sequence and mix of services. Note: The applicant MUST complete the chart of proposed program outcomes to include participants served, and job retention. (See Appendix D)

3. Quality and Extent of Linkages with Other Providers of Services to the Homeless and to Veterans: 20 points. The application should provide information on the quality and extent of the linkages this program will have with other providers of services to benefit the homeless or veterans in the local community outside of the HVRP grant. For each service, it should be specified who the provider is, the source of funding (if known), and the type of linkages/referral system established or proposed. Describe to the extent possible, how the project would fit into the community's "continuum of care" approach to respond to homelessness and any linkages to HUD or DVA programs or resources to benefit the proposed program.

4. Demonstrated Capability in Providing Required Program Services: 20 points. The applicant should describe its relevant prior experience in operating employment and training programs and providing services to participants similar to that which is proposed under this solicitation. Specific outcomes achieved by the applicant should be described in terms of clients placed in jobs, etc. The applicant must also delineate its staff capability and ability to manage the financial aspects of Federal grant programs. Relevant documentation such as financial and/or audit statements should be submitted (required for applicants who are non-profit agencies). Final or most recent technical reports for HVRP, HVET or other relevant programs should be submitted as applicable. The applicant should also address its capacity for timely startup of the program.

5. Quality of Overall Housing Strategy: 15 points. The application should demonstrate how the applicant proposes to obtain or access housing resources for veterans in the program and entering the labor force. This discussion should specify the provisions made to access temporary, transitional, and permanent housing for participants through community resources, HUD, lease, HVRP or other means. HVRP funds may not be used to purchase housing.

Applicants can expect that the cost proposal will be reviewed for allowability, allocability, and reasonableness of costs, but will not be scored.

VII. Post Award Conference

A post-award conference for those awarded FY 1998 HVRP funds is tentatively planned for April or May, 1998. Costs associated with attending this conference for up to three grantee representatives will be allowed as long as they were incurred in accordance with Federal travel regulations. Such costs shall be charged as administrative costs and reflected in the proposed budget. The site of the conference has not yet been determined but will likely be in Washington, DC. Please use Washington, DC for budget planning purposes. The conference will focus on providing information and assistance on reporting, record keeping, and grant requirements, and will also include best practices from past projects.

VIII. Reporting Requirements

The grantee shall submit the reports and documents listed below.

A. Financial Reports

The grantee shall report outlays, program income, and other financial information on a quarterly basis using SF 269A, *Financial Status Report, Short Form.* These forms shall cite the assigned grant number and be submitted to the appropriate State Director for Veterans' Employment and Training (DVET) no later than 30 days after the ending date of each Federal fiscal quarter during the grant period. In addition, a final SF 269 shall be submitted no later than 90 days after the end of the grant period.

B. Program Reports

Grantees shall submit a Quarterly Technical Performance Report 30 days after the end of each Federal fiscal quarter to the DVET which contains the following:

1. a comparison of actual accomplishments to established goals for the reporting period and any findings related to monitoring efforts;
2. reason for slippage if established goals are not met and identification of the corrective action which will be taken to meet the goals, and the timetable for accomplishment of the corrective action.

A final Technical Performance Report will also be required as part of the final report package due 90 days after grant expiration.

C. Summary of Final Report Package

The grantee shall submit 90 days after the grant expiration date the following final report package:

1. Final Financial Status Report.
2. Final Technical Performance Report.
3. Final Narrative Report—Grantees will be required to submit a final narrative report identifying major successes of the program as well as obstacles to success.

IX. Administrative Provisions

A. Limitation on Administrative and Indirect Costs

1. Direct Costs for administration, plus any indirect charges claimed, may not exceed 20 percent of the total amount of the grant.
2. Indirect costs claimed by the applicant shall be based on a federally approved rate. A copy of the negotiated, approved, and signed indirect cost negotiation agreement must be submitted with the application. (Do not submit the State cost allocation plan.)
3. Rates traceable and trackable through the SESA Cost Accounting System represent an acceptable means of allocating costs to DOL and, therefore, can be approved for use in MHAA grants to SESAS.
4. If the applicant does not presently have an approved indirect cost rate, a proposed rate with justification may be submitted. Successful applicants will be required to negotiate an acceptable and allowable rate with the appropriate DOL Regional Office of Cost Determination within 90 days of grant award.

B. Allowable Costs

Determinations of allowable costs shall be made in accordance with the following applicable Federal cost principles:

State and local government—OMB Circular A–87.

Nonprofit organizations—OMB Circular A–122.

C. Administrative Standards and Provisions

All grants shall be subject to the following administrative standards and provisions:

29 CFR Part 97—Uniform Administrative Requirements for Grants and Cooperative Agreements to State and Local Governments.

29 CFR Part 95—Grants and Agreements with Institutes of Higher Education, Hospitals, and Other Non-Profit Organizations.

29 CFR Part 96—Federal Standards for Audit of Federally Funded Grants, Contracts and Agreements.

29 CFR Part 30—Equal Employment Opportunity in Apprenticeship and Training.

29 CFR Part 31—Nondiscrimination in Federally Assisted Programs of the Department of Labor—Effectuation of Title VI of the Civil Rights Act of 1964.

Signed at Washington, D.C., this 14th day of January 1998.

Lawrence J. Kuss,

Grant Officer.

Standard Form 424 (REV. 4-88)
Prescribed by OMB Circular A-102

Authorized for Local Reproduction

INSTRUCTIONS FOR THE SF 424

This is a standard form used by applicants as a required facesheet for preapplications and applications submitted for Federal assistance. It will be used by Federal agencies to obtain applicant certification that States which ave established a review and comment procedure in response to Executive Order 12372 and have selected the program to be included in their process, have been given an opportunity to review the applicant's submission.

Item:	Entry:
1.	Self-explanatory.
2.	Date application submitted to Federal agency (or State if applicable) & applicant's control number (if applicable).
3.	State use only (if applicable)
4.	If this application is to continue or revise an existing award, enter present Federal identifier number. If for a new project, leave blank.
5.	Legal name of applicant, name of primary organizational unit which will undertake this assistance activity, complete address of the applicant, and name and telephone number of the person to contact on matters related to this application.
6.	Enter Employer Identification Number (EIN) as assigned by the Internal Revenue Service.
7.	Enter the appropriate letter in the space provided.
8.	Check appropriate box and enter appropriate letter(s) in the space(s) provided. - "New" means a new assistance award. - "Continuation" means an extension for an additional funding/budget period for a project with a projected completion date. - "Revision" means any change in the Federal Government's financial obligation or contingent liability from an existing obligation.
9.	Name of Federal agency from which assistance is being requested with this application.
10.	Use the Catalog of Federal Domestic Assistance number and title of the program under which assistance is required.
11.	Enter a brief descriptive title of the project. If more than one program is involved, you should append an explanation on a separate sheet. If appropriate (e.g., construction or real property projects), attach a map showing project location. For preapplications, use a separate sheet to provide a summary description of the project.
12.	List only the largest political entities affected (e.g., State, counties, cities.
13.	Self-explanatory.
14.	List the applicant's Congressional District and any District(s) affected by the program or project.
15.	Amount requested or to be contributed during the first funding/budget period by each contributor. Value of in-kind contributions should be included on appropriate lines as applicable. If the action will result in a dollar change to an existing award, indicate only the amount of the change. For decreases, enclose the amounts in parentheses. If both basic and supplemental amounts are included, show breakdown on an attached sheet. For multiple program funding, use totals and show breakdown using same categories as item 15.
16.	Applicants should contact the State Single Point of Contact (SPOC) for Federal Executive Order 12372 to determine whether the application is subject to the State intergovernmental review process.
17.	This question applies to the applicant organization, not the person who signs as the authorized representative. Categories of debt include delinquent audit disallowances, loans and taxes.
18.	To be signed by the authorized representative of the applicant. A copy of the governing body's authorization for you to sign this application as official representative must be on file in the applicant's office. (Certain Federal agencies may require that this authorization be submitted as part of the application.)

PART II - BUDGET INFORMATION

SECTION A - Budget Summary by Categories

	(A)	(B)	(C)
1. Personnel	$		
2. Fringe Benefits(Rate %)			
3. Travel			
4. Equipment			
5. Supplies			
6. Contractual			
7. Other			
8. Total, Direct Cost (Lines 1 through 7)	$		
9. Indirect Cost(Rate %)			
10. Training Cost/Stipends			
11. TOTAL Funds Requested (Lines 8 through 10)	$		

SECTION B - Cost Sharing/ Match Summary (if appropriate)

	(A)	(B)	(C)
1. Cash Contribution			
2. In-Kind Contribution	$		
3. TOTAL Cost Sharing / Match (Rate %)	$		

NOTE: Use Column A to record funds requested for the initial period of performance (i.e. 12 months, 18 months, etc.); Column B to record changes to Column A (i.e. requests for additional funds or line item changes; and Column C to record the totals (A plus B).

INSTRUCTIONS FOR PART II - BUDGET INFORMATION

SECTION A - Budget Summary by Categories

1. **Personnel:** Show salaries to be paid for project personnel.
2. **Fringe Benefits:** Indicate the rate and amount of fringe benefits.
3. **Travel:** Indicate the amount requested for staff travel. Include funds to cover at least one trip to Washington, DC for project director or designee.
4. **Equipment:** Indicate the cost of non-expendable personal property that has a useful life of more than one year with a per unit cost of $5,000 or more.
5. **Supplies:** Include the cost of consumable supplies and materials to be used during the project period.
6. **Contractual:** Show the amount to be used for (1) procurement contracts (except those which belong on other lines such as supplies and equipment); and (2) sub-contracts/grants.
7. **Other:** Indicate all direct costs not clearly covered by lines 1 through 6 above, including consultants.
8. **Total, Direct Costs:** Add lines 1 through 7.
9. **Indirect Costs:** Indicate the rate and amount of indirect costs. Please include a copy of your negotiated Indirect Cost Agreement.
10. **Training /Stipend Cost:** (If allowable)
11. **Total Federal funds Requested:** Show total of lines 8 through 10.

SECTION B - Cost Sharing/Matching Summary

Indicate the actual rate and amount of cost sharing/matching when there is a cost sharing/matching requirement. Also include percentage of total project cost and indicate source of cost sharing/matching funds, i.e. other Federal source or other Non-Federal source.

NOTE:

PLEASE INCLUDE A DETAILED COST ANALYSIS OF EACH LINE ITEM.

ASSURANCES AND CERTIFICATIONS - SIGNATURE PAGE

The Department of Labor will not award a grant or agreement where the grantee/recipient has failed to accept the ASSURANCES AND CERTIFICATIONS contained in this section. By signing and returning this signature page, the grantee/recipient is providing the certifications set forth below:

A. Assurances - Non-Construction Programs

B. Certifications Regarding Lobbying, Debarment, Suspension, and Other Responsibility Matters and Drug-Free/Tobacco-Free Workplace Requirements.

C. Certification of Release of Information

APPLICANT NAME and LEGAL ADDRESS:

If there is any reason why one of the assurances or certifications listed cannot be signed, please explain. Applicant need only submit and return this signature page with the grant application. All other instructions shall be kept on file by the applicant.

SIGNATURE OF AUTHORIZED CERTIFYING OFFICIAL TITLE

APPLICANT ORGANIZATION DATE SUBMITTED

Please Note: **This signature page and any pertinent attachments which may be required by these assurances and certifications shall be attached to the applicant's Cost Proposal.**

VOL 63 ISS 13 JA 21 1998 UMI

HVRP PERFORMANCE GOAL DEFINITIONS

1. Assessments. This process includes addressing the supportive services and employability and training needs of individuals before enrolling them in an HVRP program. Generally, this includes an evaluation and/or measurement of vocational interests and aptitudes, present abilities, previous education and work experience, income requirements, addressing supportive service needs, substance abuse treatment needs, counseling needs, temporary or transitional housing needs, personal circumstances and other related services.

2. Participants Enrolled. A client should be recorded as having been enrolled when an intake form has been completed, and services, referral, or employment has been received through the HVRP program. This should be an unduplicated count over the year: i.e., each participant is recorded only once, regardless of the number of times she or he receives assistance.

3. Placed Into Transitional Or Permanent Housing. A placement into transitional or permanent housing should be recorded when a veteran served by the program upgrades his/her housing situation during the reporting period from shelter/streets to transitional housing or permanent housing or from transitional housing to permanent housing. Placements resulting from referrals by HVRP staff shall be counted. This item is however an unduplicated count over the year, except that a participant may be counted once upon entering transitional housing and again upon obtaining permanent housing.

4. Direct Placements Into Unsubsidized Employment. A direct placement into unsubsidized employment must be a placement made directly by HVRP-funded staff with an established employer who covers all employment costs for 20 or more hours per week at or above the minimum wage. Day labor and other very short-term placements should not be recorded as placements into unsubsidized employment.

5. Assisted Placements Into Unsubsidized Employment. Assisted placements into unsubsidized employment should be recorded where the definition for placement with unsubsidized employment above is met, but the placement was arranged by an agency to which the HVRP referred the homeless veteran, such as a Job Training Partnership Act (JTPA) program.

6. Cost Per Placement. The cost per placement into unsubsidized employment is obtained by dividing the total HVRP funds expended by the total of direct placements plus assisted placements.

7. Number Retaining Job For 30 Days. To be counted as retaining a job for 30 days, continuous employment with one or more employers for at least 30 days must be verified and the definition for either direct placement or assisted placement into unsubsidized employment above is met. This allows clients who have moved into a position with a different employer to be recorded as retaining the job for 30 days as long as the client has been steadily employed for that length of time.

8. Number Retaining Job For 90 Days. To be counted as retaining a job for 90 days, continuous employment with one or more employers for at least 90 days must be verified, and the definition for either placement or assisted placement into unsubsidized employment above is met. This allows clients who have moved into a position with a different employer to be recorded as retaining the job for 90 days as long as the client has been steadily employed for that length of time.

9. Rate of Placement Into Unsubsidized Employment. The rate of placement into unsubsidized employment is obtained by dividing the number placed into unsubsidized employment (HVRP), plus the number of assisted placements into unsubsidized employment by the number of clients enrolled.

10. Average Hourly Wage At Placement. The average hourly wage at placement is the average hourly wage rates at placement of all assisted placements plus direct placements.

11. Employability Development Services. This includes services and activities which will develop or increase the employability of the participant. Generally, this includes vocational counseling, classroom and on-the-job training, pre-employment services (such as job seeking skills and job search workshops), temporary or trial employment, sheltered work environments and other related services and activities. Planned services should assist the participant in addressing specific barriers to employment and finding a job. These activities may be provided by the applicant or by a subgrantee, contractor or another source such as the local Job Partnership Training Act program or the Disabled Veterans'Outreach Program (DVOP) personnel or Local Veterans' Employment Representatives (LVERs). Such services are not mandatory but entries should reflect the services described in the application and the expected number of participants receiving or enrolled in such services during each quarter. Participants may be recorded more than once if they receive more than one service.

12. Total Planned Expenditures. Total funds requested. Identify forecasted expenditures needed for each fiscal quarter.

13. Administrative Costs. Administrative costs shall consist of all direct and indirect costs associated with the supervision and management of the program. These costs shall include the administrative costs, both direct and indirect, of subrecipients and contractors.

14. Participant Services. This cost includes supportive, training, or social rehabilitation services which will assist in stabilizing the participant. This category should reflect all costs other than administrative.

NATIONAL CREDIT UNION ADMINISTRATION

Sunshine Act Meeting

TIME AND DATE: 10:00 a.m., Thursday, January 22, 1998.

PLACE: Board Room, 7th Floor, Room 7047, 1775 Duke Street, Alexandria, VA 22314–3428.

STATUS: Open.

MATTERS TO BE CONSIDERED:

1. Request from a Federal Credit Union to Convert to Non Credit Union Status.
2. Request from a Federal Credit Union to Convert to a de novo (new) Federal Mutual Savings Association.
3. Requests from Two (2) Federal Credit Unions to Convert to Community Charters.
4. Request from a Credit Union to Merge and Convert Insurance.
5. Request from a Corporate Federal Credit Union for a Field of Membership Amendment.
6. Amendments to IRPS 94–1. (Chartering Manual), Community Charter, Expansion, Conversion Requirements.
7. NCUA's Year 2000 (Y2K) Contingency Plan.
8. Final Rule: Amendments to Parts 791.5 and 791.6, NCUA's Rules and Regulations, Rules of Board Procedure.

RECESS: 11.15 a.m.

TIME AND DATE: 11:30 a.m., Thursday, January 22, 1998.

PLACE: Board Room, 7th Floor, Room 7047, 1775 Duke Street, Alexandria, VA 22314–3428.

STATUS: Closed.

MATTERS TO BE CONSIDERED:

1. One (1) Administrative Action under Section 206 of the Federal Credit Union Act. Closed pursuant to exemptions (5), (7), and (10).
2. Four (4) Personnel Actions. Closed pursuant to exemptions (2) and (6).

FOR FURTHER INFORMATION CONTACT: Becky Baker, Secretary of the Board, Telephone 703–518–6304.

Becky Baker,

Secretary of the Board.

BILLING CODE 7535–01–M

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–348 and 50–364]

Southern Nuclear Operating Company, Inc., et al.; Notice of Withdrawal of Application for Amendments to Facility Operating Licenses

The U.S. Nuclear Regulatory Commission (the Commission) has permitted the request of Southern Nuclear Operating Company, Inc. (SNC), to withdraw part 2 of its June 13, 1997, application for proposed amendments to Facility Operating License Nos. NPF–2 and NPF–8 for the Joseph M. Farley Nuclear Plant, Units 1 and 2, located in Houston County, Alabama.

The proposed amendments would have revised TS 3.9.13 by extending the completion time allowed for returning one out-of-service penetration room filtration system from 48 hours to 7 days.

The Commission had previously issued a Notice of Consideration of Issuance of Amendments published in the **Federal Register** on July 16, 1997 (62 FR 38138). However, by letter dated January 7, 1998, SNC withdrew part 2 of the proposed change.

For further details with respect to this action, see the application for amendments dated June 13, 1997, and SNC's letter dated January 7, 1997, which withdrew part 2 of the application for license amendments. The above documents are available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC, and at the local public document room located at the Houston-Love Memorial Library, 212 W. Burdenshaw Street, Post Office Box 1369, Dothan, Alabama.

Dated at Rockville, Maryland, this 13th day of January 1998.

For the Nuclear Regulatory Commission.

Jacob I. Zimmerman,

Project Manager, Project Directorate II–2, Division of Reactor Projects—I/II, Office of Nuclear Reactor Regulation.

[FR Doc. 98–1378 Filed 1–20–98; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards; Meeting Notice

In accordance with the purposes of Sections 29 and 182b. of the Atomic Energy Act (42 U.S.C. 2039, 2232b), the Advisory Committee on Reactor Safeguards will hold a meeting on February 5–7, 1998, in Conference Room T–2B3, 11545 Rockville Pike, Rockville, Maryland. The date of this meeting was previously published in the **Federal Register** on Thursday, November 20, 1997 (62 FR 62079).

Thursday, February 5, 1998

8:30 a.m.–8:35 a.m.: Opening Remarks by the ACRS Chairman (Open)—The ACRS Chairman will make opening remarks regarding conduct of the meeting.

8:35 a.m.–10:00 a.m.: Development of a Revised Fire Protection Rule (Open)—The Committee will hear presentations by and hold discussions with representatives of the NRC staff, Nuclear Energy Institute (NEI), National Fire Protection Association (NFPA), and the Union of Concerned Scientists (UCS) regarding staff actions related to the development of a revised Fire Protection Rule.

10:15 A.M.–12:00 Noon: AP600 Test and Analyses Program and Standard Safety Analysis Report (Open/Closed)—The Committee will hear presentations by and hold discussions with representatives of the NRC staff and Westinghouse regarding the AP600 Test and Analyses Program and the AP600 Standard Safety Analysis Report Chapters 1, 4, 5, 7, 8, 10, 11, 13, 17 and 18.

[Portions of this session may be closed to discuss Westinghouse Proprietary Information related to the Test and Analyses Program.]

1:00 P.M.–2:00 P.M.: Westinghouse Spent Fuel Rack Criticality Analysis Methodology (Open)—The Committee will hear presentations by and hold discussions with representatives of the ACRS staff and Westinghouse regarding Westinghouse's spent fuel rack criticality analysis methodology.

2:00 p.m.–3:00 p.m.: Meeting with Chairman Jackson (Open)—The Committee will meet with Chairman Jackson to discuss items of mutual interest, including NRC Research Program; Use of PRA in the Regulatory Decisionmaking Process (CDF as a Safety Goal, Policy Issues, etc.); Risk Informed, Performance Based Regulation; Proposed Revisions to 10 CFR 50.59; NRC Strategic and Performance Planning; Shutdown and Low Power Rulemaking and Maintenance Rule; and Timeliness and Utility of ACRS Advice (Comments on ACRS/ACNW Survey).

3:15 p.m.–5:15 p.m.: Improvements to the Senior Management Meeting Process (Open)—The Committee will hear presentations by and hold discussions with representatives of the NRC staff regarding proposed improvements to the Senior Management Meeting Process.

5:15 P.M.–7:00 P.M.: Preparation of ACRS Reports (Open)—The Committee will discuss proposed ACRS reports on matters considered during this meeting, as well as the ACRS annual report to Congress regarding the NRC Safety Research Program.

Friday, February 6, 1998

8:30 a.m.–8:35 a.m.: Opening Remarks by the ACRS Chairman (Open)-The ACRS Chairman will make opening remarks regarding conduct of the meeting.

8:35 a.m.–9:30 a.m.: Proposed Rulemaking Related to 10 CFR 50.59 (Changes, Tests and Experiments) (Open)—The Committee will hear presentations by and hold discussions with representatives of the NRC staff regarding the proposed changes to 10 CFR 50.59.

9:30 a.m.–10:15 a.m.: SECY–97–231, Performance Based Inspection Guidance (Open)—The Committee will hear presentations by and hold discussions with representatives of the NRC staff regarding SECY–97–231, and related matters.

10:30 a.m.–11:30 a.m.: Human Performance and Reliability Implementation Plan (Open)—The Committee will hear presentations by and hold discussions with representatives of the NRC staff regarding the Human Performance and Reliability Implementation Plan and related activities.

11:30 a.m.–12:00 Noon: Future ACRS Activities (Open)—The Committee will discuss the recommendations of the Planning and Procedures Subcommittee regarding items proposed for consideration by the full Committee during future meetings.

1:00 p.m.–3:00 p.m.: Draft NUREG–1555, "SRP For Environmental Reviews For Nuclear Power Plants" (Open)—The Committee will hear presentations by and hold discussions with representatives of the NRC staff regarding draft NUREG–1555 and related matters.

3:15 p.m.–7:00 p.m.: Preparation of ACRS Reports (Open)—The Committee will continue its discussion of proposed ACRS reports on matters considered during this meeting, and may also discuss the ACRS annual report to Congress regarding the NRC Safety Research Program.

Saturday, February 7, 1998

8:30 a.m.–9:00 a.m.: Report of the Planning and Procedures Subcommittee (Open/Closed)—The Committee will hear a report of the Planning and Procedures Subcommittee on matters related to the conduct of ACRS business, agenda for the planning meeting, and organizational and personnel matters relating to the ACRS.

[**Note:** A portion of this session may be closed to discuss organizational and personnel matters that relate solely to the internal personnel rules and practices of this Advisory Committee, and information the release of which would constitute a clearly unwarranted invasion of personal privacy.]

9:00 a.m.–9:15 a.m.: Reconciliation of ACRS Comments and Recommendations (Open)—The Committee will discuss responses from the NRC Executive Director for Operations (EDO) to comments and recommendations included in recent ACRS reports, including the EDO response to the December 12, 1997 ACRS report related to proposed revisions to 10 CFR 50.59 (Changes, Tests and Experiments).

9:15 a.m.–4:00 p.m. (12:00 Noon–1:00 p.m. Lunch): Preparation of ACRS Reports (Open)—The Committee will continue its discussion of proposed ACRS reports on matters considered during this meeting, and may also discuss the ACRS annual report to Congress regarding the NRC Safety Research Program.

4:00 p.m.–4:30 p.m.: Miscellaneous (Open)—The Committee will discuss matters related to the conduct of Committee activities and matters and specific issues that were not completed during previous meetings, as time and availability of information permit.

Procedures for the conduct of and participation in ACRS meetings were published in the **Federal Register** on September 4, 1997 (62 FR 46782). In accordance with these procedures, oral or written views may be presented by members of the public, including representatives of the nuclear industry, electronic recordings will be permitted only during the open portions of the meeting, and questions may be asked only by members of the Committee, its consultants, and staff. Persons desiring to make oral statements should notify Dr. Gail H. Marcus, Acting Chief of the Nuclear Reactors Branch, at least five days before the meeting, if possible, so that appropriate arrangements can be made to allow the necessary time during the meeting for such statements. Use of still, motion picture, and television cameras during this meeting may be limited to selected portions of the meeting as determined by the Chairman. Information regarding the time to be set aside for this purpose may be obtained by contacting the Acting Chief of the Nuclear Reactors Branch prior to the meeting. In view of the possibility that the schedule for ACRS meetings may be adjusted by the Chairman as necessary to facilitate the conduct of the meeting, persons planning to attend should check with the Acting Chief of the Nuclear Reactors Branch if such rescheduling would result in major inconvenience.

In accordance with Subsection 10(d) P.L. 92–463, I have determined that it is necessary to close portions of this meeting noted above to discuss matters that relate solely to the internal personnel rules and practices of this Advisory Committee per 5 U.S.C. 552b(c)(2), to discuss Westinghouse proprietary information per 5 U.S.C. 552b(c)(4), and to discuss information the release of which would constitute a clearly unwarranted invasion of personal privacy per 5 U.S.C. 552b(c)(6).

Further information regarding topics to be discussed, whether the meeting has been canceled or rescheduled, the Chairman's ruling on requests for the opportunity to present oral statements and the time allotted therefor, can be obtained by contacting Dr. Gail H. Marcus, Acting Chief of the Nuclear Reactors Branch (telephone 301/415–7363), between 7:30 A.M. and 4:15 P.M. EST.

ACRS meeting agenda, meeting transcripts, and letter reports are available for downloading or reviewing on the internet at http://www.nrc.gov/ACRSACNW.

Date: January 14, 1998.

Andrew L. Bates,

Advisory Committee Management Officer.

BILLING CODE 7590–01–P

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 22998; 812–10492]

Growth Stock Portfolio, et al.; Notice of Application

January 13, 1998.

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of application for exemption under section 6(c) of the Investment Company Act of 1940 (the "Act") from section 15(a) of the Act and rule 18f–2 under the Act and from certain disclosure requirements under the Act.

SUMMARY OF APPLICATION: Applicants request an order that would (i) permit applicants to hire sub-advisers and materially amend sub-advisory agreements without shareholder approval and (ii) grant relief from

VOL 63 ISS 13 JA 21 1998 UMI

certain disclosure requirements regarding advisory fees paid to the sub-advisers.

APPLICANTS: Growth Stock Portfolio (the "Portfolio"), R. Meeder & Associates, Inc. ("RMA"), and Sector Capital Management, L.L.C. ("Sector," together with RMA, the "Advisers").

FILING DATES: The application was filed on January 13, 1997. Applicant has agreed to file an amendment, the substance of which is incorporated herein, during the notice period.

HEARING OR NOTIFICATION OF HEARING: An order granting the application will be issued unless the SEC orders a hearing. Interested persons may request a hearing by writing to the SEC's Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the SEC by 5:30 p.m. on February 9, 1998 and should be accompanied by proof of service on the applicants, in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons may request notification of a hearing by writing to the SEC's Secretary.

ADDRESSES: Secretary, SEC, 450 5th Street, N.W., Washington, D.C. 20549. Applicants: Growth Stock Portfolio and R. Meeder & Associates, Inc., 6000 Memorial Drive, Dublin, OH 43017; Sector Capital Management, L.L.C., 5350 Poplar Avenue, Suite 490, Memphis, TN 38119.

FOR FURTHER INFORMATION CONTACT: Deepak T. Pai, Staff Attorney, at (202) 942–0574, or Nadya B. Roytblat, Assistant Director, at (202) 942–0564 (Division of Investment Management, Office of Investment Company Regulation).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained for a fee from the SEC's Public Reference Branch, 450 5th Street, N.W., Washington, D.C. 20549 (tel. 202–942–8090).

Applicants' Representations

1. The Flex-Funds and The Flex-Partners, Massachusetts business trusts, are open-end management investment companies registered under the Act (The Flex-Funds and The Flex-Partners are collectively referred to as the "Trusts"). The Highlands Growth Fund is a series of The Flex-Funds, and the Core Equity Fund is a series of The Flex-Partners (The Highlands Growth Fund and the Core Equity Fund are collectively referred to as the "Funds"). The Portfolio, a New York business trust, is an open-end management investment company registered under the Act. The Portfolio's securities are not registered under the Securities Act of 1933 and the Portfolio currently does not intend to offer its shares to the public. The Portfolio offers its shares to the Funds through the use of offering documents ("Offering Documents"). Neither the Trusts nor the Funds have an investment adviser because the assets of the Funds are invested in the Portfolio, which has the same investment objectives as the Funds.

2. RMA, an investment adviser registered under the Investment Advisers Act of 1940 (the "Advisers Act"), acts as investment adviser to the Portfolio. Under an investment advisory contract, RMA (i) provides an investment program within the limitations of the Portfolio's investment policies and restrictions; (ii) furnishes all executive, administrative and clerical services required for the transaction of Portfolio business, other than accounting services and services which are provided by the Portfolio's custodian, transfer agent, independent accountants, and legal counsel; and (iii) provides office space and other facilities and equipment for the management of the affairs of the Portfolio. In addition, RMA invests the Portfolio's cash and may invest the Portfolio's financial futures contracts and related options. For its services, RMA receives a fee from the Portfolio based on the net assets of the Portfolio.

3. Sector, an investment adviser registered under the Advisers Act, serves as investment co-adviser to the Portfolio under an investment co-advisory agreement among the Portfolio, RMA and Sector (the "Co-advisory Agreement"). RMA recommended to the Portfolio's board of directors (the "Board") that Sector be hired as the investment co-adviser to the Portfolio. RMA also has the right to terminate Sector as the investment co-adviser to the Portfolio. The Co-advisory Agreement permits Sector to enter into agreements with one or more sub-advisers ("Sub-advisory Agreements") to exercise investment discretion over the Portfolio's assets.[1]

4. Under the Co-Advisory Agreement, Sector (i) Reallocates the assets of the Portfolio among the sub-advisers when necessary; (ii) evaluates and selects sub-advisers; (iii) performs internal due diligence on prospective sub-advisers and monitors sub-advisers' performance through quantitative and qualitative analysis; (iv) supervises compliance with the investment objectives and policies of the Portfolio; (v) recommends to the Board whether Sub-advisory Agreements should be renewed, modified, or terminated; and (vi) recommends to the Board the addition of new sub-advisers. The Portfolio currently has seven sub-advisers (the "Sub-advisers"). The Sub-advisers are responsible for reviewing supervising, and administering the Portfolio's investment program with respect to the portion of the Portfolio's assets assigned to them. As compensation for providing its sub-adviser selection, monitoring and asset allocation services, Sector currently receives a fee from RMA computed as a percentage of RMA's investment advisory fee. Sector pays the Sub-advisers out of this fee.

5. Applicants believe that the allocation of responsibilities between the Advisers benefits the shareholders because of the specialization and efficiency it provides. Applicants request an exemption from section 15(a) of the Act and rule 18f–2 under the Act to permit them to hire Sub-advisers and materially amend Sub-advisory Agreements without shareholder approval. Applicants also request an exemption from various disclosure requirements described below that may require them to disclose the fees paid to each Sub-adviser.[2]

6. Applicants request an exemption to permit the Portfolio and the Trusts to disclose (as a dollar amount and as a percentage of their net assets: (i) aggregate fees paid to RMA and its Affiliated Sub-advisers (as defined below); (ii) aggregate fees paid to Sector and its Affiliated Sub-advisers (as defined below); and (iii) aggregate fees paid to Sub-Advisers other than Affiliated Sub-Advisers (these fees are referred to collectively as, "Aggregate Fees"). An Affiliated Sub-adviser is any sub-adviser that is an "affiliated person" (as defined in section 2(a)(3) of the Act) of the Portfolio, the Trusts, RMA, or Sector, other than by reason of serving as a sub-adviser of the Portfolio.

[1] Under the Co-advisory Agreement, Sector is authorized to make investment decisions concerning the purchase and sale of specific securities and other instruments.

[2] Applicants also request relief with respect to any other registered open-end management investment company advised by RMA and Sector, or a person controlling, controlled by, or under common control with RMA and a person controlling, controlled by or under common control with Sector (a "Future Company"), provided that the Future Company operates in substantially the same manner as the Portfolio and complies with the conditions of the requested order.

Applicants' Legal Analysis

1. Section 15(a) of the Act provides, in relative part, that it is unlawful for any person to act as an investment adviser to a registered investment company except pursuant to a written contract which has been approved by the vote of a majority of the outstanding voting securities of such registered investment company. Rule 18f–2 provides that any investment advisory contract that is submitted to the shareholders of a series investment company under section 15(a) shall be deemed to be effectively acted upon with respect to any class or series of such company if a majority of the outstanding voting securities of such class or series vote for the approval of the contract.

2. Form N–1A is the registration statement used by open-end investment companies. Items 2, 5(b)(iii), and 16(a)(iii) of Form N–1A require disclosure of the method and amount of the investment adviser's compensation.

3. Form N–14 is the registration form for business combinations involving open-end investment companies. Item 3 of Form N–14 requires the inclusion of a "table showing the current fees for the registrant and the company being acquired and pro forma fees, if different, for the registrant after giving effect to the transaction."

4. Rule 20a–1 under the Act requires proxies solicited with respect to an investment company to comply with Schedule 14A under the Securities Exchange Act of 1934 (the "1934 Act"). Item 22(a)(3)(iv) of Schedule 14A requires a proxy statement for a shareholder meeting at which a new fee will be established or an existing fee increased to include a table of the current and pro forma fees. Items 22(c)(1)(ii), 22(c)(1)(iii), 22(c)(8), and 22(c)(9), taken together, require a proxy statement for a shareholder meeting at which the advisory contract will be voted upon to include the "rate of compensation of the investment adviser," the "aggregate amount of the investment adviser's fees," a description of "the terms of the contract to be acted upon," and, if a change in the advisory fee is proposed, the existing and proposed fees and the difference between the two fees.

5. Form N–SAR is the semi-annual report filed with the SEC by registered investment companies. Item 48 of Form N–SAR requires investment companies to disclose the rate schedule for fees paid to their investment advisers, including the Sub-advisers.

6. Regulation S–X sets forth the requirements for financial statements required to be included as part of investment company registration statements and shareholder reports filed with the SEC. Sections 6–07(2)(a), (b), and (c) of Regulation S–X require that investment companies include in their financial statements information about investment advisory fees.

7. Section 6(c) authorizes the Commission to exempt persons or transactions from the provisions of the Act to the extent that such exemptions are appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policies and provisions of the Act.

8. Applicants believe that the requested relief meets the above standard. Applicants contend that shareholders expect Sector, under the overall authority of the Portfolio's Board, to take responsibility for overseeing Sub-advisers and recommending their hiring, termination, and replacement. Applicants note that the Portfolio's investment advisory agreement with RMA and the Co-advisory Agreement will continue to be subject to shareholder approval under section 15(a).

9. Applicants also believe that the requested relief will benefit shareholders by enabling the Portfolio and the Funds to operate in a less costly and more efficient manner. Applicants argue that the requested relief will reduce the Funds' expenses because the Funds will not have to prepare and solicit proxies each time a Sub-advisory Agreement is entered into or modified. Applicants also believe that the disclosure of fees that Sector pays to each Sub-adviser would not serve a meaningful purpose since investors will pay Sector to retain and compensate the Sub-advisers.

Applicants' Conditions

Applicants agree that the order granting the requested relief shall be subject to following conditions:

1. Before the Portfolio may rely on the order requested in the application, the operation of the Portfolio in the manner described in the application will be approved by a majority of the Portfolio's outstanding voting securities, as defined in the Act, and by the Funds' shareholders in accordance with section 12(d)(1)(E)(iii)(aa) of the Act, or, in the case of a Future Company or Fund whose public shareholders purchase shares on the basis of a prospectus containing the disclosure contemplated by condition 2 below, by the sole shareholder before the offering of the Future Company's or Funds' shares to the public.

2. The Funds' prospectuses, the Portfolio's Offering Documents, and, if applicable, the Portfolio's prospectus will disclose the existence, substance, and effect of any order granted pursuant to this application. In addition, the Portfolio and the Funds will hold themselves out to the public as employing the "manager of managers" approach described in the application. The Funds' prospectuses, the Portfolio's Offering Documents, and, if applicable, the Portfolio's Prospectus will prominently disclose that RMA and Sector have ultimate responsibility for the investment performance of the Portfolio due to RMA's responsibility to oversee Sector and Sector's responsibility to oversee Sub-advisers and recommend their hiring, termination, and replacement.

3. The Portfolio and the Funds will disclose the Aggregate Fees in their registration statements.

4. Within 90 days of the hiring of any new Sub-adviser, RMA and Sector will furnish to the holders of the beneficial interests of the Portfolio and the Funds' shareholders all information about the new Sub-adviser or Sub-advisory Agreement that would be included in a proxy statement, except as modified by the order with respect to the disclosure of Aggregate Fees. Such information will include disclosure of the Aggregate Fees and any change in such disclosure caused by the addition of a new Sub-adviser. To meet this obligation, RMA and Sector will provide the holders of the beneficial interests of the Portfolio and the Funds' shareholders, within 90 days of the hiring of a Sub-adviser, with an information statement meeting the requirements of Regulation 14C and Schedule 14C under the 1934 Act. The information statement also will meet the requirements of Item 22 of Schedule 14A under the 1934 Act, except as modified by the order with respect to the disclosure of Aggregate Fees.

5. Sector and the Portfolio will not enter into a Sub-advisory Agreement with any Affiliated Sub-adviser without such agreement, including the compensation to be paid thereunder, being approved by the holders of the beneficial interests of the Portfolio and by the Funds' shareholders in accordance with section 12(d)(1)(E)(iii)(aa) of the Act.

6. At all times, a majority of the Portfolio's Board will not be "interested persons" within the meaning of section 2(a)(19) of the Act ("Independent Trustees") and the nomination of new or additional Independent Trustees will be placed within the discretion of the then existing Independent Trustees.

VOL 63 ISS 13 JA 21 1998 UMI

7. When a Sub-adviser change is proposed when the Portfolio has an Affiliated Sub-adviser, the Portfolio's Board, including a majority of the Independent Trustees, will make a separate finding reflected in its minutes, that such change is in the best interest of the Portfolio and its investors and does not involve a conflict of interest from which RMA, Sector, or the Affiliated Sub-adviser derives an inappropriate advantage.

8. RMA will provide general management services to the Portfolio, subject to Portfolio Board review. Sector will, subject to Portfolio Board review and approval, (i) together with RMA, set the Portfolio's overall investment strategies, (ii) select Sub-advisers, (iii) allocate and, when appropriate, reallocate the Portfolio's assets among Sub-advisers, (iv) monitor and evaluate Sub-adviser performances, and (v) supervise Sub-adviser compliance with the Portfolio's investment objective, policies, and restrictions.

9. Independent counsel knowledgeable about the Act and the duties of Independent Trustees will be retained to represent the Independent Trustees. The selection of such counsel will be placed within the discretion of the Independent Trustees.

10. Sector will provide the Portfolio's Board no less frequently than quarterly with information about Sector's profitability for each series of the Portfolio relying on the relief requested in the application. Whenever a Sub-adviser is hired or terminated, Sector will provide the Portfolio's Board with information showing the expected impact on Sector's profitability, and quarterly reports will reflect the impact on profitability of the hiring or termination of Sub-advisers during the quarter.

11. No director, trustee, or officer of Sector, RMA, or the Portfolio will own directly or indirectly (other than through a pooled investment vehicle over which such person does not have control) any interest in a Sub-adviser except for: (a) Ownership of interests in RMA or Sector or any entity that controls, is controlled by, or is under common control with RMA or Sector; or (b) ownership of less than 1% of the outstanding securities of any class of equity or debt of a publicly traded company that is either a Sub-adviser or an entity that controls, is controlled by, or is under common control with a Sub-adviser.

For the SEC, by the Division of Investment Management, pursuant to delegated authority.

Margaret H. McFarland,

Deputy Secretary.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Summary Notice No. PE–97–66]

Petitions for Exemption; Summary of Petitions Received; Dispositions of Petitions Issued

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of petitions for exemption received and of dispositions of prior petitions.

SUMMARY: Pursuant to FAA's rulemaking provisions governing the application, processing, and disposition of petitions for exemption (14 CFR part 11), this notice contains a summary of certain petitions seeking relief from specified requirements of the Federal Aviation Regulations (14 CFR Ch. I), dispositions of certain petitions previously received, and corrections. The purpose of this notice is to improve the public's awareness of, and participation in, this aspect of FAA's regulatory activities. Neither publication of this notice nor the inclusion or omission of information in the summary is intended to affect the legal status of any petition or its final disposition.

DATES: Comments on petitions received must identify the petition docket number involved and must be received on or before January 26, 1998.

ADDRESSES: Send comments on any petition in triplicate to: Federal Aviation Administration, Office of the Chief Counsel, Attn: Rule Docket (AGC–200), Petition Docket No. 29099, 800 Independence Avenue, SW., Washington, DC 20591.

Comments may also be sent electronically to the following internet address: 9–NPRM–CMTS@faa.dot.gov.

The petition, any comments received, and a copy of any final disposition are filed in the assigned regulatory docket and are available for examination in the Rules Docket (AGC–200), Room 915G, FAA Headquarters Building (FOB 10A), 800 Independence Avenue, SW., Washington, DC 20591; Telephone (202) 267–3132.

FOR FURTHER INFORMATION CONTACT: Angela Anderson (202) 267–9681 or Tawana Matthews (202) 267–9783 Office of Rulemaking (ARM–1) Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591.

This notice is published pursuant to paragraphs (c), (e), and (g) of § 11.27 of part 11 of the Federal Aviation Regulations (14 CFR Part 11).

Issued in Washington, DC, on January 14, 1998.

Gary A. Michel,

Acting Assistant Chief Counsel for Regulations.

Petitions for Exemption

Docket No.: 29099.

Petitioner: Embry-Riddle Aeronautical University.

Sections of the FAR Affected: 14 CFR 61.55(b)(2), 61.56(c)(1), 61.57 (a) (b) (c) (d), 61.58(a) (1) and (2), and 61.195(e)

Description of Relief Sought: To permit the petitioner to use Level D flight simulators to meet certain flight experience and recency of experience requirements of section 61 for instructor pilots prior to certification of the petitioner's part 142 training center for each appropriate Level D flight simulator program.

BILLING CODE 4910–13–M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Intent to Rule on Application to Impose and Use the Revenue from a Passenger Facility Charge (PFC) at Bismarck Municipal Airport, Bismarck, North Dakota

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of Intent to Rule on Application.

SUMMARY: The FAA proposes to rule and invites public comment on the application to impose and use the revenue from a PFC at Bismarck Municipal Airport under the provisions of the Aviation Safety and Capacity Expansion Act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) (Pub. L. 101–508) and part 158 of the Federal Aviation Regulations (14 CFR part 158).

DATES: Comments must be received on or before February 20, 1998.

ADDRESSES: Comments on this application may be mailed or delivered in triplicate to the FAA at the following address: Federal Aviation Administration, Bismarck Airports District Office, 2000 University Drive, Bismarck, North Dakota 58504. In addition, one copy of any comments submitted to the FAA must be mailed or delivered to Mr. Gregory B. Haug, Airport Manager, of the Bismarck Municipal Airport at the following address: Bismarck Municipal Airport, P.O. Box 991, Bismarck, North Dakota 58502.

VOL 63 ISS 13 JA 21 1998 UMI

Air carriers and foreign air carriers may submit copies of written comments previously provided to the City of Bismarck, North Dakota under § 158.23 of part 158.

FOR FURTHER INFORMATION CONTACT: Ms. Irene R. Porter, Manager, Bismarck Airports District Office, 2000 University Drive, Bismarck, North Dakota 58504, (701) 250–4358. The application may be reviewed in person at this same location.

SUPPLEMENTARY INFORMATION: The FAA proposes to rule and invites public comment on the application to impose and use the revenue from a PFC at Bismarck Municipal Airport under the provisions of the Aviation Safety and Capacity Expansion Act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) (Pub. L. 101–508) and part 158 of the Federal Aviation Regulations (14 CFR part 158).

On December 19, 1997, the FAA determined that the application to impose and use the revenue from a PFC submitted by the City of Bismarck, North Dakota was substantially complete within the requirements of § 158.25 of part 158. The FAA will approve or disapprove the application, in whole or in part, no later than March 21, 1998.

The following is a brief overview of the application.

PFC application number: 98–02–C–00–BIS.

Level of the proposed PFC: $3.00.

Proposed charge effective date: June 1, 1998.

Proposed charge expiration date: March 31, 2003.

Total estimated PFC revenue: $1,474,422.00.

Brief description of proposed projects:

Impose Only: Rehabilitate Baggage Claim Area.

Impose and Use: Rehabilitate General Aviation Ramp; Terminal Building, ADA Compliance; Relocation of Airway Avenue (Yegen Road); Reconstruct, Extend, and Widen Runway 3/21; PFC Application Preparation; Improve Airfield Service Road; Plans and Specifications for Runway 13/31 and Taxiway A; Rehabilitate Runway 13/31; Rehabilitate Runway 13/31 Lighting; Rehabilitate Taxiway A.

Class or classes of air carriers which the public agency has requested not be required to collect PFCs: All on demand air taxi/commercial operators, filing FAA Form 1800–31, that enplane fewer than 500 passengers per year and not having their base of operations at Bismarck Municipal Airport and all on demand air taxi/commercial operators, filing FAA Form 1800–31, having their base of operations at Bismarck Municipal Airport.

Any person may inspect the application in person at the FAA office listed above under **FOR FURTHER INFORMATION CONTACT.**

In addition, any person may, upon request, inspect the application, notice and other documents germane to the application in person at the Bismarck Municipal Airport or City of Bismarck offices.

Issued in Des Plaines, Illinois on January 8, 1998.

Benito De Leon,

Manager, Planning and Programming Branch, Airports Division, Great Lakes Region.

BILLING CODE 4910–13–M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Intent to Rule on Application to Impose and Use a Passenger Facility Charge (PFC) at Chicago O'Hare International Airport, Chicago, IL

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of Intent to Rule on application.

SUMMARY: The FAA proposes to rule and invites public comment on the application to impose and use a PFC at Chicago O'Hare International Airport under the provisions of the Aviation Safety and Capacity Expansion Act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) (Pub. L. 101–508) and part 158 of the Federal Aviation Regulations (14 CFR part 158).

DATES: Comments must be received on or before February 20, 1998.

ADDRESSES: Comments on this application may be mailed or delivered in triplicate to the FAA at the following address: Federal Aviation Administration, Chicago Airports District Office, 2300 East Devon Avenue, Room 201, Des Plaines, Illinois 60018.

In addition, one copy of any comments submitted to the FAA must be mailed or delivered to Ms. Mary Rose Loney, Commissioner, of the City of Chicago Department of Aviation at the following address: Chicago O'Hare International Airport, P.O. Box 66142, Chicago, Illinois 60666.

Air carriers and foreign air carriers may submit copies of written comments previously provided to the City of Chicago Department of Aviation under § 158.23 of part 158.

FOR FURTHER INFORMATION CONTACT: Mr. Philip M. Smithmeyer, Manager, Chicago Airports District Office, 2300 East Devon Avenue, Room 201, Des Plaines, Illinois 60018, (847) 294–7335. The application may be revised in person at this same location.

SUPPLEMENTARY INFORMATION: The FAA proposes to rule and invites public comment on the application to impose and use a PFC at Chicago O'Hare International Airport under the provisions of the Aviation Safety and Capacity Expansion Act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) (Pub. L. 101–508) and part 158 of the Federal Aviation Regulations (14 CFR part 158).

On December 23, 1997, the FAA determined that the application to impose and use the revenue from a PFC submitted by City of Chicago Department of Aviation was substantially complete within the requirements of § 158.25 of part 158. The FAA will approve or disapprove the application, in whole or in part, no later than March 25, 1998.

The following is a brief overview of the application.

PFC application number: 98–07–C–00–ORD.

Level of the PFC: $3.00.

Original charge effective date: September 1, 1993.

Revised proposed charge expiration date: July 1, 2005.

Total estimated PFC revenue: $69,189,000.00.

Brief description of proposed projects:

a. Guard Post 2 Site Improvements.

b. Runway 4R/22L Rehabilitation.

c. Runway 4L/22R Rehabilitation.

d. ATS Improvement.

e. Acquisition of 1997 Equipment.

f. Security Enhancements at Former Military Base.

g. Additional School Soundproofing.

h. Upgrade of I/CAD to Windows NT Platform.

i. I/CAD GPS for OCC.

j. ID Badging System Upgrade.

Class or classes of air carriers which the public agency has requested not be required to collect PFCs: Air Taxi operators.

Any person may inspect the application in person at the FAA office listed above under **FOR FURTHER INFORMATION CONTACT.**

In addition, any person may, upon request, inspect the application, notice and other documents germane to the application in person at the City of Chicago Department of Aviation.

Issued in Des Plaines, Illinois on January 8, 1998.

Benito De Leon,

Manager, Planning/Programming Branch, Airports Division, Great Lakes Region.

BILLING CODE 4910–13–M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Aircraft Portable Megaphones

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of availability for public comment.

SUMMARY: This notice announces the availability of and request comments on proposed technical standard order (TSO) pertaining to aircraft portable megaphones. The proposed TSO prescribes the minimum performance standards that aircraft portable megaphones must meet to be identified with the marking "TSO–C137."

EFFECTIVE DATE: Comments must be received on or before April 24, 1998.

ADDRESSES: Send all comments on the proposed technical standard order to: Technical Programs and Continued Airworthiness Branch, AIR–120, Aircraft Engineering Division, Aircraft Certification Service—File No. TSO–C137, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591. Or deliver comments to: Federal Aviation Administration, Room 815, 800 Independence Avenue, SW., Washington, DC 20591. Comments must identify the TSO file number.

FOR FURTHER INFORMATION CONTACT: Ms. Bobbie J. Smith, Technical Program and Continued Airworthiness Branch, AIR–120, Aircraft Engineering Division, Aircraft Certification Service, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591, FAX No. (202) 267–5340.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to comment on the proposed TSO listed in this notice by submitting such written data, views, or arguments as they desire to the above specified address. Comments received on the proposed technical standard order may be examined, before and after the comment closing date, in Room 815, FAA Headquarters Building (FOB–10A), 800 Independence Avenue, SW., Washington, DC 20591, weekdays except Federal holidays, between 8:30 a.m. and 4:30 p.m. All communications received on or before the closing date for comments specified above will be considered by the Director of the Aircraft Certification Service before issuing the final TSO.

Background

Proposed TSO–C137 establishes the basic requirements for the design and performance of aircraft portable megaphones.

This TSO was designed with the intent of being used predominately in transport category air carrier operations. However, the proposed TSO will be suitable for any aircraft application.

The proposed TSO references the SAE AS 4950 "Design and Performance Criteria for Transport Aircraft Portable megaphones." The TSO also references RTCA Document Number DO–160D which sets forth the environmental test standards for articles manufactured under this TSO. Compliance with this TSO is predicated, in part, on meeting the standards set forth in these documents, with the exception of certain requirements in SAE AS 4950. Specifically, this TSO substitutes different data requirements that the manufacturer must have available for FAA review for those that appear in SAE AS 4950.

In addition to marking requirements specified in 14 CFR 21.607(d), each separate component that is easily removable (without hand tools), an interchangeable element, or a separate sub-assembly of the article must be permanently and legibly marked with at least the name of the manufacturer, the manufacturer's part number, and the TSO number. This TSO also permits optional marking to denote aircraft-specific installation limitations on the article. These exceptions to SAE AS 4950 are detailed in Appendix 1 of this TSO.

How to Obtain Copies

A copy of the proposed TSO–C137, may be obtained via Internet (http:/www.faa.gov/avr/air/100home.htm) or on request from the office listed under **FOR FURTHER INFORMATION CONTACT.** Copies of Society of Automotive Engineers, Inc. (SAE) Aerospace Standard (AS) AS 4950 may be purchased from the SAE Inc., Department 331, 400 Commonwealth Drive, Warrendale, PA 15096–0001. Copies of RTCA, Inc. Document No. 160D, "Environmental Conditions and Test Procedures for Airborne Equipment," dated July 29, 1997 may be purchased from the RTCA, Inc., 1140 Connecticut Avenue, NW., Suite 1020, Washington, DC 20036.

Issued in Washington, DC, on January 13, 1998.

Abbas A. Rizvi,

Acting Manager, Aircraft Engineering Division, Aircraft Certification Service.

BILLING CODE 4910–13–M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Emergency Evacuation Slides, Ramps, and Slide/Raft Combinations

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of availability for public comment.

SUMMARY: This notice announces the availability of and request comments on proposed technical standard orders (TSO's) pertaining to emergency evacuation slides, ramps, and slide/raft combinations. The proposed TSO's prescribe the minimum performance standards that emergency evacuation slides, ramps, and slide/raft combinations must meet to be identified with the marking "TSO–C69c."

EFFECTIVE DATE: Comments must be received on or before April 24, 1998.

ADDRESSES: Send all comments on the proposed technical standard order to: Technical Programs and Continued Airworthiness Branch, AIR–120, Aircraft Engineering Division, Aircraft Certification Service—File No. TSO–C69c, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591. Or deliver comments to: Federal Aviation Administration, Room 815, 800 Independence Avenue, SW., Washington, DC 20591. Comments must identify the TSO file number.

FOR FURTHER INFORMATION CONTACT: Ms. Bobbie J. Smith, Technical Program and Continued Airworthiness Branch, AIR–120, Aircraft Engineering Division, Aircraft Certification Service, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591, FAX No. (202) 267–5340.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to comment on the proposed TSO listed in this notice by submitting such written data, views, or arguments as they desire to the above specified address. Comments received on the proposed

VOL 63 ISS 13 JA 21 1998 UMI

technical standard order may be examined, before and after the comment closing date, in Room 815, FAA Headquarters Building (FOB–10A), 800 Independence Avenue, SW., Washington, DC 20591, weekdays except Federal holidays, between 8:30 a.m. and 4:30 p.m. All communications received on or before the closing date for comments specified above will be considered by the Director of the Aircraft Certification Service before issuing the final TSO.

Background

Proposed TSO–C69c sets forth the basic requirements for the design and performance of emergency slides, ramps, and slide/raft combinations. The changes to this TSO include the addition of specific revisions to the requirements and tests for beam strength, attachment means, evacuation rate conditions, dark of night usability rate, and hot and cold soak. This revision also adds requirements for testing to ensure particular wind loading directions are added for devices which do not deploy perpendicular to the aircraft center line. In addition, Appendices 2 through 4 were added to include standardized definitions used in the TSO, described data collection procedures, and provide a detailed summary of changes contained in this latest TSO revision, respectively. The TSO has been reformatted. In addition, this revision incorporates two NTSB safety recommendations A–88–106 and A–88–107 which calls for improvements to the construction and placarding of manual inflation handles and disconnect means.

In addition to the requirements of 14 CFR 21.607(d), each separate component that is easily removable (without hand tools), an interchangeable element, or a separate sub-assembly of the article must be permanently and legibly marked with at least the name of the manufacturer, manufacturer's part number, and the TSO number.

How to Obtain Copies

A copy of the proposed TSO–C69c, may be obtained via Internet (http://www.faa.gov/avr/air100home.htm) or on request from the office listed under FOR FURTHER INFORMATION CONTACT. Federal Aviation Administration Standards for Emergency Evacuation Slides, Ramps, and Slide/Raft Combinations may be obtained at the FAA Headquarters in the Aircraft Engineering Division (AIR–120), and all Aircraft Certification Offices (ACO's).

Issued in Washington, DC, on January 13, 1998.

Abbas A. Rizvi,

Acting Manager, Aircraft Engineering Division, Aircraft Certification Service.

DEPARTMENT OF THE TREASURY

Commission to Study Capital Budgeting

AGENCY: Advisory Commission to the President of the United States.

ACTION: Notice of meetings.

SUMMARY: The agenda for the next meetings of the Commission to Study Capital Budgeting includes briefings and the hearing of testimony on capital budgeting issues on Friday, January 30. On Saturday morning, January 31, the Commission will review draft materials related to capital budgeting prepared by its staff and then continue discussions on capital budgeting as time permits. Meetings are open to the public. Limited seating capacity is available.

Dates, Times and Places of the Next Commission Meetings

January 30, 1998, 9 a.m. to 5 p.m. Senate Budget Committee Hearing Room, Room 608, Dirksen Senate Office Building, First and C Streets, NE, Washington, DC 20510.

January 31, 1998, 9 a.m. to 1 p.m. White House Conference Center, Truman Room, 726 Jackson Place, NW, Washington, DC 20503.

The Commission is seeking all views on capital budgeting. Interested parties may submit their views to: Barry Anderson, Executive Director, President's Commission to Study Capital Budgeting, Old Executive Office Building (Room 258), Washington, DC 20503. Voice: (202) 395–4630; Fax: (202) 395–6170; E-Mail: capital_budget@oa.eop.gov; Website: To be announced.

FOR FURTHER INFORMATION CONTACT: E. William Dinkelacker, Room 4456, Main Treasury, Washington, DC 20220. Voice: (202) 622–1285; Fax: (202) 622–1294; E-Mail: william.dinkelacker@treas.sprint.com.

BILLING CODE 4810–25–M

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

Office of Thrift Supervision

FEDERAL RESERVE SYSTEM

Federal Deposit Insurance Corporation

Agency Information Collection Activities; Proposed Collection; Comment Request

AGENCIES: Office of the Comptroller of the Currency (OCC), Office of Thrift Supervision (OTS), Treasury; Board of Governors of the Federal Reserve System (Board); and Federal Deposit Insurance Corporation (FDIC).

ACTION: Notice and request for comment.

SUMMARY: The OCC, OTS, Board, and FDIC (Agencies) as part of their continuing effort to reduce paperwork and respondent burden, invite the general public and other Federal agencies to take this opportunity to comment on proposed revisions to a continuing information collection, as required by the Paperwork Reduction Act of 1995. In accordance with the requirements of the Paperwork Reduction Act of 1995 (44 U.S.C. 35), the Agencies may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised, or implemented on or after October 1, 1995, unless it displays a currently valid Office of Management and Budget (OMB) control number. Currently, the Agencies are soliciting comments regarding an information collection concerning certain corporate changes. The information collection is titled: Interagency Bank Merger Act Application. In the case of the OCC, this collection is a part of the Comptroller's Corporate Manual. Additionally, the OCC is making other clarifying changes to the Comptroller's Corporate Manual.

DATES: Written comments should be submitted by March 23, 1998.

ADDRESSES: Direct written comments as follows:

OCC: Communications Division, Office of the Comptroller of the Currency, Third Floor, 250 E Street, SW, Washington, DC 20219; Attention: 1557–0014. Comments also may be sent by facsimile transmission to (202) 874–5274, or by electronic mail to: regs.comments@occ.treas.gov. Comments will be available for inspection and photocopying at the OCC's Public Reference Room, 250 E Street, SW, Washington, DC 20219, between 9 a.m. and 5 p.m., on business days. Appointments for inspection of comments can be made by calling (202) 874–5043.

OTS: Dissemination Branch, Records Management and Information Policy, Office of Thrift Supervision, 1700 G Street, NW, Washington, DC 20552, Attention 1550–0016. These submissions may be hand-delivered to 1700 G Street, NW, from 9 a.m. to 5 p.m., on business days. They may be sent by facsimile transmission to (202) 906–7755. Comments over 25 pages in length should be sent to Fax (202) 906–6956. Comments will be available for inspection at 1700 G Street, NW, from 9 a.m. until 4 p.m., on business days.

Board: William W. Wiles, Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW, Washington, DC 20551, or delivered to the Board's mail room, between 8:45 a.m. and 5:15 p.m., and to the security control room outside of those hours. Both the mail room and the security control room are accessible from the courtyard entrance on 20th Street between Constitution Avenue and C Street NW. Comments received may be inspected in Room MP–500 of the Martin Building, between 9 a.m. and 5 p.m. weekdays, except as provided in 12 CFR 261.8 of the Board's Rules Regarding Availability of Information, 12 CFR 261.8(a).

FDIC: Steven F. Hanft, FDIC Clearance Officer, Office of the Executive Secretary, Federal Deposit Insurance Corporation, 550 17th Street, NW, Washington, DC 20429, (202) 898–3907. Comments may be hand-delivered to the guard station at the rear of the 17th Street building (located on F Street) on business days, between 7 a.m. and 5 p.m. (Fax number (202) 898–3838; Internet address: comments@fdic.gov).

A copy of the comments may also be submitted to the OMB desk officer for the agencies: Alexander T. Hunt, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 3208, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or a copy of the collection may be obtained by contacting:

OCC: Jessie Gates, OCC Clearance Officer, (202) 874–5090, Legislative and Regulatory Activities Division, Office of the Comptroller of the Currency, 250 E Street, SW, Washington, DC 20219.

OTS: Scott Ciardi, Financial Analyst, Corporate Activities, (202)906–6960, or Frances C. Augello, Senior Counsel, Business Transactions Division, (202)906–6151, Office of Thrift Supervision, 1700 G Street, NW, Washington, DC 20552. Copies of the forms with instructions are available for inspection at 1700 G Street, NW, from 9 a.m. until 4 p.m. on business days or from PubliFax, OTS Fax-on-Demand system, at (202)906–5660.

Board: Mary M. McLaughlin, Chief, Financial Reports Section, (202)452–3829. Telecommunications Device for the Deaf (TDD), users may contact Diane Jenkins (202)452–3544, Board of Governors of the Federal Reserve System, 20th and C Streets, NW, Washington, DC 20551.

FDIC: Steven F. Hanft, FDIC Clearance Officer, Office of the Executive Secretary, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429, (202) 898–3907.

SUPPLEMENTARY INFORMATION: Proposal to extend for three years with major revision the following currently approved collections of information:

Title: Interagency Bank Merger Act Application.

OCC's Title: Comptroller's Corporate Manual. The specific portions of the Comptroller's Corporate Manual covered by this notice are those that pertain to the Business Combination Application, certain disclosures, and various portions to which the OCC is making clarifying changes.

OMB Number: OCC: 1557–0014.
OTS: 1550–0016.
Board: 7100–0171.
FDIC: 3064–0015.

Form Number: OCC: None.
OTS: 1639 (formerly 1588).
Board: FR 2070.
FDIC: 6220/01 and 6220/07.

Abstract: This submission covers a revision to make uniform among the Agencies the merger application forms for both affiliated and nonaffiliated institutions. The form name is the Interagency Bank Merger Act Application. The Agencies need the information collected to insure that the proposed transactions are permissible under law and regulation and are consistent with safe and sound banking practices. The Agencies are required, for example, under the Bank Merger Act, to consider financial and managerial resources, future prospects, convenience and needs of the community, community reinvestment, and competition..

Some agencies will collect limited supplemental information in certain cases. For example, the OCC and OTS will collect information regarding CRA commitments, the FDIC may require a legal certification of counsel to confirm that the merger agreement is legally sufficient, and all agencies will require additional information on the competitive impact of proposed mergers under separate instructions.

Further, the OCC is correcting its information collection inventory to cover certain disclosures required in the Manual. This is an administrative adjustment, and does not change, in any way, the requirements on national banks. Finally, the OCC is making technical and clarifying changes to various Manual booklets. These changes are not material. The changes are technical in nature and do not change, in any way, the requirements on national banks.

Type of Review: Revision of a currently approved collection.

Affected Public: Individuals or households; Businesses or other for-profit.

Number of Respondents: OCC: Nonaffiliate—120; Affiliate—260.
OTS: Nonaffiliate—60; Affiliate—5.
Board: Nonaffiliate—57; Affiliate—79.
FDIC: Nonaffiliate—240; Affiliate—290.

Total Annual Responses: OCC: Nonaffiliate—120; Affiliate—260.
OTS: Nonaffiliate—60; Affiliate—5.
Board: Nonaffiliate—57; Affiliate—79.
FDIC: Nonaffiliate—240; Affiliate—290.

Frequency of Response: On occasion.

Total Annual Burden Hours: OCC: Nonaffiliate—3,600; Affiliate—4,680. Total: 8,280 burden hours.
OTS: Nonaffiliate—1,800; Affiliate—90. Total: 1,890 burden hours.
Board: Nonaffiliate—1,710; Affiliate—1,422. Total: 3,132 burden hours.
FDIC: Nonaffiliate—7,200; Affiliate—5,220. Total: 12,420 burden hours.

General Description of Report: This information collection is mandatory. 12 U.S.C. 1828(c) (OCC, FDIC, and OTS); and 12 U.S.C. 321, 1828(c), and 4804 (Board).

Comments

Comments submitted in response to this notice will be summarized in each Agency's OMB submission. All comments will become a matter of public record. Written comments are invited on:

(a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(b) The accuracy of the agency's estimate of the burden of the collection of information;

(c) Ways to enhance the quality, utility, and clarity of the information to be collected, while minimizing burden;

(d) Ways to minimize the burden of the collection on respondents, including through the use of automated collection

VOL 63 ISS 13 JA 21 1998 UMI

techniques or other forms of information technology;

(e) Estimates of capital or startup costs and costs of operation, maintenance, and purchase of services to provide the required information; and

(f) The agencies also request specific comment on the format of the application form. Which is preferable: (1) A narrative style form that describes a feature of the merger that may be answered "not applicable," if appropriate; or (2) a yes/no form with boxes to check "yes" and "no," followed by a requirement to describe the feature if appropriate?

Dated: January 9, 1998.

Karen Solomon,

Director, Legislative & Regulatory Activities Division, Office of the Comptroller of the Currency.

Board of Governors of the Federal Reserve System, January 13, 1998.

William W. Wiles,

Secretary of the Board.

Dated at Washington, D.C., this 22d day of December 1997.

Federal Deposit Insurance Corporation.

Robert E. Feldman,

Executive Secretary.

Dated: January 9, 1998.

By the Office of Thrift Supervision.

BILLING CODE 4810–33–P, 6210–01–P, 6714–01–P, 6720–01–P

DEPARTMENT OF THE TREASURY

Fiscal Service

Federal Atlas Assurance Company of America

AGENCY: Financial Management Service, Fiscal Service, Department of the Treasury.

ACTION: Surety companies acceptable on Federal Atlas Assurance Company of America.

SUMMARY: (Dept. Circ. 570, 1997 Rev., Supp. No. 6.)

FOR FURTHER INFORMATION CONTACT: Surety Bond Branch, (202) 874–7102.

A Certificate of Authority as an acceptable surety on Federal Bonds is hereby issued to the following company under Sections 9304 to 9308, Title 31, of the United States Code. Federal bond-approving officers should annotate their reference copies of the Treasury Circular 570, 1997 Revision, on page 35553 to reflect this addition:

Atlas Assurance Company of America. Business address: 600 College Road East, Princeton, NJ 08540. Phone: (609) 275–2600. Underwriting limitation: [b] $34,535,000. Surety licenses: [c] AL, AK, AZ, AR, CA, CO, CT, DE, DC, FL, GA, HI, ID, IL, IN, IA, KS, KY, LA, ME, MD, MA, MI, MN, MS, MO, MT, NE, NV, NH, NJ, NM, NY, NC, ND, OH, OK, OR, PA, RI, SC, SD, TN, TX, UT, VT, VA, WA, WV, WI, WY. Incorporated in: New York.

Certificates of Authority expire on June 30 each year, unless revoked prior to that date. The Certificates are subject to subsequent annual renewal as long as the companies remain qualified (31 CFR, Part 223). A list of qualified companies is published annually as of July 1 in Treasury Department Circular 570, with details as to underwriting limitations, areas in which licensed to transact surety business and other information.

The Circular may be viewed and downloaded through the Internet (http://www.fms.treas.gov/c570.html) or through our computerized public bulletin board system (FMS Inside Line) at (202) 874–6887. A hard copy may be purchased from the Government Printing Office (GPO), Subscription Service, Washington, DC, telephone (202) 512–1800. When ordering the Circular from GPO, use the following stock number: 048000–00509–8.

Questions concerning this Notice may be directed to the U.S. Department of the Treasury, Financial Management Service, Funds Management Division, Surety Bond Branch, 3700 East-West Highway, Room 6A11, Hyattsville, MD 20782.

Dated: January 7, 1998.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Revenue Procedure 98–13

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning Revenue Procedure 98–13, Election to Treat Certain Revocable Trusts as Part of an Estate.

DATES: Written comments should be received on or before March 23, 1998 to be assured of consideration.

ADDRESSES: Direct all written comments to Garrick R. Shear, Internal Revenue Service, room 5571, 1111 Constitution Avenue, NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the revenue procedure should be directed to Carol Savage, (202) 622–3945, Internal Revenue Service, room 5569, 1111 Constitution Avenue, NW., Washington, DC 20224.

SUPPLEMENTARY INFORMATION:

Title: Election to Treat Certain Revocable Trusts as Part of an Estate.

OMB Number: 1545–1578.

Revenue Procedure Number: Revenue Procedure 98–13.

Abstract: Revenue Procedure 98–13 describes the procedures and requirements for making an election to have certain revocable trusts treated and taxed as part of an estate. The Taxpayer Relief Act of 1997 added section 646 to the Internal Revenue Code to permit the election.

Current Actions: There are no changes being made to the revenue procedure at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households.

Estimated Number of Respondents: 10,000.

Estimated Time Per Respondent: 30 minutes.

Estimated Total Annual Burden Hours: 5,000.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: January 13, 1998.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Revenue Procedure 98–15

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning Revenue Procedure 98–15, Reduced Interest Election for Deferred Estate Tax.

DATES: Written comments should be received on or before March 23, 1998 to be assured of consideration.

ADDRESSES: Direct all written comments to Garrick R. Shear, Internal Revenue Service, room 5571, 1111 Constitution Avenue, NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the revenue procedure should be directed to Carol Savage, (202) 622–3945, Internal Revenue Service, room 5569, 1111 Constitution Avenue, NW., Washington, DC 20224.

SUPPLEMENTARY INFORMATION:

Title: Reduced Interest Election for Deferred Estate Tax.

OMB Number: 1545–1585.

Revenue Procedure Number: Revenue Procedure 98–15.

Abstract: Revenue Procedure 98–15 provides procedures for making an election under section 503 of the Taxpayer Relief Act of 1997 to reduce the rate of interest on estate taxes deferred under section 6166 of the Internal Revenue Code and to eliminate the deduction for interest paid on the deferred estate taxes.

Current Actions: There are no changes being made to the revenue procedure at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households.

Estimated Number of Respondents: 6,600.

Estimated Time Per Respondent: 30 minutes.

Estimated Total Annual Burden Hours: 3,300.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

DEPARTMENT OF VETERANS AFFAIRS

Summary of Precedent Opinions of the General Counsel; Correction

In a notice document published in the **Federal Register** on December 1, 1997 (62 FR 63603), the VA published a summary of precedent opinions of the General Counsel. The document of December 1, failed to include an effective date for VAOPGCPREC 28–97. In a correction document published in the **Federal Register** on December 9, 1997 (62 FR 64910), the effective date for VAOPGCPREC 28–97 was incorrectly stated to be July 24, 1993. The correct effective date is July 24, 1997.

Accordingly, in correction of notice document 97–31329 appearing on page 64910, in the issue of Tuesday, December 9, 1997, the effective date is corrected to read "Effective Date: July 24, 1997".

Approved: January 12, 1998.

Thomas O. Gessel,

Director, Office of Regulations Management.

Part II

Department of Health and Human Services

Health Resources and Services Administration

Health Education Assistance Loan (HEAL) Program: List of Defaulted Borrowers; Notice

VOL 63 ISS 13 JA 21 1998 UMI

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Health Education Assistance Loan (HEAL) Program: List of Defaulted Borrowers

AGENCY: Health Resources and Services Administration, HHS.

ACTION: Notice.

SUMMARY: The Health Resources and Services Administration (HRSA), as required by section 709(c)(1) of the Public Health Service Act (the Act), is publishing this notice of Health Education Assistance Loan (HEAL) borrowers who have defaulted on the repayment of their HEAL loans and are excluded from the Medicare and State health care programs as of July 31, 1997. This listing also can be found on the Internet at http://www.defaulteddocs.dhhs.gov.

FOR FURTHER INFORMATION CONTACT: Mr. Michael Heningburg, Director, Division of Student Assistance, Bureau of Health Professions, Health Resources and Services Administration, Parklawn Building, Room 8–48, 5600 Fishers Lane, Rockville, Maryland 20857 (written requests only). All media inquiries should be directed to the HRSA Office of Communications at (301) 443–3376. Borrower-specific account information, beyond that included in the notice, will not be released to any person other than the borrower, without the written consent of the borrower.

SUPPLEMENTARY INFORMATION: Section 709(c)(1) of the Act (42 U.S.C. 292h(c)(1)) requires the Department of Health and Human Services (HHS) to compile and publish in the **Federal Register** a list of HEAL borrowers who have defaulted on the repayment of their HEAL loans. This list includes any borrower: (1) Whose HEAL loan has been assigned to HHS; and (2) who, as a result of HEAL default, was excluded from the Medicare and State health care programs as of July 31, 1997. The list does not include any defaulter excluded from the Medicare and State health care programs who, as of July 31, 1997, had provided HHS with satisfactory evidence that he or she had filed for bankruptcy and was making payments under a confirmed plan approved by the bankruptcy court. The list also does not include more than 1,000 defaulters who: (1) Have made satisfactory arrangements with HHS to resolve the default after being advised of their potential exclusion from the Medicare and State health care programs; or (2) as of September 19, 1997, had entered into a Settlement Agreement for repayment of the outstanding HEAL debt that had been approved by HRSA.

If extensive loan collection procedures fail to bring HEAL defaulters into repayment, HHS then is required to exclude these defaulters from receiving reimbursement under the Medicare program (42 U.S.C. 1395ccc). The Office of Inspector General imposes a parallel exclusion under section 1128(b)(14) of the Social Security Act, which requires States to exclude the defaulter from participation in all State health care programs (42 U.S.C. 1320a–7(b)(14)).

The total number of defaulters published in this list should not be compared to the number published in the **Federal Register** on March 15, 1995 (60 FR 14060) since the criteria used to compile the lists are different. This list does not include HEAL defaulters who are in the collection activities preceding the Medicare and State health care programs exclusion. If these defaulters do not enter into repayment, they will be added to the list.

The list that follows at the end of this document states: the defaulter's name, the latest known City and State of residence, the total amount of the HEAL debt, the school last attended for which a HEAL loan was received, the borrower's practice discipline, and the estimated school separation date. This information is listed by State of residence and by practice discipline.

Section 709(c)(2) of the Act directs that the information included in this notice be made available to relevant Federal agencies and to schools, school associations, professional and specialty associations, State licensing boards, hospitals with which listed borrowers may be associated, and other relevant organizations. In accordance with this section of the Act, HHS will provide to these entities, upon written request, the information included in the **Federal Register** notice along with Social Security Account Numbers and last known street addresses of the borrowers listed. Written requests should be submitted to the Director, Division of Student Assistance, at the address indicated above.

Dated: January 7, 1998.

Claude Earl Fox,

Acting Administrator.

[Docket No. FR–4079–F–02]

RIN 2502–AG75

Amendments to Real Estate Settlement Procedures Act Regulation (Regulation X)—Escrow Accounting Procedures

AGENCY: Office of the Assistant Secretary for Housing-Federal Housing Commissioner, HUD.

ACTION: Final rule.

SUMMARY: In this final rule, the Department of Housing and Urban Development is revising Regulation X, which implements the Real Estate Settlement Procedures Act of 1974 (RESPA). This rule addresses problems that were raised in applying escrow accounting requirements under Regulation X. The first problem, designated as "Annual vs. Installment Disbursements," involves whether disbursements from mortgage escrow accounts must be made on an annual or installment basis when the payee offers a choice. To address this problem, this rule maintains the current requirements under Regulation X, but clarifies them.

The second problem, designated as "Payment Shock," involves the proper accounting method to calculate escrow payments where the servicer anticipates that disbursements for items such as property taxes will increase substantially in the second year of the escrow account and where "payment shock"—the consumer's experiencing of a substantial rise in escrow payments—will result. The Department has chosen to address this matter by recommending (but not mandating) a best practice for servicers: a voluntary agreement to accept overpayments. A consumer disclosure format has been provided to disclose this information. This rule contains a new provision covering procedures for voluntary overpayments.

The Department has determined not to adopt two other changes that were proposed. The Department will continue to require the single-item listing of escrow deposits on the HUD–1 or HUD–1A. Also, the Department is not revising the requirements for listing a lead-based paint inspection or risk assessment on the Good Faith Estimate (GFE) format and HUD–1 and HUD–1A, but is clarifying the instructions for these formats.

EFFECTIVE DATE: February 20, 1998.

FOR FURTHER INFORMATION CONTACT: David R. Williamson, Director, Office of Consumer and Regulatory Affairs, Room 9146, or Rebecca J. Holtz, Director, RESPA/ILS Division, telephone (202) 708–4560; or, for legal questions, Kenneth A. Markison, Assistant General Counsel for GSE/RESPA, Room 9262, telephone (202) 708–1550, or Grant Mitchell, Senior Attorney for RESPA, telephone (202) 708–1552 (these are not toll-free telephone numbers). For hearing-and speech-impaired persons, these telephone numbers may be accessed via TTY (text telephone) by calling the Federal Information Relay Service at (800) 877–8339 (toll-free). The address for these persons is: Department of Housing and Urban Development, 451 Seventh Street, SW, Washington, DC 20410–0500.

SUPPLEMENTARY INFORMATION:

I. Background

The Department's 1994–1995 escrow accounting rules [1] included significant new requirements for servicers maintaining an estimated 35 million mortgage escrow accounts for American homeowners. These rules, promulgated under the Real Estate Settlement Procedures Act (RESPA) (12 U.S.C. 2601–2617), as amendments to Regulation X (24 CFR part 3500), limited the amounts that servicers may hold in escrow accounts by establishing new uniform accounting and disbursement requirements and by requiring meaningful disclosure to each homeowner at the account's inception and annually thereafter.

The 1994–1995 escrow rules represented a notable achievement. As a result of the escrow rules, the amounts in homeowners' escrow accounts have been reduced substantially. At the time the rules were promulgated, the Department estimated that homeowners would save as much as $1.5 billion by virtue of the new rules. This savings is now being used by homeowners for down payments, to keep and maintain homes, or to fill other needs.

Because the 1994–1995 escrow rules implemented new accounting requirements, they required major changes by mortgage servicers. As the rule's requirements were applied to individual accounts, members of Congress, local government officials, industry representatives, and homeowners brought to the Department's attention certain problems concerning the 1994–1995 rules. In this final rule, the Department is clarifying the rules and identifying "best practices" [2] of mortgage servicers in an effort to resolve two of these problems.

As detailed below, the first problem, designated as "Annual vs. Installment Disbursements," is whether disbursements from mortgage escrow accounts should be made on an annual or installment basis if the payee offers a choice. In some cases, a switch from installment to annual disbursements, required under certain circumstances under the rule, resulted in servicers requiring greater payments to escrow accounts for some borrowers and adverse tax consequences for some borrowers. The second problem, designated as "Payment Shock," was asserted to occur when borrowers were required to make significantly increased payments into their escrow accounts when disbursements for items such as property taxes would increase substantially in the second year of the escrow account and the rule did not allow servicers to require escrowing for the next year's payments. The Department also became aware of two additional concerns involving the disclosure of amounts required for escrow using single-item accounting and involving the possible need for a new disclosure of lead-based paint inspection fees.

All of these matters led the Department to issue a proposed rule on September 3, 1996 (61 FR 46511) to seek public comment on these issues. In the proposed rule, the Department offered a variety of approaches to address these matters in the most economical and efficient way. The Department recognized that the rules were new and industry and consumer adjustments were underway. Consequently, the choices included keeping the requirements the same, but clarifying them, or doing nothing.

In the Department's proposal, the Secretary pointed out that any amendments to the rule must further the following three principles:

(1) Reduce the cost of homeownership by ensuring that funds are not held in escrow accounts in excess of the amounts that are necessary to pay expenses for the mortgaged property and allowed by law;

(2) Establish reasonable, uniform practices for escrow accounting; and

(3) Provide servicers with clear, specific guidance on the requirements of section 10 of the Real Estate Settlement Procedures Act of 1974 (RESPA), which governs escrow accounting procedures.

Following receipt of comments under the proposed rule, as detailed below, the Department determined that many of the initial problems in implementing the escrow rules were being resolved as the industry and the public adjusted to the new requirements. Specifically with respect to the choice of annual vs. installment disbursements, consumers' accounts that had been changed as a result of the implementation of the rule had stabilized and had not been changed again. However, there remains a need for the Department to clarify and elucidate current requirements in this final rule.

With regard to the "payment shock" problem, the Department determined, based on the comments, that extensive additional regulatory changes are not required and could prove detrimental to consumers. Instead, the Department determined that this problem would be better resolved by identifying and sharing best practices of servicers. In this context, servicers should, as a best practice, provide a simple notice to consumers to allow them voluntarily to increase their payments to their accounts. A new provision in 24 CFR 3500.17(f)(2)(iii) sets forth procedures if voluntary overpayment agreements are obtained.

The Department also determined not to adopt other changes to the Good Faith Estimate (GFE), HUD–1, and HUD–1A that were proposed to address the other matters raised in the proposed rule. Based on the comments received, the Department determined that new requirements on these subjects were not necessary. Current disclosure requirements are generally useful and sufficient; more significant changes at this time could serve to confuse matters while the market is still adjusting to the relatively new rules. Moreover, the Department has recently issued a new settlement booklet for consumers entitled "Buying Your Home, Settlement Costs and Helpful Information," published on June 11, 1997 (62 FR 31982), which includes guidance on lead inspections during the homebuying process. To complement these new materials, the Department is making one minor clarification to the instructions for the HUD–1 regarding lead-based paint disclosures.

In sum, the regulatory record, described in detail below, makes very clear that this subject involves complex matters that in many cases are better resolved by allowing time for accounting systems and consumers alike to adjust. In this final rule, the Department continues to protect homeowners by maintaining escrow accounting requirements and limits without change. At the same time, in the interest of reducing homeownership costs, establishing uniform practices, and providing clear specific guidance, the rule makes modest clarifications to ensure that servicers do not unnecessarily incur additional costs that would ultimately be passed on to American homeowners.

In applying the significant protections under RESPA—including the limits on the amounts in mortgage escrow accounts—the Department is mindful that it must carry out RESPA's important requirements in a manner that is true to RESPA's consumer protection purposes. These purposes include ensuring that consumers are protected from unnecessarily high costs that may come from abusive practices by servicers.

This preamble continues with a background discussion of the legal requirements under section 10 of RESPA and the Department's prior rulemakings. Following the background discussion, the preamble discusses the issues addressed in the proposed rule and details the many comments received on the proposed rule. These comments informed the Department and shaped today's rule. Finally, the preamble discusses this final rule.

II. Legal Context

Section 10 of RESPA (12 U.S.C. 2609) establishes the statutory limits on the amounts that mortgage servicers or lenders may require a borrower to deposit into an escrow account if the mortgage documents require one or the servicer chooses to establish one.[3] RESPA does not require the use of escrow accounts. Section 10(a)(1) of RESPA does prohibit a servicer, at the time the escrow account is created, from requiring the borrower to make a payment to the escrow account in excess of the maximum amounts calculated in accordance with the statute. These maximum amounts are calculated by analyzing how much money will be needed to cover expected disbursements, such as taxes and insurance, "beginning on the last date on which each such charge would have been paid under the normal lending practice of the lender and local custom, provided that the selection of each such date constitutes prudent lending practice, and ending on the due date of the first full installment payment under the mortgage" relating to the mortgaged property, plus a cushion no greater than one-sixth of the estimated total annual disbursements from the account (one-sixth cushion). Section 10(a)(2) prohibits the lender, over the rest of the life of the escrow account, from requiring the borrower to make payments to the escrow account that exceed one-twelfth of the total annual escrow disbursements that the lender reasonably anticipates paying from the escrow account during the year, plus the amount necessary to maintain a one-sixth cushion. Section 10 does not require that the servicer collect the maximums allowed under the statute; the servicer may always collect less and is not required to collect any cushion at all.

Section 10 and section 6(g) of RESPA (12 U.S.C. 2605(g)) govern the timing of disbursements from escrow accounts. In choosing a disbursement date, section 10 requires that the servicer follow "normal lending practices of the lender and local custom, provided that the selection of each such date constitutes prudent lending practice." Section 6(g) requires servicers to "make payments from the escrow account for such taxes, insurance premiums, and other charges in a timely manner as such payments become due."

---

[1] The Department issued several escrow rules during 1994–1995. On October 26, 1994 (59 FR 53890), the Department published a final rule implementing sections 6(g) and 10 of RESPA and changes to RESPA made in section 942 of the Cranston-Gonzalez National Affordable Housing Act (Pub. L. 101–625, approved November 28, 1990). Because of the magnitude of the change brought about by this rule, soon after its publication it became evident that further clarification of the rule was needed. The Department issued a February 15, 1995 rule (60 FR 8812) that modified and clarified the October 1994 rule and delayed its effective date until May 24, 1995. The Department issued further rules to clarify and correct the October 1994 rule on December 19, 1994 (50 FR 65442); March 1, 1995 (60 FR 11194); and May 9, 1995 (60 FR 24734), and published a notice of software availability on April 4, 1995 (60 FR 16985). These rules are referred to in this preamble collectively as the 1994–1995 escrow rules.

The Department's RESPA regulations were streamlined on March 26, 1996 (61 FR 13232) to comply with the President's regulatory reform initiatives. On September 3, 1996 (61 FR 46510), the Department published a correction to 24 CFR 3500.17. The Department published further revisions to Regulation X on September 24, 1996 (61 FR 50208) and November 15, 1996 (61 FR 58472).

[2] Generally, the Department has characterized "best practices" in other programs as those practices that are in accordance with a law's purposes, that are widely replicable, that show creativity in addressing a problem or problems, and that have a significant positive impact on those whom they are intended to serve. The Department identifies best practices operating successfully in the marketplace that support the regulatory principles involved in order to encourage their use. For example, the Department has identified best practices in furtherance of its responsibilities under the Fair Housing Act (42 U.S.C. 3601 *et seq.*).

[3] As stated in footnote 1 to the preamble to the Department's September 3, 1996 proposed rule on escrow accounting (61 FR 46511, 46511 n.1), at times RESPA uses the term "lender" and at other times it uses the term "servicer." A lender creates a loan obligation, but may or may not service the loan. As in the proposed rule, within this final rule the Department uses the term "servicer" to include the lender when the lender performs the servicing function.

VOL 63 ISS 13 JA 21 1998 UMI

III. Explanation of Problems Addressed in September 3, 1996 Proposed Rule and Proposed Solutions

On September 3, 1996 (61 FR 46511), the Department published a proposed rule, primarily to address three problems in implementing the 1994–1995 escrow rules. These problems, explained below, were designated as:

- Annual vs. Installment Disbursements;
- Payment Shock; and
- Single-item Analysis with Aggregate Adjustment.

In addition, the Department proposed revising the GFE format and HUD–1 and HUD–1A to refer specifically to a lead-based paint inspection or risk assessment.

A. Annual vs. Installment Disbursements Problem

1. Explanation of the Annual vs. Installment Disbursements Problem

The first problem that the proposed rule addressed involved the servicers' disbursements from mortgage escrow accounts if the payee (i.e., the entity to which escrow disbursements are paid, such as a taxing jurisdiction) offers a choice of disbursements on an annual or installment basis. Sometimes payees offer a discount to the borrower if disbursements are made on an annual basis. These discounts are commonly offered by taxing jurisdictions, which may offer a discount for annual payments of property taxes.

The Department's regulation at 24 CFR 3500.17(k)(1) has provided, "In calculating the disbursement date, the servicer shall use a date on or before the earlier of the deadline to take advantage of discounts, if available, or the deadline to avoid a penalty." See also §§ 3500.17(b) (definition of "disbursement date"); 3500.17(c)(2) and (c)(3); and 3500.17(d)(1)(i)(A) and (2)(i)(A). The preamble to the October 1994 final rule explained, "Unless there is a discount to the borrower for early payments, the regulation does not allow servicers to pay installment payments on an annual or other prepayment basis." 59 FR 53893. The preamble explained that this approach is consistent with the Department's intention that the regulations generally favor installment disbursements, because in many cases they result in lower up-front payments (closing costs). The Department also sought for servicers to take advantage of discounts that would benefit borrowers.

In response to further questions on this issue, however, the Department indicated in its February 1995 final rule clarifying the escrow rules that the October 1994 rule's focus had been to address "a practice, previously engaged in by some servicers, of collecting and paying a full-year's taxes in advance, although they were billed on an installment basis." 59 FR 8813. In the preamble to a May 1995 further clarification to the rules, the Department stated that "servicers were permitted (but not required) to make disbursements on an annual basis if a discount were available." The preamble to the May 1995 rule explained:

> [T]he Department received a number of questions regarding circumstances in which the payee offered an option of either installment payments or a one-time payment with a discount. The preamble to the October 26, 1994, and February 15, 1995, rules indicated that when a choice was available, servicers should make disbursements on an installment basis, rather than an annual basis; however, servicers were permitted (but not required) to make disbursements on an annual basis if a discount were available. Once the choice of payment basis is made, the disbursement date chosen for that basis depends on discount and penalty dates. Section 3500.17(k) states that "[i]n calculating the disbursement date, the servicer shall use a date on or before the earlier of the deadline to take advantage of discounts, if available, or the deadline to avoid a penalty." This provision is consistent with the rule, which is designed to avoid excessive upfront payments and balances in escrow accounts and, therefore, favors installment payments, unless there are penalties or discounts that make annual payments advantageous for the consumer. Also, after settlement a servicer and borrower are not prevented by this rule from mutually agreeing, on an individual case basis, to a different payment basis (installment or annual) or disbursement date.
>
> 60 FR 24734.

In the preamble to the September 3, 1996 proposed rule, the Department indicated that the rule text and the preamble language may have created confusion. As explained in the preamble to the proposed rule, some mortgage servicers have interpreted the rule to require that a servicer, when offered an option of making a disbursement from the escrow account in installments or in an annual disbursement with a discount, must choose the lump sum annual disbursement with a discount, no matter how small the discount is, even if the borrower and the servicer would otherwise agree to forego the discount and have the escrow account computed for disbursements on an installment basis. On the other hand, other servicers have interpreted the Department's rule, in light of preamble language, to require installments when available and allow, but not require, annual disbursement at the servicer's discretion when a discount is offered for annual disbursement.

As indicated in the preamble to the proposed rule, some borrowers were affected by the changes brought about by the 1994–1995 escrow rules. Concerns raised to the Department regarding the annual vs. installment disbursements problem came from borrowers and members of Congress who were concerned about the effect of the 1994–1995 escrow rules on their constituents.

As explained in the preamble to the proposed rule, the choice of disbursement methods has consequences for borrowers, including increasing or decreasing the amounts required to be deposited into the escrow account at closing. In general, disbursements from an escrow account in installments work to the borrower's benefit, because, on average, they result in lower up-front payments to establish the account (i.e., lower closing costs). Footnote 2 of the proposed rule (61 FR 46512) explained:

> The choice of installment, rather than annual, disbursements often results in substantial reductions in up-front cash requirements for the buyer. For example, if two equal installments could be paid 6 months apart instead of paying the entire bill on one of the installment dates, then homebuyers who close on their loans less than 6 months before the date on which the entire bill would otherwise have been due could come to settlement with 6 months less in tax deposits to the escrow account. This results from the accrued taxes being a half-year's taxes less for those homebuyers. Assuming closings are evenly distributed throughout the year, households with the option of two equal installment payments 6 months apart, will, on average, be able to reduce the average up-front cash required at settlement by 3-months' worth of taxes. In general, as the number of installments grows, so does the average up-front savings.

The disbursement method may also have income tax ramifications for the consumer, depending on the timing of disbursements for deductible items.

The preamble to the proposed rule explained that after publication of the 1994–1995 escrow rules, many servicers that had been disbursing in installments switched to annual disbursements if discounts were available. There were many consequences of the switch that have been described to the Department, mostly affecting borrowers, and other consequences that the Department speculates may have resulted. After the Department issued the escrow rule, some borrowers may have been required by their servicers to make up substantial shortages in their escrow accounts (generally in increased monthly payments over a year), which arose when taxes were switched from installment disbursements to one annual lump sum disbursement.

The preamble to the proposed rule also noted other adverse consequences that might have arisen from the 1994–1995 escrow rules. For example, some borrowers whose servicers switched from annual to installment disbursements may have lost a significant portion of their income tax deductions for property taxes in the year in which the switch was made and may have been unhappy with that consequence. Some taxing jurisdictions may have faced an unexpected temporary shortfall in receipts of property taxes as a result of servicers changing from annual to installment disbursements.

The preamble to the proposed rule also noted that although some borrowers may have been adversely affected by a change in disbursement method, many others likely benefited, perhaps unknowingly, from such a change. For example, a change from installment to annual disbursements to take advantage of a discount lowered the total tax burden for many homeowners. Similarly, a change from annual to installment disbursements resulted in lower escrow payments and, possibly, refunds or credits for many homeowners. Finally, for many borrowers, the Department's rules apparently have not resulted in any change to the disbursement method for their escrow accounts.

2. Alternatives Proposed to Address Annual vs. Installment Disbursements Problem

In response to the Annual vs. Installment Disbursements problem, the Department proposed alternative ways of revising the escrow rules, including requiring that disclosures be given to borrowers so that they could make informed choices as to how their accounts were to be set up and maintained and require servicers to follow those preferences. At the same time, the Department recognized that providing borrowers choices may impose additional burdens and costs on servicers, which are frequently passed on to borrowers. Thus, the proposed rule also highlighted approaches that had been proposed by industry representatives. The Department sought comments on all approaches and also asked a number of questions that were designed to help the Department make decisions among alternatives for the final rule.

a. Consumer Choice. The first alternative contained in the proposed rule, Consumer Choice, distinguished between new loans and existing loans. Under this alternative, for new loans (loans that settled on or after the effective date of a final rule), servicers would be required to give borrowers the choice of making disbursements of property taxes on an installment or on an annual basis, when those options are offered by the taxing jurisdiction. The Department's proposal did not address the choice between installments and annual disbursements for other escrow items, because the question has only been raised to the Department in the context of property taxes. The preamble indicated that the Department would consider addressing other escrow items, depending on comments received.[4]

This alternative would have required servicers, at some time before settlement, to provide a disclosure, in the format of Appendix F in the proposed rule, to borrowers whose property taxes will be paid from an escrow account and whose taxing jurisdictions offer the choice between disbursements on an installment or an annual basis. The proposed format indicated some of the advantages and disadvantages to the borrower of installment and annual disbursements and asked the borrower to make a choice between the methods. The preamble explained that if the borrower did not make a choice, the servicer would be required to make installment disbursements of property taxes. As discussed below, this alternative also would have provided that once the consumer had made a choice (or installments were required because the consumer did not make a choice), the servicer and subsequent servicers would be prohibited from changing the method of disbursement for property taxes without the borrower's prior written consent, as long as the taxing jurisdiction continued to offer a choice.

For existing loans (loans that were settled prior to the effective date of a final rule), this alternative would have prohibited the servicer and subsequent servicers from changing the method of disbursement for property taxes without the borrower's prior written consent where the taxing jurisdiction offers a choice between installments and annual disbursements. In addition, no later than the first escrow analysis for such escrow accounts performed after the effective date of a final rule, servicers would be required to offer borrowers, in writing, an opportunity to switch from one method of disbursement for property taxes to another.

b. Servicer Flexibility. Under the second alternative presented in the proposed rule, the Department would have revised the rule to provide that a servicer must make disbursements by a date that avoids a penalty, but the servicer is otherwise free to make disbursements on such date as complies with normal lending practice of the lender and local custom, provided that the selection of each such date constitutes prudent lending practice. As discussed below, under this alternative, once the servicer had made a choice of the disbursement method, the servicer and subsequent servicers would have been prohibited from changing the method of disbursement without the borrower's prior written consent, as long as the payee continued to offer a choice.

c. Keep, But Clarify, Current Requirements. The third alternative offered in the proposed rule was that the Department would revise the rule to keep, but clarify the current requirements. Under this alternative, the regulations would have been revised to provide that servicers must make disbursements from escrow accounts on an installment basis, if payees offer that option as an alternative to annual disbursements. If a payee offers the option of installment disbursements or a discount for annual disbursements, however, the servicer may, at the servicer's discretion (but is not required by RESPA to), make annual disbursements, in order to take advantage of the discount for the borrower; the Department encourages (but does not require) servicers to follow the preference of the borrower. If the payee offers the option of installment disbursements or annual disbursements with no discount, the servicer must make installment disbursements.

d. Prohibition Against Switching Disbursement Methods Without Borrower's Consent. Each of the alternatives proposed—Consumer Choice; Servicer Flexibility; and Keep, But Clarify, Current Requirements—provided that once a disbursement method has been selected in accordance with the requirements of the alternative, servicers would be prohibited from switching disbursement methods without the borrower's consent. This would mean that even if one servicer acquires servicing from another servicer, the second servicer would be required to apply the same disbursement method as the first servicer, as long as that

[4] The preamble to the proposed rule noted that if the servicer is given a choice between installment or annual disbursements for other escrow items (such as property or hazard insurance), the Department's rule would require the servicer to make disbursements by a date that avoids a penalty, but the servicer would otherwise be free to make disbursements on such date as complies with normal lending practice of the lender and local custom, provided that the selection of each such date constitutes prudent lending practice.

VOL 63 ISS 13 JA 21 1998 UMI

option is offered by the payee, unless the borrower consents to changing disbursement methods.

The preamble to the proposed rule explained that the reason for this approach was that many loans shifted disbursement dates as a result of the 1994–1995 escrow rules. The Department was seeking to develop an approach with the minimum negative impact for borrowers, servicers, and third parties, such as taxing jurisdictions.

The preamble to the proposed rule explained the adverse consequences, discussed above, that can occur when borrowers' disbursement methods are switched. The preamble to the proposed rule explained that the approach of prohibiting a servicer from switching disbursement methods without the borrower's consent, including requiring a servicer to use the disbursement method used by the former servicer when there is a transfer of servicing, would not mean that the borrower would have to consent to a transfer of servicing or would have veto authority over such a transfer. However, this approach would mean that a borrower would have to consent to a change in the disbursement method, including a change proposed by a subsequent servicer. The Department sought comments on whether this policy would adversely affect the value, and the efficiency of the transfer, of servicing rights.

B. Payment Shock Problem

1. Explanation of Payment Shock Problem

The second problem that the proposed rule addressed involved cases in which the originator or servicer[5] anticipates that disbursements for escrow items such as property taxes will increase substantially in the second year of the escrow account. A substantial increase in property taxes in the second year often occurs in cases of new construction. In many jurisdictions, the taxes the locality charges for the first year are based on the assessed value of the unimproved property, while for the second year the taxes are based on the improved value. A substantial increase in payments may also occur when a tax disbursement that would normally appear on the projection for the coming year is paid prior to the borrower's first regular payment, i.e., these regularly occurring taxes do not appear in the projection. Reassessments after a property is sold may also cause a substantial second year increase.

The preamble to the proposed rule explained that, consistent with section 10 of RESPA, the Department's regulations have specified the maximum amount that a servicer may legally require borrowers to deposit in escrow accounts at the creation of the escrow account and during the life of the escrow account. The Department's regulations prescribe that in conducting an escrow account analysis, the servicer considers only the disbursements that are expected to come due during the next 12-month period. See §§ 3500.17(b) (definition of "escrow account computation year") and 3500.17(c) (limits on payments to escrow accounts). While the servicer can take into account expected changes to disbursements over the 12-month period,[6] even if the servicer knows that disbursements from an escrow account will substantially increase at a time more than 12 months in the future, the servicer cannot, when preparing the initial escrow account statement, calculate the borrower's payments to cover the expected increases beyond that 12-month period.

However, the Department's existing regulations (§ 3500.17(f)(1)(ii)) allow the servicer to conduct escrow account analyses at other times during the escrow computation year, which can result in changes to what the borrower must deposit in the escrow account. Some servicers conduct escrow account analyses when bills for escrow items increase.

Since the Department's current escrow rule provides for calculating escrow payments based on the projection of escrow disbursements for a 12-month period, when escrow items increase substantially after the initial 12-month period, the result is likely to be a substantial increase in a borrower's monthly payments for the second year and/or a lump sum payment, not only to reflect the higher disbursements, but to make up a shortage in the escrow account.[7] While the originator or servicer could alert the borrower at closing that an increase will occur, if that is not done, the borrower may be unpleasantly surprised by the increase. The preamble to the proposed rule explained that this situation could result in several problems. While disclosures received at closing show low payment amounts throughout the first year, the escrow payment will substantially increase for the second year, or even during the first year if a short-year statement is issued at the point when the higher disbursement shows up in the 12-month projection.[8] Some borrowers may be unable to meet the increased escrow payments and paying off the shortage will raise payments even more. A customer relations issue may be created for servicers who have to explain to borrowers why the payment is increased so much.

As indicated in the preamble to the proposed rule, the concerns raised to the Department regarding payment shock came largely from industry representatives who told the Department that they have had to respond to numerous borrower inquiries and complaints about increases in escrow payments to reflect higher disbursements and payments to make up shortages. Mortgage servicers had indicated that they wanted to avoid any payment change in subsequent years by collecting more money in the first year of servicing.

2. Alternatives Proposed to Address Payment Shock Problem

The proposed rule offered three rulemaking alternatives, some of which contained variations within the alternative, to address the payment shock problem. The purpose of the alternatives was to develop a consumer-friendly way to avoid the payment shock surprise for the borrower, who may not be prepared to make the higher payments to his or her escrow account that would result from a substantial increase in the amounts needed for disbursements from the account. At the same time, the proposals sought to minimize the burden on the industry.

a. Consumer Choice. The first alternative contained in the proposed rule, Consumer Choice, would have provided that when the servicer expected that the bills disbursed from the escrow account would increase substantially after the first year, the servicer would provide to the borrower, at some time prior to closing, a written disclosure. The proposed format for the disclosure was set forth in Appendix G to the proposed rule. The borrower would make a choice from several accounting options for his or her account on a format that would indicate, under each option: (1) the amount due at closing; (2) the monthly escrow payments in the first, second, and third years; and (3) the corresponding surpluses anticipated at the end of the first year.[9]

The proposed rule explained that the borrower would, therefore, have the opportunity to make a voluntary choice to limit payment changes in the second year of the escrow account. As would be explained on the disclosure format, if the borrower did not make a choice, the accounting method would "default" to the method prescribed under the current regulations (which may result in substantially increased payments in the second year). This alternative, as proposed, contained the additional restriction that once an escrow accounting method was selected by choice or default, that method could not be changed without the consent of the borrower, even if the servicing rights were transferred to another servicer.

The preamble to the proposed rule explained that, under this alternative, the following accounting methods (illustrated in "The Payment Shock Problem," Appendix H–1 to the proposed rule) would be presented to the borrower for his or her selection:

Method A. Analysis of the account using the accounting method required under the current rule, which results in a shortage at the end of the first year and higher payments in the second year.

Method B. Analysis of the account using an accounting method that:

—Requires an initial deposit of $0 into the escrow account at closing;
—Requires a monthly payment in the first year equal to one-twelfth of the estimated total annual disbursements from the escrow account for the second year; and
—Causes surpluses or smaller shortages at the end of the first year, which causes escrow payments to increase in the second year by an amount less than under Method A or not at all.

Method C. Analysis of the account using an alternative accounting method that:

—Requires an initial deposit into the escrow account at closing greater than the initial deposits required under Method B;
—Requires the same monthly payment during the first year as under Method B, which is greater than under Method A;
—Generates month-end balances such that the lowest month-end balance for the first year equals one-sixth of the estimated total annual disbursements for the second year (the initial deposit is not considered in finding the lowest month-end balance);
—Generates even larger balances at the end of the first year than under Method B, eliminating shortages and increasing surpluses that must be returned to the borrower; and
—Causes no increase in escrow payments in the second year.

The preamble to the proposed rule noted that if the consumer were to select Methods B or C, the amounts held in escrow could be greater than allowed under section 10 of RESPA. In order to permit these options, the Secretary would invoke his exemption authority under section 19(a) of RESPA (12 U.S.C. 2617).

b. Make No Change. The second alternative in the proposed rule was to continue the current requirements for escrow analysis, even when the servicer expected that the bills disbursed from the escrow account would increase substantially after the first year. This alternative would not prevent payment shock in all instances. However, under this alternative, servicers could continue to disclose voluntarily the problem to borrowers and borrowers could make voluntary overpayments to escrow accounts. Servicers could also calculate short-year statements. Thus, even if no change were made to the regulations, some methods would continue to be available, although not required, to alleviate the payment shock problem.

c. Mandate First Year Overpayment. Under the third alternative in the proposed rule, Mandate First Year Overpayment, the Department would have provided that when the servicer expected that the bills disbursed from the escrow account would increase substantially after the first year, the servicer would be required to establish the escrow account under a procedure that had the characteristics described under Consumer Choice, Method C, above (illustrated in "The Payment Shock Problem," Appendix H–2 to the proposed rule). The preamble to the proposed rule explained that this approach would result in requiring amounts held in escrow to be greater than allowed under section 10 of RESPA. The Secretary could, however, mandate the use of this escrow accounting method pursuant to his exemption authority under section 19(a) of RESPA (12 U.S.C. 2617).

C. Single-Item Analysis With Aggregate Adjustment Problem

1. Explanation of Single-Item Analysis With Aggregate Adjustment Problem

A third problem that the proposed rule addressed was the means of disclosure on the HUD–1 and HUD–1A settlement forms of amounts required for deposit at settlement in the escrow account. The 1994–1995 escrow rules established aggregate accounting (i.e., analyzing the escrow account as a whole) as the uniform nationwide standard escrow accounting method to be used to compute borrowers' escrow accounts. In establishing this standard, the rules supplanted single-item accounting, the accounting method that had been used at settlement up until that time to compute required escrow account balances. Historically, under single-item accounting, the reserve amount for each escrow account item on the HUD–1 or HUD–1A in the 1000 series was computed for the borrower and listed separately. Either zero, one, or two months worth of payments for

[5] Three originators/servicers criticized the Department's proposed rule because it identified the "servicer" as the person who would be in a position to determine whether the bills paid out of the escrow account will increase substantially after the first year. These commenters indicated that it is the originator (loan officer, processor, settlement agent) who communicates with borrowers prior to closing, not the servicer, and that it should be the originators who would be in the position of determining at closing whether payments will substantially increase, not the servicer. The Department intended to use the terms interchangeably and explained in footnote 1 of the proposed rule (61 FR 46511) that the term "servicer" included the lender when the lender performs the servicing functions. The Department intended that the term "servicer" also would include the originator in this context.

[6] The preamble to the proposed rule (61 FR 46511, 46516 n.7) explained that the Department's current regulations address the issue of estimating disbursement amounts for the 12-month computation year:

To conduct an escrow account analysis, the servicer shall estimate the amount of escrow account items to be disbursed. If the servicer knows the charge for an escrow item in the next computation year, then the servicer shall use that amount in estimating disbursement amounts. If the charge is unknown to the servicer, the servicer may base the estimate on the preceding year's charge as modified by an amount not exceeding the most recent year's change in the national Consumer Price Index for all urban consumers (CPI, all items). In cases of unassessed new construction, the servicer may base an estimate on the assessment of comparable residential property in the market area.

24 CFR 3500.17(c)(7).

[7] The preamble to the proposed rule explained that an increase in the monthly payment can be broken down into two components. Any time an escrow account disbursement increases, it will have the effect of raising the monthly borrower escrow payment by approximately one-twelfth of that increase. In addition, the projection for the coming year shows what the target balance (accruals plus the cushion) should be at the beginning of the coming year. To the extent that expected disbursements in the second year exceed what they were in the first, the beginning target balance for the second year may be in excess of the actual balance at the end of the first year. If so, then there is a shortage to be made up as well. If the 12-month approach is taken to eliminate the shortage, then monthly payments will also rise by approximately one-twelfth of the shortage. If a cushion is used, the payment increases will be slightly higher, until the cushion is built up.

[8] The Department's regulations at 24 CFR 3500.17(f)(1) (i) and (ii) provide that, aside from conducting an escrow account analysis when an escrow account is established and at completion of the escrow account computation year, a servicer may conduct an escrow account analysis at other times. The escrow account analyses conducted at other times result in short-year statements.

[9] The preamble to the proposed rule noted that whether disbursements from escrow accounts would be made on an annual or installment basis and whether there were a discount for annual disbursement would affect the numbers to be filled in and, potentially, the number of calculations on the Escrow Accounting Method Selection Format.

VOL 63 ISS 13 JA 21 1998 UMI

each escrow item was set forth on the HUD–1 or HUD–1A in the 1000 series as necessary to establish the escrow account.

When the Department was developing the 1994–1995 escrow rules, Federal Reserve Board staff indicated that even if aggregate accounting were used it also needed a single-item amount for private mortgage insurance (PMI) reserves in order to make annual percentage rate (APR) calculations under the Truth in Lending Act (TILA). For this reason, and in an effort to avoid altering the basic format of the HUD–1 or HUD–1A in the 1994–1995 escrow rules, the Department required that an aggregate adjustment (either zero or a negative number) be made after all of the individual items were listed separately in the 1000 series, so that the total amount for escrow account items conformed to the aggregate accounting method. Before the 1994–1995 escrow rules, Section L of the HUD–1 and HUD–1A only showed positive numbers, that is, payments that were being allocated to various settlement costs. After publication of the 1994–1995 escrow rules, the Department received complaints that the itemization of the reserve amounts with an aggregate adjustment was confusing and the information was not useful to borrowers. Settlement agents and others indicated that individual itemization of reserves in the 1000 series imposed an additional paperwork and explanation burden, when the only relevant number for calculations is the total deposited.

2. Revision Proposed to Address Single-Item Analysis With Aggregate Adjustment Problem

In response to the Single-Item Analysis with Aggregate Adjustment problem the Department proposed to make more flexible the requirements for the provision of information to consumers. In the proposed rule, the Department proposed that to relieve confusion it would no longer require the single-item listing of escrow deposits or reserves on the HUD–1 or HUD–1A. The rule would create a new option in the instructions for the 1000 series of these forms to reflect the aggregate amounts to be deposited. As proposed, the settlement agent could also have continued to itemize the 1000-series reserves, at the settlement agent's discretion. If the charges were not itemized, an asterisk (*) would have had to be placed next to each item in the 1000 series for which a reserve was taken. The amount collected would have been described as "Aggregate Escrow Deposit for Items Marked (*) Above" on a line at the end of the 1000 series. In the discussion "Clarifications of Existing Rule" in Part VI of the preamble to the proposed rule, the Department had clarified that entries on the GFE may be based on single-item analysis, with a maximum 1-month cushion. The proposed rule also clarified that the use of the estimating method remained available after the end of the phase-in period (October 24, 1997).

D. Lead-Based Paint Disclosure Issue

1. Explanation of Lead-Based Paint Disclosure Issue

The proposed rule also addressed a concern that consumers should get information about their right to arrange for a timely paint inspection or risk assessment for the presence of lead-based paint or lead-based paint hazards before becoming obligated under a sales contract. The preamble to the proposed rule explained that a prospective purchaser generally has 10 days to conduct such a lead-based paint evaluation of the property. A prospective purchaser, however, may waive in writing the opportunity to conduct this evaluation. The proposed rule addressed ways that consumers could receive this information in addition to existing disclosure requirements.

2. Revision Proposed to Address Lead-Based Paint Disclosure Issue

In response to the Lead-based Paint Disclosure issue, the Department proposed to require additional information to be provided to the consumer on the GFE and the HUD–1 or HUD–1A. The Department proposed to add information to the GFE format to help make purchasers of pre-1978 residential dwellings aware that, pursuant to 42 U.S.C. 4852d (implemented by the Department in regulations published on March 6, 1996, 61 FR 9064), purchasers have the right to arrange for a paint inspection or risk assessment for the presence of lead-based paint or lead-based paint hazards before becoming obligated under a sales contract. The Department proposed to add language to the GFE format (Appendix C to part 3500) specifically to refer to a lead-based paint inspection or risk assessment and designate a separate line in the 1300 series of the HUD–1 and HUD–1A for lead-based paint inspections or assessments and to revise the instructions for completing the HUD–1 and HUD–1A accordingly. The preamble to the proposed rule indicated that the Department anticipated that a more detailed explanation of purchasers' rights in this regard would be contained in the next revision of the HUD Settlement Costs booklet. See section 5 of RESPA (12 U.S.C. 2604); 24 CFR 3500.6.

IV. Overview of Public Comments

A. Description of the Commenters

The Department received a total of 141 comments on the proposed rule. Of the 141 comments, some were duplicates. Thus, the Department places the number of different comments received at 134.[10] The Department analyzed all the comments in detail and gave them careful consideration.

One-hundred two of the comments came from originators/servicers.[11] Fourteen comments came from trade associations. Four came from individual consumers, three from tax service providers, two from members of Congress, four from financial software companies, one from a state lending agency, one from a mortgage insurer, one from a builder, and two from persons whose professional interest in the rule could not be determined.

B. What Commenters Commented On

The Annual vs. Installment Disbursements problem attracted the most comments. One-hundred twenty-eight commenters, including all but one of the trade associations and all but two of the originators/servicers, commented on this issue. The Payment Shock Problem received the second highest number of comments, with one-hundred

[10] Seven comments were identical letters submitted by various officials of the same mortgage corporation; they were counted as one comment. Two other comments were substantially similar letters submitted by different offices of the same bank and mortgage lending subsidiary; they also were counted as one comment, but minor variations between the two were considered.

Twenty-one comments were duplicate comments submitted by various originators and servicers, including the United States Department of Agriculture. One bank and trust submitted nearly identical comments as the Mortgage Bankers of America (MBA), while the Oregon Bankers Association submitted nearly identical comments as the American Bankers Association (ABA). The Mortgage Bankers Association of Minnesota adopted with one small addition the comments of Norwest. Since these comments were submitted by separate entities, they are all counted as separate comments.

One commenter simply summarized the proposed rule without taking a position on any of the proposals.

[11] In some cases, the precise nature of the business was not clear from the comment. Moreover, it did not appear that the comments differed markedly depending on the precise nature of the business. For example, it did not appear that the comments from retail lenders differed markedly from those from mortgage brokers, or that the comments from one type of retail lender differed from those or other types of retail lenders. Thus, all businesses that originate, service, and/or broker loans are designated as "originators/servicers" in this preamble.

sixteen commenters, including ninety-six originators/servicers and all but two of the trade associations. The Single-Item Analysis With Aggregate Adjustment problem also attracted a significant number of comments, seventy-eight in all, including sixty-five originators/servicers and ten trade associations. Only seventeen commenters, twelve originators/servicers and five trade associations, commented on the additional proposed change concerning lead-based paint.

C. Overview of Positions

The overwhelming majority of originators, servicers and mortgage brokers opposed those options for the first two issues that were designed to provide borrowers more choices, citing the costs and burdens of such an approach. Three commenters, including Norwest, criticized those options as being inconsistent with the principles the Department had articulated, asserting that the Consumer Choice options would increase the cost of homeownership. In contrast, the few consumers and members of Congress who commented on the first issue supported Consumer Choice approaches; these commenters did not comment on the Payment Shock problem.

On the Single-Item Analysis With Aggregate Adjustment problem, more commenters supported the proposed change than opposed it. Opinion was nearly evenly divided on the additional proposed change concerning lead-based paint.

Nine commenters, including the American Bankers Association (ABA), commented that no changes should be made at this time and instead, the Department should wait several years before considering further changes to Regulation X, at least until the changes made under the 1994–1995 escrow rules are fully implemented. (Those provisions took effect May 24, 1995 but provided for a three-year phase in for existing escrow accounts which expires October 27, 1997.)

The reasons given by the ABA, which were echoed by the Oregon Bankers Association, for not making any changes to the rule were that the rule would alter the escrow accounting systems at the very time the Department's new rules are bring fully implemented, causing major problems and an excessive burden for banks and other mortgage servicers. The New York Credit Union League agreed, emphasizing the costly changes that are already being made as a result of that earlier rule.

A bank holding company, in terms echoed by other originators and servicers, commented that there was no need to change the rules now as those borrowers with existing accounts have already benefited from or suffered the consequences of the 1994–1995 escrow rules and have subsequently adjusted to the changes and many of the problems created by that rule are over. Thus, it would be premature to make further changes, and doing so may only again create the same sort of initial problems that were created by the 1994–1995 escrow rules. GE Capital recommended waiting at least two years before revisiting the need for any changes. Another servicer and originator recommended waiting 24 to 36 months before making further changes. A bank compliance officer and a bank holding company also recommended against changes being made at this time.

Several other commenters recommended that the Department hold off action on specific portions of the rule. Those comments are analyzed separately under the portion of the preamble discussing that aspect of the rule.

In contrast, many commenters emphasized the importance of making changes to address their particular issues of concern, particularly the Payment Shock problem. These comments are summarized under the particular issues discussed later in this summary.

V. Annual vs. Installment Disbursements Problem—Comments Received, Approach Adopted in Today's Final Rule, Basis for Approach Adopted, Basis for Rejecting Alternative Approaches, Clarifications

A. Comments Received

Through the comments received on the proposed rule, the Department gained a better understanding of the Annual vs. Installment Disbursements problem. The Department learned more about how servicers have been addressing the problem of setting the appropriate disbursement date when given a choice of annual or installment disbursements. The comments received indicated that practices have not been uniform and that in some cases, originators/servicers have been using creative approaches to meeting consumer's needs. Five originators/servicers and two tax services indicated that they were disbursing in installments unless a discount was offered for annual disbursements that the servicer thought was a large enough discount to be in the borrower's interest, in which case the disbursements were made annually; one trade association indicated this was the approach of most of its members as well. One savings and loan indicated that its practice was to accommodate individual borrowers by switching people who complain to whichever method they prefer.

Other originators/servicers are using practices that do not provide as much flexibility for the consumer. In many cases, the originators/servicers indicated that they believed such practices were compelled by the existing RESPA regulations. For example, thirteen originators/servicers indicated that when such a choice is offered, they currently disburse in installments unless a discount is offered for annual disbursements, in which case they always disburse annually regardless of how insignificant the discount may be. Two originators/servicers and one tax service indicated that if no discount is offered for annual disbursements but a service fee is charged for installment disbursements, they disburse annually, no matter how insignificant the service fee may be.

A few commenters noted that in many jurisdictions, the installment option is only available for individuals, not servicers. Other commenters noted special rules that apply in particular States, such as Wisconsin, where the practice is to pay taxes in the year levied, even though they do not have to be paid until the following year, and Maryland, where a law provides that first time homebuyers may choose between annual and installment disbursements with a consumer disclosure highlighting differences between the two methods.

The Department also learned more about the discounts obtained by servicers for borrowers, e.g., how large the discounts are and when disbursements must be made in order to receive the discounts. Commenters estimated the size of the discounts to range from around 1–5 percent of the property tax bill, with only two commenters indicating that discounts ranged up to 10 percent, and only one commenter indicating they tended to be less than one percent. Several commenters—three consumers, two members of Congress, two originators/servicers, one trade association—expressed the view that discounts are small and not in the borrower's interest to disburse in order to collect them. Two originators/servicers expressed the opposite view that discounts tended to be large and in the borrower's interest to obtain. The Department notes that, under reasonable assumptions,[12] a

[12] The assumptions are that if, for example, the entire tax bill is paid on January 1, the discount

Continued

VOL 63 ISS 13 JA 21 1998 UMI

discount of 1 percent of the annual tax bill converts to approximately a 4 percent annualized return; a 5 percent discount converts to approximately a 23 percent annualized return.

Several commenters commented on the extent of the problem. Two consumers from New York asserted that borrowers whose servicers switched from installments to annual disbursements were adversely impacted. One, a senior citizen, explained that she and her husband were required by their servicer either to make a lump sum payment of almost $1,500 with a monthly increase of over $150 or no lump sum payment but a monthly increase of over $200, to obtain a discount of only 1 percent. Another reported that his mortgage payment was increased over $100 for a mere $8 discount for annual tax payments.

Other commenters, however, challenged the Department's perspective that the issue of Annual vs. Installment Disbursements was a problem in need of fixing. Some questioned the Department's evidence that there was a problem. One bank expressed doubt about how many borrowers were actually affected, and to what extent, by the 1994–1995 escrow rules, indicating that the impact of the rule change had already been absorbed. Four originators/servicers, including Citicorp and First American Real Estate Tax Service, Inc., a large tax service, specifically asserted that there was no current problem. Citicorp asserted that there were few problems with the existing rule for borrowers or industry and that it was premature to change the 1994–1995 escrow rules until there was more experience operating under it. Citicorp recommended waiting until 1998 to make further changes. Ten commenters in the origination and servicing industry, including NationsBank and GE Capital, as well as the Mortgage Bankers Association (MBA), also asserted that the impact of the 1994–1995 escrow rules had already been absorbed, and any impacts on consumers with existing loans had already taken place.

Most of the commenters commented on one or more of the specific alternative proposals for addressing the problem.[13] The overwhelming majority of originators, servicers, and mortgage brokers opposed Consumer Choice; there was some division of opinion on what alternative approach to take. A modified version of the "Keep But Clarify Current Requirements" alternative garnered the most consistent support; the modification was that the restriction on servicers switching disbursement methods when servicing is transferred be eliminated. Opinion was fairly evenly divided on the merits of the "Servicer Flexibility" alternative.

1. Comments on Consumer Choice Alternative

Only seven commenters supported Consumer Choice. The California Association of Realtors (CAR) specifically supported applying the Consumer Choice option to new loans as well as existing loans. CAR commented that the benefits would outweigh the marginal costs and that it favored approaches that provide consumers with as much information as possible and the opportunity, when fully informed, to make choices about the servicing of their loans and the related impound/escrow accounting. The CAR added that if the consumer failed to make a choice, disbursements should be made on an installment basis.

Two comments from elected officials, one from Representative Peter King of New York and one joint letter from Senator Alphonse D'Amato, Representative King, and Representative Dan Frisa also endorsed the Consumer Choice approach, focusing on its application to existing loans. Both letters expressed deep concern for homeowners who were negatively impacted when servicers switched disbursement methods and urged the Department to allow homeowners to have the choice to return to their prior disbursement method. Representative King's letter stated that consumers, not financial institutions, will be able to determine which method of tax payment is best for them and that allowing such a choice would further the goals of RESPA. Senator D'Amato's letter stated that ideally homeowners should be given the option to return to their previous disbursement methods with the excess of any escrow accounts returned and, at a minimum, their servicers must inquire as to the homeowners' preference.

Four homeowners in New York advocated allowing homeowners to have the right to decide whether they wish to forego a discount for annual disbursements and instead have their taxes disbursed in installments. All focused on the benefits of applying Consumer Choice to existing loans, complaining that they were left with a shortage in their account and suffered severe financial hardship trying to make up the shortage when their servicers switched disbursement methods.

In addition, one federal credit union's comments gave tepid support to the Consumer Choice option if it were limited to new loans. The credit union indicated that offering the choice to new loans would only entail the burden of preparing and explaining the form. It indicated, however, that for existing loans Consumer Choice would be costly in terms of staff, time, and the mailing of the selection format, and would be confusing to borrowers. The credit union also indicated that since borrowers could refinance anyway, there was no apparent need to offer existing borrowers a choice.

In contrast, 107 commenters opposed the adoption of Consumer Choice (91 originators/servicers, 11 trade associations, 3 tax services, 2 financial software companies, and 1 person whose professional interest was not known). Only one commenter, a credit union, appeared to limit its opposition to the Consumer Choice alternative to its application to existing loans. All of the other commenters appeared to oppose the application of Consumer Choice regardless of whether it extended to both new and existing loans, or only to new loans.

Most commenters did not separate out their objections to Consumer Choice as it would apply to new loans as opposed to existing loans. Whether the commenters separated out their objections or not did not affect the objections raised. Accordingly, all objections are discussed together below, with an indication, as applicable, if an objection was raised specifically in one context as opposed to another.

The most common objections made by commenters were:

1. It would cause miscellaneous or general increases in costs and/or administrative burdens, such as costs and burdens relating to originating or servicing (64 commenters—60 originators/servicers, 3 trade associations, 1 tax service).

2. They were concerned about the specific costs and burdens of consumer disclosure, including producing and mailing disclosures, soliciting preferences, processing disclosures, tracking selection, and maintaining information on selection (50 commenters—45 originators/servicers, 4 trade associations, 1 financial software company) or opposed the addition of a new disclosure in general (8 commenters—6 originators/servicers, 1 financial software company, 1 person of unknown professional interest).

3. It would require more customer service to explain choices and answer questions for consumers, which would raise costs, workload, and require more staff (46 commenters—41 originators/servicers, 4 trade associations, 1 financial software company).

4. The cost would be passed on to consumers (44 commenters—35 originators/servicers, 6 trade associations, 2 tax services, 1 financial software company).

5. They did not want to make the system and programming changes, acquire the new software, or incur the expense of additional programming that would be needed (38 commenters—32 originators/servicers, 3 trade associations, 2 financial software companies, 1 tax service).

6. It would cause consumer confusion and consumers would not be able to make an educated choice (30 commenters—25 originators/servicers, 3 trade associations, 1 financial software company, 1 person of unknown professional interest).

7. They did not want to have to maintain two, or possibly many more, different disbursement systems for every taxing jurisdiction where they service loans (24 commenters—18 originators/servicers, 5 trade associations, 1 tax service).

8. It would lead to more errors and could result in missed payments and interest and penalties (24 commenters—21 originators/servicers, 1 trade association, 1 tax service, 1 financial software company).

9. It would create hardship for taxing authorities (18 commenters), such as increased administrative costs/burden and workload due to lack of uniformity and similar factors (12 originators/servicers), unexpected shortfalls in tax receipts (8 commenters—7 originators/servicers, 1 trade association), and unspecified or miscellaneous difficulties (2 originators/servicers).

10. It would require additional training of staff (8 commenters—7 originators/servicers, 1 trade association) or require additional staff and/or staff time for processing (13 commenters—12 originators/servicers, 1 trade association).

11. It would result in impossibilities and impracticalities (15 commenters) including that computer and other systems could not handle Consumer Choice (6 commenters—5 originators/servicers, 1 trade association).

12. It would increase the need for manual processing or interfere with technological advances (12 commenters—10 originators/servicers, 1 tax service, 1 financial software company).

13. It would be less efficient (11 commenters—10 originators/servicers, 1 trade association).

14. It would result in a loss of uniformity (10 commenters—9 originators/servicers, 1 trade association).

In addition, several commenters indicated that several aspects of the Consumer Choice alternative in the proposed rule were unclear and required further clarification. For example, eight originators/servicers and a trade association indicated that the proposed rule was not sufficiently clear about what would happen if the customer did not return the format or how a servicer should document that a borrower made no selection. Several commenters recommended that if the Department were to proceed with Consumer Choice, it should make variations of one type or another from the way in which it was proposed.

In its proposed rule, the Department asked Question 4, which was designed to learn more about the potential impact on servicers of requiring them to provide borrowers with a one-time choice at closing as opposed to allowing borrowers to switch disbursement methods during the life of the loan. The answers received to this question substantially overlapped with the comments discussed above regarding the benefits and disadvantages of Consumer Choice.

Twenty-eight commenters (24 originators/servicers, 3 trade associations, 1 tax service) explicitly indicated in their responses to this question that not even a one-time choice should be provided to consumers, but that if the Department chose the Consumer Choice alternative anyway, it should be limited to a one-time choice. This view was implicit in the comments of several others. Among the drawbacks cited for providing more than a one-time choice were the following:

1. It would increase the burden if servicers needed to make constant changes (nine commenters—eight originators/servicers, one trade association).

2. It would result in higher costs (eight commenters—seven originators/servicers, one tax service).

3. It would lead to more errors, confusion, uncertainty and/or noncompliance (seven commenters—five originators/servicers, one trade association).

4. It would be impossible, impractical, or unfair (five originators/servicers).

In its proposed rule, the Department also asked three related questions (Questions 2, 5, and 11) that were designed to elicit responses as to whether, in general, the approach in the final rule should make a distinction between loans that settle before the effective date of a final rule and loans that settle on or after the effective date. While the Department posed the questions so as to be applicable regardless of which alternative was selected, virtually all who answered the questions did so in the context of applying Consumer Choice. The answers received to these questions substantially overlapped each other, as well as overlapping with the comments received on Consumer Choice, and thus are discussed together here.

Fourteen commenters—twelve originators/servicers and two trade associations—emphasized the drawbacks to applying new rules to existing loans, as opposed to only applying it to new loans. The drawbacks to applying consumer choice to all loans included: (1) it would be more costly/burdensome to apply to all (eight commenters); (2) it may result in shortages (two commenters); and (3) it would cause more confusion, disruption, and/or chance for error (two commenters).

In contrast, 13 commenters—11 originators/servicers, 1 trade association, and 1 financial software company—emphasized the drawbacks to trying to apply new rules only to new loans, thereby requiring maintaining separate rules for a portion of their portfolio. These commenters either supported or leaned toward uniform treatment of all loans, some with mixed feelings about the significant burdens it would impose to apply a change to existing loans. The drawbacks cited

---

applies to the entire bill. Otherwise, half of the bill is due on January 1 and half is due on July 1.

[13] In contrast, one commenter, a Wisconsin bank holding company, seemed to question the Department's legal authority to propose any solution to the problem. The commenter asserted that the Department can prohibit over-escrowing and pre-accrual or other servicer practices "that require borrowers to have more than the amount of the projected property tax plus the permissible cushion in the escrow account before the tax lien attaches, but it was not the purpose of Congress that RESPA limit a lender's right to keep mortgaged property free of liens, and the authority of the Department to interpret RESPA so as to do so is questionable." The commenter criticized any proposal that would establish detailed rules regarding when servicer may disburse funds to pay property taxes after the tax lien has attached to the property.

This objection seems to raise an issue that was settled in the May 1995 rule, which elevated cash flow over lien priority. The Department has clear legal authority to address the matter of disbursements, as part of the Secretary's rulemaking authority pursuant to section 19(a) of RESPA (12 U.S.C. 2617) to interpret RESPA, including section 10 and section 6(g). Section 10(a) requires that disbursements be made in accordance with prudent lending practice. Section 10(a)(2) prohibits lenders from requiring consumers to deposit in escrow accounts more than one-twelfth of the total amount of the estimated taxes, insurance premiums and other charges which are "reasonably anticipated" to be paid on dates during the ensuing twelve months plus a cushion. Section 6(g) requires that disbursements be made as payments become due. By promulgating a rule to address the Annual vs. Installments Disbursement problem, the Department would be acting appropriately under one or more of these statutory provisions.

VOL 63 ISS 13 JA 21 1998 UMI

included: (1) the need for uniformity and consistency (five commenters); (2) it would be costly and burdensome to distinguish (four commenters); (3) it would result in more borrower confusion or dissatisfaction (three commenters); (4) taxing authorities could not gauge the number and amount of tax payments (two commenters); and (5) more errors would result.

Finally, in the proposed rule the Department asked Question 10, which was designed to elicit comments on whether the Department should apply a Consumer Choice approach to other escrow items for which a choice between installments and annual disbursements may be offered. No commenter gave a clear answer that supported applying a consumer's choice to other escrow items. In contrast, 27 commenters (23 originators/servicers and 3 trade associations) opposed extending a consumer's choice to other escrow items. The reasons given for opposing such an approach included the following:

1. Additional costs and burdens would result (e.g., insurance companies impose a service charge for installment payments and this would be passed on to consumer) (19 commenters—17 originators/servicers, 2 trade associations).

2. There would be no benefit to consumers (e.g., taxes are the largest item so the savings from installments will be negligible) (10 commenters—9 originators/servicers and 1 trade association).

3. More errors, customer dissatisfaction, and customer confusion would result (six commenters—five originators/servicers and one trade association).

2. Comments on Servicer Flexibility Alternative

Twenty-five commenters—18 originators/servicers, 5 trade associations, 1 tax service, and 1 financial software company—supported Servicer Flexibility. Eight of these commenters (seven originators/servicers and one financial software company) who otherwise supported Servicer Flexibility, however, did not support the aspect of Servicer Flexibility that would have included restrictions on changing disbursement methods when servicing rights were transferred. Indeed, two of these originators/servicers made a special point of indicating that they would not support Servicer Flexibility if it included that element.

The most common reasons for supporting Servicer Flexibility included:

1. It would be flexible (six commenters—three originators/servicers, three trade associations).

2. It would be easy to administer and cause little disruption (five commenters—two originators/servicers, two trade associations, one financial software company).

3. It would not be costly (four originators/servicers).

4. The lender/servicer is likely to do what is in the consumer's interest anyway; Servicer Flexibility would allow servicers to accommodate borrowers (four commenters—two originators/servicers, two trade associations).

In contrast, 19 commenters—14 originators/servicers, 4 trade associations, and 1 tax service—opposed Servicer Flexibility. The reasons for opposing Servicer Flexibility included:

1. It would not create a system that is uniform, standardized, consistent, or certain; there would still be no clarity (12 commenters—9 originators/servicers, 2 trade associations, 1 tax service).

2. The restriction on changing disbursement methods when there is a transfer of servicing or reasons related thereto was objectionable (five commenters—three originators/servicers, one trade association, one tax service).

3. Increased costs would result (five commenters—four originators/servicers, one trade association).

4. It might not result in the best method for consumers (two originators/servicers, one trade association) and litigation would result (two originators/servicers).

In addition, one federal credit union suggested that the Department adopt a variation on Servicer Flexibility under which the servicer should notify the borrower when the disbursement method is being changed, changing should be limited to when it benefits the borrower (such as taking advantage of a sufficient discount), and the annual statement could be used to inform the borrower of the method used.

3. Comments on Keep, But Clarify, Current Requirements Alternative

Sixty-five commenters—58 originators/servicers, 4 trade associations, 1 tax service, 1 financial software company, and 1 State lending agency—supported the Keep, But Clarify, Current Requirements alternative. Six other commenters (two originators/servicers, three trade associations, and one tax service) indicated it was their second choice. Forty-eight of the commenters who otherwise supported Keep, But Clarify, Current Requirements as either their first or second choice (46 originators/servicers, 1 trade association, and 1 State lending agency), did not support the aspect of this alternative that would include restrictions on changing disbursement methods when servicing rights were transferred. Indeed, 30 of these commenters specifically emphasized their objection to this aspect of this alternative in discussing the support they otherwise would give to it.

The reasons given by those who supported Keep, But Clarify, Current Requirements as their first choice were substantially the same as the reasons given by the three originators/servicers who indicated it was their second choice. The most common reasons of both groups of commenters included:

1. It would be good for consumers for miscellaneous or unspecified reasons (26 commenters—24 originators/servicers, 1 State lending agency, 1 financial software company) or because it would be flexible and allow accommodating customers (8 commenters—5 originators/servicers, 3 trade associations).

2. It would cause little disruption, would not be burdensome, would not require much change, and would be efficient (11 commenters—8 originators/servicers, 2 trade associations, 1 State lending agency).

3. It would not be costly and any costs associated with it would be within an acceptable range (eight commenters—six originators/servicers, two trade associations).

4. It would be a balanced, sensible, practical compromise (six commenters—five originators/servicers, one trade association)

5. It was favored but no specific reason was given (20 commenters—17 originators/servicers, 2 trade associations, 1 tax service).

In contrast, eight originators/servicers and two trade associations opposed Keep, But Clarify, Current Requirements. The most common reasons given for opposing it included the following:

1. It would not standardize the industry (two originators/servicers).

2. It would be unclear, vague, and not specific (two originators/servicers).

3. It would be bad for consumers (e.g., consumer dissatisfaction, confusion, disruption, loss of tax deduction) (two originators/servicers, one trade association).

4. It would be objectionable because of the restriction on switching disbursement methods when there is a transfer of servicing (two commenters—one originator/servicer, one trade association).

Several commenters recommended variations on Keep, But Clarify, Current Requirements such as requiring installments unless there is a discount for annual disbursements, in which case making annual disbursements mandatory to get the discount instead of optional for servicer. Other commenters encouraged the Department to consider other approaches, such as making no changes at all to address this problem.

4. Comments on Proposed Rule Provision Prohibiting Switching Disbursement Methods Without Borrower's Consent

Only seven commenters supported, in any context, prohibiting a servicer or transferor servicer from changing the disbursement method, as long as a choice exists, without the borrower's prior written consent. Two appeared to support it as a general proposition regardless of the alternative selected. One was Senator D'Amato, who asserted that changes without the borrower's approval "have been the primary culprit in the unfair treatment which mortgage lenders have imposed on the homeowners of Long Island, chiefly by requiring hundreds of dollars per month from homeowners in escrow payments in order to take advantage of minuscule discounts through the payment of local taxes on an annual basis." The other was a federal savings bank, which gave no specific reasons other than suggesting it would be less complicated to do so.

One servicer indicated that if Servicer Flexibility were adopted, it would be logical to prohibit subsequent servicers from changing the disbursement method without the borrower's written consent. This commenter stated that it understands the need to get the borrower's consent before changing the method of tax disbursements when servicing is transferred.

Were the Department to adopt the alternative of Keep, But Clarify, Current Requirements, three commenters supported the restriction. America's Community Bankers (ACB) supported the restriction, so long as the disbursement method continues to be offered by the taxing authority. A large bank with a mortgage lending subsidiary endorsed allowing servicers and subsequent servicers to change the disbursement method only to bring the escrow account into compliance with RESPA under a revised interpretation by the Department. One other servicer commented that requiring the same disbursement date when servicing is transferred is beneficial in that it protects against payment shock for borrowers.

In contrast, 71 commenters opposed the restriction. Fifty-seven of those who opposed it (including 21 originators/servicers submitting the same form letter) discussed their opposition as a general objection applicable to whichever of the three alternatives for addressing the Annual vs. Installment Disbursements problem might be adopted. These 57 included 51 originators/servicers, 4 trade associations, a State lending agency, and a financial software company. Fourteen expressed their opposition in connection with one or more of the specific alternative solutions proposed, but none of these commenters either stated or suggested that the proposal would be acceptable in the context of a different alternative being adopted. Since the objections were consistent regardless of whether expressed in connection with one or all alternatives, all the comments on this issue are discussed in this section. One servicer specifically said that it opposed all the alternatives presented in the proposed rule because of this common feature.

The arguments against including the restriction in the final rule primarily focused on the way in which such a restriction would impair the value of servicing rights and the costs and administrative burdens associated with the restriction. Many of the arguments against the restriction overlapped each other. The most common reasons given included that:

1. It would result in a variety of miscellaneous administrative burdens (35 commenters—34 originators/servicers and 1 trade association).

2. It would increase costs for servicers, such as system and processing changes including computer system changes and the burden on the due diligence process (14 commenters—12 originators/servicers and 2 trade associations) and would increase costs to consumers (6 commenters—4 originators/servicers and 2 trade associations).

3. The restriction would impair the value of servicing rights (13 commenters—10 originators/servicers, 2 trade associations, 1 State lending agency), such as by creating inefficiency and increased cost (3 originators/servicers, 1 trade association).

4. As the restriction applies to the Keep, But Clarify, Current Requirements alternative, it would be a new requirement, rather than a clarification of an existing requirement (seven commenters—six originators/servicers and one trade association).

5. It would result in a variety of practical difficulties or impossibilities (six commenters—five originators/servicers and one trade association).

6. It would reduce the number of sales and transfers of servicing rights (five commenters—four originators/servicers and one trade association).

7. No problem exists that needs to be fixed by such a restriction (five originators/servicers).

In addition, three commenters (two originators/servicers, one trade association) indicated their belief that the Department would lack legal authority to mandate such a restriction. Three originators/servicers requested that the Department clarify certain points pertaining to this restriction.

Six commenters proposed variations on the restriction. Three commenters supported limiting the ability of the acquiring servicer to change the disbursement method to particular types of situations. One federal credit union indicated that it supported restricting a servicer acquiring servicing rights from changing disbursement methods unless the change would benefit the borrower, but gave no details on how to apply such a standard. The Georgia Housing and Finance Administration favored limiting servicers from making changes to the disbursements method to situations involving transfers of servicing, borrower hardships, taxing authority changes, system conversion, and other major organizational changes. GE Capital asked the Department to allow a change in disbursement dates or methods after a transfer of servicing if the dates are incorrect or the methodology is not available to the new servicer. Three mortgage companies suggested that servicers should simply include in the letter notifying the consumer of a transfer of servicing what disbursement method will be used, prior to making the change.

B. Approach Adopted in Today's Final Rule

Having carefully analyzed the comments received, the Department has decided to adopt, with modifications, the Keep, But Clarify, Current Requirements alternative. The Department is revising the rule to provide that servicers must make timely payments, that is, on or before the deadline to avoid a penalty, and advance funds as necessary, so long as the borrower's payment is not more than 30 days overdue. The rule also provides special requirements for property taxes when the taxing jurisdiction offers the servicer a choice between annual disbursements with a discount and installment disbursements. In such

VOL 63 ISS 13 JA 21 1998 UMI

cases, if the taxing jurisdiction neither offers a discount for disbursements on a lump sum annual basis nor imposes any additional charge or fee for installment disbursements, the servicer must make disbursements on an installment basis, unless the servicer and borrower agree otherwise. If, however, the taxing jurisdiction offers a discount for disbursements on a lump sum annual basis or imposes any additional charge or fee for installment disbursements, the servicer may, at the servicer's discretion (but is not required by RESPA to), make lump sum annual disbursements, as long as such method of disbursement complies with the requirements of § 3500.17 (k)(1) and (k)(2) of this rule. HUD encourages, but does not require, the servicer to follow the preference of the borrower, if such preference is known to the servicer.

This final rule also incorporates into the regulations a provision that the servicer and borrower may mutually agree, on an individual case basis, to a different disbursement basis (installment or annual) or disbursement dates, than the rule would otherwise require. This provision is consistent with, but more expansive than, the statement contained in the discussion in the preamble to the Department's May 9, 1995 rule (60 FR 24734), which indicated that such agreements were allowed after settlement only. At the time the preamble to the May 1995 rule was written, the Department felt that the concern for borrower coercion was so great as to make it necessary to limit agreements concerning disbursement dates to the period after settlement, when the likelihood of coercion was reduced. The Department understands, however, that allowing such agreements only after settlement discourages them, since it is more burdensome to change the disbursement basis or date after settlement than to set up the account from the start in a way that is mutually agreeable to the borrower and servicer.

This final rule emphasizes that these agreements must be completely voluntary and that neither loan approval nor any term of the loan may be conditioned on the borrower's agreeing to a different disbursement basis or disbursement date for property taxes. The rule does, however, allow such agreements to be made prior to settlement, thereby avoiding the need to make postsettlement changes in the disbursement basis or dates when such an agreement is reached before settlement. This rule also clarifies that whatever the borrower and servicer agree to must avoid a penalty, comply with normal lending practice of the lender and local custom, and constitute prudent lending practice. This new provision provides flexibility. It allows the parties to agree, for example, to annual disbursements of property taxes even if there is no discount where an installment option is offered.

This final rule departs from Keep, But Clarify, Current Requirements as articulated in the proposed rule in that, under this final rule, the only specific requirements for choosing between annual and installment disbursements pertain to property taxes, not other escrow items. The reason the Department distinguishes property taxes from other escrow items is that the concerns that have been raised to the Department on the Annual vs. Installment Disbursement issue have been limited to property taxes. For most consumers, property taxes are much larger than hazard insurance and other escrow items.

This final rule also departs from Keep, But Clarify, Current Requirements as articulated in the proposed rule in that, for the reasons discussed in Part V(D)(3) of this preamble below, it does not adopt the restriction in the proposed rule that a servicer and subsequent servicers would be prohibited from changing the method of disbursement without the borrower's prior written consent, as long as a choice continues to exist in the taxing jurisdiction.

Finally, the final rule adds a definition of "penalty" to the definitions in § 3500.17. This definition clarifies that a penalty means a late charge imposed for paying after the disbursement is due. It does not include any additional charge or fee associated with choosing installment disbursements as opposed to annual disbursements or for choosing one installment plan over another. In comments on the proposed rule, four originators/servicers and one tax service commented that the proposed rule had been unclear whether a service fee levied on installment disbursements is regarded as a penalty. These commenters took the position that the servicers may or must use annual disbursements to avoid a penalty (service charge, interest payment, or other fee) for paying in installments, not just to take advantage of a discount available for annual disbursements. One of these commenters questioned whether the existence of a service charge for installment disbursements makes an annual disbursement plan without such a service charge the equivalent of a discount.

Notwithstanding these comments, the Department believes the better approach is not to regard a service charge, interest payment, or other fee associated with choosing installment disbursements as opposed to annual disbursements as a penalty to be avoided. Rather, if a service charge, interest payment, or other fee is imposed for choosing installment disbursements as opposed to annual disbursements, the ability to avoid them by paying annually creates, in essence, a discount for annual disbursements. With respect to disbursements for property taxes, once the choice is viewed as between annual disbursements at a discount and installment disbursements, in accordance with this rule, the servicer may, but is not required by RESPA to,[14] pay annually. Thus, for property taxes, the servicer may choose to disburse the property taxes in installments and incur the service charge, interest payment, or other fee associated with choosing installment disbursements, or may avoid them by disbursing annually. The servicer is encouraged, but not required, to follow the preference of the borrower.[15]

Stated in other terms, for property taxes, the servicer should add up the total payments associated with disbursing annually and compare that amount to the total payments associated with disbursing in installments. In making those calculations, the servicer should take into account any applicable discounts or service charges. If the total amount associated with disbursing property taxes annually is greater than or equal to the total amount associated with disbursing in installments, the servicer must disburse the property taxes in installments, except when the servicer and borrower mutually agree otherwise. If, however, the total amount for disbursing the property taxes in installments is greater than the total amount for disbursing them annually, the servicer may, but is not required by RESPA to, disburse them annually. The servicer is encouraged, but not required, to follow the preference of the borrower.

C. Basis for Approach Adopted

The preamble to the proposed rule indicated that the Department believed the advantage of Keep, But Clarify, Current Requirements would be that, like Servicer Flexibility, it would provide flexibility to servicers. It would also allow servicers to accommodate borrowers with a particular preference.

[14] The caveat, "by RESPA," is designed to allow for the possibility that State law could require annual disbursements.

[15] For other escrow items, the servicer may disburse annually or in installments, so long as the method avoids a penalty and the disbursement basis and disbursement date complies with the normal lending practice of the lender and local custom, and constitutes prudent lending practice.

To the extent that the Department thought Keep, But Clarify, Current Requirements had a potential drawback, it was that it would not guarantee that servicers would accommodate the preferences of individual borrowers, providing less choice for borrowers.

The comments received served to confirm the Department's belief that Keep, But Clarify, Current Requirements, with some modifications, is a workable solution to this problem. Commenters noted many positive reasons for choosing this alternative. The Department is persuaded that, on balance, it is the best approach for meeting consumers' needs and balancing those against the valid concerns of the industry. Such an approach will cause the least disruption and burden and will be the least costly approach, yet it is sufficiently flexible to accommodate the preferences of individual consumers.

By clarifying the regulations in a way that allows more flexibility for servicers and consumers, the Department intends to encourage more servicers to adopt the types of best practices that some servicers are already using that ensure flexibility for consumers. These best practices to address the Annual vs. Installment Disbursements problem include:

- Disbursing property taxes in installments unless a discount is offered for annual disbursements that the servicer, based on its best business judgment, believes is a large enough discount to be in the borrower's interest, in which case the servicer makes disbursements annually.
- Accommodating individual borrowers by switching borrowers who complain to whichever method they prefer for the disbursement of property taxes.

These two practices are examples of the types of best practices that some originators/servicers in the industry are using today, even without a Government requirement. The Department would encourage servicers to adopt these practices so that they will become more widespread.

In contrast, the Department intends to discourage practices that do not provide as much flexibility for the consumer. These include:

- If a choice between annual disbursements with a discount or installment disbursements is offered, always disbursing annually regardless of how insignificant the discount may be and despite the consumer's stated preference for installment disbursements.
- If a choice between annual disbursements or installment disbursements with an additional charge or fee for installment disbursements is offered, always disbursing annually regardless of how insignificant the charge or fee for installment disbursements may be and despite the consumer's stated preference for installment disbursements.

The Department intends that the revisions made in this final rule clarify that these two inflexible practices were not, and are not, compelled by the Department; the Department does not in any way mandate such practices. The Department encourages servicers to use practices that are more consumer friendly.

D. Basis for Rejecting Alternative Approaches

1. Rejection of Consumer Choice Alternative

The preamble to the proposed rule indicated that this approach would provide the greatest flexibility to the borrower. However, the Department also noted that it could impose higher costs on servicers. The Department observed that servicers would likely need two different disbursement systems to reflect the disbursement preferences of borrowers.

While the Department believes that it would have legal authority to impose Consumer Choice as part of the Secretary's rulemaking authority, it has decided not to do so. The Department is persuaded that the types of costs and burdens associated with such an approach are unwarranted at this time. The cost of implementing Consumer Choice with respect to disbursing property taxes on an installment or annual basis would be substantial according to most of the comments received on this issue. New software and operating procedures would have to be developed for originators and all those involved in servicing. Some efficiencies would be lost as multiple processes were employed for making disbursements to taxing authorities, when only one process had been followed before.

Additionally, the Department gathered information from members of the servicing industry on the cost of the Consumer Choice alternative. The Department believes that the cost per account subject to Consumer Choice would be significant, even under a very simple system subject to the following assumptions: (1) a choice would only be permitted at origination with no provisions for the consumer to opt to change the disbursement method later and (2) little in terms of disclosure to the consumer would be provided other than notifying the consumer that a one-time choice at origination was permitted. To the extent that the disclosure required more information or the consumer could opt to change the disbursement method during the life of the loan, the costs would be greater.

The additional costs of consumer choice could be justified if there were commensurate benefits to consumers. But the vast majority of consumer complaints concerning the disbursement method arose out of the transition associated with the 1994–1995 escrow rules. These were one-time, as opposed to ongoing, problems. Complaints about this problem have recently become rare.

Given that the transition associated with the 1994–1995 escrow rules is almost complete and that this transition has been the source of essentially all the complaints concerning the Annual vs. Installment Disbursements problem, the Department believes that only a small percentage of consumers would benefit from the Consumer Choice alternative. It is not anticipated that the benefits to the few who would choose a basis other than what the servicer would choose under the rule would exceed the costs associated with that option. Since it is consumers who would probably bear the additional costs of providing choice, the Department does not believe it is in the consumers' overall best interest to require consumer choice.

The Department was also influenced by the lack of consensus among the commenters on the technical details of the Consumer Choice alternative. The Department asked several specific questions about how to implement such an option in the way least disruptive to the industry. The answers received further reflected the uncertainties and disruptions that would be created by imposing the Consumer Choice alternative and helped convince the Department that such an approach is not feasible. Since the Department is not adopting the Consumer Choice alternative in this final rule, the responses received to a number of the questions raised in the proposed rule do not merit detailed discussion, but a brief summary of the comments in response to these questions is provided below to convey the divergent opinions on this subject.

1. The Department asked Question 7, which was designed to elicit comments on when the appropriate time would be for the originator or servicer to provide the borrower the disclosure, if the Consumer Choice alternative were to be adopted. The commenters were fairly evenly divided on whether the disclosure should be provided and the

VOL 63 ISS 13 JA 21 1998 UMI

selection made before closing but after underwriting or before underwriting. Thirteen commenters simply indicated sometime before closing, whereas 12 commenters indicated it would have to be before underwriting. Seven commenters specifically indicated that the selection would affect underwriting, whereas three commenters specifically indicated that the selection should not affect underwriting.

2. The Department asked Question 8, which was designed to elicit comments about whether the Department should prescribe a disclosure format if an approach were adopted in which the borrower's preference for installments or annual disbursements were controlling. There was general agreement that the Department should prescribe the format (20 commenters supporting prescribing it, with only 4 opposed). However, there was disagreement over what the disclosure should say. Six commenters supported the disclosure the Department had proposed, if one was to be mandated. Seven commenters, however, said it was too confusing and/or unclear. Four criticized it for containing too much information or being overwhelming whereas, two criticized it for not including enough information.

3. The Department asked Question 9, which inquired what period of time would be needed for servicers to be able to implement the Consumer Choice alternative. Four commenters said it could be implemented in less than 12 months, 9 commenters indicated 12 months or more, 2 commenters said 18 to 24 months, and 4 commenters estimated it would take 24 months.

2. Rejection of Servicer Flexibility Alternative

The preamble to the proposed rule explained that the Department perceived this alternative as being the least intrusive regulatory approach for the Department to take and providing the greatest flexibility to servicers, while leaving servicers free to accommodate borrowers with a particular preference, as long as the borrowers' preferences were in accordance with the normal lending practice of the lender and local custom and constituted prudent lending practice. The Department noted that the disadvantage of this alternative is that it would not guarantee that servicers would accommodate the preferences of individual borrowers and, therefore, it provided less choice for borrowers.

The Department has decided not to adopt the Servicer Flexibility alternative. Most commenters did not favor such an approach. The Department decided that there is no reason to adopt this approach and that it would not necessarily be best for the consumer.

3. Rejection of Prohibiting Switching Disbursement Methods Without Borrower's Consent

While the Department would have legal authority to impose a restriction against switching disbursement methods without the borrower's consent as part of the Secretary's rulemaking authority, it has decided not to do so. The types of costs and burdens associated with such a restriction are unwarranted. Therefore, this final rule does not contain this restriction as part of the approach adopted.

E. Clarifications

In issuing this final rule, the Department wishes to address several questions from commenters that will clarify the rule.

1. Selecting From Among Various Installment Plans Offered

Several commenters requested clarification of the servicer's obligations when a taxing authority offers several different installment plans. In such circumstances, the Department encourages the servicer to use the installment plan that results in the lowest closing costs for the consumer. However, the servicer is free to make disbursements according to any installment plan offered by the taxing jurisdiction so long as the selection complies with the normal lending practice of the lender and local custom, and the installment plan selected constitutes prudent lending practice. The servicer may also make disbursements according to any installment plan offered by the taxing jurisdiction to which the servicer and borrower may mutually agree, on an individual case basis.

2. The Size of the Discount Does Not Matter

One mortgage company commented that the Department should make the application of the Keep, But Clarify, Current Requirements approach more consistent by establishing a guideline on when to switch to annual disbursements to take advantage of a discount. One tax service indicated that when the payee offers a choice between installments and annual disbursements at a discount, the Department should either require maximum discounts be taken or set a threshold and require the servicer to disburse to obtain any maximum discount meeting or exceeding that minimum.

In its proposed rule, the Department asked Question 6, which specifically solicited comments on whether the size of an available discount should matter and, if so, how. Fifteen commenters—11 originators/servicers, 1 trade association, 2 tax services, and 1 financial software company—indicated that the size of the discount should make a difference under the rule in some fashion. Eight commenters indicated that the rule should provide that if the discount offered meets a Department-determined threshold, the servicer must disburse annually to obtain the discount. Three commenters indicated that the rule should provide that the servicer is free to decide if the discount is large enough to make it worthwhile to make disbursements in such a way as to collect the discount.

Among those who favored making the size of the discount matter under the rule, there was no agreement on the best approach to setting the discount threshold that would trigger application of one rule or another. Five commenters opposed tying the discount threshold to a market rate, while only one supported this approach. Five commenters favored, but two commenters opposed, a "reasonable servicer" standard. One large tax service commented that not just the size of the discount, but several other factors, affect the value of the discount to the consumer, such as the rate of interest (if any) paid on escrow accounts, market interest rates, and the borrower's income tax rate.

In contrast, 16 commenters—15 originators/servicers and 1 trade association—indicated that the size of the discount should not make a difference under the rule. These commenters indicated that such consideration would present an additional burden and cost to calculate the size of the discount and that discounts are beneficial to the consumer regardless of the size.

The Department has not adopted the approach of making the size of the discount a determinative factor in which disbursement method the servicer should use. There is no apparent way to arrive at a reasonable and acceptable guideline. Rather, the Department's approach in this rule allows latitude to the servicer, while encouraging the servicer to follow the preference of the borrower.

3. Application of Rule to Other Escrow Items

Two originators/servicers commented that this rule should clarify that the Department's policy of favoring installments only applies to taxes, not other escrow items such as hazard insurance. One of these commenters added that this rule should clarify: (1) that servicers should disburse mortgage insurance payments monthly or annually; and (2) that hazard insurance payments should be disbursed annually or as billed by the insurer, and if discounts are available for annual disbursements it should be disbursed annually.

Under this final rule, the only specific requirements for choosing between annual and installment disbursements pertain to property taxes, not other escrow items such as hazard insurance. For escrow items other than property taxes, if a payee offers a servicer a choice between installment or annual disbursements, the servicer is required to make disbursements by a date that avoids a penalty. The servicer, however, is otherwise free to make disbursements on such disbursement basis (annual or installments) and disbursement date as complies with the normal lending practice of the lender and local custom, provided that the selection of each such basis and date constitutes prudent lending practice. The reason for distinguishing property taxes from other escrow items is explained in Part V(B) of this preamble, above.

4. No Preemption of State Law on Installment Option

Two commenters requested clarification of whether RESPA preempts State law in such a way as to require that States offer an installment payments option to servicers, or if they currently only offer that option to individual borrowers. The answer to that question is that RESPA does not so preempt State law. Whether taxing jurisdictions should make an installment option available to servicers is a matter of State law, not RESPA.

5. Disbursing Annually Instead of in Installments When There is no Discount if a Choice is Offered

One commenter, a Wisconsin bank holding company, raised a concern regarding escrow accounts in Wisconsin, stating that servicers should be able to make tax disbursements in an annual disbursement rather than installments, if a choice is offered, even if there is no discount for annual disbursements. The commenter represented that this was partly to protect the servicer's lien, which becomes effective on the first of the year in which the taxes are billed, and partly to give the borrower the benefit of tax deductions for the current year. The commenter explained that in Wisconsin, taxes are billed in November and can be paid in two installments in the following January and July. In addition, State law requires the servicer to issue a joint check to the borrower and the taxing authority by December 20, or give the borrower three options: (1) Pay in full by December 31 if the tax bill is received by December 20, (2) pay the full tax when due (January and July installments), or (3) issue a joint check to the borrower and taxing authority by December 20. If the servicer offers the three options, the servicer is required to follow the borrower's preference.

The commenter asserted that for the Department effectively to prohibit the December payment would conflict with the Department's prior guidance set forth in the preamble to the February 15, 1995 rule (60 FR 8813, second column), which specifically allowed the practice. The commenter further argued that a substantial change in interpretation would undercut servicers who relied on the Department's prior advice, would force servicers to disregard State law, and would negatively impact on borrowers' tax deductions.

In response to this and other comments, this final rule adds a provision to the regulations (§ 3500.17(k)(4)) specifying that a servicer and borrower may mutually agree, on an individual case basis, to a different disbursement basis (installment or annual) or disbursement date than that which would otherwise be prescribed under the regulations. This addition should address the commenter's concern and allow the servicer to comply with Wisconsin law.

VI. Payment Shock—Comments Received, Approach Adopted in This Final Rule, Basis for Approach Adopted, Basis for Rejecting Alternatives

A. Comments Received

Through the comments received on the proposed rule, the Department gained a better understanding of the payment shock problem. A few commenters pointed out that there could be other causes of payment shock aside from those that the Department had described in the preamble to the proposed rule. Citicorp pointed out that payment shock can also be caused by rate adjustments to Adjustable Rate Mortgages (ARMs), special tax assessments, and additional insurance coverage selected by borrowers after closing.

The Department also learned more about how servicers have been addressing the problem of payment shock. Eight originators/servicers indicated that their practice is to notify borrowers ahead of time and provide an opportunity to make voluntary payments ahead of schedule to avoid payment shock. Seven originators/servicers indicated that they offer consumers extended repayment plans, even beyond those required under RESPA, to make up shortages that result from payment shock. Nine originators/servicers indicated that they use short-year statements to minimize payment shock, a practice that also is useful. Two originators/servicers indicated that they simply notify borrowers ahead of time that payment shock may occur but do not explain how to avoid it.

The Department solicited comments to gauge the extent of the payment shock problem. Four originators/servicers and one home builder specifically commented that they agreed with the Department's assessment that payment shock is a very significant problem that needs to be addressed. One commenter estimated that roughly 50 percent of its customers experience payment shock because 30 percent of its loans are for new construction on which taxes are initially assessed on unimproved property and then reassessed for the improvements; an additional 20 percent of its loans have prepaid taxes.

The view that payment shock was a problem was implicit in the comments of several others, such as a servicer who indicated that the current regulations do not work because of difficult situations with borrowers that arise when payment shock occurs. Every commenter who stated a reason for opposing the Make No Change alternative indicated that they opposed the alternative because it would not address the payment shock problem and/or ignored that a problem exists. There were 13 commenters who made such a statement—10 originators/servicers (including 1 of the 4 mentioned above), 1 trade association, 1 tax service, and the home builder mentioned above.

Countrywide commented that payment shock is the most serious problem caused by the existing escrow accounting regulations because it leads to delinquency, hurts borrowers' credit, and may result in people losing their homes. NationsBank commented that it results in an inability to make additional payments in the second year, increases the possibility of delinquent payments, and accelerated collection proceedings, and causes consumers to lose confidence in their lending institutions. Two other originators/servicers agreed with Countrywide's assessment that the situation leads to a significant number of defaults and foreclosures. Two commenters commented that when payment shock

VOL 63 ISS 13 JA 21 1998 UMI

occurs, borrowers unfairly blame their lenders and/or their builders and closing agents. Two commenters commented that when it happens, lenders are left having to carry shortages, sometimes for 24 to 48 months, and that this puts the lenders at risk. Countrywide indicated that it is a particularly perilous situation when two or more risk factors are present in a transaction (a condition known as "layered risk"), such as when payment shock is combined with an upward adjustment in the ARM rate.

In contrast, seven originators/servicers questioned whether payment shock was really a problem in need of fixing. A bank with a mortgage lending subsidiary commented that while many consumers fail to plan for payment shock, they are not really surprised by it and feel that the problem has nothing to do with the servicer. A rural bank commented that it is really a consumer education problem, a problem that will happen regardless of whether there is an escrow account or not. A bank holding company commented that it is not a significant problem, while a federal credit union indicated it was a very infrequent problem. One servicer requested that the Department wait until the transition period expires on the 1994–1995 escrow rules before making any further changes. Citicorp also questioned whether it is a real and on-going problem and suggested waiting until 1998 to consider new requirements.

1. Comments on Consumer Choice

Only one commenter, the California Association of Realtors (CAR), supported Consumer Choice. As with the Annual vs. Installment Disbursements problem, the CAR commented that it favored approaches that provide consumers with as much information as possible and the opportunity, when fully informed, to make choices about the servicing of their loans and the related impound/escrow accounting.

In contrast, 81 commenters opposed the adoption of Consumer Choice—66 originators/servicers, 10 trade associations, 1 tax service, 2 financial software companies, 1 builder, and 1 person of unknown professional interest. The most common reasons given included:

1. It would result in miscellaneous costs and/or administrative burdens (e.g., would increase cost of servicing or be a burden on closing, would create operational problems, would be complicated) (53 commenters—46 originators/servicers, 5 trade associations, 1 financial software company, 1 builder).

2. It would be impractical (36 commenters), for reasons such as servicers will not have or would find it difficult to get or estimate the information needed to calculate the disclosure (30 commenters—28 originators/servicers, 2 financial software companies).

3. It would necessitate more customer service to explain choices and answer questions for consumers (28 commenters—26 originators/servicers, 2 trade associations).

4. Consumer Choice would require system and programming changes and new software or additional programming (23 commenters—19 originators/servicers, 4 trade associations). Two large lenders indicated that if Consumer Choice were selected they would need in excess of 18 to 24 months from the issuance of the final rule to reprogram their computers and develop new forms and procedures.

5. The specific costs and burdens of consumer disclosure, including producing and mailing disclosures, soliciting preferences, processing disclosures, tracking selections, and maintaining information on selection should be avoided (19 commenters—12 originators/servicers, 6 trade associations, 2 financial software companies) or objections to adding a new disclosure in general (5 commenters—4 originators/servicers, 1 builder).

6. The additional cost would be passed on to consumers (21 commenters—16 originators/servicers, 3 trade associations, 1 financial software company, 1 builder).

7. It would create consumer confusion, consumers would not be able to make an educated selection, and it would impose a burden on consumers to have to make such a choice (17 commenters—11 originators/servicers, 4 trade associations, 1 financial software company, 1 builder).

8. There is no need for it (14 commenters) for reasons such that no consumer benefit or no significant consumer benefit would result (10 commenters—6 originators/servicers, 4 trade associations).

9. It would necessitate multiple sets of closing documents to accommodate possible choices or otherwise interfere with the correct preparation of closing documents (eight commenters—five originators/servicers, one trade association, one financial software company, one builder).

10. Additional training of staff would be required (eight commenters—six originators/servicers, two trade associations).

Several commenters commented specifically about the proposed prohibition against servicers switching accounting methods without the borrower's consent, which was one element of the Consumer Choice alternative. Only one commenter, GE Capital, indicated that it supported restricting changes to accounting methods when there is a transfer of servicing. GE Capital's support, however, was conditioned on the selection of the accounting method being limited to a one-time choice at closing, the selection being limited to situations involving new construction, and the regulations being clarified to provide that payments (as opposed to methodology) could be changed in the event of unanticipated changes to escrow items.

In contrast, seven commenters, including six originators/servicers and one trade association, opposed the aspect of Consumer Choice prohibiting servicers from switching escrow accounting methods. The reasons given included the following: (1) It would chill or burden sales of servicing rights (three originators/servicers, one trade association); (2) it would pose an administrative burden (two originators/servicers); and (3) it would impair value of servicing rights (two originators/servicers).

In the proposed rule, the Department asked Question 2, which was designed to elicit commenters' views on how to define a substantial increase in disbursements from an escrow account, and how mortgage servicers could go about determining whether bills paid out of escrow accounts were expected to increase substantially after the first year. Virtually all of the commenters that responded to this question focused on whether a 50 percent increase was an appropriate threshold for defining a substantial increase, as proposed.

Four commenters—three originators/servicers and one trade association—supported using 50 percent as a threshold. One bank holding company indicated that 50 percent was an appropriate threshold but that the payment shock problem should only be addressed in situations involving new construction. Most gave no reason for why they believed 50 percent was an appropriate threshold, other than that it seemed to be a reasonable approach. The National Association of Federal Credit Unions (NAFCU) indicated that the approach would avoid confusion.

In contrast, 21 commenters—17 originators/servicers, 2 trade associations, 1 financial software company, and 1 builder—opposed using 50 percent as a threshold. Many of these commenters indicated that the Department should not set any threshold for when an increase would be considered substantial, yet no commenters favored offering alternatives to borrowers whose escrow payments were not expected to increase substantially after the first year, and 16 commenters (14 originators/servicers, 2 trade associations) specifically opposed such an idea. The reasons for opposing using 50 percent as a threshold and/or opposing any Department-established threshold were similar. They included:

1. Servicers would not be able to estimate if the expected increase was within the threshold (seven comments—six originators/servicers, one trade association).

2. Even less than a 50 percent increase could be a problem for borrowers (five commenters—three originators/servicers, one financial software company, one builder).

3. It would be burdensome and/or costly to calculate if the expected increase would meet the threshold (five commenters—four originators/servicers, one trade association).

4. Servicers should be given more flexibility (two originators/servicers).

The Department also asked Questions 2 and 7, which were designed to elicit responses as to whether, if the Consumer Choice alternative were adopted, the final rule should limit a borrower's opportunity to switch escrow accounting methods. Sixteen commenters (14 originators/servicers, 1 trade association, 1 financial software company) indicated that they opposed allowing even a one-time choice to be provided to consumers, but that if the Department chose the Consumer Choice alternative anyway, it should be limited to a one-time choice, for reasons such as the additional burdens and costs more opportunities to switch would create. Several other commenters that were less clear in their dislike of the Consumer Choice alternative, nonetheless took clear positions against offering more than a one-time choice.

In contrast, only three commenters advised against having different systems for different borrowers. One based its view on the additional confusion it would create over options and management of the options. Another based its opinion on the additional complications. A third stated it would add to the programming, personal, and postage costs and create more confusion.

2. Comments on Make No Change Alternative

A total of 46 commenters supported the Make No Change alternative. Forty-two commenters—35 originators/servicers, 5 trade associations, 1 financial software company, and 1 person of unknown professional interest—supported Make No Change as proposed. The MBA and a bank and trust indicated that Make No Change was their second choice next to Mandate First Year Overpayment; NAFCU also implied it was their second choice.

Four additional commenters indicated they would support Make No Change if Variation (A) were added to it. The proposed rule described Variation (A) as follows:

(A) Require servicers to disclose to borrowers that it is anticipated that they will have a substantial payment increase in the second year, so borrowers will be less surprised when such an increase occurs, but do not require servicers to indicate specifically to borrowers methods of avoiding the shortage.

61 FR 46517.

Three of the 42 who supported the Make No Change alternative as proposed also indicated they would support Make No Change with Variation (A). In addition, two originators/servicers that recommended alternatives instead of Make No Change also indicated that as part of those approaches that it should be disclosed to the borrower that a shortage is expected, but not the amount of the expected shortage.

One commenter who otherwise supported the Make No Change alternative indicated that it was opposed to mandating any type of notice, but indicated a notice similar to Variation (A) would be less problematic than the type of disclosure that would be part of the Consumer Choice alternative. The commenter observed that any disclosure should be generic (no calculations) and advise consumers that: (1) The amount of taxes for which escrow funds are being collected is based on information available at time of closing about anticipated property taxes for next year; (2) the amount could change especially for new construction; and (3) the consumer should monitor the situation and consult a tax advisor if the amount increases substantially.

Ten other commenters—eight originators/servicers, one financial software company, one builder—specifically commented that they opposed Variation (A). The primary reasons were that it would not be effective at eliminating payment shock, and giving borrowers advance notice that a payment increase may occur should be left to the originator/servicer. The reasons the commenters gave for supporting the Make No Change alternative as their second choice were similar to the reasons other commenters gave for supporting it as their first choice. The reasons of all the commenters who supported it as their first or second choice are summarized below:

1. This approach would encourage good, voluntary practices to help customers on an individual basis (25 commenters—22 originators/servicers, 3 trade associations).

2. No change is needed because the current rule is adequate (four commenters—three originators/servicers, one financial software company).

3. It would not be disruptive (three commenters—two originators/servicers, one trade association).

4. It would allow servicers to exercise good judgment (two trade associations).

5. It would be flexible (two originators/servicers).

6. Providing consumers with a simple disclosure would give consumers information to act in their own best interest (one trade association).

In contrast, 13 commenters—10 originators/servicers, 1 trade association, 1 tax service, and 1 builder—opposed the Make No Change alternative. Each of these commenters stated that they opposed the alternative because it would not address the problem and/or ignored a problem that exists.

Other commenters supported other variations on the Make No Change alternative. Two originators/servicers supported Variation (B). Variation (B) would have required servicers to disclose to borrowers that it is anticipated that they will have a substantial payment increase in the second year, and to inform borrowers of the amount of the expected shortage at the end of the first year and of the opportunity to make additional payments to escrow ahead of schedule to avoid payment shock. On the other hand, seven commenters—five originators/servicers and two financial software companies—opposed Variation (B) for reasons such as the burdens and difficulties associated with trying to estimate the amount of a shortage that is expected to result.

In the proposed rule the Department also solicited comments on the following alternative. For each new account for which it is anticipated that there will be a substantial payment increase in the second year for one or

VOL 63 ISS 13 JA 21 1998 UMI

more escrow items, allow the servicer, with the consent of the borrower, the option of calculating the escrow payments on a 24-month basis. This would allow the servicer to look ahead to the second year and estimate the payment that would be due, thereby mitigating the deficiency or shortage after the first year, leaving a smaller deficiency or shortage after the second year. (Using an escrow account period of more than 1 year has precedent. See the treatment of flood insurance and water purification escrow funds in § 3500.17(c)(9).) Under this option, since the amounts held in escrow would be greater than allowed under section 10 of RESPA, it would be necessary for the Secretary to invoke his exemption authority under section 19(a) of RESPA (12 U.S.C. 2617).

Only eight commenters commented on this particular approach. Five commenters supported it while three opposed it. The Department does not believe it is a superior approach to that adopted in this final rule, as discussed below.

The proposed rule also invited commenters to submit other permissible approaches under RESPA that would better serve the interests of the public and the intent of the statute, inviting commenters to submit specific regulatory language to implement their proposals. Fourteen originators/servicers and two trade associations submitted a variety of additional alternatives, none of which appear to the Department to be a superior approach to that adopted in this final rule, as discussed below.

3. Comments on Mandate First Year Overpayment Alternative

Twenty-seven commenters—21 originators/servicers, 2 trade associations, 2 financial software companies, 1 tax service, and 1 State lending agency—supported the Mandate First Year Overpayment alternative. In addition, Citicorp indicated that the Mandate First Year Overpayment alternative was its second choice to the Make No Change alternative. Bank of America indicated it was its second choice next to an alternative of its own creation, but only for new construction and situations involving special tax discounts (e.g., reduced taxes for seniors, disabled, or veterans). GE Capital indicated it was its second choice to the Make No Change alternative, but should only apply if the increase will be due to taxes being based on the land value only for the first year. If the increase will be due to items paid prior to the first payment date, GE Capital favored a different approach.

The reasons given for supporting the Mandate First Year Overpayment alternative included the following:

1. This approach would avoid payment shock best and would result in the fewest shortages (14 commenters—11 originators/servicers, 2 trade associations, 1 financial software company).

2. It would be better for consumers (12 commenters—9 originators/servicers, 2 financial software companies, 1 State lending agency).

3. It would increase consistency, standardization, and uniformity (seven commenters—three originators/servicers, one trade association, two financial software companies, one State lending agency).

4. It would require only minimal changes (four commenters—two originators/servicers, two financial software companies).

5. It would be the least costly alternative to implement (one originator/servicer, one financial software company).

6. It would be the fairest alternative (one originator/servicer, one tax service).

In contrast, 36 commenters—32 originators/servicers, 3 trade associations, and 1 person of unknown professional interest—opposed the Mandate First Year Overpayment alternative. The reasons given for opposing this alternative included the following:

1. It would not be in the consumer's interest to overpay and then money get back; this would be unfair to the borrower (10 commenters—7 originators/servicers, 2 trade associations, 1 person of unknown professional interest).

2. This alternative would be administratively burdensome or costly (e.g., having to make constant refunds and explanations to consumer) (six commenters—four originators/servicers, two trade associations).

3. It would run contrary to the Secretary's stated objectives (21 originators/servicers).

In the proposed rule, the Department proposed that as a variation on Method C, the cushion could be calculated as one-sixth of the estimated annual disbursements for the first year, instead of 2 months of the escrow payments for the first year. Two originators/servicers and a financial software company indicated that they preferred Method C to the variation. One of these commenters, a bank holding company, indicated that the variation would be more complicated for borrowers and for the industry. No commenter indicated a preference for the variation.

Commenters also suggested several additional variations on the Mandate First Year Overpayment alternative as their preferred approach, such as limiting it only to situations involving new construction (five commenters—four originators/servicers, one trade association) or offering it even when less than a 50 percent increase in disbursements were expected (four commenters—two originators/servicers, one financial software company, one builder).

B. Approach Adopted in Today's Final Rule

Based on the comments received, the Secretary has determined that there would be little value in rulemaking on the payment shock "problem." The comments, in sum, do not indicate that the "problem" is uniformly accepted as such in the industry, there is little support for the Department's prescribing a particular accounting method that will result in overescrowing consumers' money, and there is no agreement on the nature of any form that the Department would prescribe for homebuyers to warn of the possibility of a substantial increase in payments to their accounts.

During the rulemaking, however, the Department identified that individual servicers do provide a written disclosure to borrowers when they anticipate increased payments. The Department favors this approach and believes that such a disclosure should be encouraged as a best practice, without the Department prescribing the particular form.

The Department has decided to adopt, with modifications, the Make No Change alternative. This final rule, therefore, continues the current requirements for escrow analysis, even when the servicer expects that the disbursements from the escrow account will increase substantially after the first year. This alternative will not prevent payment shock in all instances. Under the final rule, however, as in the past, servicers may disclose the problem to borrowers, and borrowers may make voluntary overpayments to escrow accounts. Servicers may also calculate short-year statements. Thus, some methods are available to alleviate the payment shock problem, although they are not required.

This final rule does depart, however, from the Make No Change alternative of the proposed rule in encouraging, on a voluntary basis, the use of a consumer disclosure format concerning payment shock to be given to consumers when the originator or servicer expects that a substantial increase in escrow payments will occur in the second year of the escrow account. The Department has determined not to define a "substantial increase." Instead, this rule leaves this determination to each originator or servicer to apply sound business judgment.

This disclosure format, which is published as an appendix to this final rule, will be available from the Department as a Public Guidance Document at the address indicated in 24 CFR 3500.3. The format is entitled "Consumer Disclosure for Voluntary Escrow Payments" to clarify that when the originator or servicer provides the disclosure, the consumer may choose whether to make higher payments during the first year to reduce or eliminate the monthly payment increase in the second year. The disclosure contains the following information:

> The bills paid out of your escrow account are expected to increase substantially after the first year[.] [because _____]. Under normal escrow practices, your monthly escrow payment in the second year could be much higher than in the first.
>
> You may voluntarily choose to make higher payments during the first year to reduce or eliminate the monthly payment increase in the second year. If you are interested in doing this, contact:
>
> _____
>
> The instructions to the preparer explain that the blank provided is to indicate whom to contact for further information on making voluntary overpayments during the first year, including the mailing address, fax number, e-mail address, and/or telephone number of the contact. The terms "reserve" or "impound" may be substituted for the terms "escrow account" or "escrow" to reflect local usage.

While use of the disclosure is not mandatory, providing the disclosure to consumers is a best practice that the Department encourages originators and servicers to follow. The Department is publishing this format at the end of this rule as an appendix for the convenience of the reader. It will not be codified in the Code of Federal Regulations.

The recommended format published with this final rule, in addition to providing notice that payment shock may occur, also indicates that payment shock can be avoided by making additional payments to the escrow account, and suggests that the consumer ask the appropriate originator or servicer for more information. While simply informing consumers of the potential of payment shock and providing information on how to avoid it may not lead the consumers to take actions to avoid it, the information will benefit some consumers and may lead them to request voluntary borrower and servicer agreements to make additional payments to avoid shortages.

To provide clarity to servicers, this rule adds a new provision (24 CFR 3500.17(f)(2)(iii)) regarding funds deposited as a result of such voluntary borrower and servicer agreements. The provision states that the voluntary agreement is for a 1-escrow-account-year period, although successive agreements are allowed. By receiving higher escrow payments into the account, the ending balance will be greater, thus lowering or eliminating the anticipated shortage at the time of the next analysis. At the time of the next escrow analysis, § 3500.17(f) regarding shortages, surpluses, and deficiencies will continue to apply, and may not be changed by any voluntary agreement.

C. Basis for Approach Adopted

The comments received served to confirm that the Make No Change alternative, with some modifications, is a workable solution to this problem. Based on its review of the comments, the costs and burdens associated with any other approach are simply too great compared to the benefits. There is no strong evidence that additional regulation is needed at this time to address the problem. Existing procedures are adequate to avoid payment shock. This rule encourages originators and servicers to inform consumers of the potential problem and allow them to use existing procedures to avoid the problem if they so desire.

This final rule is similar to Variation (A) of the Make No Change alternative in the proposed rule, which was recommended by several commenters. As recommended by commenters, use of the format is not mandatory, but the recommended format is similar to that which was suggested by several commenters. Heeding the objections of several commenters, the recommended format does not call for an estimate of the amount of a shortage that is expected to result. Several commenters urged that the final rule leave the decision of whether to give borrowers advance notice that a payment increase may occur to the originator/servicer. In response, this final rule leaves this determination to each originator or servicer to apply sound business judgment in deciding whether to provide the disclosure; it does not make the disclosure mandatory or define a "substantial increase."

The Department intends this final rule to encourage more originators and servicers to adopt practices that will ensure that consumers are informed of the payment shock problem and given the opportunity to avoid it. These practices include:

- Notifying borrowers in advance and providing an opportunity to make voluntary payments ahead of schedule to avoid payment shock. The Department encourages servicers to use the recommended format published today to notify borrowers of this potential problem when the originator or servicer, in applying sound business judgment, believes that payment shock is like to occur.
- Offering consumers extended repayment plans, even beyond those required under RESPA, to make up substantial shortages associated with payment shock.

These two practices are examples of the types of best practices that some originators/servicers in the industry are using today, even without a Government requirement. The Department encourages servicers to adopt these practices so that they will become more widespread.

D. Basis for Rejecting Alternative Approaches

1. Rejection of Consumer Choice Alternative

While the Department believes it would have legal authority to impose Consumer Choice, including the prohibition against the servicer changing escrow account methods, as part of the Secretary's rulemaking authority, it has decided not to do so. The types of costs and burdens associated with such an approach are prohibitive at this time.

The Department was also influenced by the obvious lack of consensus among the commenters as to how to work out the technical details associated with the Consumer Choice alternative. The Department asked several specific questions about how to go about implementing such an alternative in the way least disruptive to the industry. The answers reflected the uncertainties and disruptions that would be created by imposing the Consumer Choice alternative, and helped convince the Department that such an approach is not feasible. Since the Department is not adopting the Consumer Choice alternative in this final rule, the responses received to a number of the questions raised in the proposed rule concerning this issue do not merit detailed discussion, but a brief summary of the comments in response to these questions is provided below to give a

VOL 63 ISS 13 JA 21 1998 UMI

sense of the divergent opinions received:

1. The Department asked Question 5, which was designed to elicit views on when the appropriate time would be for the originator or servicer to provide the borrower the disclosure, if the Consumer Choice alternative were to be adopted. The commenters were nearly evenly divided on whether the disclosure should be provided and the selection made before closing but after underwriting or before underwriting. Eight commenters simply indicated sometime before closing, whereas six commenters indicated that it would have to be before underwriting. Two originators/servicers and one tax service indicated that no matter what time was selected, problems would arise. Five commenters specifically indicated that the selection would affect underwriting because it could affect the funds needed to close, whereas one mortgage lending subsidiary of a bank stated emphatically that it "should have absolutely no bearing on the loan underwriting or approval process since the borrower must qualify based on a tax escrow payment calculated on fully assessed value."

2. The Department asked Question 6, which asked whether the Department should prescribe a disclosure format if an approach were adopted in which the borrower's preference for a particular escrow accounting method were controlling. Although there was general agreement that the Department should prescribe the format (15 commenters supporting prescribing it with only 2 opposed), there was disagreement over what the disclosure should say. One commenter supported the disclosure the Department had proposed, agreeing "with the simplicity of the proposed format." Seven commenters, however, said it was confusing and contained too much information, whereas two commenters criticized it for not including enough information.

2. Rejection of Mandate First Year Overpayment Alternative

While the Mandate First Year Overpayment alternative was extolled by some in the industry as the best solution, there was no consensus even within the industry for this approach. Thirty-two originators/servicers and 3 trade associations opposed it, while only 21 originators/servicers, 2 trade associations, 2 financial software companies, 1 tax service, and 1 State lending agency supported it. The Department is persuaded that it is simply not in the consumer's interest to mandate overpayment into escrow accounts, even if consumers ultimately get the money back. Mandating escrowing beyond the limitations of the statute would be unfair to borrowers. Consumers should not be forced to tie up money unnecessarily in their escrow accounts and may prefer to invest the money elsewhere or use it for other more pressing purposes. There is no compelling case for the Department to exercise its exemption authority for this purpose. Nor would such an approach be consistent with the Secretary's stated objectives for escrow accounting.

VII. Single-Item Analysis With Aggregate Adjustment Problem—Comments Received, Approach Adopted in This Final Rule, and Basis

A. Comments Received on Revision Proposed

The Department sought comments from the public on this proposal, as well as other approaches that would be permissible under RESPA and might better serve the interests of the public and the intent of the statute. The Department also invited commenters to submit specific regulatory language to implement their proposals.

A significant number of commenters, including servicers and trade associations, found the proposal to represent a functional or acceptable solution. The MBA, while favoring the proposal, indicated that some of its members were concerned about settlement agent confusion from the change. Those members opposing the change indicated that they make use of the 45-day period within which the initial analysis must be delivered, so they did not share the concern over presenting two different accounting methods. During the Department's development of the proposed rule, Federal Reserve Board staff had indicated that it had no objection to the approach in the proposed rule, inasmuch as the PMI number for APR calculations would otherwise be available.

On the other hand, a number of major lenders and/or servicers opposed the change. For example, Chase Mortgage stated that it was not beneficial for consumers or servicers, since consumers would lose the ease of a single statement from which amounts can be reconciled, and servicers would have no viable audit trail to indicate how the initial deposit was calculated to resolve later differences or discrepancies. Bank of America's comments were similar. A number of other commenters decried a retreat from uniformity (the original premise of the 1994–1995 escrow rules) that allowing options among servicers would produce, and indicated that options affected the ease of servicing transfers. On a tangential point, the American Escrow Association wanted continued clarity that the settlement agent action reflected instructions received, not independent activities of the settlement agent.

B. Approach Adopted in This Final Rule and Basis

The Department carefully reviewed the comments and considered them in view of the mandate issued to the Department and the Federal Reserve Board under legislation enacted September 30, 1996 to re-examine RESPA and TILA disclosure requirements. See sec. 2101 of the Economic Growth and Regulatory Paperwork Reduction Act of 1996 (Title II of the Omnibus Consolidated Appropriations Act, 1997, Pub. L. 104–208; approved September 30, 1996).

It would be inappropriate to undertake a piecemeal and unilateral revision of the HUD–1 and HUD–1A at this time. In addition, the elimination of the aggregate adjustment from the HUD–1 and HUD–1A would harm those who have already developed systems that rely on it for an audit trail. There simply was no consensus for the change. Therefore, this final rule does not contain any revision to the 1000 series disclosures; servicers should continue to follow existing requirements.

On a related matter, this rule adds information to the footnote instructions to Appendix C, in order to reaffirm a previous clarification that instead of using aggregate accounting with no more than a 2-month cushion, the reserves on the Good Faith Estimate may be estimated by using single item accounting with no more than a 1-month cushion (see 61 FR 46518, column 3, September 3, 1996).

VIII. Lead-Based Paint Disclosure Issue—Comments Received, Approach Adopted in This Final Rule, and Basis

A. Comments Received on Revision Proposed

Commenters were almost evenly divided regarding the desirability of adding the lead-based paint disclosures. Nine commenters—four originators/servicers and five trade associations—indicated that they supported or had no objection to the proposal. Most gave no reason. Among those who did, the National Association of Federal Credit Unions indicated that they supported the proposal because it would help educate borrowers of their rights.

In contrast, eight originators/servicers opposed the proposal. One lender indicated that by imposing the burden of disclosure on the lender, the Department would be blurring the responsibility of sellers to give lead-based paint disclosures required by the EPA/HUD rule (implementing section 1018 of the Housing and Community Development Act of 1992). The commenter noted that lenders have never been required to disclose matters of law between sellers and buyers. Six other originators/servicers presented similar or related arguments.

Four originators/servicers indicated that providing a disclosure on the GFE would be duplicative of other lead disclosures; one commented that the HUD booklet "Settlement Costs and You" was a more appropriate forum for this type of disclosure. Two originators/servicers expressed concern that lenders would become involved in lawsuits involving lead-based paint, and that the disclosure could be interpreted as implying a lender duty in some future consumer class action.

B. Approach Adopted in This Final Rule and Basis

Upon careful review of these comments, the Department agrees with the commenters who believe that the lead-based paint disclosure need not specifically be added to the GFE and the HUD–1 and HUD–1A as a separate line at this time. This final rule continues the existing requirement that the lead-based paint inspection fee be included on the HUD–1 or HUD–1A if a lead-based paint inspection is either: (1) required by the lender, whether paid outside of settlement (in which case "P.O.C." should be used) or at settlement; or (2) paid for at settlement. The only change made by this rule is a clarification to the instructions for the HUD–1. The current instructions indicate that Lines 1301 and 1302 of the HUD–1 may be used for "fees for survey, pest inspection, radon inspection, lead-based paint inspection, or other similar inspections." The instructions are being changed to indicate that Lines 1301–1302 or any other available blank line in the 1300 series may be used for these purposes.

In addition, the Department has recently implemented several programs to assist homebuyers in financing the cost of lead-based paint inspections, risk assessments, and repairs. These programs include special requirements for the disclosure of information pertaining to lead-based paint on the HUD–1 and HUD–1A, which were explained in Notice H 96–93 (HUD) issued by the Department's Office of Housing on November 5, 1996.

Most importantly, since the time the September 13, 1996 proposed rule was issued, the Department has replaced its out-of-date settlement costs booklet (see 62 FR 31891, June 11, 1997). This new booklet is also available on the RESPA Website: http://www.hud.gov/fha/res/respa_hm.html. This revised booklet discusses the legal provisions that allow the buyer the option of obtaining a lead-based paint inspection, and gives an earlier and more meaningful description of the lead-based paint inspection process to the consumer. The Department is also currently engaged in a process with the Federal Reserve Board, referred to in Part VII(B) above of this preamble, which involves an overall review of settlement disclosure forms and requirements.

IX. Rule Changes

The changes made in this final rule are summarized below:

1. This rule amends § 3500.17(a) to include a reference to the voluntary disclosure format. This reference clarifies that the Department encourages, but does not require, originators and servicers to provide the format to consumers when they anticipate a substantial increase in disbursements from the escrow account after the first year of the loan.

2. This rule revises the definition of "disbursement date" in § 3500.17(b) to eliminate a redundant sentence that had referred to § 3500.17(k).

3. This rule adds a definition of "penalty" to § 3500.17(b) to clarify that a penalty does not include any additional charge or fee associated with choosing installment payments as opposed to annual payments or for choosing one installment plan over another. As discussed in Part III(C)(1) of this preamble, this new definition is necessary to clarify, in response to comments on the proposed rule, that a service fee levied by the payee on installment payments is not regarded as a penalty.

4. This rule amends § 3500.17 (c)(1) and (c)(2) to eliminate redundant descriptions of the requirements of § 3500.17(k); the requirements of § 3500.17(k) are clarified by revisions to that paragraph. This rule also makes technical amendments to the citation of § 3500.17 (c)(1) and (c)(2).

5. This rule revises § 3500.17(i)(1) to conform the language more closely to the statutory language in section 10(c)(2)(A) of RESPA. While this clarification pertains to escrow accounting, it does not directly relate to the other matters addressed in this final rule. This is a technical clarification, not a departure from prior requirements. As such, the Department restates its position that because an escrow account statement clearly itemizes all amounts paid out of the escrow account during the period as required, the statement does not also have to provide, as an additional element of the statement, a separate sum of all of those amounts.

6. This rule revises § 3500.17 (k)(1) and (k)(2) to eliminate awkward and unnecessary cross-references to the definition of "disbursement date." The revisions to paragraph (k)(1) eliminate language that had indicated that in calculating the disbursement date, servicers were to use a date on or before the earlier of the deadline to take advantage of discounts, if available, or the deadline to avoid a penalty. This language caused much public confusion. Instead, as explained in Part III(C)(1) of this preamble, under this final rule servicers are required to disburse in a timely manner, that is, on or before the deadline to avoid a penalty. For escrow items other than property taxes, the rule leaves it to the servicer to decide whether to disburse on a date early enough to take advantage of discounts, so long as the disbursement basis (annual or installments) and the disbursement date complies with the normal lending practice of the lender and local custom and constitutes prudent lending practice. For property taxes only, this rule contains special requirements in paragraph (k)(3).

7. This rule adds § 3500.17(k)(3) to specify the special additional requirements applicable to property taxes when the taxing jurisdiction offers the servicer a choice of disbursements on an installment or annual basis. Those requirements are explained in Part III(C)(1) of this preamble.

8. This rule adds § 3500.17(k)(4) to specify that a servicer and borrower may mutually agree, on an individual case basis, to a different disbursement basis (installment or annual) or disbursement date for property taxes, so long as their agreement avoids a penalty, complies with the normal lending practice of the lender and local custom, and constitutes prudent lending practice. This provision is discussed in Part III(C)(1) of this preamble.

9. This rule makes one minor clarification to the instructions to the HUD–1 as it relates to disclosure of "lead-based paint inspection" fees.

10. This rule includes as an appendix a voluntary disclosure format that is entitled "Consumer Disclosure for Voluntary Escrow Account Payments." This format is discussed in Part IV(C)(1) of this preamble.

11. This rule adds a footnote instruction to Appendix C to part 3500, the Sample Form of Good Faith

VOL

Estimate, to clarify that single item analysis with a 1-month cushion can be used in developing the estimates for reserves relating to lines 1000–1005 of the Good Faith Estimate.

Findings and Certifications

Paperwork Reduction Act

The information collection requirements in this final rule have been approved by the Office of Management and Budget (OMB) in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520), and assigned OMB control number 2502–0517. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection displays a valid control number.

Environmental Impact

In accordance with 24 CFR 50.19(c)(1) of the Department's regulations, this rule does not direct, provide for assistance or loan and mortgage insurance for, or otherwise govern or regulate property acquisition, disposition, lease, rehabilitation, alteration, demolition, or new construction, or set out or provide for standards for construction or construction materials, manufactured housing, or occupancy. Therefore, this rule is categorically excluded from the requirements of the National Environmental Policy Act (42 U.S.C. 4321).

Executive Order 12866

The Office of Management and Budget (OMB) reviewed this rule under Executive Order 12866, *Regulatory Planning and Review*, issued by the President on September 30, 1993. OMB determined that this rule is a "significant regulatory action," as defined in section 3(f) of the Order (although not economically significant, as provided in section 3(f)(1) of the Order). Any changes made in this rule subsequent to its submission to OMB are identified in the docket file, which is available for public inspection between 7:30 a.m. and 5:30 p.m. in the Office of the Rules Docket Clerk, Office of General Counsel, Room 10276, Department of Housing and Urban Development, 451 Seventh Street, SW, Washington, DC.

Regulatory Flexibility Act

The Secretary, in accordance with the Regulatory Flexibility Act (5 U.S.C. 605(b)), has reviewed this rule before publication and by approving it certifies that this rule would not have a significant economic impact on a substantial number of small entities. This rule will maintain existing requirements, but clarify them. It also recommends voluntary use of certain practices that would benefit consumers, including voluntary use of a model disclosure format.

Executive Order 12612, Federalism

The General Counsel, as the Designated Official under section 6(a) of Executive Order 12612, *Federalism*, has determined that the policies contained in this rule would not have substantial direct effects on States or their political subdivisions, or the relationship between the Federal Government and the States, or on the distribution of power and responsibilities among the various levels of government. As a result, the rule is not subject to review under the Order. The rule is directed toward clarifying existing requirements and encouraging voluntary use of certain practices that the Department believes would be beneficial to consumers.

Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) (Pub. L. 104–4; approved March 22, 1995), establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments, and on the private sector. This rule does not impose any Federal mandates on any State, local, or tribal governments, or on the private sector, within the meaning of the UMRA.

List of Subjects in 24 CFR Part 3500

Consumer protection, Condominiums, Housing, Mortgages, Mortgage servicing, Reporting and recordkeeping requirements.

For the reasons stated in the preamble, part 3500 of title 24 of the Code of Federal Regulations is amended as set forth below.

PART 3500—REAL ESTATE SETTLEMENT PROCEDURES ACT

1. The authority citation is revised to read as follows:

Authority: 12 U.S.C. 2601 *et seq.*; 42 U.S.C. 3535(d).

2. In § 3500.17:

a. Paragraph (a) is amended by adding a sentence at the end;

b. Paragraph (b) is amended by revising the definition of "*Disbursement date*", and by adding a new definition of "*Penalty*" in alphabetical order;

c. Paragraphs (c)(2) and (c)(3) are revised;

d. Paragraph (f) is amended by adding a new paragraph (f)(2)(iii);

e. Paragraph (i) is amended by revising the third sentence of the introductory text of paragraph (i)(1) and by revising paragraph (i)(1)(iv); and

f. Paragraph (k) is revised, to read as follows:

§ 3500.17 Escrow accounts.

(a) * * * A HUD Public Guidance Document entitled "Consumer Disclosure for Voluntary Escrow Account Payments" provides a model disclosure format that originators and servicers are encouraged, but not required, to provide to consumers when the originator or servicer anticipates a substantial increase in disbursements from the escrow account after the first year of the loan. The disclosures in that model format may be combined with or included in the Initial Escrow Account Statement required in § 3500.17(g).

(b) * * *

* * * * *

Disbursement date means the date on which the servicer actually pays an escrow item from the escrow account.

* * * * *

Penalty means a late charge imposed by the payee for paying after the disbursement is due. It does not include any additional charge or fee imposed by the payee associated with choosing installment payments as opposed to annual payments or for choosing one installment plan over another.

* * * * *

(c) * * *

(2) *Escrow analysis at creation of escrow account.* Before establishing an escrow account, the servicer must conduct an escrow account analysis to determine the amount the borrower must deposit into the escrow account (subject to the limitations of paragraph (c)(1)(i) of this section), and the amount of the borrower's periodic payments into the escrow account (subject to the limitations of paragraph (c)(1)(ii) of this section). In conducting the escrow account analysis, the servicer must estimate the disbursement amounts according to paragraph (c)(7) of this section. Pursuant to paragraph (k) of this section, the servicer must use a date on or before the deadline to avoid a penalty as the disbursement date for the escrow item and comply with any other requirements of paragraph (k) of this section. Upon completing the initial escrow account analysis, the servicer must prepare and deliver an initial escrow account statement to the borrower, as set forth in paragraph (g) of this section. The servicer must use the escrow account analysis to determine whether a surplus, shortage, or deficiency exists and must make any adjustments to the account pursuant to paragraph (f) of this section.

(3) *Subsequent escrow account analyses.* For each escrow account, the servicer must conduct an escrow account analysis at the completion of the escrow account computation year to determine the borrower's monthly escrow account payments for the next computation year, subject to the limitations of paragraph (c)(1)(ii) of this section. In conducting the escrow account analysis, the servicer must estimate the disbursement amounts according to paragraph (c)(7) of this section. Pursuant to paragraph (k) of this section, the servicer must use a date on or before the deadline to avoid a penalty as the disbursement date for the escrow item and comply with any other requirements of paragraph (k) of this section. The servicer must use the escrow account analysis to determine whether a surplus, shortage, or deficiency exists, and must make any adjustments to the account pursuant to paragraph (f) of this section. Upon completing an escrow account analysis, the servicer must prepare and submit an annual escrow account statement to the borrower, as set forth in paragraph (i) of this section.

* * * * *

(f) * * *

(2) * * *

(iii) After an initial or annual escrow analysis has been performed, the servicer and the borrower may enter into a voluntary agreement for the forthcoming escrow accounting year for the borrower to deposit funds into the escrow account for that year greater than the limits established under paragraph (c) of this section. Such an agreement shall cover only one escrow accounting year, but a new voluntary agreement may be entered into after the next escrow analysis is performed. The voluntary agreement may not alter how surpluses are to be treated when the next escrow analysis is performed at the end of the escrow accounting year covered by the voluntary agreement.

* * * * *

(i) * * *

(1) * * * The annual escrow account statement must include, at a minimum, the following (the items in paragraphs (i)(1)(i) through (i)(1)(iv) must be clearly itemized):

* * * * *

(iv) The total amount paid out of the escrow account during the same period for taxes, insurance premiums, and other charges (as separately identified);

* * * * *

(k) *Timely payments.* (1) If the terms of any federally related mortgage loan require the borrower to make payments to an escrow account, the servicer must pay the disbursements in a timely manner, that is, on or before the deadline to avoid a penalty, as long as the borrower's payment is not more than 30 days overdue.

(2) The servicer must advance funds to make disbursements in a timely manner as long as the borrower's payment is not more than 30 days overdue. Upon advancing funds to pay a disbursement, the servicer may seek repayment from the borrower for the deficiency pursuant to paragraph (f) of this section.

(3) For the payment of property taxes from the escrow account, if a taxing jurisdiction offers a servicer a choice between annual and installment disbursements, the servicer must also comply with this paragraph (k)(3). If the taxing jurisdiction neither offers a discount for disbursements on a lump sum annual basis nor imposes any additional charge or fee for installment disbursements, the servicer must make disbursements on an installment basis. If, however, the taxing jurisdiction offers a discount for disbursements on a lump sum annual basis or imposes any additional charge or fee for installment disbursements, the servicer may at the servicer's discretion (but is not required by RESPA to), make lump sum annual disbursements in order to take advantage of the discount for the borrower or avoid the additional charge or fee for installments, as long as such method of disbursement complies with paragraphs (k)(1) and (k)(2) of this section. HUD encourages, but does not require, the servicer to follow the preference of the borrower, if such preference is known to the servicer.

(4) Notwithstanding paragraph (k)(3) of this section, a servicer and borrower may mutually agree, on an individual case basis, to a different disbursement basis (installment or annual) or disbursement date for property taxes from that required under paragraph (k)(3) of this section, so long as the agreement meets the requirements of paragraphs (k)(1) and (k)(2) of this section. The borrower must voluntarily agree; neither loan approval nor any term of the loan may be conditioned on the borrower's agreeing to a different disbursement basis or disbursement date.

* * * * *

3. In Appendix A to part 3500, under the text heading "Line Item Instructions", and under the subheading "Section L. Settlement Charges", the paragraph beginning with the phrase "Lines 1301 and 1302" is revised to read as follows:

Appendix A to Part 3500—Instructions for Completing HUD–1 and HUD–1A Settlement Statements; Sample HUD–1 and HUD–1A Statements

* * * * *

Line Item Instructions

* * * * *

Section L. Settlement Charges

* * * * *

Lines 1301 and 1302, or any other available blank line in the 1300 series, are used for fees for survey, pest inspection, radon inspection, lead-based paint inspection, or other similar inspections.

* * * * *

4. Appendix C to part 3500 is amended by adding a new footnote 3 after the word "Reserves" in the first column of the table, and by adding the following text under the heading "FOOTNOTES" at the end after the text of footnote 2, to read as follows:

Appendix C to Part 3500—Sample Form of Good Faith Estimate

* * * * *

Footnotes

[3] As an alternative to using aggregate accounting with no more than a two-month cushion, the estimate may be obtained by using single-item accounting with no more than a one-month cushion.

Dated: January 13, 1998.

Nicolas P. Retsinas,

Assistant Secretary for Housing-Federal Housing Commissioner.

The following Appendix, "Public Guidance Document, Consumer Disclosure for Voluntary Escrow Account Payments", will not be codified in title 24 of the Code of Federal Regulations.

Appendix

Public Guidance Document

Consumer Disclosure for Voluntary Escrow Account Payments

The bills paid out of your escrow account are expected to increase substantially after the first year[.] [because _____ .] Under normal escrow practices, your monthly escrow payment in the second year could be much higher than in the first.

You may voluntarily choose to make higher payments during the first year to reduce or eliminate the monthly payment increase in the second year. If you are interested in doing this, contact:

_____.

[INSTRUCTIONS TO PREPARER: You are encouraged to provide this document to borrowers when you anticipate a substantial increase in bills paid out of the escrow account after the first year of the loan. Explanation of the reason for the increase is

VOL

DEPARTMENT OF EDUCATION

[CFDA No.: 84.133A]

Office of Special Education and Rehabilitative Services; National Institute on Disability and Rehabilitation Research; Notice Inviting Applications for New Traumatic Brain Injury (TBI); Model Systems Projects Under the Disability and Rehabilitation; Research Projects and Centers Program for Fiscal Year 1998

Purpose of Program: Authority for Disability and Rehabilitation Research Projects (DRRPs) is contained in section 202 of the Rehabilitation Act of 1973, as amended (29 U.S.C. 761a). DRRPs carry out one or more of the following types of activities, as specified in 34 CFR 350.13–350.19: research, development, demonstration, training, dissemination, utilization, and technical assistance. Disability and Rehabilitation Research Projects develop methods, procedures, and rehabilitation technology that maximize the full inclusion and integration into society, employment, independent living, family support, and economic and social self-sufficiency of individuals with disabilities, especially individuals with the most severe disabilities.

This notice supports the National Education Goal that calls for all Americans to possess the knowledge and skills necessary to compete in a global economy and exercise the rights and responsibilities of citizenship.

Deadline for Transmittal of Applications: March 23, 1998.

Application Available: January 20, 1998.

Maximum Award Amount per Year: $345,000.

Note: The Secretary will reject without consideration or evaluation any application that proposes a project funding level that exceeds the stated maximum award amount per year (See 34 CFR 75.104(b)).

Estimated Number of Awards: 10.

Note: The estimates of funding level and awards in this notice do not bind the Department of Education to a specific level of funding or number of grants.

Project Period: 48 months.

Eligible Applicants: Parties eligible to apply for grants under this program are States, public or private agencies, including for-profit agencies, public or private organizations, including for-profit organizations, institutions of higher education, and Indian tribes and tribal organizations.

Applicable Regulations: The Education Department General Administrative Regulations (EDGAR), 34 CFR parts 74, 75, 77, 80, 81, 82, 85, 86, and 34 CFR part 350.

Priority: This notice invites applications for TBI Model Systems Projects. On May 9, 1997 a notice of final priority was published in the **Federal Register** establishing the required activities for TBI Model System Projects in fiscal year 1997 and fiscal year 1998.

The conference agreement accompanying NIDRR's FY 1998 appropriation included $5 million to permit NIDRR to establish additional TBI Model System projects and a national data center.

This notice invites applications for additional TBI Model Systems Projects in FY 1998. In addition to establishing the TBI Model Systems Project in FY 1998, NIDRR plans to invite applications for collaborative research involving the TBI Model Systems.

On February 6, 1997 NIDRR published in the **Federal Register** regulations consolidating a number of regulations governing NIDRR's existing programs, including, but not limited to, Parts 350 (General Provisions) and 351 (Research and Demonstration Projects). These new regulations took effect on October 1, 1997 and apply to this competition. The new regulations include a new menu of selection criteria (34 CFR 350.54) for use in evaluating all applications. NIDRR has drawn from this menu of selection criteria to establish the specific selection criteria (contained in the application package) that will be used to evaluate applications for the TBI Model Systems Projects priority referenced in this notice inviting applications. The final priorities established for the TBI Model Systems R&D Projects in FY 1997 will be used for equivalent projects in FY 1998.

For Applications Contact: The Grants and Contracts Service Team (GCST), Department of Education, 600 Independence Avenue S.W., Switzer Building, 3317, Washington, D.C. 20202, or call (202) 205–8207. Individuals who use a telecommunications device for the deaf (TDD) may call the TDD number at (202) 205–9860. The preferred method for requesting information is to FAX your request to (202) 205–8717.

Individuals with disabilities may obtain a copy of the application package in an alternate format by contacting the GCST. However, the Department is not able to reproduce in an alternate format the standard forms included in the application package.

FOR FURTHER INFORMATION CONTACT: Donna Nangle, U.S. Department of Education, 600 Maryland Avenue, S.W., room 3418, Switzer Building, Washington, D.C. 20202–2645. Telephone: (202) 205–5880. Individuals who use a telecommunications device for the deaf (TDD) may call the TDD number at (202) 205–2742. Internet: Donna__Nangle@ed.gov

Individuals with disabilities may obtain this document in an alternate format (e.g., Braille, large print, audiotape, or computer diskette) on request to the contact person listed in the preceding paragraph.

Electronic Access to This Document: Anyone may view this document, as well as all other Department of Education documents published in the **Federal Register**, in text or portable document format (pdf) on the World Wide Web at either of the following sites:

http://ocfo.ed.gov/fedreg.htm
http://www.ed.gov/news.html

To use the pdf you must have the Adobe Acrobat Reader Program with Search, which is available free at either of the preceding sites. If you have questions about using the pdf, call the U.S. Government Printing Office toll free at 1–888–293–6498.

Anyone may also view these documents in text copy only on an electronic bulletin board of the Department. Telephone: (202) 219–1511 or, toll free, 1–800–222–4922. The documents are located under Option G—Files/Announcements, Bulletins and Press Releases.

Note: The official version of this document is the document published in the **Federal Register**.

Program Authority: 29 U.S.C. 760–762.

Dated: January 15, 1998.

Howard R. Moses,

Acting Assistant Secretary for Special Education and Rehabilitative Services.

Title 3—

The President

Proclamation 7063 of January 15, 1998

Religious Freedom Day, 1998

By the President of the United States of America

A Proclamation

The right to worship according to one's own conscience is essential to our dignity as human beings. Whatever our religious beliefs, they represent the essence of our personal values and cannot be dictated to us. Recognizing this truth, our founders made religious liberty the first freedom guaranteed in the Bill of Rights. They wisely understood as well that in protecting the free exercise of religion, we must also prohibit the establishment of religion by the state.

Among the early European settlers who came to our shores were many seeking to escape the religious compulsion and persecution they had endured in the lands of their birth. William Penn, Roger Williams, and many others would strive to make their settlements havens for freedom of conscience, laying the foundation for the great tradition of religious liberty that would ultimately find expression in the First Amendment to the Constitution. Since those early days, our continuing aspiration has been to banish lingering prejudice and increase religious understanding and respect among our people.

Today, millions of people of different faiths call America home. The churches, synagogues, temples, mosques, and other houses of worship they have built have become centers of community life and service and a source of strength for our Nation. As our country becomes increasingly diverse, we must reaffirm our efforts to reach out to one another and to see past our differences to the values we hold in common.

My Administration is striving to enhance this climate of acceptance and respect, bringing people together across lines of faith. Two years ago, with the help of a broad coalition of religious and civic leaders, we created guidelines clarifying the nature of religious expression permitted in our public schools and reaffirming that America's young people do not have to leave their religious beliefs at the schoolhouse door. With the help of that same coalition, I issued additional guidelines last August to reinforce the right of religious expression in the Federal workplace. Building on America's long-standing commitment to freedom and fairness, these guidelines will ensure that Federal employees may engage in personal religious expression to the greatest extent possible, consistent with workplace efficiency and the requirements of law. The guidelines also clarify that Federal employers may not discriminate in employment on the basis of religion and that an agency must reasonably accommodate employees' religious practices.

On Religious Freedom Day this year, as we celebrate and cherish this precious right we enjoy as Americans, we must not forget others who are less fortunate. Throughout the world, in many lands, too many people still suffer and die for their beliefs, and lives, families, and communities are torn apart by old hatreds and prejudices. We must continue to proclaim the fundamental right of all peoples to believe and worship according to their own conscience, to affirm their beliefs openly and freely, and to practice their faith without fear or intimidation. The priceless gift we have inherited from past generations will only grow in value as we share it with others.

NOW, THEREFORE, I, WILLIAM J. CLINTON, President of the United States of America, by virtue of the authority vested in me by the Constitution and laws of the United States, do hereby proclaim January 16, 1998, as Religious Freedom Day. I call upon the people of the United States to observe this day with appropriate ceremonies, activities, and programs, and I urge all Americans to reaffirm their devotion to the fundamental principles of religious freedom and religious tolerance.

IN WITNESS WHEREOF, I have hereunto set my hand this fifteenth day of January, in the year of our Lord nineteen hundred and ninety-eight, and of the Independence of the United States of America the two hundred and twenty-second.

William J. Clinton

Presidential Documents

Proclamation 7064 of January 16, 1998

Martin Luther King, Jr., Federal Holiday, 1998

By the President of the United States of America

A Proclamation

America has been blessed with heroes throughout our history, men and women of vision and courage who have set our feet firmly on the path of freedom and equality. Some became heroes by leading us in times of struggle; some by shaping our values and challenging us to greatness. And a few, like Dr. Martin Luther King, Jr., have done all this and more.

A thoughtful man and one of deep personal faith, his conscience called him into action for the soul of our Nation. He mobilized thousands of other brave and principled Americans—black and white, renowned and unknown—and began a crusade for justice that continues today. In sit-ins, marches, demonstrations, and boycotts, he and many others met violence with nonviolence and ignorance with determination. They awakened the conscience of our Nation and succeeded in winning passage of historic civil rights legislation: the Civil Rights Act of 1964, the Voting Rights Act of 1965, and the Fair Housing Act of 1968. Pouring out his life in service, Dr. King made enormous and lasting contributions to improve the lives of millions of his fellow Americans.

Almost 35 years have passed since Dr. King challenged us from the steps of the Lincoln Memorial to live out the true meaning of our creed—that all men are created equal—and almost 30 years have passed since he was taken from us after an all-too-brief sojourn on this earth. A generation of young Americans has come of age without experiencing firsthand the power of his vision or the eloquence of his voice. Much has changed for the better in that time, but we still have much to do if we are to finish the work of Martin Luther King, Jr.

Following his example of service, we must build communities where everyone shares an equal opportunity for a good education and a good job, where our children can grow up without living in the shadow of guns, gangs, and drugs, and where we reject separation and isolation and instead celebrate together the blessing of our diversity. Last June, I established my initiative, "One America in the 21st Century," to encourage a national dialogue among Americans about race and to spur concerted action that will bring Americans together. We must put aside the bitter refrains of accusation and recrimination and instead discuss and implement new ideas for forging a single Nation in the 21st Century out of our ever-increasing racial and ethnic diversity. By learning to talk to one another, to trust one another, and to work together in hope, we can and will come to the time Dr. King foresaw when "justice rolls down like waters."

NOW, THEREFORE, I, WILLIAM J. CLINTON, President of the United States of America, by virtue of the authority vested in me by the Constitution and laws of the United States, do hereby proclaim Monday, January 19, 1998, as the Martin Luther King, Jr., Federal Holiday. I call upon the people of the United States to observe this occasion with appropriate programs, ceremonies, and activities and to participate in the many community service activities taking place across the country on this day.

LIST OF PUBLIC LAWS

The List of Public Laws for the 105th Congress, First Session, has been completed. It will resume when bills are enacted into Public Law during the second session of the 105th Congress, which convenes on January 27, 1998.

Note: A Cumulative List of Public Laws was published in the **Federal Register** on December 31, 1997.

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service for newly enacted public laws. To subscribe, send E-mail to **LISTPROC@ETC.FED.GOV** with the message:

SUBSCRIBE PUBLAWS-L FIRSTNAME LASTNAME

Note: This service is strictly for E-mail notification of new public laws only. The text of laws is not available through this service. We cannot respond to specific inquiries sent to this address.

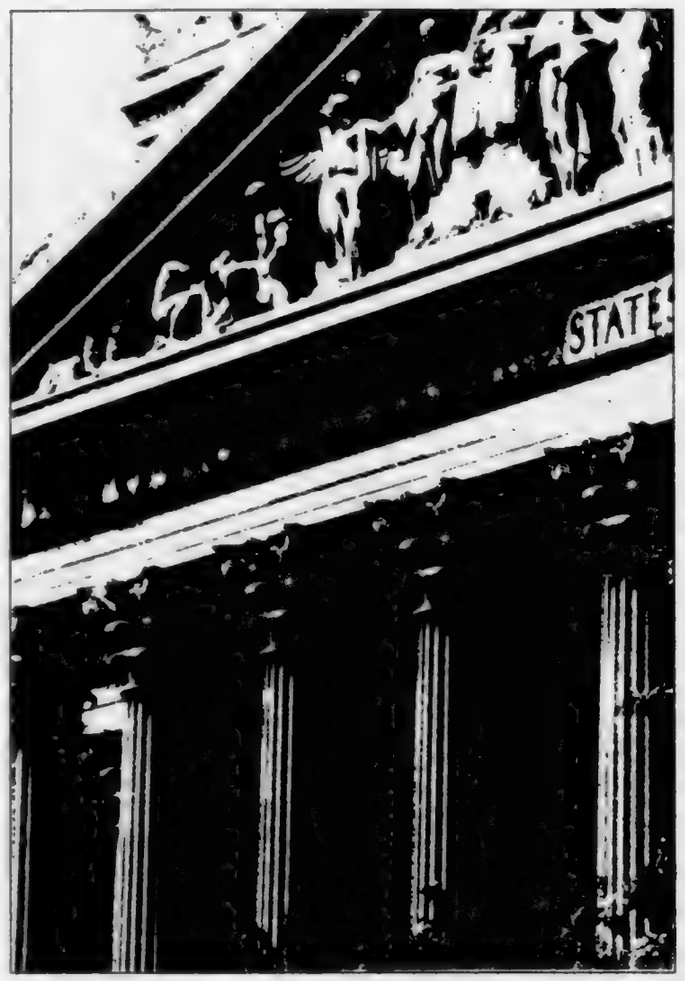
Would you like to know...

if any changes have been made to the Code of Federal Regulations or what documents have been published in the Federal Register without reading the Federal Register every day? If so, you may wish to subscribe to the *LSA (List of CFR Sections Affected)*, the *Federal Register Index*, or both.



LSA • List of CFR Sections Affected

The LSA (List of CFR Sections Affected) is designed to lead users of the Code of Federal Regulations to amendatory actions published in the Federal Register. The LSA is issued monthly in cumulative form. Entries indicate the nature of the changes—such as revised, removed, or corrected.
$27 per year.

Federal Register Index

The index, covering the contents of the daily Federal Register, is issued monthly in cumulative form. Entries are carried primarily under the names of the issuing agencies. Significant subjects are carried as cross-references.
$25 per year.

A finding aid is included in each publication which lists Federal Register page numbers with the date of publication in the Federal Register

INFORMATION ABOUT THE SUPERINTENDENT OF DOCUMENTS' SUBSCRIPTION SERVICE

Know when to expect your renewal notice and keep a good thing coming. To keep our subscription prices down, the Government Printing Office mails each subscriber *only one renewal notice*. You can learn when you will get your renewal notice by checking the number that follows month/year code on the top line of your label *as shown in this example*:

A renewal notice will be sent approximately 90 days **before the shown date.**

```
AFR  SMITH212J                DEC97 R 1
JOHN SMITH
212 MAIN STREET
FORESTVILLE MD 20747
```

A renewal notice will be sent approximately 90 days **before the shown date.**

```
AFRDO  SMITH212J              DEC97 R 1
JOHN SMITH
212 MAIN STREET
FORESTVILLE MD 20747
```

To be sure that your service continues without interruption, please return your renewal notice promptly. If your subscription service is discontinued, simply send your mailing label from any issue to the Superintendent of Documents, Washington, DC 20402–9372 with the proper remittance. Your service will be reinstated.

To change your address: Please SEND YOUR MAILING LABEL, along with your new address to the Superintendent of Documents, Attn: Chief, Mail List Branch, Mail Stop: SSOM, Washington, DC 20402–9373.

To inquire about your subscription service: Please SEND YOUR MAILING LABEL, along with your correspondence, to the Superintendent of Documents, Attn: Chief, Mail List Branch, Mail Stop: SSOM, Washington, DC 20402–9375.

To order a new subscription: Please use the order form provided below.

Public Laws

105th Congress, 2nd Session, 1998

Pamphlet prints of public laws, often referred to as slip laws, are the initial publication of Federal laws upon enactment and are printed as soon as possible after approval by the President. Legislative history references appear on each law. Subscription service includes all public laws, issued irregularly upon enactment, for the 105th Congress, 2nd Session, 1998.

Individual laws also may be purchased from the Superintendent of Documents, U.S. Government Printing Office. Prices vary. See Reader Aids Section of the Federal Register for announcements of newly enacted laws or access the online database at http://www.access.gpo.gov/nara/index.html

The authentic text behind the news . . .

The Weekly Compilation of **Presidential Documents**

This unique service provides up-to-date information on Presidential policies and announcements. It contains the full text of the President's public speeches, statements, messages to Congress, news conferences, and other Presidential materials released by the White House.

The Weekly Compilation carries a Monday dateline and covers materials released during the preceding week. Each issue includes a Table of Contents, lists of acts approved by the President, nominations submitted to the Senate, a checklist of White House press releases, and a digest of other Presidential activities and White House announcements. Indexes are published quarterly.

Published by the Office of the Federal Register, National Archives and Records Administration.

For information on briefings in Washington, DC, see announcement on the inside cover of this issue.

Now Available Online

Code of Federal Regulations

via

GPO Access

(Selected Volumes)

Free, easy, online access to selected *Code of Federal Regulations (CFR)* volumes is now available via *GPO Access*, a service of the United States Government Printing Office (GPO). *CFR* titles will be added to *GPO Access* incrementally throughout calendar years 1996 and 1997 until a complete set is available. GPO is taking steps so that the online and printed versions of the *CFR* will be released concurrently.

The *CFR* and *Federal Register* on *GPO Access*, are the official online editions authorized by the Administrative Committee of the Federal Register.

New titles and/or volumes will be added to this online service as they become available.

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The Federal Register provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The seal of the National Archives and Records Administration authenticates this issue of the Federal Register as the official serial publication established under the Federal Register Act. 44 U.S.C. 1507 provides that the contents of the **Federal Register** shall be judicially noticed.

The Federal Register is published in paper, 24x microfiche and as an online database through *GPO Access*, a service of the U.S. Government Printing Office. The online edition of the **Federal Register** on *GPO Access* is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions. The online database is updated by 6 a.m. each day the **Federal Register** is published. The database includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward. Free public access is available on a Wide Area Information Server (WAIS) through the Internet and via asynchronous dial-in. Internet users can access the database by using the World Wide Web; the Superintendent of Documents home page address is http://www.access.gpo.gov/su_docs/, by using local WAIS client software, or by telnet to swais.access.gpo.gov, then login as guest, (no password required). Dial-in users should use communications software and modem to call (202) 512–1661; type swais, then login as guest (no password required). For general information about *GPO Access*, contact the *GPO Access* User Support Team by sending Internet e-mail to gpoaccess@gpo.gov; by faxing to (202) 512–1262; or by calling toll free 1–888–293–6498 or (202) 512–1530 between 7 a.m. and 5 p.m. Eastern time, Monday–Friday, except for Federal holidays.

The annual subscription price for the **Federal Register** paper edition is $555, or $607 for a combined **Federal Register**, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the Federal Register Index and LSA is $220. Six month subscriptions are available for one-half the annual rate. The charge for individual copies in paper form is $8.00 for each issue, or $8.00 for each group of pages as actually bound; or $1.50 for each issue in microfiche form. All prices include regular domestic postage and handling. International customers please add 25% for foreign handling. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard or Discover. Mail to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250–7954.

There are no restrictions on the republication of material appearing in the **Federal Register**.

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.
WHO: Sponsored by the Office of the Federal Register.
WHAT: Free public briefings (approximately 3 hours) to present:
1. The regulatory process, with a focus on the Federal Register system and the public's role in the development regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.
WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

WASHINGTON, DC
[Two Sessions]
WHEN: January 27, 1998 at 9:00 am, and February 17, 1998 at 9:00 am.
WHERE: Office of the Federal Register Conference Room 800 North Capitol Street NW., Washington, DC (3 blocks north of Union Station Metro)
RESERVATIONS: 202–523–4538

Rules and Regulations

Federal Register
Vol. 63, No. 14
Thursday, January 22, 1998

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Parts 905 and 944

[Docket No. FV98–905–2 IFR]

Oranges, Grapefruit, Tangerines, and Tangelos Grown in Florida and Imported Grapefruit; Relaxation of the Minimum Size Requirement for Red Seedless Grapefruit

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Interim final rule with request for comments.

SUMMARY: This interim final rule makes changes in the regulations under the Florida citrus marketing order and the grapefruit import regulations. This rule relaxes the minimum size requirement for red seedless grapefruit and for red seedless grapefruit imported into the United States from size 48 (3$^{9}/_{16}$ inches diameter) to size 56 (3$^{5}/_{16}$ inches diameter). The Citrus Administrative Committee (Committee), the agency that locally administers the marketing order for oranges, grapefruit, tangerines, and tangelos grown in Florida, unanimously recommended this change. This change allows handlers and importers to ship size 56 red seedless grapefruit through November 8, 1998.

DATES: Effective January 23, 1998, through November 8, 1998; comments received by March 23, 1998 will be considered prior to issuance of a final rule.

ADDRESSES: Interested persons are invited to submit written comments concerning this rule. Comments must be sent in triplicate to the Docket Clerk, Fruit and Vegetable Division, AMS, USDA, Room 2525–S, P.O. Box 96456, Washington, D.C. 20090–6456; Fax: (202) 205–6632. All comments should reference the docket number and the date and page number of this issue of the **Federal Register** and will be available for public inspection in the office of the Docket Clerk during regular business hours.

FOR FURTHER INFORMATION CONTACT: William G. Pimental, Southeast Marketing Field Office, F&V, AMS, USDA, P.O. Box 2276, Winter Haven, Florida 33883; telephone: (941) 299–4770, Fax: (941) 299–5169; or Anne M. Dec, Marketing Order Administration Branch, F&V, AMS, USDA, room 2522–S, P.O. Box 96456, Washington, DC 20090–6456; telephone: (202) 720–2491, Fax: (202) 720–5698. Small businesses may request information on compliance with this regulation by contacting Jay Guerber, Marketing Order Administration Branch, F&V, AMS, USDA, room 2525–S, P.O. Box 96456, Washington, DC 20090–6456; telephone: (202) 720–2491, Fax: (202) 720–5698.

SUPPLEMENTARY INFORMATION: This rule is issued under Marketing Agreement No. 84 and Marketing Order No. 905 (7 CFR Part 905), as amended, regulating the handling of oranges, grapefruit, tangerines, and tangelos grown in Florida, hereinafter referred to as the order. The marketing agreement and order are effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the Act.

This rule is also issued under section 8e of the Act, which provides that whenever specified commodities, including grapefruit, are regulated under a Federal marketing order, imports of these commodities into the United States are prohibited unless they meet the same or comparable grade, size, quality, or maturity requirements as those in effect for the domestically produced commodities.

The Department of Agriculture (Department) is issuing this rule in conformance with Executive Order 12866.

This rule has been reviewed under Executive Order 12988, Civil Justice Reform. This rule is not intended to have retroactive effect. This rule will not preempt any State or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with the Secretary a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and request a modification of the order or to be exempted therefrom. A handler is afforded the opportunity for a hearing on the petition. After the hearing, the Secretary would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review the Secretary's ruling on the petition, provided an action is filed not later than 20 days after the date of the entry of the ruling.

There are no administrative procedures which must be exhausted prior to any judicial challenge to the provisions of import regulations issued under section 8e of the Act.

The order for Florida citrus provides for the establishment of minimum grade and size requirements with the concurrence of the Secretary. The grade and size requirements are designated to provide fresh markets with fruit of acceptable quality and size, thereby maintaining consumer confidence for fresh Florida citrus. This helps create buyer confidence and contributes to stable marketing conditions. This is in the interest of growers, handlers, and consumers, and is designed to increase returns to Florida citrus growers. The current minimum grade standard for red seedless grapefruit is U.S. No. 1. The minimum size requirement for domestic shipments is size 56 (at least 3$^{5}/_{16}$ inches in diameter) through November 8, 1997, and size 48 (3$^{9}/_{16}$ inches in diameter) thereafter. The current minimum size for export shipments is size 56 throughout the year.

This interim final rule invites comments on a change to the order's rules and regulations relaxing the minimum size requirement for domestic shipments of red seedless grapefruit. This action allows for the continued shipment of size 56 grapefruit. This rule relaxes the minimum size from size 48 (3$^{9}/_{16}$ inches diameter) to size 56 (3 $^{5}/_{16}$ inches diameter) through November 8, 1998. Absent this change, the minimum size would be size 48 (3$^{9}/_{16}$ inches diameter). The Committee met on October 14 and December 16, 1997, and unanimously recommended this action.

VOL
63
ISS
14
JA
22
1998
UMI

Section 905.52 of the order, in part, authorizes the Committee to recommend minimum grade and size regulations to the Secretary. Section 905.306 (7 CFR 905.306) specifies minimum grade and size requirements for different varieties of fresh Florida grapefruit. Such requirements for domestic shipments are specified in § 905.306 in Table I of paragraph (a), and for export shipments in Table II of paragraph (b). This rule adjusts Table I to reflect the minimum size of 56 through November 8, 1998. Minimum grade and size requirements for grapefruit imported into the United States are currently in effect under § 944.106 (7 CFR 944.106). Export requirements are not changed by this rule.

The Committee originally met to discuss this issue on October 14, 1997, and recommended releasing size 56 red grapefruit for a limited time period this season. They voted to allow handlers to ship size 56 red seedless grapefruit through January 11, 1998, to give the Committee time to determine the market effect of size 56.

The Committee met again on December 16, 1997, through an emergency telephone meeting. The meeting was called to determine whether the Committee wanted to release size 56 for the remainder of the season. The Committee voted unanimously to extend the release of size 56 through November 8, 1998.

While wanting to give handlers the opportunity to continue to market size 56, the Committee also wanted the opportunity to review the effect of size 56 on the domestic market after the percentage of size rule expired November 30, 1997 (62 FR 58633; October 30, 1997). The percentage of size rule controlled the volume of sizes 48 and 56 that was shipped in a given week, to both domestic and export markets. There is a limited market for small sizes. However, the largest part of this market is to export markets. The Committee is not sure to what extent there is domestic demand for size 56. This minimum size change pertains to the domestic market, and does not change the minimum size for export shipments which will continue at size 56 throughout the season.

To determine if there is a domestic market for size 56, and the effect of its presence on the market, the Committee recommended, on October 14, 1997, allowing shipments of size 56 red seedless grapefruit through January 11, 1998. The Committee agreed to revisit the issue to evaluate the impact of size 56 on the market after the expiration of volume regulation.

The Committee revisited the issue during the meeting December 16, 1997, and determined that size 56 should not be released until November 8, 1998. In making its recommendation, the Committee considered estimated supplies and current shipments. The Committee examined the size distribution information available for the current season. On December 12, 1997, the Florida Agricultural Statistics Service (FASS) reduced the marketable crop estimate for red seedless grapefruit by two million boxes, or approximately seven percent for the 1997–98 season. FASS also reported that red seedless grapefruit size as measured in November, was 30.6 percent size 56 and smaller as compared to 35.5 percent as measured in November last year. This in turn compares to only 16.8 percent measuring size 56 or smaller in November of 1995. So, even though red seedless grapefruit are running larger than last season, there are a fair number of small grapefruit.

The Committee also reviewed shipment data available through November 23 of this season. Thus far, size 56 red seedless grapefruit represents only 3.7 percent of total domestic shipments. Comparatively, through the same time period, 11 percent of all red seedless grapefruit shipments from Florida, domestic and export was size 56. Of the size 56 red seedless grapefruit shipped, 18 percent went to the domestic market, while 82 percent was shipped to the export market.

In its discussion, the Committee recognized that fruit was continuing to size. One member commented that fruit that had measured size 56 in October, had sized up one size. This was helping to match supplies of size 56 with demand. The Committee did have several concerns. One topic that was raised was the currency and economic problems currently facing the Pacific Rim countries. These countries traditionally have been good markets for size 56 grapefruit. The Committee was concerned that current conditions could reduce demand, and alternative outlets would need to be available. The Committee agreed that it would be advantageous to have the ability to ship size 56 red seedless grapefruit to the domestic market should problems materialize in the export market.

One Committee member asked whether Texas was planning to market size 56 grapefruit this season. The Committee was informed that Texas would be selling size 56 for the entire season. The Committee believes that some domestic markets may have been developed for size 56 and that handlers should continue to supply those markets.

Based on the available information, the Committee unanimously recommended that the minimum size for shipping red seedless grapefruit to the domestic market should be size 56 through November 8, 1998.

This rule will have a beneficial impact on producers and handlers since it will permit Florida grapefruit handlers to make available those sizes of fruit needed to meet anticipated market demand for the 1997–98 season. This will provide for the maximization of shipments to fresh market channels during this period. Additionally, importers will be favorably affected by this change since the relaxation of the minimum size regulation will also apply to imported grapefruit.

Section 8e of the Act provides that when certain domestically produced commodities, including grapefruit, are regulated under a Federal marketing order, imports of that commodity must meet the same or comparable grade, size, quality, and maturity requirements. Since this rule relaxes the minimum size requirement under the domestic handling regulations, a corresponding change to the import regulations is necessary.

Minimum grade and size requirements for grapefruit imported into the United States are currently in effect under § 944.106 [7 CFR 944.106]. This rule relaxes the minimum size requirements for imported red seedless grapefruit to 3$^{5}/_{16}$ inches in diameter (size 56) for the remainder of the 1997–1998 season ending on November 8, 1998, to reflect the relaxation being made under the order for grapefruit grown in Florida.

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Agricultural Marketing Service (AMS) has considered the economic impact of this action on small entities. Accordingly, AMS has prepared this initial regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility. Import regulations issued under the Act are based on those established under Federal marketing orders.

There are approximately 80 Florida citrus handlers subject to regulation under the marketing order, about 11,000 Florida citrus producers, and about 25 grapefruit importers. Small agricultural service firms, which include grapefruit handlers and importers, have been defined by the Small Business Administration (13 CFR 121.601) as those whose annual receipts are less than $5,000,000, and small agricultural producers are defined as those whose annual receipts are less than $500,000.

Based on the Florida Agricultural Statistics Service and Committee data for the 1995–96 season, the average annual f.o.b. price for fresh Florida red grapefruit during the 1995–96 season was $5.00 per $^{4}/_{5}$ bushel cartons for all grapefruit shipments, and the total shipments for the 1995–96 season were 23 million cartons of grapefruit. Approximately 20 percent of all handlers handled 60 percent of Florida grapefruit shipments. In addition, many of these handlers ship other citrus fruit and products which are not included in Committee data but would contribute further to handler receipts. Using the average f.o.b. price, about 80 percent of grapefruit handlers could be considered small businesses under the SBA definition and about 20 percent of the handlers could be considered large businesses. The majority of handlers, growers, and importers may be classified as small entities.

Florida shipped approximately 44,224,000 cartons of grapefruit to the fresh market during the 1996–97 season. Of these cartons, about 25,586,000 were exported. In the past three seasons, domestic shipments of Florida grapefruit averaged about 18,798,000 cartons. During the period 1991 through 1996, imports have averaged 734,800 cartons a season. Imports account for less than five percent of domestic shipments.

Section 905.52 of the order, in part, authorizes the Committee to recommend minimum grade and size regulations to the Secretary. Section 905.306 (7 CFR 905.306) specifies minimum grade and size requirements for different varieties of fresh Florida grapefruit. This rule relaxes the minimum size requirement for domestic shipments of red seedless grapefruit from size 48 (3$^{9}/_{16}$ inches diameter) to size 56 (3$^{5}/_{16}$ inches diameter) through November 8, 1998. No change is being made in the minimum size requirement for export shipments of size 56. Absent this rule, the minimum size requirement for domestic shipments would be size 48. The motion to allow shipments of size 56 red seedless grapefruit through November 8, 1998, was passed by the Committee unanimously.

The Committee originally met to discuss this issue on October 14, 1997, and recommended releasing size 56 red grapefruit for a limited time period this season. They voted to allow handlers to ship size 56 red seedless grapefruit through January 11, 1998, to give the Committee time to determine the market effect of size 56.

The Committee met again on December 16, 1997, through an emergency telephone meeting. The meeting was called to determine whether the Committee wanted to release size 56 for the remainder of the season. The Committee voted unanimously to extend the release of size 56 through November 8, 1998.

In its discussion, the Committee recognized that fruit was continuing to size. One member commented that fruit that had measured size 56 in October, had sized up one size. This was helping to match supplies of size 56 with demand. The Committee did have several concerns. One topic that was raised was the currency and economic problems currently facing the Pacific Rim countries. These countries traditionally have been good markets for size 56 grapefruit. The Committee was concerned that current conditions could reduce demand, and alternative outlets would need to be available. The Committee agreed that it would be advantageous to have the ability to ship size 56 red seedless grapefruit to the domestic market should problems materialize in the export market.

One Committee member asked whether Texas was planning to market size 56 grapefruit this season. The Committee was informed that Texas would be selling size 56 for the entire season. The Committee believes that some domestic markets may have been developed for size 56 and that handlers should continue to supply those markets.

During the discussion of this rule, the Committee considered the costs and benefits of this action. Several members stated that with the volume of grapefruit available, the stagnant demand, and concerns regarding the Asian export markets, it was important to take advantage of any market available. There was also discussion that Texas was planning to ship size 56 this season. Some members stated that if they eliminated size 56, they would be losing markets. Members agreed that maximizing fresh shipments helps grower returns. The Committee has released size 56 for the past seven seasons. There should be no production adjustment costs associated with this rule.

This rule is expected to have a positive impact on growers and handlers, as it will permit the shipment of smaller sized red seedless grapefruit to the domestic market, allowing the industry to meet anticipated demand through November 8, 1998. This will provide for the maximization of shipments to fresh market channels during this period.

This regulation lowers the minimum size to size 56. This minimum applies to all handlers of red seedless grapefruit. The costs or benefits of this rule are not expected to be disproportionately more or less for small handlers or growers than for larger entities.

In 1996, imports of grapefruit totaled 15,000 tons (approximately 705,880 cartons). The Bahamas were the principal source, accounting for 95 percent of the total. Remaining imports were supplied by the Dominican Republic and Israel. Imported grapefruit enters the United States from October through May. Imports account for less than five percent of domestic shipments.

Section 8e of the Act provides that when certain domestically produced commodities, including grapefruit, are regulated under a Federal marketing order, imports of that commodity must meet the same or comparable grade, size, quality and maturity requirements. Because this rule changes the minimum size for domestic red seedless grapefruit shipments, this change will also be applicable to imported grapefruit. This rule relaxes the minimum size to size 56. This regulation will benefit importers to the same extent that it benefits Florida grapefruit producers and handlers because it allows shipments of size 56 red seedless grapefruit into U.S. markets through November 8, 1998.

The Committee discussed alternatives to this action. One alternative discussed was the elimination of size 56 grapefruit all together. Several members expressed concern that a viable market has been developed for a portion of the size 56 grapefruit crop. Not allowing handlers to supply this market could result in throwing business and money away. Other members pointed out that it could be detrimental to supply this market for smaller sizes if that market is not profitable and the result is depressed prices for all sizes of grapefruit.

In addition, the Committee recognized that through November, regulation was in place to control the amount of size 56 red seedless grapefruit entering the market. Under the percentage of size rule, the quantity of sizes 48 and/or 56 red seedless grapefruit that may be shipped by a handler during a particular

VOL
63
ISS
14
JA
22
1998
UMI

week is calculated using a recommended percentage. This percentage of size rule was in effect through November 30, 1997. The Committee agreed that, for the remainder of the 1997–1998 season, no further restriction on size 56 was necessary. A motion to eliminate size 56 was rejected.

This rule will not impose any additional reporting or recordkeeping requirements on either small or large red seedless grapefruit handlers or importers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information collection requirements and duplication by industry and public sectors.

In addition, the Department has not identified any relevant Federal rules that duplicate, overlap or conflict with this rule. However, red seedless grapefruit must meet the requirements as specified in the U.S. Standards for Grades of Florida Grapefruit (7 CFR 51.760 through 51.784) issued under the Agricultural Marketing Act of 1946 (7 U.S.C. 1621 through 1627).

Further, the Committee's October meeting was widely publicized throughout the citrus industry and all interested persons were invited to attend the meeting and participate in Committee deliberations. Like all Committee meetings, the October 14, 1997, meeting was a public meeting and all entities, both large and small, were able to express their views on this issue. Finally, interested persons are invited to submit information on the regulatory and informational impacts of this action on small businesses.

In accordance with section 8e of the Act, the United States Trade Representative has concurred with the issuance of this interim final rule.

After consideration of all relevant material presented, including the Committee's recommendation, and other information, it is found that this interim final rule, as hereinafter set forth, will tend to effectuate the declared policy of the Act.

Pursuant to 5 U.S.C. 553, it is also found and determined, upon good cause, that it is impracticable, unnecessary and contrary to the public interest to give preliminary notice prior to putting this rule into effect, and that good cause exists for not postponing the effective date of this action until 30 days after publication in the **Federal Register** because: (1) This rule relaxes the minimum size requirement currently in effect for red seedless grapefruit grown in Florida and red seedless grapefruit imported into the United States; (2) Florida grapefruit handlers are aware of this action which was unanimously recommended by the Committee, and they will need no additional time to comply with the relaxed size requirement; (3) shipments of the 1997–98 season Florida red seedless grapefruit crop are underway; and (4) this rule provides a 60-day comment period, and any comments received will be considered prior to any finalization of this interim final rule.

List of Subjects

7 CFR Part 982

[Docket No. FV98–982–1 IFR]

Hazelnuts Grown in Oregon and Washington; Establishment of Interim and Final Free and Restricted Percentages for the 1997–98 Marketing Year

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Interim final rule with request for comments.

SUMMARY: This interim final rule establishes interim and final free and restricted percentages for domestic inshell hazelnuts for the 1997–98 marketing year under the Federal marketing order for hazelnuts grown in Oregon and Washington. The percentages allocate the quantity of domestically produced hazelnuts which may be marketed in the domestic inshell market. The percentages are intended to stabilize the supply of domestic inshell hazelnuts to meet the limited domestic demand for such hazelnuts and provide reasonable returns to producers. This rule was recommended unanimously by the Hazelnut Marketing Board (Board), which is the agency responsible for local administration of the order.

DATES: Effective January 23, 1998. Comments which are received by March 23, 1998, will be considered prior to issuance of a final rule.

ADDRESSES: Interested persons are invited to submit written comments concerning this rule. Comments must be sent in triplicate to the Docket Clerk, Fruit and Vegetable Programs, AMS, USDA, Room 2525–S, P.O. Box 96456, Washington, DC 20090–6456; Fax: (202) 205–6632. Comments should reference the docket number and the date and page number of this issue of the **Federal Register** and will be available for public inspection in the Office of the Docket Clerk during regular business hours.

FOR FURTHER INFORMATION CONTACT: Teresa L. Hutchinson, Northwest Marketing Field Office, Fruit and Vegetable Programs, Agricultural Marketing Service, USDA, 1220 SW Third Avenue, Room 369, Portland, OR 97204; telephone: (503) 326–2724, Fax: (503) 326–7440 or George J. Kelhart, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, Room 2525–S, P.O. Box 96456, Washington, DC 20090–6456; telephone: (202) 720–2491, Fax: (202) 205–6632. Small businesses may request information on compliance with this regulation by contacting: Jay Guerber, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, P.O. Box 96456, Room 2525–S, Washington, DC 20090–6456; telephone: (202) 720–2491, Fax: (202) 205–6632.

SUPPLEMENTARY INFORMATION: This rule is issued under Marketing Agreement No. 115 and Order No. 982 (7 CFR part 982), both as amended, regulating the handling of hazelnuts grown in Oregon and Washington, hereinafter referred to as the "order." The marketing agreement and order are effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the "Act."

The Department of Agriculture (Department) is issuing this rule in conformance with Executive Order 12866.

This rule has been reviewed under Executive Order 12988, Civil Justice Reform. It is intended that this action apply to all merchantable hazelnuts handled during the 1997–98 marketing year (July 1, 1997, through June 30, 1998). This rule will not preempt any State or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with the Secretary a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and request a modification of the order or to be exempted therefrom. A handler is afforded the opportunity for a hearing on the petition. After the hearing, the Secretary would rule on the petition. The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review the Secretary's ruling on the petition, provided an action is filed not later than 20 days after the date of the entry of the ruling.

This rule establishes marketing percentages which allocate the quantity of inshell hazelnuts that may be marketed in domestic markets. The Board is required to meet prior to September 20 of each marketing year to compute its marketing policy for that year and compute and announce an inshell trade demand if it determines that volume regulations would tend to effectuate the declared policy of the Act. The Board also computes and announces preliminary free and restricted percentages for that year.

The inshell trade demand is the amount of inshell hazelnuts that handlers may ship to the domestic market throughout the marketing season. The order specifies that the inshell trade demand be computed by averaging the preceding three "normal" years' trade acquisitions of inshell hazelnuts, rounded to the nearest whole number. The Board may increase the three-year average by up to 25 percent, if market conditions warrant an increase. The Board's authority to recommend volume regulations and the computations used to determine released percentages are specified in section 982.40 of the order.

The National Agricultural Statistics Service (NASS) estimated hazelnut production at 40,000 tons for the Oregon and Washington area.

The majority of domestic inshell hazelnuts are marketed in October, November, and December. By November, the marketing season is well under way.

The quantity marketed is broken down into free and restricted percentages to make available hazelnuts which may be marketed in domestic inshell markets (free) and hazelnuts which must be exported, shelled or

VOL
63
ISS
14
JA
22
1998
UMI

otherwise disposed of (restricted). The preliminary free percentage releases 80 percent of the adjusted inshell trade demand. The preliminary free percentage is expressed as a percentage of the total supply subject to regulation (supply) and is based on the preliminary crop estimate.

At its August 28, 1997, meeting, the Board computed and announced preliminary free and restricted percentages of 8 percent and 92 percent, respectively. The Board used the NASS crop estimate of 40,000 tons. The purpose of releasing only 80 percent of the inshell trade demand under the preliminary percentage was to guard against an underestimate of crop size. The preliminary free percentage released 3,003 tons of hazelnuts from the 1997 supply for domestic inshell use. The preliminary restricted percentage of the 1997 supply for export and kernel markets totaled 34,296 tons.

Under the order, the Board must meet a second time, on or before November 15, to recommend interim final and final percentages. The Board uses current crop estimates to calculate the interim final and final percentages. The interim final percentages are calculated in the same way as the preliminary percentages and release the remaining 20 percent (to total 100 percent of the inshell trade demand) previously computed by the Board. Final free and restricted percentages may release up to an additional 15 percent of the average of the preceding three years' trade acquisitions to provide an adequate carryover into the following season. The final free and restricted percentages must be effective by June 1, at least 30 days prior to the end of the marketing year, June 30. The final free and restricted percentages can be made effective earlier, if recommended by the Board and approved by the Secretary. Revisions in the marketing policy can be made until February 15 of each marketing year, but the inshell trade demand can only be revised upward, consistent with section 982.40(e).

The Board met on November 13, 1997, and reviewed and approved an amended marketing policy. The Board recommended that the three-year average trade acquisition figure of 4,279 tons be increased by 214 tons for market expansion. The Board also recommended the establishment of interim final and final free and restricted percentages. Interim final percentages were recommended at 10 percent free and 90 percent restricted. The interim final percentage makes an additional 965 tons of inshell hazelnuts available for the domestic inshell market, including product for market expansion. The interim final marketing percentages are based on the Board's final production estimate (42,000 tons) and release 3,968 tons to the domestic inshell market from the 1997 supply subject to regulation. The interim final restricted percentage resulted in a restricted obligation of 35,173 tons.

The final free and restricted percentages were recommended at 12 percent and 88 percent, respectively. The Board also recommended that the final percentages be effective on April 30, 1997. The established final marketing percentages release for domestic inshell use an additional 642 tons from the supply subject to regulation. Thus, a total of 4,610 tons of inshell hazelnuts will be released from the 1997 supply for domestic inshell use.

The marketing percentages are based on the Board's production estimates and the following supply and demand information for the 1997–98 marketing year:

	Tons
Inshell Supply	
(1) Total production (Board's estimate)	42,000
(2) Less substandard, farm use (disappearance)	2,860
(3) Merchantable production (Board's adjusted crop estimate)	39,140
(4) Plus undeclared carryin as of July 1, 1997, subject to regulation	1
(5) Supply subject to regulation (Item 3 plus Item 4)	39,141
Inshell Trade Demand	
(6) Average trade acquisitions of inshell hazelnuts for three prior years	4,279
(7) Increase to encourage increased sales (5 percent of Item 6)	214
(8) Less declared carryin as of July 1, 1996, not subject to regulation	525
(9) Adjusted Inshell Trade Demand	3,968
(10) 15 percent of the average trade acquisitions of inshell hazelnuts for three prior years (Item 6)	642
(11) Adjusted Inshell Trade Demand plus 15 percent for carryout (Item 9 plus Item 10)	4,610

Percentages	Free	Restricted
(12) Interim final percentages (Item 9 divided by Item 5) × 100	10	90
(13) Final percentages (Item 11 divided by Item 5) × 100	12	88

In addition to complying with the provisions of the order, the Board also considered the Department's 1982 "Guidelines for Fruit, Vegetable, and Specialty Crop Marketing Orders" (Guidelines) when making its computations in the marketing policy. This volume control regulation provides a method to collectively limit the supply of inshell hazelnuts available for sale in domestic markets. The Guidelines provide that the domestic inshell market has available a quantity equal to 110 percent of prior years' shipments before secondary market allocations are approved. This provides for plentiful supplies for consumers and for market expansion, while retaining the mechanism for dealing with oversupply situations. At its November 13, 1997, meeting, the Board recommended that an increase of 5 percent (214 tons) for market expansion be included in the inshell trade demand which was used to compute the interim percentages. The established final percentages are based on the final inshell trade demand, and will make available an additional 642 tons for desirable carryout. The total free supply for the 1997–98 marketing year is 5,135 tons of hazelnuts, which is the final trade demand of 4,610 tons plus the declared carryin of 525 tons. This amount is 120 percent of prior years' sales and exceeds the goal of the Guidelines.

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Agricultural Marketing Service (AMS) has considered the economic impact of this rule on small entities. Accordingly, AMS has prepared this initial regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

There are approximately 1,000 producers of hazelnuts in the production area and approximately 23 handlers subject to regulation under the marketing order. Small agricultural producers have been defined by the Small Business Administration (13 CFR 121.601) as those having annual receipts of less than $500,000, and small agricultural service firms are defined as those whose annual receipts are less than $5,000,000. Using these criteria, virtually all of the producers are small agricultural producers and an estimated 20 of the 23 handlers are small agricultural service firms. Thus, the great majority of hazelnut producers and handlers may be classified as small entities.

Board meetings are widely publicized in advance of the meetings and are held in a location central to the production area. The meetings are open to all industry members and other interested persons who are encouraged to participate in the deliberations and voice their opinions on topics under discussion. Thus, Board recommendations can be considered to represent the interests of small business entities in the industry.

Many years of marketing experience led to the development of the current volume control procedures. These procedures have helped the industry solve its marketing problems by keeping inshell supplies in balance with domestic needs. The current volume control procedures fully supply the domestic inshell market, provide for market expansion, and help prevent oversupplies in that market.

Inshell hazelnuts sold to the domestic market provide higher returns to the industry than are obtained from shelling. The inshell market is inelastic and is characterized as having limited demand and being prone to oversupply.

Industry statistics show that total hazelnut production has varied widely over the last 10 years, from a low of 13,000 tons in 1989 to a high of 41,000 tons in 1993. Average production has been around 24,000 tons. While crop size has fluctuated, the volume regulations contribute toward orderly marketing and market stability, and help moderate the variation in returns for all growers and handlers, both large and small. For instance, production in the shortest crop year (1989) was 53 percent of the 10-year average (1987–1996). Production in the biggest crop year (1996) was 170 percent of the 10-year average. The percentage releases provide all handlers with the opportunity to benefit from the most profitable domestic inshell market. That market is available to all handlers, regardless of handler size.

NASS statistics show that the grower price per pound has increased steadily over the last 4 years, from $.28 in 1992 to $.43 in 1996.

The Board discussed the only alternative to this rule which was not to regulate. Without any regulations in effect, the Board believes that the industry would oversupply the inshell domestic market. With the 1997 hazelnut crop the largest in history, the release of 42,000 tons on the domestic inshell market would cause grower returns to decrease drastically, and completely disrupt the market.

While the level of benefits of this rulemaking are difficult to quantify, the stabilizing effects of the volume regulations impact both small and large handlers positively by helping them maintain and expand markets even though hazelnut supplies fluctuate widely from season to season.

Hazelnuts produced under the order comprise virtually all of the hazelnuts produced in the U.S. This production represents, on average, approximately 3 percent of total U.S. tree nut production and approximately 3 percent of the world's hazelnut production.

This volume control regulation provides a method for the U.S. hazelnut industry to limit the supply of domestic inshell hazelnuts available for sale in the U.S. Section 982.40 of the order establishes a procedure and computations for the Board to follow in recommending to the Secretary release of preliminary, interim final, and final quantities of hazelnuts to be released to the free and restricted markets each marketing year. The program results in plentiful supplies for consumers and for market expansion while retaining the mechanism for dealing with oversupply situations.

Currently, U.S. hazelnut production can be successfully allocated between the inshell domestic and secondary markets. One of the best secondary markets for hazelnuts is the export market. Inshell hazelnuts produced under the marketing order compete well in export markets because of quality. Europe, and Germany in particular, is historically the primary world market for U.S. produced inshell hazelnuts, although China was the largest importer in 1996–97. A third market is for shelled hazelnuts sold domestically. Domestically produced kernels generally command a higher price in the domestic market than imported kernels. The industry is continuing its efforts to develop and expand secondary markets, especially the domestic kernel market. Small business entities, both producers and handlers, benefit from the expansion efforts resulting from this program.

There are some reporting, recordkeeping and other compliance requirements under the order. The reporting and recordkeeping burdens have been accepted by the handlers as necessary for compliance purposes and for developing statistical data for maintenance of the program. The forms require information which is readily available from handler records and which can be provided without data processing equipment or trained statistical staff. As with other marketing order programs, reports and forms are periodically studied to reduce or eliminate duplicate information collection burdens by industry and public sector agencies. This interim final rule does not change those requirements.

The Department has not identified any relevant Federal rules that duplicate, overlap or conflict with this regulation.

Written comments as to the effect of this action on small business entities timely received, will be considered before finalization of this rule.

After consideration of all relevant material presented, including the Board's recommendation and other information, it is found that this interim final rule, as hereinafter set forth, will tend to effectuate the declared policy of the Act.

Pursuant to 5 U.S.C. 553, it is also found and determined, upon good cause, that it is impracticable, unnecessary, and contrary to the public interest to give preliminary notice prior to putting this rule into effect, and that good cause exists for not postponing the effective date of this action until 30 days after publication in the **Federal Register** because: (1) The 1997–98 marketing year began July 1, 1997, and the percentages established herein apply to all merchantable hazelnuts handled from the beginning of the crop year; (2) handlers are aware of this rule, which was recommended at an open Board meeting, and need no additional time to comply with this rule; and (3) interested persons are provided a 60-day comment period in which to respond. All comments timely received will be considered prior to finalization of this action.

List of Subjects in 7 CFR Part 982

Filberts, Hazelnuts, Marketing agreements, Nuts, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, 7 CFR part 982 is amended as follows:

PART 982—HAZELNUTS GROWN IN OREGON AND WASHINGTON

1. The authority citation for 7 CFR Part 982 continues to read as follows:

Authority: 7 U.S.C. 601–674.

2. Section 982.245 is added to read as follows:

Note: This section will not appear in the annual Code of Federal Regulations.

VOL 63 ISS 14 JA 22 1998 UMI

§ 982.245 Free and restricted percentages—1997–98 marketing year.

(a) The interim final free and restricted percentages for merchantable hazelnuts for the 1997–98 marketing year shall be 10 and 90 percent, respectively.

(b) On April 30, 1998, the final free and restricted percentages for merchantable hazelnuts for the 1997–98 marketing year shall be 12 and 88 percent, respectively.

Dated: January 15, 1998.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Parts 997 and 998

[Docket No. FV97–998–3 FIR]

Domestically Produced Peanuts Handled by Persons Not Subject to Peanut Marketing Agreement No. 146; Marketing Agreement No. 146 Regulating the Quality of Domestically Produced Peanuts

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: The Department of Agriculture (Department) is adopting as a final rule, without change, an interim final rule which decreased the assessment rate for the Peanut Administrative Committee (Committee) under Marketing Agreement No. 146 (agreement) for the 1997–98 and subsequent crop years. Authorization to assess peanut handlers who have signed the agreement enables the Committee to incur expenses that are reasonable and necessary to administer the program. The Department is also required to impose an administrative assessment on farmers' stock peanuts received or acquired by handlers who are not signatory (non-signatory handlers) to the agreement. Therefore, the assessment rate established under the agreement also must be applied to all non-signatory handlers. The 1997–98 crop year began July 1 and ends June 30. The assessment rate will remain in effect indefinitely unless modified, suspended, or terminated.

EFFECTIVE DATE: February 23, 1998.

FOR FURTHER INFORMATION CONTACT: Tammie Bryant or Jim Wendland, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, P.O. Box 96456, room 2525–S, Washington, DC 20090–6456, telephone (202) 720–2491, FAX (202) 205–6632. Small businesses may request information on compliance with this regulation by contacting: Jay Guerber, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, P.O. Box 96456, room 2525–S, Washington, DC 20090–6456, telephone (202) 720–2491, FAX (202) 205–6632.

SUPPLEMENTARY INFORMATION: This rule is issued pursuant to the requirements of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereafter referred to as the "Act"; and under Marketing Agreement No. 146 (7 CFR part 998) regulating the quality of domestically produced peanuts.

The Department is issuing this rule in conformance with Executive Order 12866.

This rule has been reviewed under Executive Order 12988, Civil Justice Reform. Farmers' stock peanuts received or acquired by non-signatory handlers and farmers' stock peanuts received or acquired by handlers signatory to the agreement, other than from those described in §§ 998.31(c) and (d), are subject to assessments. It is intended that the assessment rates issued herein will be applicable to all assessable peanuts beginning July 1, 1997, and continuing until amended, suspended, or terminated. This rule will not preempt any State or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule. There are no administrative procedures which must be exhausted prior to any judicial challenge to the provisions of this rule.

This rule adopts as a final rule, without change, the provisions of an interim final rule, which decreased the assessment rate established for the Committee for the 1997–98 and subsequent fiscal years from $0.70 to $0.35 per ton.

The agreement provides authority for the Committee, with the approval of the Department, to formulate an annual budget of expenses and collect assessments from handlers to administer the program. Funds to administer the agreement program are derived from signatory handler assessments. The members of the Committee are handlers and producers of peanuts. They are familiar with the Committee's needs and with the costs of goods and services in their local areas and, thus, are in a position to formulate an appropriate budget and assessment rate. The assessment rate is formulated and discussed in public meetings. Thus, all directly affected persons have an opportunity to participate and provide input. The handlers of peanuts who are directly affected have signed the marketing agreement authorizing the expenses that may be incurred and the imposition of assessments.

For the 1997–98 and subsequent crop years, the Committee recommended and the Department approved, an assessment rate that would continue in effect from crop year to crop year indefinitely unless modified, suspended, or terminated by the Secretary, upon recommendation and information submitted by the Committee or other information available to the Secretary.

The Committee met on April 30, 1997, and unanimously recommended 1997–98 administrative expenditures of $525,000 and an administrative assessment rate of $0.35 per net ton of assessable farmers' stock peanuts received or acquired by handlers. The Committee also voted not to recommend an assessment rate for indemnification for handler losses due to aflatoxin contamination. Adequate funds are included in the Committee's indemnification reserve for such expenses during the 1997–98 crop year. In comparison, last year's budgeted administrative expenditures were $1,025,500. Major expenditures recommended by the Committee for the 1997–98 crop year compared with those budgeted for 1996–97 (in parentheses) include: $55,000 for executive salaries ($112,450), $50,000 for clerical salaries ($131,500), $125,000 for field representatives (3 compliance officers rather than 7 fieldmen) salaries ($296,700), $18,000 for payroll taxes ($42,000), $65,000 for employee benefits ($148,000), $40,000 for Committee members travel ($40,000), $5,000 for staff travel ($5,000), $60,000 for field representatives travel ($110,000), $9,800 for insurance and bonds ($9,800), $19,000 for office rent and parking ($46,200), $10,000 for office supplies and stationery ($14,000), $10,400 for postage and mailing ($13,200), $11,000 for telephone and telegraph ($15,000), $6,000 for repairs and maintenance agreements ($6,000), $10,400 for the audit fee ($10,400), and $15,800 for the contingency reserve ($10,250).

The assessment rate recommended by the Committee was derived by dividing anticipated expenses by expected receipts and acquisitions of farmers' stock peanuts. Farmers' stock peanuts received or acquired by handlers signatory to the agreement, other than from those described in § 998.31(c) and (d), are subject to the assessments. Farmers stock peanuts received or acquired by non-signatory handlers by law are subject to the same assessment rate. Assessments are due on the 15th of the month following the month in which the farmers' stock peanuts are received or acquired. Receipts for the year under the agreement are estimated at 1,500,000 tons, which should provide $525,000 in assessment income. Approximately 95 percent of the domestically produced peanut crop is marketed by handlers who are signatory to the agreement. The remaining 5 percent of the U.S. peanut crop is marketed by non-signer handlers.

The Act provides for mandatory assessment of farmers' stock peanuts acquired by non-signatory peanut handlers. Section 608b of the Act specifies that: (1) Any assessment (except indemnification assessments) imposed under the agreement on signatory handlers shall also apply to non-signatory handlers, and (2) such assessment shall be paid to the Secretary.

The assessment rates established in this rule will continue in effect indefinitely unless modified, suspended, or terminated by the Secretary upon recommendation and information submitted by the Committee or other available information.

Although these assessment rates are effective for an indefinite period, the Committee will continue to meet prior to or during each crop year to recommend a budget of expenses and consider recommendations for modification of the assessment rate. The dates and times of Committee meetings are available from the Committee or the Department. Committee meetings are open to the public and interested persons may express their views at these meetings. The Department will evaluate Committee recommendations and other available information to determine whether modification of the assessment rate is needed. Further rulemaking will be undertaken as necessary. The Committee's 1997–98 budget was reviewed and approved by the Department on September 17, 1997, and those for subsequent crop years will be reviewed and, as appropriate, approved by the Department.

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Agricultural Marketing Service (AMS) has considered the economic impact of this rule on small entities. Accordingly, AMS has prepared this final regulatory flexibility analysis.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. There are approximately 80 peanut handlers who are subject to regulation under the agreement or the non-signer program and approximately 25,000 peanut producers in the 16-State production area. Small agricultural service firms, which include handlers, have been defined by the Small Business Administration (13 CFR 121.601) as those having annual receipts of less than $5,000,000, and small agricultural producers are defined as those whose annual receipts are less than $500,000. Approximately 25 percent of the signatory handlers, virtually all of the non-signer handlers, and most of the producers may be classified as small entities.

This rule continues in effect the assessment rate established for the Committee and collected from handlers for the 1997–98 and subsequent crop years of $0.35 per net ton. The assessment rate is $0.35 less than the rate previously in effect.

The Committee discussed alternatives to this rule, including alternative expenditure levels. The Committee also discussed the alternative of not decreasing the assessment rate. However, it decided against this course of action. The peanut industry has been in a state of economic decline since 1991, with the Committee attempting to cut costs wherever possible. The Committee's budget for 1997–98 is $525,000; this is $500,500 less than the amount budgeted for 1996–97. Based on an estimated 1,500,000 net tons of assessable peanuts, income derived from handler assessments during 1997–98 will be adequate to cover budgeted expenses.

This rule continues in effect the assessment obligation imposed on handlers. While this action will impose some costs on handlers, the costs are minimal and in the form of uniform assessments on all handlers. Some of the costs may be passed on to producers. However, these costs will be offset by the benefits derived from the operation of the agreement. This administrative assessment is required to also be applied uniformly to all non-signatory handlers and should be of benefit to all. In addition, the Committee's meeting was widely publicized throughout the peanut industry and all interested persons were invited to attend the meeting and participate in Committee deliberations on all issues. Like all Committee meetings, the April 30, 1997, meeting was a public meeting and all entities, both large and small, were able to express views on this issue.

This action will not impose any additional reporting or recordkeeping requirements on either small or large peanut handlers. As with all Federal marketing agreement and order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies.

The Department has not identified any relevant Federal rules that duplicate, overlap, or conflict with this rule.

An interim final rule concerning this action was published in the **Federal Register** on September 17, 1997 (62 FR 48749). A copy of the interim final rule was also made available on the Internet by the Office of the Federal Register. The comment period ended October 17, 1997, and no comments were received.

After consideration of all relevant matter presented, including the information and recommendation submitted by the Committee and other available information, it is hereby found that this rule, as hereinafter set forth, will tend to effectuate the declared policy of the Act.

List of Subjects

7 CFR Part 997

Food grades and standards, Peanuts, Reporting and recordkeeping requirements.

7 CFR Part 998

7 CFR Part 2003

Functional Organization of the Rural Development Mission Area; Correction

AGENCIES: Rural Housing Service; Rural Business-Cooperative Service; Rural Utilities Service; Farm Service Agency; USDA.

ACTION: Final rule; correcting amendments.

SUMMARY: This document contains corrections to the final regulations which were published Wednesday, December 24, 1997 (62 FR 67258–65). The regulations provided the function statements for organizational units within the Rural Development mission area, the Rural Housing Service, Rural Business-Cooperative Service, and the Rural Utilities Service.

EFFECTIVE DATE: January 22, 1998.

FOR FURTHER INFORMATION CONTACT: Timothy J. Ryan, Assistant Administrator for Human Resources, Rural Development, STOP 0730, 1400 Independence Avenue, SW., Washington, D.C. 20250–0730; Telephone: (202) 690–9860.

SUPPLEMENTARY INFORMATION:

Background

The final regulations that are the subject of these corrections amend the issuing agencies regulations to reflect the reorganization of the Department of Agriculture. The Department of Agriculture Reorganization Act of 1994 (Pub. L. 103–354)(1994 Act), enacted on October 13, 1994, abolished the Farmers Home Administration (FmHA). The Office of the Assistant Administrator, Farm Loan Programs, and all of its subordinate organizational units have been transferred to the Farm Service Agency (FSA). The remainder of the FmHA organizational units have been transferred in accordance with the 1994 Act to one of the following newly created agencies which make up the Rural Development mission area (Rural Development): the Rural Housing Service, the Rural Business-Cooperative Service, and the Rural Utilities Service. The Rural Utilities Service also includes the organizational units of the former Rural Electrification Administration. The rule only covers the Rural Development agencies.

Need for Correction

As published, the final regulations contain errors which may cause inconvenience and confusion for the public.

List of Subjects in 7 CFR Part 2003

Organizations and functions (government agencies).

PART 2003—ORGANIZATION

Accordingly, 7 CFR part 2003 is corrected by making the following correcting amendments:

1. The authority citation for Part 2003 continues to read as follows:

Authority: 5 U.S.C. 301, 7 U.S.C. 901 *et seq.*, 7 U.S.C. 1989, 7 U.S.C. 6941 *et seq.*, 42 U.S.C. 1480 *et seq.*

§ 2003.10 [Corrected]

2. In the table in § 2003.10(c) the location for the USDA Rural Development State Office in Texas is revised to read "Temple, TX".

3. In the table in § 2003.10(c) after the entry for Texas, an additional State entry is added to read "Utah", and an additional location entry is added to read "Salt Lake City, UT".

Dated: January 14, 1998.

Jill Long Thompson,

Under Secretary, Rural Development.

RIN 1545–AV46

Obligations of States and Political Subdivisions

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Final and temporary regulations.

SUMMARY: This document contains final and temporary regulations that provide guidance to state and local governments that issue bonds for output facilities. This document also contains temporary regulations that provide guidance to certain nongovernmental persons that are engaged in the local furnishing of electric energy or gas using facilities financed with state or local government bonds. These temporary regulations reflect changes made by the Tax Reform Act of 1986 and the Small Business Job Protection Act of 1996. The temporary regulations will affect State and local government issuers of obligations and nongovernmental persons engaged in the local furnishing of electric energy or gas after the effective date of these regulations.

The text of these temporary regulations also serves as the text of the proposed regulations set forth in the notice of proposed rulemaking on this subject in the Proposed Rules section of this issue of the **Federal Register**.

DATES: These regulations are effective January 22, 1998.

For dates of applicability, see §§ 1.141–15T, 1.142(f)(4)–1T(g), and 1.150–5T(b) of these regulations.

FOR FURTHER INFORMATION CONTACT: Concerning the regulations, Allan Seller (202) 622–3980 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

This document amends the Income Tax Regulations (26 CFR part 1) under section 141 by providing special rules for state and local bonds issued for output facilities. This document also amends the Income Tax Regulations under section 142(f)(4) by providing rules for nongovernmental persons engaged in local furnishing of electric energy or gas using facilities financed with state or local bonds to make the election provided in that section. Proposed regulations §§ 1.141–7 and 1.141–8, published on December 30, 1994, (59 FR 67658) addressed the application of the private activity bond tests under section 141(b)(2) to output contracts for output facilities and the application of the $15 million limit under section 141(b)(4) to output facility financings. These sections (the 1994 proposed output regulations) are withdrawn. Public comments submitted on the 1994 proposed output regulations, however, have been taken into account in formulating these temporary regulations.

Explanation of Provisions

A. Section 1.141–7T Special Rules for Output Facilities

1. Basis for Special Rules for Output Facilities

The 1994 proposed output regulations contain special rules for applying the private business tests to output contracts. Among the reasons for special rules for output facilities are that governmentally-owned utilities are often under an open-ended obligation to assure service to their customers and that general public customers are ordinarily required to make continuing payments for service. Output facilities also require special rules because the economic benefit provided by these facilities is usually the use of fungible property, such as electric power or water. The temporary regulations continue the approach of the proposed regulations, but contain a number of new provisions, consistent with the general principles of the existing regulations under § 1.103–7(b)(5), that take into account changes in the electric industry.

2. The Benefits and Burdens Standard

The 1994 proposed output regulations provide that a contract to sell output of a financed facility to a nongovernmental person may cause the private business tests of section 141(b) to be met if it has the effect of transferring to that nongovernmental person the benefits of owning the facility and the burdens of paying debt service on the facility. The temporary regulations adopt this standard, but clarify its application.

For purposes of the standard, the temporary regulations generally provide that use of output on a basis different from the general public has the effect of transferring the benefits of ownership. Similarly, contracts that provide a substantial certainty that payments for output will be made under the terms of the contract, other than on a short-term basis, have the effect of transferring the burden of paying debt service on a facility. The standard does not require that the burdens of ownership for general tax purposes be transferred to a nongovernmental person.

3. Requirements Contracts

The 1994 proposed output regulations provide that take or pay contracts, take contracts, and certain requirements contracts meet the benefits and burdens standard. Many commentators, noting that § 1.103–7(b)(5) does not expressly refer to requirements contracts, suggested that requirements contracts should never meet the benefits and burdens standard.

The temporary regulations narrow the rule for requirements contracts, by providing that a requirements contract meets the benefits and burdens test only to the extent that the issuer reasonably expects that it is substantially certain that payments for output will be made under the contract. Such a requirements contract is in substance equivalent to a take contract. A retail requirements contract generally does not meet this standard, unless the contract requires substantial termination payments or contains other terms that establish substantial certainty of payment. Whether the payments under a wholesale requirements contract are substantially certain to be made is determined on the basis of all the facts and circumstances, taking into account such factors as whether the purchaser's customer base has significant indicators of stability, whether the contract covers historical requirements of the purchaser, and whether the purchaser has agreed not to construct or acquire other power resources.

4. Special Rule for Output Contracts With Specific Performance Rights

The 1994 proposed output regulations provide that a requirements contract meets the benefits and burdens standard if the purchaser has priority rights to the output (or rights to control the allocation of the available output).

The temporary regulations generally provide that any output contract that provides the purchaser with specific rights to control the output or with other specific performance rights to the use of output of a financed facility meets the benefits and burdens test, even if the issuer reasonably expects that it is not substantially certain that payments will be made under the contract. This different standard applies to output contracts that provide the purchaser with specific performance rights because those contracts closely resemble leases, and, thus, provide more substantial rights to the use of a financed facility.

5. Security Interest Test

The 1994 proposed output regulations do not address how the security interest test applies to output contracts.

The temporary regulations provide that payments made or to be made under an output contract pledged as security for an issue are taken into account under the private security or payment test even if payment under the contract is not substantially certain. This rule is appropriate because it is reasonable to presume that payments under a contract pledged as security for an issue are material to the payment of debt service on an issue.

6. Use of Nameplate Capacity to Determine Available Output

The 1994 proposed output regulations measure the available output of a facility by reference to nameplate capacity, but further provide that, if nameplate capacity or its equivalent is greater than 150 percent of the average expected output, average expected output is used instead of nameplate capacity. In addition, nameplate capacity is reduced by scheduled maintenance. Commentators suggested that reference to nameplate capacity to determine available output is a bright-line, administrable test, and that the reductions to nameplate capacity in the 1994 proposed output regulations should be deleted.

The temporary regulations generally provide that nameplate capacity may be used as a reference to determine available output of a generating facility. This rule acknowledges that, consistent with prudent utility practice, governmentally-owned utilities may be required to acquire or construct facilities with excess capacity for their current or future reserves. To prevent tax-exempt financings that are inconsistent with the purposes of section 141, however, the temporary regulations provide that this rule does not apply if the issuer reasonably expects on the issue date that nongovernmental persons that are treated as private business users will purchase 30 percent or more of the actual output of the facility. In such a case, the Commissioner may determine available output on another reasonable basis. In addition, the temporary regulations clarify that, if a limited source of supply constrains the output of a facility (for example, if seasonal differences in water flow constrain output of a hydroelectric facility), the available output must be determined by taking into account these constraints. The temporary regulations also delete the rule that nameplate capacity is reduced by scheduled maintenance.

7. Exception for Swapping and Pooling Arrangements

The 1994 proposed output regulations provide that certain arrangements to swap and pool power do not meet the private business tests.

The temporary regulations simplify this exception and expand it, so that it includes swapping arrangements entered into to enhance reliability of a system.

8. Exceptions for Short-term Sales of Output

The 1994 proposed output regulations provide that 30-day agreements for spot sales of excess capacity do not result in private business use.

The temporary regulations provide that the exceptions for short-term use that apply to other types of arrangements under the general private activity bond rules in § 1.141–3 also apply to output contracts. Thus, in general an output contract that is available to the general public may have a term up to 180 days; an output contract that is not treated as general public use, but that is offered on the basis of generally applicable or uniformly applied rates, may have a term of up to 90 days; and an output

VOL 63 ISS 14 JA 22 1998 UMI

contract that is specially negotiated may have a term of up to 30 days.

9. Special Exceptions for Sales of Output Attributable to Excess Generating Capacity Which Mitigate Stranded Costs

The 1994 proposed output regulations provide that a single nonrenewable contract for a term of not greater than 1 year is not treated as private business use. Commentators suggested that longer term, renewable contracts to sell output attributable to excess generating capacity should be disregarded under the private business use test. Commentators noted that the excess generating capacity problem may be exacerbated by the development of open-access regulatory policies and other factors.

The temporary regulations respond to these special considerations by providing a more flexible exception for sales of output attributable to excess generating capacity that results from the offering of nondiscriminatory, open access tariffs. This exception is also consistent with the Federal Energy Regulatory Commission policy that utilities should take reasonable steps to mitigate the imposition of charges to recover legitimate, prudent, and verifiable stranded costs associated with providing open access. Under this exception, a contract to sell excess power is not treated as private business use if the term of the contract (including all renewal options) is not greater than 3 years, the issuer does not issue tax-exempt bonds to increase the capacity of its generation system during the term of the contract, the governmental owner offers non-discriminatory, open access transmission tariffs pursuant to the FERC rules (or comparable state law provisions pursuant to a plan approved by the FERC), all of the output sold under the contract is excess capacity resulting from participation in open access, the contract mitigates stranded costs of the owner that are attributable to entry into the open access system, and stranded costs recovered under the contract by that owner are used to redeem tax-exempt bonds as promptly as reasonably practical.

10. Special Exceptions for Transmission Facilities

The 1994 proposed output regulations provide special rules for transmission facilities, which are intended to respond to the development of regulatory policies that require or encourage open access to transmission systems. Under these special rules, in general, the use of transmission facilities is not private business use to the extent that it results from an order or actions taken in response to (or to prevent) an anticipated order by the United States that those facilities be used by a particular nongovernmental person, provided that the transmission facilities were sized based on the issuer's reasonable expectations about the amount of wheeling. The 1994 proposed output regulations contain a number of exceptions to this rule, which are designed to prevent the tax-exempt financing of facilities constructed for use by nongovernmental persons. The 1994 proposed output regulations also provide that an issuer must take remedial action if more than 20 percent of a transmission facility is so used by a nongovernmental person.

Commentators suggested that the exceptions for use of transmission systems should be made more flexible to accommodate the development of open access regulatory policies. Commentators noted that measurement of use of a transmission system raises a number of complex technical issues. For example, capacity or available output may be much more readily determined for a generating unit than for a transmission system. Some commentators suggested that all use of a transmission system pursuant to standard tariffs should be treated as general public use. Other commentators suggested that any rules addressing open access required by the FERC should also similarly address open access required by state public utility commissions.

The temporary regulations broaden the exceptions for use of transmission facilities, but do not treat all use of transmission facilities pursuant to standard tariffs as general public use. Under § 1.141–2(d), an action taken in response to a specific FERC order to wheel power under sections 211 and 212 of the Federal Power Act (16 U.S.C. 824j and 824k) would otherwise qualify for an exception from the deliberate action rule because it is taken in response to a regulatory directive made by the federal government. The temporary regulations additionally provide that an action taken in anticipation of such an order is not a deliberate action.

The temporary regulations also provide a special exception for transmission facilities pursuant to which an action is not treated as a deliberate action if it is taken to implement the offering of non-discriminatory, open access for the use of financed transmission facilities in a manner consistent with FERC rules, including reciprocity conditions of FERC Order No. 888 (61 FR 21540, May 10, 1996), pursuant to a plan approved by the FERC. The special exception also applies to orders and rules of state regulatory authorities pursuant to a plan approved by the FERC that are comparable to certain FERC orders and rules. This exception does not apply, however, to the sale, exchange, or other disposition of bond-financed transmission facilities to a nongovernmental person.

Section 1.141–2(d)(1) provides that an issue is an issue of private activity bonds if the issuer reasonably expects, as of the issue date, that the issue will meet either the private business tests or the private loan financing test or if the issuer takes a deliberate action, subsequent to the issue date, that causes the conditions of either the private business tests or the private loan financing test to be met. Thus, reasonable expectations about private business use of transmission facilities under non-discriminatory, open-access tariffs, must be taken into account on the issue date of bonds financing those facilities. A special transition rule applies to bonds (other than advance refunding bonds) that refund bonds issued prior to July 9, 1996 (the effective date of FERC Order No. 888). Because an issuer is in general not required to apply the temporary regulations to refunding bonds issued after the effective date that do not have a weighted average maturity longer than the remaining weighted average maturity of the refunded bonds, the special transition rule will apply only if the issuer chooses to apply the temporary regulations. Whether bonds issued after July 9, 1996, to finance output facilities met the reasonable expectations test of section 141 because of the possibility of actions taken to implement open access tariffs is appropriately determined on a facts and circumstances basis.

These special rules for transmission facilities are appropriate because of the unique statutory and regulatory regime that applies to transmission facilities.

B. Section 1.141–8T $15 Million Limitation for Output Facilities

1. Clarification of Computation of Nonqualified Amount

The 1994 proposed output regulations provide guidance on the special $15 million limitation on output facilities of section 141(b)(4). In general, this limitation is based on the "nonqualified amount" of an issue or issues that finance a single project.

The temporary regulations clarify that, in determining the total nonqualified amount for issues

financing a project, the nonqualified amount is first determined on an issue-by-issue basis, and that these amounts are then aggregated. The temporary regulations also provide a simpler method for determining how much the nonqualified amount of an issue is reduced when principal of the issue is paid. Under this method, the nonqualified amount of an issue is reduced by the ratio of adjusted issue price over issue price.

C. Section 1.142(f)(4)–1T Manner of Making Election to Terminate Tax-exempt Bond Financing

Section 142(f)(4) permits a person engaged in the local furnishing of electric energy or gas that uses facilities financed with exempt facility bonds under section 142(a)(8) and that expands its service area in a manner inconsistent with the requirements of sections 142(a)(8) and 142(f) to make an election to ensure that those bonds will continue to be treated as exempt facility bonds. In order to make the election the person engaged in local furnishing must, among other things, agree to redeem all outstanding bonds that financed the facilities not later than 6 months after the later of the earliest date on which the bonds may be redeemed or the date of the election. The temporary regulations set forth the required time and manner of making this election. In general, the election must be made on or before the 90th day after the later of (i) the date of the service area expansion or (ii) the effective date of the temporary regulations.

D. § 1.150–5T Filing Notices and Elections

The temporary regulations specify that notices and elections under section 142(f)(4)(B) and § 1.141–12(d)(3) must be filed with the Chief, Employee Plans and Exempt Organizations Division of the appropriate key district office.

E. Need for Temporary Regulations and Request for Public Comments

Congress passed the Federal Energy Act of 1992 to encourage deregulation of the electric power industry. Since that time, the Federal Energy Regulatory Commission and various states have adopted policies to open up access to transmission facilities. Treasury and the IRS are aware that these initiatives are causing rapid changes in the electric power industry, and have received many comments asking for immediate guidance under section 141 regarding the effect on the tax-exempt status of bonds of certain restructuring transactions necessary for utilities to participate in a deregulated electric utility environment. For example, several comments state that the restructuring initiatives in various states and regions may not proceed until Treasury and the IRS clarify the extent to which municipal utilities may transfer control of certain assets financed with tax-exempt bonds to an independent system operator. Based on these considerations, it has been determined that immediate regulatory guidance is necessary to ensure efficient administration of the tax laws.

The regulations are published in both temporary and proposed form to provide immediate guidance on which issuers can rely in evaluating their participation in open access regimes, while providing the opportunity for public comment. In addition, Treasury and the IRS believe that providing guidance on the effect of open access participation is more appropriately accomplished by regulation than by private letter ruling. Treasury and the IRS are also aware, however, that restructuring efforts are evolving and uncertain, and that new types of arrangements may be developed to implement restructuring. Many of the issues that will arise may need to be addressed legislatively. Accordingly, the regulations are published in temporary form with the expectation the Treasury and the IRS will reexamine them in light of new developments within the next three years.

Comments are invited on whether further guidance is needed to address the new types of contractual arrangements that are arising in the electric power industry. In particular, comments are invited on whether there are any instances in which an option of a nongovernmental purchaser to purchase output of a bond-financed facility should not be taken into account as private business use.

Effective Dates

Sections 1.141–7T and 1.141–8T are applicable to bonds issued on or after February 23, 1998.

Special Analyses

It has been determined that this Treasury decision is not a significant regulatory action as defined in EO 12866. Therefore, a regulatory assessment is not required. It has also been determined that section 553(b) of the Administrative Procedure Act (5 U.S.C. chapter 5) does not apply to these regulations.

It is hereby certified that the provisions of these regulations that impose a collection of information requirement on small entities do not have a significant impact on a substantial number of small entities. This certification is based upon the fact that in the years 1987 through 1993 a total of only 61 different state or local government issuers of exempt facility bonds issued under section 142(f) for facilities for the local furnishing of electric energy or gas filed information returns with the Internal Revenue Service under section 149(e). Further, an election under section 142(f)(4) is in no event required to be filed with the Internal Revenue Service more than once. Therefore, a Regulatory Flexibility Analysis under the Regulatory Flexibility Act (5 U.S.C. Chapter 6) is not required. Pursuant to section 7805(f) of the Internal Revenue Code, these temporary regulations will be submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on its impact on small business.

Drafting Information

The principal authors of these regulations are Michael G. Bailey and Allan Seller, Office of Assistant Chief Counsel (Financial Institutions & Products), and Nancy M. Lashnits, formerly of that office. However, other personnel from IRS and the Treasury Department participated in their development.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Adoption of Amendments to the Regulations

Accordingly, 26 CFR part 1 is amended as follows:

PART 1—INCOME TAXES

Paragraph 1. The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

Par. 2. Section 1.141–0 is amended by removing the entries for §§ 1.141–7 and 1.141–8 and adding entries to the table in numerical order to read as follows:

§ 1.141–0 Table of contents.

* * * * *

§ 1.141–7T Special rules for output facilities (temporary).

(a) Overview.
(b) Definitions.
(1) Available output.
(2) Measurement period.
(3) Sale at wholesale.
(4) Stranded costs.
(5) Take contract and take or pay contract.
(6) Transmission facilities.
(7) Nonqualified amount.
(c) Output contracts.

VOL 63 ISS 14 JA 22 1998 UMI

(1) General rule.
(2) Benefits and burdens test.
(3) Take contract or take or pay contract.
(4) Requirements contracts.
(5) Contract with specific performance rights.
(d) Measurement of private business use.
(e) Measurement of private security or payment.
(f) Exceptions for certain contracts.
(1) Small purchases of output.
(2) Swapping and pooling arrangements.
(3) Short-term output contracts.
(4) Special 3-year exception for sales of output attributable to excess generating capacity resulting from participation in open access.
(5) Special exceptions for transmission facilities.
(6) Certain conduit parties disregarded.
(g) Allocations of output facilities and systems.
(1) Facts and circumstances analysis.
(2) Illustrations.
(3) Transmission contracts.
(4) Allocation of payments.
(h) Examples.

§ 1.141–8T $15 million limitation for output facilities (temporary).

(a) In general.
(1) General rule.
(2) Reduction in $15 million output limitation for outstanding issues.
(3) Benefits and burdens test applicable.
